- ✦ Quotes ancient texts, usually to undercut your ideas

**Bound Demon**
- ✦ Looks like a miniature version of a proper demon
- ✦ Is too lazy to walk or to fly, and rolls wherever it goes

**Cat**
- ✦ Appears to be made of shadow
- ✦ Has vestigial bat wings
- ✦ Licks the blood from its fur after battle

**Crafter Homunculus**
- ✦ Is made of clay, but has clockwork joints
- ✦ Makes a tiny statue of every monster you defeat

**Dragonling**
- ✦ Is colored like a type of chromatic or metallic dragon
- ✦ Trails tendrils of smoke from its nostrils
- ✦ Tiny flames burst from its mouth when it hiccups, which is frequently
- ✦ Has a squeaky, high-pitched roar

**Falcon**
- ✦ Glows with golden light in bright sunshine
- ✦ Leaves small rodent corpses in your sleeping bag

**Owl**
- ✦ Can move eyes and beak to different parts of its head
- ✦ Hoots when it thinks it's found a mate for its master

**Rat**
- ✦ Leaves a cloud of black ash and trail of soot as it moves
- ✦ Chews on your spellbook (or other arcane implement) and magic items

**Raven**
- ✦ Has a streak of silver feathers
- ✦ Raps its beak on objects when it is being ignored
- ✦ Croaks a catchphrase at opportune times

**Serpent**
- ✦ Looks like rippling mercury when it moves
- ✦ Hisses at anyone who touches you (its master)

**Spider**
- ✦ Glows a poisonous green
- ✦ Constructs complex webs to mark where it has been

Your epic destiny is the mythic archetype you aspire to achieve. Once you reach 21st level, the greatness you knew you were destined for is no longer theoretical, but within your reach.

## Arcane Sword

*Spells of destruction infuse your blade, and no enemy can stand in your way.*

**Prerequisites:** 21st level, swordmage

Barriers of shimmering arcane incantations sheathe your body, deflecting and dissipating your enemies' attacks. The sword in your hand has become an extension of your will, a magical limb suffused with the combined art of spell and swordcraft. Eldritch power reverberates between you and your sword, creating an arcane conduit that promises nothing but destruction for any who stand in your way. You are a swordmage, and your goal is nothing less than perfection.

You have become the utmost practitioner of your art; it has been long since you've sought others to teach you their secrets. You have become your own teacher, and your ceaseless study into the dual arts of blade and magic has yielded a bounty of techniques that combine martial skill with magical prowess.

Others believe that you apply your incredible and growing skill to achieve ends important to you. That is true, to a point. In fact, you take up epic quests and engage terrible foes in order to improve your art. Your ambition transcends other concerns, but also uses them as a foil. You might save the world, but in doing so, you seek to become the ultimate swordmage, an Arcane Sword.

### Immortality?

Arcane Swords all hunger to improve their skill, but even these perfectionists one day recognize when they have reached the height of their art. Different Arcane Swords follow different routes to immortality; one of these might be your path.

**Martial Seclusion:** When you complete your final quest, you sequester yourself in a place where few are likely to find you. Here you create your own private sanctum, a place of peace where you can train day and night, eventually becoming one with your blade and your magic.

**Dojo Master:** When you complete your final quest, you might decide to teach others something of what you have learned. Instead of a private sanctum, you create a school where you teach the best swordmages of a generation the secrets of your craft.

**Relic Sword:** A few stories relate how some Arcane Swords meld into and become one and the same as their sword, creating a named artifact that persists in the world through all its future ages.

### Arcane Sword Features

**Spellsword Recall (21st level):** When you spend an action point to take an extra action, you regain one of your expended swordmage encounter attack powers before using that action.

**Sword's Vengeance (24th level):** Once per day, when you die, your sword fights on in your stead until the end of the encounter. Each round, the sword can move and make attacks as if you were still wielding it, but it cannot be the target of any attack.

At the end of the encounter, after a short rest, the sword returns to your body, and if your body is still present, you return to life with 1 hit point.

If your body is missing, you will need other magic to return to life.

**Spellsword Perfection (30th level):** Choose one swordmage encounter attack power that you know. You can now use that power as an at-will power rather than an encounter power.

### Arcane Sword Power

**Mass Aegis** — Arcane Sword Utility 26

*You unleash a frenzy of strikes, slicing all around you with your blade. Your attacks trail a blaze of magic, marking all enemies that stand too near.*

**Encounter ✦ Arcane**
**Minor Action** **Close** burst 2
**Target:** Each enemy in burst
**Effect:** Each target is marked by your Swordmage Aegis power until the end of your next turn.

CHRIS SEAMAN

# Archlich

*You fail to remain living, but also fail to die. Undead, you ensure your ability to defend against evil forever.*

**Prerequisites:** 21st level, any arcane class

You pursue eternal life as an undead creature. Most wizards who search for and achieve easy immortality by way of esoteric necromantic texts are evil, avaricious spellcasters who stop at nothing to achieve their ultimate goals. For some, that goal is lichdom itself. But you have a greater, nobler purpose.

Unlike many who have become liches before you, you have trained your mind to avoid succumbing to the madness that necromantic preservation often brings. For instance, you did not perform the foul ritual that traded your life for animation the moment you found it; you waited until your power was equal to the change. Nor did you accept the aid of Orcus, Demon Prince of the Undead, to empower the ritual, but you waited to find methods outside his control. In doing so, you escaped his touch, though you bear his personal enmity to this day.

## Immortality?

When you complete your final quest, an age of the world concludes. It is time to make way for new heroes. However, you do not go too far.

MATIAS TAPIA

You watch the world and all that goes on upon it by means of a cadre of spies and magical sensors. You reside in a secluded citadel deep underground or in a far corner of one of the planes. You are content to let the events of the world roll on, watching; however, you are not completely indifferent. Now and then, you can provide a clue to help those in need.

## Archlich Features

**Archlich Knowledge (21st level):** Your Intelligence score increases by 2.

**Archlich's Phylactery (21st level):** You create a magical receptacle that contains your life force. When you drop to 0 hit points or fewer, you and your possessions crumble to dust. A day later, you reappear alive with maximum hit points in a space adjacent to your phylactery, with all your possessions.

Your phylactery can be destroyed. It has 40 hit points and resist 20 to all damage. The typical phylactery is a sealed metal box filled with parchment inscribed with magical phrases written in your blood. Phylacteries can come in other forms, such as rings, gems, or amulets, but they always have 40 hit points and resist 20 to all damage. If your phylactery is destroyed, you can make a new one by spending 10 days and 50,000 gp.

**Shroud of Life and Death (21st level):** Any living enemy that comes within 3 squares of you or starts its turn there takes 5 necrotic damage. Any undead enemy that comes wthin 3 squares of you or starts its turn there takes 5 radiant damage.

**Lich Resistances (21st level):** You gain resist necrotic and resist poison equal to 5 + one-half your level.

**Mastery over Death (24th level):** Once per day, when you die, you can empower your undead form instead of dying. You regain hit points equal to half your maximum hit points. Until the end of the encounter, you can't spend healing surges, and any creature that attacks you and deals damage takes ongoing 20 necrotic damage (save ends).

**Essence of Undeath (30th level):** Whenever an enemy within 5 squares of you is reduced to 0 hit points or fewer, you regain the use of an expended arcane encounter power.

## Archlich Power

**Archlich Potency** Archlich Utility 26

*Fell spells resonate more fluidly within your animated mind.*

**Daily ✦ Arcane**
**Minor Action** **Personal**

**Effect:** You regain one arcane fear or necrotic encounter or daily power that you have already used.

You gain resistance to all damage equal to 5 + one-half your level until the end of the encounter.

# Archspell

*When you especially like a spell, you squeeze every last advantage from its casting.*

**Prerequisites:** 21st level, any arcane class

In your expert opinion, of all the varied spells that have passed the lips of casters down the ages, there is one whose elegance, power, and conceptual fundamental beauty surpasses all others. You should know, because you have endured much to master it. You refer to this spell of spells (with some pride) as your "signature spell."

Other arcane characters might cast the same spell, but your study of it, with an attention to detail none could ever hope to match, has unlocked intricacies of the power that have been lost on all others. Of course, it would be impossible to research every spell in your arsenal with such exacting care. There is not time enough in any one life for such a project. That's why you have chosen just one spell to devote yourself to entirely. A single spell, one which no other creature will ever cast as magnificently as you cast it.

Sometimes you take pity on others you happen to encounter that also cast your signature spell. You might approach these unenlightened mages and offer them encouragement, and explain to them that one day they might be great, but only if they improve their technique with the spell in question. If they show interest, you are more than happy to demonstrate your skill with your spell.

As you progress in power and mastery, your reputation as a connoisseur of your signature spell also grows. In fact, your name begins to become synonymous with the spell. You can hardly imagine anything more satisfying: With every casting, your name, too, is spoken aloud.

## Immortality?

Upon completion of your final quest, you gain a final insight into the elegant complexity that lives within your spell. Having cast it so many times, you awaken a resonance between it and your own soul.

Once you put your mortal affairs in order, you embrace that resonance. One last time, you cast your signature spell. As the final syllable leaves your lips, the casting infuses every fiber of your being. You and your spell become one and the same. As long as anyone else knows your spell, you persist in that caster's living mind and in the dusty texts of old tomes, encoded in the spell's formula. Perhaps one day when some special mage rediscovers and casts the spell, you will return in physical form, ready to help the world again with a mastery only you can provide.

## Archspell Features

Archspells gain many benefits based around a single power chosen with the Signature Spell feature.

**Signature Spell (21st level):** Choose one of your arcane daily attack powers. You gain a +2 bonus to attack rolls with that power. If you retrain that power, you can choose a new arcane daily attack power as your Signature Spell.

**Returning Spell (24th level):** Once per day, when you die, you regain half your hit points on your next turn. If you have already expended your Signature Spell daily attack power, you regain it.

**Living Spell (30th level):** You can use your Signature Spell as an encounter power rather than a daily power.

## Archspell Power

**Channel the Signature** Archspell Utility 26

*You bring the power of your signature spell to your lips, but rather than casting it, you hold it resonating in your mind. Until you cast it, you siphon energy to resist the attacks of others.*

**Encounter ✦ Arcane**
**Minor Action** **Personal**

**Effect:** You gain resist 15 to all damage until the end of the encounter or until you use your Signature Spell.

WOODROW J. HINTON III

# Feyliege

*You command legions of powerful eladrin, tapping into the magical potential of the Feywild.*

**Prerequisites:** 21st level; any arcane class; must have the fey origin, be a half-elf, or be a warlock with the fey pact

Your mastery over the mystical arts that twine through the Feywild has earned you the respect of eladrin and other noble fey creatures. You are seen as a great leader in the sometimes fanciful, wondrous echo of the world. Where castles of eladrin nobles raise their gleaming spires, your name has been bandied about as a potential lord of great power. Where shadowed hillocks cover twilight tunnels into the brooding Feydark, your name is also whispered, but as a curse.

As a lord of the Feywild, you are sometimes called upon to use your power to defend the interests of the faerie realm. However, your interests are wider still, and you often use your knowledge and ties to aid you in your own quests and errands. Sometimes, a future version of yourself steps back through the world lines to offer aid, and in so doing provide a glimpse of what one day might be in a fey echo of reality.

## Immortality?

Upon completion of your final quest, you retreat to the Feywild for good, but your coming is foretold. Indeed, the Court of Stars, that storied city that crowns the Feywild's heart, has sent envoys, invitations, and inquiries regarding your bloodline. There are intimations that you might be, in truth, of the lineage of Lord Oran or Queen Tiandra.

You have a choice before you. You could find a secluded spot and build a towering edifice among the trees, then live out a peaceful life in the mists and shadows behind the world. You could take the guise of a simple traveler, passing from settlement to settlement in the Feywild and in the natural world, appearing as an itinerant elderly nomad, but one capable of dispensing great wisdom. Or, you could accept your destiny and the summons from the Feywild's heart, and take a seat of wisdom and power in the Court of Stars, a seat that will someday be the one that overlooks all others.

## Feyliege Features

**Feywild Charm (21st level):** Your Charisma score increases by 2.

**Eternal King on an Eternal Throne (24th level):** Once per day, when you die, an older, more regal version of yourself steps from the mists of time to take your place. You heal to half your maximum hit points and gain concealment against all attacks until the end of the encounter. If you die while in the form of your future self, you're dead.

At the end of the encounter, your future self restores you to life if your body is still present. Your current hit point total is unchanged, and you no longer have concealment.

If your body is missing, you will need other magic to return to life, but you can continue adventuring as your future self if you would like to do so.

**Dominion over the Mind (30th level):** Whenever you use an arcane charm power and score a critical hit against an enemy, that enemy is dominated until the end of your next turn.

WARREN MAHY

## Feyliege Power

**Shields of the Eladrin Host** Feyliege Utility 26

*Spectral eladrin knights spring from all sides, protecting you and your allies from danger, transporting all of you to safety, and then disappear back into the Feywild.*

**Encounter ✦ Arcane, Teleportation**
**Immediate Interrupt** **Close** burst 5
**Trigger:** An attack hits you or an ally within 5 squares of you
**Target:** You and each ally in burst
**Effect:** Each target gains a +4 bonus to AC and Reflex until the end of his or her next turn. After the triggering attack is resolved, any target can swap positions with another target.

# Immanence

*All life is energy. You can see the flows and associations where others see only inanimate matter.*

**Prerequisites:** 21st level, any arcane class

Magic is less complex than most believe it to be. Beneath the incantations, the beautifully fashioned implements, the intricately carved circles and sigils, and the lore scribbled in tomes unnumbered lies one simple truth: Everything is energy. Energy comes in many forms, but once the first fundamental truth is grasped, all later use of magic becomes applied manipulation of energy. Energy can be tuned, directed, drawn away, or multiplied. It can be slowed so that it seems to be a solid, or converted to an insubstantial fluid of potential.

Others who lack your understanding find you obscure or mystical, but in fact you could not be more practical. In the grand scheme of things, only energy is eternal and true; all its shapes and flows are temporary, and will shift into unrecognizable patterns as time advances.

Your comprehension of these truths grants you exceptional and growing power over the world that others believe is mostly physical. Hazardous discharges flow around you like water. You can even extend a fraction of your protection to your allies. So powerful is your control over energy that when your body takes too much hurt, you can convert yourself to a field of substanceless particles.

WILLIAM O'CONNOR

## Immortality?

When you complete your final quest, your understanding over the nature of energy expands. You suddenly grasp the final truth with which you have so long struggled: Only one energy field exists, and the entirety of the cosmos is made up of this undulating, many-layered expanse. The cosmos and you are one and the same. The same field that makes up everything else is part of you.

After putting your mortal affairs in order, you transform spontaneously into a being of pure energy, leapfrogging the state of divinity to become a fixture of the cosmos itself. After all, even the gods and the primordials are made of energy. You are an Immanence; you are everywhere.

## Immanence Features

**Variable Resistance (21st level):** After the first time you take damage of a particular type during an encounter, you gain resist 20 to that damage type until the end of the encounter.

**Spirit of Energy (24th level):** Once per day, when you drop to 0 hit points or fewer, you regain hit points equal to half your maximum hit points and become a spirit of energy. Until you regain hit points from a healing power or take a short rest, you are insubstantial and have phasing.

Also, at the start of your next turn, each enemy adjacent to you takes 20 damage of one of the following types, chosen when you take this form: acid, cold, fire, lightning, necrotic, poison, psychic, radiant, or thunder.

**Shared Resistance (30th level):** While any ally is adjacent to you, he or she gains your resistances and immunities.

## Immanence Power

**Vary Resistance** Immanence Utility 26

*With a passing thought, you tune the energy of your body to resist a new form of damage.*

**Encounter ✦ Arcane**
**Minor Action** **Personal**
**Requirement:** You must have already gained a type of energy resistance during this encounter from your Variable Resistance feature.
**Effect:** Change your current Variable Resistance to one of the following types: acid, cold, fire, lightning, necrotic, poison, psychic, radiant, or thunder.

# Lord of Fate

*For every action, there is an equal and opposite reaction. Fate's weave requires a cosmic balance.*

**Prerequisites:** 21st level, any arcane class, unaligned alignment

You have mastered whole libraries of arcane lore. With all that knowledge, you have glimpsed a universal truth: A cosmic balance hides behind all things, weighing the energies of existence and perhaps judging them. Life, motion, and the intricacy of existence itself participate in a constant interaction of warring forces, but a war subtly harmonized by the balance.

Your understanding of this balance informs your actions. Seeing the need for moderation in all things, you seek to damp down fiery passions and heart-wrenching attachments. If you attack the forces of evil, or struggle against chaos, you do so simply to bring the adversary back into a state of balance with virtue and order. You accept that life must include both despair and joy, both beauty and horror.

You are becoming an agent of balance—a living exemplar of the cosmic fulcrum.

## Immortality?

As the last mortal breath escapes your lungs, your hard-won knowledge that life and death are eternal twins fills your dissipating perception. In that instant, your soul flashes out into the multiverse, beyond the grasp of the gods or the natural order. The force you sensed as a mortal, the underlying cosmic balance behind all things, accepts you as part of itself. You are transfigured into a sentient incarnation of that cosmic balance. It permeates existence, and so do you. Your knowledge multiplies a thousandfold. In your hands rests the future balance of the cosmos.

## Lord of Fate Features

**Turnabout (21st level):** When you roll initiative, designate any creature you can see as the target of your Turnabout feature. Until end of the encounter, any condition that target imposes on another creature through the use of an attack power is also imposed on the target.

**Balanced Sum (24th level):** Once per day, when an enemy's attack drops you to 0 hit points or fewer, you regain hit points equal to your healing surge value, and you gain temporary hit points equal to your attacker's current hit point value.

**Fulcrum of Power (30th level):** When you are damaged by an attack power that a creature can recharge, the attacking creature can't attempt to recharge that power until you make an attack roll against it.

LUCIO PARRILLO

## Lord of Fate Power

**Golden Mean** Lord of Fate Utility 26

*You show your power over fate, and let the balance reign over enemies and allies alike.*

**Daily ✦ Arcane, Zone**
**Minor Action** **Close** burst 5

**Effect:** The burst creates a zone of balanced fate that lasts until the end of your next turn. Each creature within the zone doesn't make d20 rolls to resolve attack rolls, ability checks, skill checks, and saving throws. Instead, these rolls are resolved as if the creature rolled a 10 on the die.

**Sustain Minor:** You can sustain the zone until the end of your next turn. The zone's area shrinks by 1 each time the zone is sustained. When the zone is a burst 1, it can no longer be sustained.

# Magister

*Magic flows through you as it flows through all the worlds. Magic that flows through you once is yours forever.*

**Prerequisites:** 21st level, any arcane class

Your reputation as a powerful spellcaster has only grown in the telling, perhaps sometimes even outpacing your actual abilities. Indeed, some credulous few have gone so far as to call you the "mouth of magic," implying that you are the ultimate expert on all things arcane.

You don't go out of your way to dissuade such talk. After all, you are a powerful practitioner of the arcane arts. You are a protégé of powerful wizards, sorcerers, and warlocks (if not in the flesh, at least in the study of their lives, their rituals, and the spells they preferred to cast). Furthermore, spells and rituals have been your daily fare for longer than you can recall. You are mortal, yes, but the flux of magic that daily flows through your form lifts you closer and closer to something finer with each arcane utterance.

Any wizard, warlock, or other spellcaster can study hard and eventually master a wide variety of magical stratagems. It is not impossible to grow in power and ability. But a few who do so sense an underlying unity to magic, a thread that connects apparently disparate magical functions. Those few, like you, claim the title of Magister and the enhanced magical prowess that goes with it.

Regardless of what others say or what you believe, empirical evidence has proved it: You have become one of the most powerful spellcasters in history. You manipulate magic as easily as you breathe.

## Immortality?

Your ultimate destiny is certain to be colorful, but is otherwise open-ended. It is likely to be whatever best suits the unique expression of your class. You might be a chaos sorcerer who decides to live deep within the Elemental Chaos, returning in some future age to help assuage the world's need. You might be a great bard whose magic eventually challenges the immortals, and perhaps wins you a place in the courts of the gods on your own terms. You might be a wizard whose studies have rewarded you with a natural fluency that none could have predicted early in your career, but whose popularity and notoriety live on for centuries afterward—aided by the fact that you remain accessible, if inactive, in a grand tower hidden in a Feywild mountain pass.

## Magister Features

**Magister's Knack (21st level):** One ability score of your choice increases by 2.

**Magic's Flow (21st level):** Whenever you use an arcane encounter or daily attack power, you gain a +4 bonus to the defense or defenses that power attacks until the end of your next turn.

**Return of the Magister (24th level):** Once per day when you drop to 0 hit points or fewer or are about to take enough damage to kill you, you can spend a healing surge, teleport 15 squares as a free action, and roll saving throws against all effects on you that a save can end.

**Magic's Master (30th level):** Twice per day, you can perform any ritual you have mastered as a standard action.

## Magister Powers

**Magister's Key** Magister Utility 26

*You renew the magical potential of an already used magic item with a touch.*

**Daily ✦ Arcane**
**Minor Action** **Personal**

**Effect:** You regain the use of an expended daily power of any single magic item in your possession.

EVA WIDERMANN

# Parable

*The material world is an illusion. Look behind the world, but not for the truth–for the next layer of delusion.*

**Prerequisites:** 21st level, wizard

The world is not real. It is a story whose teller is the cosmos itself, a cosmos unaware of its own ongoing process of coming more fully into being. Time is an illusion, merely a prop for the unfolding tale. Without time, matter, too, is mere imagination. Gods and mortals, primordials and angels, and every other creature that strives, lives, and dies upon the stage of supposed existence, is facade thrown up by the cosmos. The solid-seeming earth is anything but, and the distinctions between the heavenly realms and the infernalmost pits is a paper-thin fiction.

Or, at least, such is your creed, and you have good reason to believe it's true. The wise know that stories are narratives that give structure to knowledge, and you are wiser than most. This narrative principle runs far more deeply than most presume–you believe it is the core axiom of creation itself. However, knowing reality for the illusion it is, you have begun to alter your own story. In so doing, you have risen above the masses that still believe reality is more than a cloak over the nothingness that lies beneath everything. In taking a hand in your own tale, you have become a living parable, perhaps one capable of wrenching existence onto a track designed by you.

## Immortality?

The act of completing your final quest also proved that you could change the course of the unfolding cosmic yarn according to your own desires. Your mastery over the illusion that serves as creation's tissue is nearly complete. Only a few final threads of figment elude you.

So you retreat from all the competing stories of the world, fading into the illusion, becoming a part of it. When next you take a step, you do not emerge as a discrete entity only feet away from your previous position. Instead, your body and mind leap into a thousand different stories in a thousand different times and places. You seek to become part of the underlying story, the first story, the parable that precedes all others. In so doing, you hope to promote yourself above all others. No longer will you be a character in the story, but the storyteller.

## Parable Features

**As if Illusion (21st level):** Whenever you move, you ignore difficult terrain.

**Never Really There (24th level):** You never take damage from a missed attack.

JASON ENGLE

**Life's Illusion (30th level):** Once per day, when you die, you can return to life at maximum hit points 10 squares away from the space where you died. In fact, you only seemed to die–your enemy killed a perfect illusion of you, while you stood a short distance away.

## Parable Power

**Figment Step** Parable Utility 26

*The attack, the creature, and even your own physical form are not real. Change the story, and you change reality.*

**Encounter ✦ Arcane, Illusion**
**Immediate Interrupt** **Personal**
**Trigger:** An enemy hits you with an attack
**Effect:** The triggering enemy's attack does not occur. You disappear from your space and reappear 5 squares away in a space of your choosing. The triggering enemy loses the action taken to make the attack, but retains the power used for the attack.

# Sage of Ages

*Knowledge is power. Once that fact is understood, the power of the gods themselves becomes something knowable.*

**Prerequisites:** 21st level, any arcane class

Knowledge is power, freedom, life, and love. With the proper information, you can unravel the secrets of the universe and be the master of your own fate. You have always believed this. Your curiosity about all things is legendary. Even as a child, you asked "why?" more often than any other question. As you matured, you sought knowledge about harder-to-reach places, traveling first the world, then other planes of existence. Knowledge is your solace, your hope, and your support. Faith might be fine for others, but you see it as a shallow edifice. Only objective study and the knowledge gained thereby allows one to see things as they truly are.

The petty bickering of kings and nobles holds less and less interest for you, and as you learn more and more about the facade of flesh that mortals wear to hide their souls, even earthly delights begin to lose their flavor. All else pales before the pursuit of pure knowledge.

## Immortality?

When you complete your final quest, you make your plans to withdraw from the world. You have accumulated so much knowledge that you have become a force of nature itself. As one of a select few who have earned the title Sage of Ages, you take up the lonely task of a keeper of secrets, history, and unfettered knowledge.

When the time is right, you retreat to a secret place only you know of, a place where you find knowledge within the natural bends and crevices in space and time. You begin to observe a river of events and store them away in your mind. Age, cares, and the needs of the flesh flow around you, not through you. You are a fountainhead of knowledge that other creatures, sometimes even gods, seek out because of your perfect enlightenment.

MATT CAVOTTA

## Sage of Ages Features

**Paragon of Learning (21st level):** You gain a +6 bonus to Arcana checks, Dungeoneering checks, History checks, Nature checks, and Religion checks.

**Keeper's Prescience (24th level):** At the start of each of your turns, roll a d20. You can use the result of that roll in place of any one d20 roll you make before the start of your next turn.

**Reverse Time (30th level):** Once per day, when an attack would normally drop you to 0 hit points or fewer or kill you, you do not die. Instead, you regain maximum hit points and move your place in the initiative order to directly after the creature that made the attack.

## Sage of Ages Power

**Trick of Knowledge** Sage of Ages Utility 26

*Your vast learning grants you different insightful advantages in different situations.*

**Encounter ✦ Arcane**
**Minor Action** **Personal**

**Effect:** You make an Arcana check and gain a benefit based on your check result until the end of the encounter.

30 or lower: No effect
31–35: +5 bonus to saving throws
36–40: +2 bonus to all defenses
41–45: +2 bonus to attack rolls with arcane powers
46–50: Make saving throws at the start of your turn instead of the end of your turn
51–55: Pick two benefits you can gain from a roll of 31 through 50
56–60: Pick three benefits you can gain from a roll of 31 through 50
61 or higher: Gain all four benefits you can gain from a roll of 31 through 50

# MAGIC ITEMS: TOME

A tome is a thick book packed with knowledge about casting a spell. The materials that make up the cover of a tome range from leather and thin wood to heavy pieces of metal. The pages of a book can be paper, leather, thin pieces of metal, or other flexible materials. You can't make melee attacks with a tome.

If you can wield a tome as an implement, you can add its enhancement bonus to the attack rolls and the damage rolls of implement powers you use through the tome, and you can use its properties and powers. Otherwise, you gain no benefit from wielding a tome.

**TOMES**

| Lvl | Name | Price (gp) |
|---|---|---|
| 1 | Magic tome +1 | 360 |
| 2 | Tome of the replenishing flame +1 | 520 |
| 3 | Tome of forty steps +1 | 680 |
| 3 | Tome of the north wind +1 | 680 |
| 4 | Tome of arrest +1 | 840 |
| 5 | Book of undeniable fire +1 | 1,000 |
| 5 | Summoner's tome +1 | 1,000 |
| 6 | Magic tome +2 | 1,800 |
| 7 | Tome of the replenishing flame +2 | 2,600 |
| 8 | Tome of forty steps +2 | 3,400 |
| 8 | Tome of the north wind +2 | 3,400 |
| 9 | Tome of arrest +2 | 4,200 |
| 10 | Book of undeniable fire +2 | 5,000 |

## Book of Undeniable Fire — Level 5+

*The pages of this tome have scorch marks along the edges.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 5 | +1 | 1,000 gp | Lvl 20 | +4 | 125,000 gp |
| Lvl 10 | +2 | 5,000 gp | Lvl 25 | +5 | 625,000 gp |
| Lvl 15 | +3 | 25,000 gp | Lvl 30 | +6 | 3,125,000 gp |

**Implement (Tome)**
**Enhancement:** Attack rolls and damage rolls
**Critical:** +1d8 fire damage per plus
**Property:** When you use a wizard fire power through this tome, the target's resistance to fire (if any) against that attack is reduced by 10.
*Level 15 or 20:* The resistance is reduced by 20.
*Level 25 or 30:* The resistance is reduced by 30.
**Property:** This tome contains two wizard daily fire powers. Both powers must be of a level equal to or lower than that of the tome. Choose these powers when you acquire the tome; they cannot be changed later. You can add these powers to your spellbook.
**Power (Daily ✦ Arcane, Fire, Implement):** Free Action. Choose a power contained in this tome and expend an unused wizard daily attack power of an equal or higher level. You gain the use of the chosen power during this encounter. The power is lost if you do not use it before the end of the encounter.

## Magic Tome — Level 1+

*A simple tome, enchanted to channel arcane energy.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 1 | +1 | 360 gp | Lvl 16 | +4 | 45,000 gp |
| Lvl 6 | +2 | 1,800 gp | Lvl 21 | +5 | 225,000 gp |
| Lvl 11 | +3 | 9,000 gp | Lvl 26 | +6 | 1,125,000 gp |

**Implement (Tome)**
**Enhancement:** Attack rolls and damage rolls
**Critical:** +1d6 damage per plus

## Summoner's Tome — Level 5+

*Outlines of creatures are burnt into the cured-hide cover of this book, which holds many summoning secrets.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 5 | +1 | 1,000 gp | Lvl 20 | +4 | 125,000 gp |
| Lvl 10 | +2 | 5,000 gp | Lvl 25 | +5 | 625,000 gp |
| Lvl 15 | +3 | 25,000 gp | Lvl 30 | +6 | 3,125,000 gp |

**Implement (Tome)**
**Enhancement:** Attack rolls and damage rolls
**Critical:** +1d6 damage per plus
**Property:** When you hit with an opportunity attack using a conjuration or summoning wizard power through this tome, the target takes extra damage equal to this tome's enhancement bonus.
**Property:** This tome contains two wizard daily summoning powers. Both powers must be of a level equal to or lower than that of the tome. Choose these powers when you acquire the tome; they cannot be changed later. You can add these powers to your spellbook.
**Power (Daily ✦ Arcane, Implement, Summoning):** Free Action. Choose a power contained in this tome and expend an unused wizard daily attack power of an equal or higher level. You gain the use of the chosen power during this encounter. The power is lost if you do not use it before the end of the encounter.

## Timeless Tome — Level 29

*This tome enables you to further manipulate the boundaries of time.*

Lvl 29 +6 2,625,000 gp
**Implement (Tome)**
**Enhancement:** Attack rolls and damage rolls
**Critical:** +1d6 damage per plus
**Property:** When you use the *time stop* power, you gain three extra standard actions instead of two. (You still can't use these actions to attack other creatures.)
**Power (Daily):** Free Action. You expend an unused wizard utility power of level 22 or higher and gain the use of the *time stop* power during this encounter. The power is lost if you do not use it before the end of the encounter.

## Tome of Arrest — Level 4+

*This tome's cover is emblazoned with the symbol of a golden clenched fist.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 4 | +1 | 840 gp | Lvl 19 | +4 | 105,000 gp |
| Lvl 9 | +2 | 4,200 gp | Lvl 24 | +5 | 525,000 gp |
| Lvl 14 | +3 | 21,000 gp | Lvl 29 | +6 | 2,625,000 gp |

**Implement (Tome)**
**Enhancement:** Attack rolls and damage rolls
**Critical:** +1d8 force damage per plus
**Property:** When you use a wizard power that immobilizes an enemy through this tome, that enemy also takes extra damage equal to your Constitution modifier.
**Power (Daily):** Free Action. *Trigger:* You use a wizard summoning power. *Effect:* Until the end of the encounter or until the summoned creature is dismissed, creatures that shift provoke opportunity attacks from the summoned creature when moving out of a square adjacent to the summoned creature.

## Tome of Forty Steps — Level 3+

*Included within this curious tome are a number of arcane formulas for manipulating speed and time.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 3 | +1 | 680 gp | Lvl 18 | +4 | 85,000 gp |
| Lvl 8 | +2 | 3,400 gp | Lvl 23 | +5 | 425,000 gp |
| Lvl 13 | +3 | 17,000 gp | Lvl 28 | +6 | 2,125,000 gp |

**Implement (Tome)**
**Enhancement:** Attack rolls and damage rolls
**Critical:** +1d6 damage per plus
**Property:** Your summoned creatures gain a +1 item bonus to speed.
**Power (Daily):** Free Action. *Trigger:* You use a wizard summoning power. *Effect:* Each round while the summoned creature exists, you gain an additional move action that you can use only to command the creature.

## Tome of the North Wind — Level 3+

*Covered in a thin patina of frost even in blazing heat, this tome unlocks the secrets of ice magic.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 3 | +1 | 680 gp | Lvl 18 | +4 | 85,000 gp |
| Lvl 8 | +2 | 3,400 gp | Lvl 23 | +5 | 425,000 gp |
| Lvl 13 | +3 | 17,000 gp | Lvl 28 | +6 | 2,125,000 gp |

**Implement (Tome)**
**Enhancement:** Attack rolls and damage rolls
**Critical:** +1d8 cold damage per plus
**Property:** When you use a wizard cold power through this tome, and the target of the power is slowed, that target takes damage equal to your Constitution modifier if it moves while slowed.
**Property:** This tome contains two wizard daily cold powers. Both powers must be of a level equal to or lower than that of the tome. Choose these powers when you acquire the tome; they cannot be changed later. You can add these powers to your spellbook.
**Power (Daily ✦ Arcane, Cold, Implement):** Free Action. Choose a power contained in this tome and expend an unused wizard daily attack power of an equal or higher level. You gain the use of the chosen power during this encounter. The power is lost if you do not use it before the end of the encounter.

ZOLTAN BOROS & GABOR SZIKSZAI

### Tome of the Replenishing Flame — Level 2+

*This tome's copper binding is pleasantly warm to the touch.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 2 | +1 | 520 gp | Lvl 17 | +4 | 65,000 gp |
| Lvl 7 | +2 | 2,600 gp | Lvl 22 | +5 | 325,000 gp |
| Lvl 12 | +3 | 13,000 gp | Lvl 27 | +6 | 1,625,000 gp |

**Implement (Tome)**
**Enhancement:** Attack rolls and damage rolls
**Critical:** +1d10 fire damage per plus
**Property:** When you use a wizard fire power that can be sustained through this tome, you regain hit points equal to the tome's enhancement bonus each round that you sustain the power while bloodied. For example, if you used the *flaming sphere* power with a *tome of the replenishing flame* +2, you would regain 2 hit points each round you sustain the *flaming sphere* while you are bloodied.
**Property:** This tome contains two wizard daily fire powers. Both powers must be of a level equal to or lower than that of the tome. Choose these powers when you acquire the tome; they cannot be changed later. You can add these powers to your spellbook.
**Power (Daily ✦ Arcane, Fire, Implement):** Free Action. Choose a power contained in this tome and expend an unused wizard daily attack power of an equal or higher level. You gain the use of the chosen power during this encounter. The power is lost if you do not use it before the end of the encounter.

# NEW RITUALS

The world is flush with sacraments, rites, ceremonies, and other procedures that wring incredible effects from an input of time, components, and learning. These disparate workings are known collectively as rituals. See Chapter 10 of the *Player's Handbook* for instructions on how to use a ritual in the D&D game.

### RITUALS BY LEVEL

| Lvl | Ritual | Key Skill |
|---|---|---|
| 1 | Purify Water | Arcana, Nature, or Religion |
| 1 | Unseen Servant | Arcana |
| 2 | Lower Water | Nature |
| 3 | Fool's Gold | Arcana |
| 4 | Beast Growth | Nature |
| 4 | Call of Friendship | Diplomacy |
| 5 | Object Reading | Arcana |
| 6 | Preserve Flame | Arcana |
| 6 | Shrink | Arcana |
| 8 | Anthem of Unity | Diplomacy |
| 9 | Detect Treasure | Arcana |
| 9 | Magic Map | Arcana |
| 11 | History Revealed | Arcana |
| 12 | Arcane Barrier | Arcana |
| 14 | Telepathic Bond | Arcana |
| 14 | Whispers of the Edifice | Arcana |
| 16 | Farsight | Arcana |
| 18 | Guards and Wards | Arcana |
| 28 | Imprisonment | Arcana |

The rituals in this section are listed on the table below.

## Anthem of Unity

*The anthem's invigorating notes fill the audience with pride and single-minded purpose.*

**Level:** 8
**Category:** Binding
**Time:** 10 minutes
**Duration:** 1 day
**Prerequisite:** Bard
**Component Cost:** 135 gp, plus a focus worth 680 gp
**Market Price:** 680 gp
**Key Skill:** Diplomacy

When you perform the Anthem of Unity for a crowd of ordinary people—peasants, commoners, artisans, and the like—you unite them behind a single cause. Only creatures whose level is at least 2 lower than yours are affected by this ritual.

The crowd must not be hostile to you and must be able to see and hear you for the entire performance. At the end of the ritual, you can request a single service from the crowd, to which the members of the audience respond as if you were a trusted friend. You can request anything that doesn't involve violence, put the listeners at inordinate risk or imperil their friends or family, or place them in financial ruin. For example, you might ask the listeners to help put out a fire raging in the city, hide you and your allies from searching guards, or provide you with shelter or food. A Diplomacy check made at the end of this ritual determines what sort of help you can request.

| Diplomacy Check Result | Effect |
|---|---|
| 19 or lower | The listeners perform an action that lasts up to 1 hour and that benefits them in at least some small way. |
| 20–29 | The listeners perform a task that lasts up to 1 hour and that poses no risk or reward to them. |
| 30–39 | The listeners perform a task that lasts up to 6 hours and that poses a mild risk but at least some benefit to them. |
| 40 or higher | The listeners perform a task that lasts up to 1 day and that poses a mild risk without any benefit to them. |

The number of individuals affected extends to anyone who witnesses the entire performance, so the larger the venue, the more people you can affect.

**Focus:** A musical instrument you play as part of performing the ritual.

## Arcane Barrier

*You create a tough, translucent wall that blocks a passageway or covers a doorway.*

**Level:** 12
**Category:** Warding
**Time:** 10 minutes
**Duration:** 4 hours
**Component Cost:** 1,000 gp
**Market Price:** 3,200 gp
**Key Skill:** Arcana

You create a magical barrier of force that is 2 squares long and 2 squares tall. It is large enough to block a standard doorway or seal off a hallway. The obstruction is invisible from more than 10 squares away, but if viewed from closer than that, it is discernible as a translucent, shimmering, paper-thin wall.

When you perform the ritual, you allow for certain other creatures or types of creature to pass through the barrier, ignoring its effects, in the same manner as for Arcane Lock (*Player's Handbook*, page 301). Your Arcana check, with a +5 bonus, sets the DC for the ward to be defeated by rituals such as Knock. The DC to break through the barrier with a Strength check is 5 higher than that.

If you spend 4 hours and four times the component cost to perform this ritual, the duration becomes permanent. A ritual caster who performs a ritual, such as Knock, to pass through a permanent Arcane Barrier can choose to bring the Arcane Barrier down temporarily (in which case it seals again after 5 minutes) or to destroy it.

## Beast Growth

*The beast grows to incredible size and exhibits tremendous strength.*

**Level:** 4
**Category:** Exploration
**Time:** 10 minutes
**Duration:** 8 hours
**Component Cost:** 70 gp
**Market Price:** 175 gp
**Key Skill:** Nature (no check)

A nonhostile Small or larger natural beast, such as a dog, horse, camel, or elephant, must remain within 5 squares of you while you perform this ritual. Upon the ritual's completion, the creature's size increases by one category. This change does not alter the beast's statistics, though its Strength is considered 8 higher for the purpose of determining how much the creature can carry, drag, or lift. In addition, the beast gains a +4 power bonus to Strength checks (but not to attack rolls or damage rolls).

The ritual's effect ends if the beast dies, at which point it reverts to its normal size.

## Call of Friendship

*Your song calls to a person's heart, filling it with feelings of kinship, affection, and perhaps even love.*

**Level:** 4
**Category:** Exploration
**Time:** 10 minutes
**Duration:** Special
**Prerequisite:** Bard
**Component Cost:** 50 gp, plus a focus worth 50 gp
**Market Price:** 215 gp
**Key Skill:** Diplomacy

You target one nonhostile natural humanoid creature that is at least 2 levels lower than you. The target must remain within 10 squares of you and hear the entire performance. Once you complete the ritual, make a Diplomacy check to determine the effect it has on the target. Once the ritual's duration expires, the target's attitude returns to normal. The ritual does not affect the target's memory in any way.

| Diplomacy Check Result | Effect |
|---|---|
| 19 or lower | The target acts as a friend for 1 hour, assisting you as he can, but he takes no actions that put him at any risk or that require an expense of more than 5 gp. |
| 20–29 | The target acts as a friend for 1 hour, assisting you as he can, but he takes no actions that put him at any risk or that require an expense of more than 25 gp. |
| 30–39 | The target acts as a friend for 6 hours, assisting you as he can, but he takes no actions that put him at any risk or that require an expense of more than 50 gp. |
| 40 or higher | The target acts as a friend for 1 day, assisting you as he can, but he takes no actions that put him at any risk or that require an expense of more than 500 gp. |

**Focus:** A musical instrument you play as part of performing the ritual.

## Detect Treasure

*You use a gold rod to indicate where nearby treasure is found. After a moment, the rod begins to vibrate, pulling you toward a large cache of loot.*

**Level:** 9
**Category:** Exploration
**Time:** 10 minutes
**Duration:** 5 minutes
**Component Cost:** 325 gp plus a focus worth 1,000 gp
**Market Price:** 800 gp
**Key Skill:** Arcana

You hold out a gold rod while you focus your mind on finding nearby treasure. The rod pulls in your hands, pointing toward the most valuable concentration of wealth within a number of squares determined by your Arcana check result. You can reduce the range if you choose.

| Arcana Check Result | Maximum Range |
|---|---|
| 9 or lower | 10 squares |
| 10-19 | 20 squares |
| 20-29 | 50 squares |
| 30-39 | 100 squares |
| 40 or higher | 200 squares |

When you finish performing the ritual, you can command the rod to detect only valuables within certain categories: metals, gems, other (art objects, maps, ritual components, and so on), or any combination of the above.

**Focus:** A gold rod you use in the performance of the ritual.

## Farsight

*You extend your senses to the horizon when you will it.*

**Level:** 16
**Category:** Scrying
**Time:** 10 minutes
**Duration:** Special
**Component Cost:** 3,600 gp, plus a focus worth 2,500 gp
**Market Price:** 9,000 gp
**Key Skill:** Arcana

Farsight functions as the Wizard's Sight ritual (*Player's Handbook*, page 315), but you can place your scrying sensor in any square you can see. You can see and hear as if you were standing in that square, and you have darkvision through the sensor. Your Perception skill determines whether you hear quiet sounds or notice unobtrusive things while observing an area through the sensor. You cannot place the scrying sensor in a location you can see only by using a scrying sensor.

Your Arcana check result determines how long the sensor lasts.

| Arcana Check Result | Duration |
|---|---|
| 19 or lower | 2 rounds |
| 20-24 | 3 rounds |
| 25-29 | 4 rounds |
| 30-39 | 5 rounds |
| 40 or higher | 6 rounds |

The ritual creates a scrying sensor—a shimmer in the air—that watchful creatures might notice. Creatures must succeed on a Perception check (DC 10 + your level) to notice the sensor. They can't disrupt or interact with the sensor in any way.

Sufficiently powerful warding magic, such as the Forbiddance ritual (*Player's Handbook*, page 305), can block Farsight. If the location is warded in such a manner, you learn that fact as soon as you begin the ritual, so you can interrupt the ritual and not expend any components.

**Focus:** A mirror or a crystal ball that conveys what you see and hear.

## Fool's Gold

*You turn a pile of base metal or lesser coins into a mound of gold.*

**Level:** 3
**Category:** Deception
**Time:** 1 minute
**Duration:** Special
**Component Cost:** Varies
**Market Price:** 125 gp
**Key Skill:** Arcana

You create an amount of illusory gold that vanishes after a certain amount of time. The gold looks, feels, and smells like real gold and weighs as much as real gold. You create an amount of false gold equal to the amount you spend as the ritual's component cost times a multiplier based on your Arcana check result. Your Arcana check result also determines how long the illusory gold exists. For example, if you expend 100 gp as the component cost and you achieve a result of 25 on your Arcana check, you crdeate 1,000 gp worth of illusory gold that lasts for 4 hours.

| Arcana Check Result | Duration/Multiplier |
|---|---|
| 9 or lower | 1 hour/×2 multiplier |
| 10-19 | 2 hours/×5 multiplier |
| 20-29 | 4 hours/×10 multiplier |
| 30-39 | 8 hours/×20 multiplier |
| 40 or higher | 24 hours/×100 multiplier |

Any creature can discern the true nature of the illusory gold by succeeding on a Perception check or Arcana check against a DC equal to your Arcana check result.

## Guards and Wards

*You fill your castle with dense areas of fog, arcane locks, and false portals to hinder and confuse intruders.*

**Level:** 18
**Category:** Warding
**Time:** 1 hour
**Duration:** 24 hours (special)
**Component Cost:** 5,000 gp, plus 5 healing surges
**Market Price:** 17,000 gp
**Key Skill:** Arcana

You layer enchanted defenses over an area you own or inhabit no larger than 30 squares by 30 squares and 100 feet (20 squares) in height.

The area fills with dense fog that makes the area heavily obscured. You and any creature you invite into the area can see through the fog as if the fog was not there. You can grant a creature a temporary invitation of any set length or revoke an invitation if you are in the presence of the invited creature or in the area of the ritual's effect.

All doors, windows, and other sealable nonmagical portals are locked using Arcane Lock (*Player's Handbook*, page 301). You create a number of hallucinatory items as per the ritual of the same name (*Player's Handbook*, page 306) equal to one-fifth of your Arcana check result. The

hallucinatory items created most often are false doors and false walls. Consult the Arcane Lock and Hallucinatory Item rituals for their effects, and use your Arcana check result to determine their properties.

The warding effect lasts for 24 hours, but you can extend this duration by spending a healing surge every 24 hours to sustain it. You do not need to be in the same area or even on the same plane to sustain the effect. If the ritual's effect is sustained without interruption for a year and a day, the effect becomes permanent.

## History Revealed

*You touch the disgraced general, conjuring images in your mind of a lavish masquerade ball, a military coup, and a horrible massacre.*

**Level:** 11
**Category:** Divination
**Time:** 10 minutes
**Duration:** 5 minutes
**Component Cost:** 600 gp
**Market Price:** 2,900 gp
**Key Skill:** Arcana

When you complete the ritual, you touch a willing or helpless creature and see the most defining moments of the creature's life. The images appear in order from the most important to the least. Your Arcana check determines the number of past scenes you see. The scenes you view are those most pivotal to the creature's history and are not chosen by any agency. Performing this ritual more than once on the same creature invariably displays the same scenes unless the creature has experienced defining moments since the last time you performed the ritual.

| Arcana Check Result | Number of Scenes |
|---|---|
| 9 or lower | 1 scene |
| 10-19 | 2 scenes |
| 20-29 | 3 scenes |
| 30-39 | 4 scenes |
| 40 or higher | 5 scenes |

## Imprisonment

*You inscribe runes upon your foe, and it falls into a space beyond the normal bounds of the cosmos from which it might never return.*

**Level:** 28
**Category:** Warding
**Time:** 1 hour
**Duration:** Permanent
**Component Cost:** 170,000 gp, plus 5 healing surges
**Market Price:** 500,000 gp
**Key Skill:** Arcana (no check)

You imprison a creature within a demiplane created by this ritual. The creature to be imprisoned must be either helpless or willing, and it must be present for the entire performance of the ritual. When the ritual is complete, an invisible magical field envelops the creature, putting it into suspended animation, and the

FRANZ VOHWINKEL

creature falls into a space beyond the normal bounds of the cosmos. Only divination rituals performed by creatures of your level or higher can determine the location of the imprisoned creature.

You must set one or more possible conditions that release the creature, should they come to pass. You can set an imprisoned creature free by performing a ritual of release that has no component cost and takes 1 hour. A freed creature has no memory of the events that occurred during its imprisonment, and it appears in the world on the ground closest to where it was imprisoned.

## Lower Water

*The water vanishes into the ground as if it fears your presence and power.*

**Level:** 2
**Category:** Exploration
**Time:** 10 minutes
**Duration:** 1 hour
**Component Cost:** 25 gp
**Market Price:** 100 gp
**Key Skill:** Nature

You cause a body of water to reduce in depth. Your Nature check determines how many squares the water lowers. The space of water you can affect has sides equal to your level in squares. For example, if you are level 12, you affect a space that is 12 squares on a side. If you lower the water to ground level or lower, the affected area becomes dry. In large bodies of water, the water outside the area is unaffected by the void you create. To an observer, the sides of the area appear to be walls of water. At the end of the ritual's duration, water returns to fill the volume it previously occupied.

| Nature Check Result | Depth |
|---|---|
| 19 or lower | 2 squares |
| 20–29 | 4 squares |
| 30–39 | 8 squares |
| 40 or higher | 16 squares |

## Magic Map

*You swing a crystal focus in circles above a map until it stops, hovering over a particular spot that indicates where your quarry is located. As you watch, the crystal focus moves across the map, tracing the route taken by your quarry.*

**Level:** 9
**Category:** Divination
**Time:** 10 minutes
**Duration:** Special
**Component Cost:** 325 gp, plus a focus worth 100 gp
**Market Price:** 800 gp
**Key Skill:** Arcana

When you perform this ritual, choose a specific creature. You must have an object that is tied to the creature, such as a bit of hair, a favorite scarf, or a personal weapon. You hold the object in one hand and suspend the focus from the other hand, holding it above a map representing a region no larger than 50 by 50 miles. If the creature is in the area, the focus is drawn to the creature's exact location as depicted on the map. As you watch, the focus follows the creature's movement.

Your Arcana check determines the duration of the time during which you can pinpoint the creature's location. This ritual is only as accurate as the map that is used.

| Arcana Check Result | Duration |
|---|---|
| 19 or lower | 1 round |
| 20-29 | 10 rounds |
| 30-39 | 10 minutes |
| 40 or higher | 1 hour |

**Focus:** A crystal plumb bob worth at least 100 gp, and a body part or personal object of the creature.

## Object Reading

*You touch the mysterious object and see images in your mind of its history.*

**Level:** 5
**Category:** Divination
**Time:** 1 hour
**Duration:** 5 minutes
**Component Cost:** 25 gp
**Market Price:** 250 gp
**Key Skill:** Arcana

You see images you wish to see related to an object you hold at the completion of the ritual. Your Arcana check result determines the number of images you see that are associated with the object's past. You might choose to see a sword's last owner, the creature that forged it, and the last creature it killed.

| Arcana Check Result | Images Displayed |
|---|---|
| 9 or lower | 1 image |
| 10-19 | 2 images |
| 20-29 | 3 images |
| 30 or higher | 5 images |

## Preserve Flame

*Under winter rain or the ocean's depths, this flame burns just as well as in the dry heat of midsummer.*

**Level:** 6
**Category:** Exploration
**Time:** 10 minutes
**Duration:** 8 hours
**Component Cost:** 75 gp
**Market Price:** 360 gp
**Key Skill:** Arcana (no check)

You alter one fire within 5 squares of you that is the size of a bonfire or smaller. No amount of water or effort can douse the flame until the ritual's duration expires.

You can voluntarily end this effect as a minor action.

## Purify Water

*The lake, tainted by a now-dead demon that laired in its depths, becomes crystal clear and refreshing to drink.*

**Level:** 1
**Category:** Exploration
**Time:** 10 minutes
**Duration:** Instantaneous
**Component Cost:** 10 gp
**Market Price:** 50 gp
**Key Skill:** Arcana, Nature, or Religion

You purify a volume of water. The amount of water you can purify is determined by the result of your Arcana check, Nature check, or Religion check.

| Skill Check Result | Amount of Water |
|---|---|
| 9 or lower | 1 square |
| 10-19 | 2 squares |
| 20-34 | 4 squares |
| 35 or higher | 10 squares |

## Shrink

*With a final flourish, you shrink the statue down to a much smaller size. The guards will never notice it hidden in your boot.*

**Level:** 6
**Category:** Exploration
**Time:** 10 minutes
**Duration:** Special
**Component Cost:** 50 gp
**Market Price:** 360 gp
**Key Skill:** Arcana

You shrink an object. Your Arcana check result determines how small the item becomes and how long the effect of the ritual lasts.

| Arcana Check Result | Size/Duration |
|---|---|
| 9 or lower | 75% of true size/1 hour |
| 10-19 | 50% of true size /6 hours |
| 20-29 | 25% of true size /12 hours |
| 30 or higher | 10% of true size /24 hours |

## Telepathic Bond

*You link hands with your allies, joining your minds with a psychic bond. Now, no matter where you each are, you can speak mind to mind.*

**Level:** 14
**Category:** Exploration
**Time:** 10 minutes
**Duration:** Special
**Component Cost:** 1,100 gp
**Market Price:** 4,200 gp
**Key Skill:** Arcana

For the duration of the ritual, you and up to eight allies can communicate telepathically. You do not need to share a common language to communicate telepathically. Your Arcana check result determines the duration of the ritual.

| Arcana Check Result | Duration |
|---|---|
| 9 or lower | 10 minutes |
| 10-19 | 30 minutes |
| 20-29 | 1 hour |
| 30-39 | 3 hours |
| 40 or higher | 8 hours |

## Unseen Servant

*Why bother with real servants when magical ones are so much more obedient?*

**Level:** 1
**Category:** Creation
**Time:** 10 minutes
**Duration:** Until your next extended rest or until you dismiss the servant
**Key Skill:** Arcana (no check)
**Component Cost:** 20 gp, plus a focus worth at least 25 gp
**Market Price:** 50 gp

You conjure a Medium unseen servant of invisible force. It obeys your commands, moves at your speed, can lift up to 100 pounds, and performs basic functions and repetitive tasks, such as cleaning, making camp, and moving, holding, or carrying objects.

An unseen servant never tires. It cannot move more than 20 squares from your space. It does not occupy any space and cannot attack or be attacked. Each unseen servant you currently control doubles the component cost to create the next.

**Focus:** A ceramic hand. The person who holds this focus is empowered to command any unseen servants summoned with it. If the focus is broken or not in anyone's possession for a minute or longer, all unseen servants bound to it disappear.

## Whispers of the Edifice

*You speak to the essence of a place, and the room reveals its darkest secrets and exposes its hidden skeletons.*

**Level:** 14
**Category:** Exploration
**Time:** 10 minutes
**Duration:** 5 minutes
**Component Cost:** 800 gp
**Market Price:** 4,200 gp
**Key Skill:** Arcana

You ask questions of and receive verbal answers from a single room or area. Your Arcana check result determines the number of questions you can ask. The room or area can be no larger than four times your level in square feet. The room knows what has happened inside it for its entire existence, but it is incapable of making any judgments or analysis.

| Arcana Check Result | Questions Allowed |
|---|---|
| 9 or lower | None |
| 10-19 | 1 question |
| 20-29 | 2 questions |
| 30-39 | 3 questions |
| 40 or higher | 4 questions |

# Arcane Backgrounds

The background section in Chapter 3 of *Player's Handbook 2* fleshes out the basics of character generation. It provides story hooks for a character's background and adds game benefits that reflect who you were before you became an adventurer.

Here are five backgrounds you can use or adapt to your arcane character. After choosing your background elements, you can (with your DM's consent) select one of the following background benefits.

- Gain a +2 bonus to checks with a skill associated with your background.
- Add a skill associated with your background to your class's skills list before you choose your trained skills.
- Choose one language connected to your background. You can speak, read, and write that language fluently.
- If you are using a campaign setting that offers regional benefits (such as the Forgotten Realms setting), gain a regional benefit.

## Arcane Agent

You are a member of a secret arcane society. The public believes that your secret society is composed of thieves and assassins, and it has been outlawed. Your society believes that your particular tradition of magic is unduly prosecuted in the area where you reside. Whether this belief is correct or not, you are an avid supporter of your society, and you look forward to the rare times when you receive secret communiques from other members of your society. Sometimes these messages take the form of magical sendings; others are inked on parchments that are magically treated to flash into ash upon being read. Most are of the "keep the faith" variety, though a few instruct you to undertake minor quests for the society. So far, none of these missions have taxed you or put you in a precarious moral situation.

*Associated Skills:* Stealth, Streetwise

## Arcane Mercenary

You work for pay. You'll take coin if that's all your patron has to offer, but you prefer to be paid in magic. Magic items, magical lore, magical secrets—you value these more than gold.

More than any other form of payment, you want an artifact. Gaining an artifact is your goal. You might even have a specific artifact in mind.

You recognize that artifacts, as magical quasi-entities with temperaments and goals all their own, cannot be bought and sold by gold. That knowledge only stokes your burning desire to possess one.

*Associated Skills:* Diplomacy, History

## Arcane Refugee

A great conflagration of magic enveloped your home when you were a child. Your family fled, and your parents became bitter, angry people who denounced spells and those who worked them.

Your family never explained to you the nature of the magical disaster that destroyed your home (and perhaps even the city or region where you lived as a child). This event stirred a great curiosity in you because of a strange red scar you have on the back of your hand—a remnant of your flight from the disaster. Some nights, the scar glimmers with its own light.

You began secretly exploring arcane magic. Your study was enhanced when you found an old locked chest in your surviving parents' chamber. It was filled with dusty, old books describing arcane fields of study. Before long, you were working basic spells on your own—but then your parents found out. You were banished and commanded never to return.

You wander now, looking for ways to increase your arcane knowledge and trying to discover more about the magical disaster that overshadows your life.

*Associated Skills:* Arcana, History

## Arcane Sentinel

A great secret has been entrusted to you, and you are that secret's sentinel. Your secret might be your guardianship of a tome containing dire and wondrous prophecies, the location of a magical shrine or planar gate, or your identity as the heir of some arcane tradition hunted to extinction except for the last few who cling to their allegiance to the order.

You are not completely alone. A few others share your burden. Sometimes you note the secret sign of your sentinel affiliation scribed in magical runes on the side of a building, written on a dungeon wall, or whispered in a dream. Until the next gathering of your fellow sentinels, reading these secret signposts is the safest way to maintain contact with your fellows without betraying your secret trust.

*Associated Skill:* Arcana

## Arcane Tracker

You are on the trail of a wondrous thing. It might be a manifestation that appears only under a full moon or an eclipse, a spellwarped beast whose rampages lash into the world from another plane, a lich assassin who killed your master and stole relics meant for you, or a demon child who rides an albino serpent through the dreams of its hapless victims. You pledged yourself to this hunt, knowing full well that the nature of your quarry could lead you far across the world and perhaps even beyond it. You know that when you finally catch what you are chasing, a great trove of arcane knowledge will be yours for the taking.

*Associated Skills:* Dungeoneering, Nature

# WHEN THERE'S A FIGHT WITH A DRAGON, IT'S MORE FUN TO BE ON *HIS* SIDE.

As Dungeon Master, you get to control the monsters, craft the challenges, and create the stories that get retold. Expand your imagination beyond your character sheet and into a D&D® campaign of your own.

Pick up a copy of the *Dungeon Master's Guide®* and *Dungeon Master's Guide 2* — and share the experience.

# Cast a Deadly Spell

You are a master of magic, a wielder and shaper of raw arcane power. Armed with your favorite staff, sword, or other implement, you stand ready to crush the forces arrayed against you.

This Dungeons & Dragons® supplement presents new powers, feats, paragon paths, and epic destinies designed for the bard, sorcerer, swordmage, warlock, and wizard classes. It also includes the vestige pact for warlocks, rules for familiars, a new kind of implement (tomes), and new builds and class features that allow you to play new versions of your favorite arcane classes—from the prescient bard or storm sorcerer to the illusionist wizard or summoner wizard.

For use with these 4th Edition Dungeons & Dragons® core products:

*Player's Handbook®* *Dungeon Master's Guide®*

*Monster Manual®*

*D&D® Miniatures* *D&D™ Dungeon Tiles*

CHAPTER 1

# Evil Unearthed

*"I have examined this book, perused its pages, and inspected the reflections of those despicable authors who have added their peculiar insights into this most foul work, yet I refuse to see this tome as evil. This book is just a book. Where evil exists in regard to this tome is in the intent behind its use. I can imagine how a wretched man with darkness in his heart might find the contents here instructive to feeding his vile ambition. Yet can we not also see how a virtuous man might scan these same pages for insights into how he might triumph over that same darkness? This book is a tool and nothing more. Do not be put off by the sharpened edges and the curious odors wafting from its pages."*

—Shemeshka the Marauder

**SOMETHING ABOUT** evil fascinates us, but who can say what turns a person into a monster, what compels an individual to commit unspeakable acts? This tome pulls aside the veil to reveal evil as it manifests in the worlds of the DUNGEONS & DRAGONS® roleplaying game.

In the D&D® game world, the *Book of Vile Darkness* is considered by many to be the most evil and blasphemous of all tomes. It is a catalog of wickedness, a repository of wisdom for those in service to evil, and a compendium of all things foul. The tome is an infection, a dark presence that uses temptation and corruption to bleed into societies. Handling the manuscript corrupts the innocent, and its lore destroys as it spreads like cancer through the minds of its readers. Thus, this sourcebook shares the damnable book's title. And in its pages you will find everything you need to make evil worthy of its name.

RALPH HORSLEY

# Product Overview

This product includes two books and a foldout battle map. The book you hold in your hands is intended for the Dungeon Master (DM), and it contains everything you need to place evil on center stage in your games. It offers extensive advice about building villains and running campaigns for evil adventurers. It also includes an assortment of tools to test and shock your players. It concludes with an adventure that explores what might happen when heroes come across the *Book of Vile Darkness*, and it includes combat encounters that use the battle map.

The second and smaller book is a guide for players interested in creating and playing evil adventurers. Since not every DM is keen to run a game featuring evil adventurers, it's ultimately your decision whether the options presented in the player's book are available to your players. Evil campaigns can be fun and interesting, but they often end badly—with a pile of dead characters as the only reward for your trouble. That said, you might find evil adventurers provide a refreshing change of pace to your group's normal roleplaying experience.

Before you turn the page to explore the wickedness piled inside, please know this product in no way aims to glorify evil or encourage deviant behaviors. Instead, these books are designed to give you a little nastiness with which to darken your games and present unforgettable challenges to your players.

A final warning: If you use this material, be prepared. Your players might never forgive you.

## OTHER RESOURCES

*The Book of Vile Darkness* is a toolbox for showcasing evil in your games. With it, your villains come to life, environments ooze corruption, and, ultimately, you will defeat your players' expectations. What this book is not is a comprehensive overview of evil, in all of its incarnations, found in the various D&D® settings. There are plenty of great sourcebooks that do this already. *Open Grave: Secrets of the Undead*™ provides an in-depth look at undead, while *Demonomicon*™ does the same for demons. For information on the gods, the planes, and their inhabitants, the *Manual of the Planes*™, *The Plane Above: Secrets of the Astral Sea*™, and *The Plane Below: Secrets of the Elemental Chaos* all offer great insight. Finally, the *Monster Vault*™ and *Monster Manual*® series of books also provide information on various evil creatures beyond this product. In short, this book works best when used in conjunction with your other sourcebooks to create truly vile creatures and encounters of your own design.

# The Book of Vile Darkness

*"There is not a moment in the long years of my life when darkness did not shroud my thoughts. Looking back through the veil of time, I recall well those early lessons, living a life apart from others due to the stain my family bore upon their souls. We were untouchable, outsiders, cursed, a people known for consorting with the forbidden. Such a life brought great suffering and want, yet I believe the hunger I felt and the resentment brimming in my soul laid the foundation for the greatness I have since achieved.*

*"My mother's identity shaped my earliest life. I recall well her sacrifices, the mewling cries of small animals dying beneath her sacrificial knife. I remember her horrid coupling with things that bore no resemblance to natural creatures. She was stern and cruel, yet she was the greatest teacher I have ever known. Though I have no love for her and was gladdened when the people burned her alive for consorting with fiends, I owe her a great debt. Without her, I would not be who I am today.*

*"I mention these memories not out of some maudlin need to explore my origins or as some justification for the actions I have taken in my mortal life. Rather, I bring them up here, in this work, to explain this manuscript's purpose and to reveal to you the power and wonder residing within darkness.*

*"Before any legitimate discussion on the nature of evil can begin, it is first necessary to dispense with the misapprehensions about evil commonly held by those moralizing proselytizers who seek to redeem the corrupted, to save those who have fallen into shadow, and to foster virtue in all they meet. Evil is not an absence of good. It is not a choice. It is not some crime, such as murder, theft, or deviance. It is not service to a reprehensible master; nor is it devotion to some dark power. Evil is one of two forces in the cosmos, an agency locked in eternal struggle against its antithesis. This war has only two sides, the light and the dark. And the whole of creation is both their battleground and the prize for which they vie. Do not be deceived into thinking a middle path will present a way to rise above the struggle. Only good and only evil exist. And not even a hair's width of space separates them.*

*"My mother understood this. She embraced her nature. She welcomed the darkness into her soul and profited from it. And though she found agony and death for her allegiance, her legacy lives on in me and my works.*

*"This, then, is why I wrote this book, why I labored to complete my studies on evil and preserve its legacy for all time. This book I leave as a testament to my service to evil and also as a guide to others who would follow my steps into the vile darkness. These contents exist to understand evil's myriad expressions, to learn from them, and to use them. And though I have embraced the darkness, I know my understanding of it is not yet complete. Therefore, I leave this book open to others to add to its lore with a goal of creating a more*

*perfect understanding of what it means to serve evil and to wield its power.*

*"I have but one warning before I leave you to your awakening. Resist not the truths I and perhaps others record here. Open your mind and heart to the knowledge contained on these pages. Only then will you understand and receive the wisdom darkness can provide. Should you falter, should you feel the treacherous pangs of guilt and shame, understand that this book will know. And when this book is roused, it will destroy you. Embrace the lore and spurn the light, and you too shall ever after walk in darkness."*

–Vecna

No description adequately evokes the fear and revulsion experienced by those who have encountered the dreaded *Book of Vile Darkness*. An ancient tome, it is said to be the foremost authority on evil, exploring every manifestation of darkness as it appears throughout the world and the planes beyond. It corrupts and destroys all whose eyes fall upon its filthy pages. It is a unique tome. There is no other of its kind or equal. Copies do exist and some might even contain excerpts from the original, but all are fragmentary–flawed, imperfect facsimiles lacking in the true power contained by the original work.

The *Book of Vile Darkness* is not a traditional tome; it is never fixed or complete. The book is always changing. New pages replace the old. Each time the book falls into wicked hands, its contents evolve. Those with the power to master the book are free to replace, revise, and add to its contents, and the tome changes form and composition to reflect the interests of its user. Anyone else–anyone too weak, too good, or too easily frightened–finds annihilation as his or her only reward.

Vecna is often credited as the book's original author, and the introduction quoted above seems to confirm this. Others have argued that Vecna came upon the tome during his rise to power. The book's secrets proved a contributing factor, along with Kas's betrayal, to the archlich's apotheosis. Some point to another figure as the original writer–a horrific monster called Nhagruul, who allegedly fashioned the tome from his own flesh. Nhagruul supposedly crafted the ink from his blood and bound his very soul into the manuscript. A third belief holds that anonymous seers of Tharizdun, the Chained God, created the book as a tool to annihilate the works of law and chaos–the worlds of the gods and the primordials. The tome's true origins are likely lost forever, since its changing nature and numerous contributors make it difficult to identify the original author.

The book is a great, ugly thing, its black patchwork cover held in place by heavy metal plates and adamantine wire. Claws and teeth sprout from its spine, while a heavy iron hasp and padlock hold the book closed. Textual revisions and additions are immediately obvious when examining its contents. Most pages are parchment, likely made from humanoid skin, though other sheets are made of thin lead, a dragon scale, or stranger materials. The writing's clarity ranges from lucid to incoherent, some in tight, neatly cramped rows and others in insane scrawls spattered with drool and blood. Diagrams, illustrations, and commentary from past owners break up the text. The book is almost impossible to navigate rationally, and learning anything useful from the book requires long hours of study.

It is hard to guess why this book was originally written. Many believe that the book was intended to serve as a profane liturgy for priests of the newly ascendant Vecna, and one can find passages in Vecna's surviving entries of the book similar to parts of other works authored by the archlich. The writing covers a wide range of grisly subjects–ritual sacrifice, demon husbandry, methods of extracting pain from the innocent, and so on. One does not read the book from front to back, since there is no order or structure to its contents. Instead, a reader leafs through the book, letting the corruption in his or her soul guide the eyes as they fall upon the page, to glean what lore the book bestows.

Devouring the tome rewards the dedicated reader with profound insight into evil's machinations, aiding the scholar in refining individual talents, while adding fuel to the corrupt fire burning in his or her breast. To all others, this book is an accursed thing, an object to be torn asunder, burned, its ashes scattered to the four winds. The darkness within the tattered pages is palpable. Those of pure spirit unfortunate enough to handle the text find their flesh blistering almost instantly. For those daring to read it, many things might occur: death is the most common result, the reader's brain liquefied in place. Others are driven mad or so corrupted they become monstrous things, filthy wretches beyond redemption. There are a few–perhaps those the book chooses–who find wisdom in the erratic text, and with that wisdom plunge into true villainy.

# Evil in the Game

*"I have heard it said evil is nothing more than good's absence, as if evil was the darkness to good's light. A comforting thought, I imagine, for those seeking redemption, but, I tell you, put such thoughts from your mind. You need only peer into a demon's eyes to know evil is not some vacuum waiting for virtue to come and fill its emptiness. Evil is a force. It is an influence in the cosmos, an agency equal to or perhaps even greater than its antithesis. There are two sides in this eternal struggle, one light and the other dark. You might find evil's works reprehensible, yet to those whose hearts belong to corruption, good deeds are equally deplorable. Understand, there is no redemption, only treason against the side you were born to serve."*

—Asmodeus, Lord of the Nine Hells

The capacity for evil lies in every thinking creature, just as vital as the potential to do good. Most creatures are divided. Virtue wars against dark desire, the cosmic struggle between these two forces played out on the smallest stage of one life. Committing what some might think an evil act does not make an individual evil, so long as the individual retains the ability to do good. What constitutes true evil is an inability to recognize good as a preferred state, to perform good deeds, and to fight against the darkness within. This descent into evil can be described as a staining of the soul, revealing the influence of evil in its purest form—vile darkness.

Certain authors of the *Book of Vile Darkness* claim good and evil were never part of Creation's underpinnings. In the beginning, only the contest between order and chaos existed. Eventually, order brought stability and godly worship to the worlds that the primordials had so crudely fashioned. It wasn't until Tharizdun plucked a shard of darkness from the furthest reaches of the cosmos that evil was born. And in reaction, good was born. Though this unusual thesis pervades the writings of the blasphemous tome, most moralists reject it.

Vile darkness, evil in its purest form, is a soulless emptiness permeating the cosmos. It spreads like so much spilled ink, staining everything it touches. Although it is possible to survive contact with this overpowering evil, it will always exist in the creatures, places, and objects manifesting it, and thus it can never truly be contained or defeated. It is possible to destroy Orcus, but the evil the demon lord represents will eventually infect or reanimate something else to take his place. There is no escape from vile darkness, and the struggle between it and exalted goodness will rage until the end of all things.

## Spread of Evil

*"It would be convenient to say that evil has in some way been a constant presence since the primordials first spun a world out of raw chaos. Such a tale would be deception. As much as good and evil shape the cosmos today, they are in fact intruders, forces introduced not long after creation by a mad god deceived and seduced by evil's allure.*

—Zagig Yragerne

Evil's influence is undeniable. It exists in the places stained by dark deeds and in the ruin left in devastation's wake. Evil relies on its servants to expand through the planes, and it regularly lures creatures into its embrace. These thralls are utter slaves to darkness. Their every work, regardless of their plans and ambitions, serves only to perpetuate evil's spread with greater and greater acts of villainy.

The method of contagion might vary from individual to individual, but there is an underlying structure to evil's agency. It can be best described as a process consisting of three broad phases; domination, corruption, and annihilation.

## Domination

*"I am nothing more than I am—the son of a witch and a demon lord. It is my birthright to claim this world, to conquer it and crush my enemies beneath my heel. You have a choice, then, knowing as you do that I am clear of vision and purpose. You can kneel and accept me as your master, or you can die."*

—Iuz the Old

Evil is insidious. It tempts. It is the easy path. Why negotiate with an intractable opponent when it is far easier to simply kill and take what you want? Why cultivate when you can steal? Why love, when lust's fulfillment is all you need? Evil's attraction arises from the freedom it promises and the power it grants. By abandoning a moral code, one can do what one wants with no regard for the consequences of those actions. Evil frees the darkness residing in each and every individual by dismissing repercussions and celebrating desire's swift fulfillment. Evil uses temptation to initiate the domination of formerly moral creatures. It might seduce or compel, but the result is the same: the action, if undertaken, is the first step onto evil's road.

One can see domination at work across the planes. Devils are the purest example of domination. They mislead and corrupt mortals either through promises of pleasure (the succubus), greed (the pit fiend), or brute force (the bearded devil). But devils do not have a monopoly on domination. Dark gods such as Tiamat or Bane demonstrate evil's efforts to subjugate the weak and bend them to their will. Domination also manifests through the actions of lesser conquerors in

the world, from the marching hobgoblin armies to the cunning mind flayer who manipulates thralls from the shadows.

Dominators are predominantly evil.

## Corruption

*"It is easy for you to judge me, seeing me as an undead monster, my brother's blood staining my hands, with my true love's ghost tormenting my waking dreams, but you cannot know evil's allure. You cannot understand how easy it is to take the dark path when the road of light and goodness is so hard to walk. I was not always the creature you see before you. Once I was a good man, as good as any other. I cared for my people, I loved life and living, and I sought to leave the world better than how I found it. Yet one betrayal, one treachery was enough to show me the truth I dared not believe, that good and evil are illusions and that there can only be action. So I followed this dark path, and as I walked, I found it easier to accept the future I had chosen. Do I regret? Perhaps. But I am committed to my journey and to claim what is mine by rights."*

—Strahd von Zarovich

One dark deed is not enough to condemn a creature as irredeemable, but it is the first step, and evil is never content with a touch when an embrace beckons. The first temptation is one of many to come and the more the individual succumbs, the greater evil's hold. This corruption brings with it an inability to see any other option aside from the most expedient one—the one that tightens evil's hold on the world. With each wicked deed, the individual becomes more inured to the pangs of conscience. One murder might be difficult, but each murder after the first becomes easier and easier, until the creature becomes defined by its wicked deeds. All it takes is to be touched by vile darkness for evil to take root and thrive in the fertile soil of the soul. And the deeper the corruption runs, the more it spreads, afflicting the body and mind until the individual's wickedness becomes unmistakable.

Goblins, bugbears, and drow demonstrate how evil, once it takes hold, can turn an entire people to immorality, twisting them into something both less and more than they once were. Corruption is also present in many aberrant creatures. The Far Realm might be the purest example of evil as a corrupting influence, as revealed in the foulspawn. The same can said for darkness pervading the Shadowfell and those creatures who embrace its power, such as intelligent undead, necromancers, and blackguards. Not even the gods are above corruption, as demonstrated by Torog and Zehir, who seem to wallow in their moral failings.

Corruptors are evil.

## Annihilation

*"So much talk of good and evil bores me!"*

*"To understand evil is to understand true power."*

*"Don't you lecture me!"*

*"Maybe we should focus on killing Asmodeus."*

*"That spineless thief? I will spill his brains with that scepter of his and take back what he stole from us!"*

*"What a splendid idea!"*

*"Platitudes! From you? Ha! You are trying to deceive me!"*

*"Really, Aameul, your paranoia will be our undoing."*

*"My paranoia will be your undoing! I know your game!"*

*"Can we at least agree that evil, in its purest form, is complete annihilation?"*

*"Never!"*

—Aameul and Hethradiah, the two heads of Demogorgon, Prince of Demons

If there's one constant with all of evil's expressions, it is that evil eventually turns on itself. Evil is destructive. It devours anything and everything that it can until there is nothing left. When it has wrung every use from its servants, when it can drive its thralls no further, it turns them against each other until nothing remains.

Annihilation is evil's final state. It is the fate of all who serve evil and it is the ultimate aim of vile darkness. Creatures tempted by darkness and then corrupted by it are almost always destroyed in the end. Likewise, evil that manifests in the world spreads out, stains what it touches, and then collapses under its own excess. While this might be a comforting idea for those sworn to fight evil, once the vile darkness reaches annihilation, it attains its most destructive and persistent aspect and nothing short of total extinction can end its threat.

Certain creatures in the natural world have already become thralls to annihilation. Orcs, gnolls, troglodytes, sahuagin, and other creatures are wild, unpredictable races made monstrous by their soulless pursuit of utter destruction. As awful and threatening as these creatures are, they pale before the true horror embodied by demons. These shrieking hordes, led by those powerful lords who carve up the Abyss into petty kingdoms, boil up from the depths to visit destruction onto the world unlike anything it has ever before seen. Mirroring these efforts, but less restrained, are the slaads, who might very well be vile darkness personified. Add to those the various primordials and princes of Elemental Evil, the fallen and corrupt gods Gruumsh and Lolth, and countless other forces swelling from the deep places in the world and beyond its bounds, and one can see the struggle against vile darkness is not one to be won by simply waiting out the storm.

Annihilators are chaotic evil.

CHAPTER 2

# Evil Campaigns

*"The line between hero and villain is so faint, it might as well not be there at all. Disagree? Consider this: A group breaks into a residence, kills everyone inside, and then makes off with anything of value. Robbers sacking a roadside cottage are named villains for such a deed, yet adventurers who storm a goblin warren and do the same are dubbed heroes. The difference? You tell me because I cannot see it."*

–Lord Robilar

THE CORE rules urge players to stick with unaligned or good alignments and spend their time fighting evil and its machinations. That said, playing villains can be exciting. Since DUNGEONS & DRAGONS has room to permit this darker experience, this chapter sets out to give you tips and advice for running games featuring evil characters.

Before you allow players to use the rules in the accompanying player's book, it's a good idea to review this chapter first. It includes advice on the following topics.

- **Creating Evil Adventurers:** When building evil characters, players must pay special attention to class and race.
- **Managing Evil Characters:** Keeping adventurers working together despite their differences can be a difficult task. This chapter presents ideas that can help limit their potential for disruptive behavior.
- **Evil Adventuring:** Evil characters' motivations and methods need to be considered when crafting an adventure.
- **Adventures Ideas:** You can use these plot options to construct or adapt adventures for evil parties.
- **Campaign Themes:** Apply these themes to tie campaigns to evil's three expressions–domination, corruption, and annihilation.
- **Campaign Arcs:** Two campaign arcs demonstrate how to construct linked adventures that involve aspects of vile darkness for good or evil characters.

RALPH HORSLEY

# Creating Evil Adventurers

*"Do unto others before they do unto you."*

—Slippery Ketta

The normal rules for character creation suffice for creating evil adventurers. Regardless of a wizard's alignment, all the rules related to wizards apply. That said, you should pay particular attention to a few elements.

**Class:** Most classes are not restricted to a particular alignment. The cavalier (see *Heroes of the Forgotten Kingdoms*) is a challenging exception, though, because the character must have an alignment that befits a virtue. That doesn't rule out a player taking the role of an evil cavalier. It just makes it tricky. Such a character could be a fallen paladin or an extremist who is cleaving to a fanatical view of the virtue and thereby working evil. Alternatively, you could alter the feature to accommodate a vice.

When a player chooses a class, work together to discover how he or she can use that class's features and powers for evil. You might want to swap out keywords to better accommodate the character. For example, you could replace radiant damage with necrotic damage for a death priest.

**Race:** A character of any race can be evil. An evil campaign might suggest using monstrous races, such as goblins or kobolds, or races whose stories have strong evil overtones, such as the githyanki and bladelings. However, racial entries for these creatures as presented in *Monster Manual* and *Monster Manual 2* are not balanced for player use and present challenges when used in a campaign. Rather than using the racial mechanics described in these sources, you could reskin an existing race. For example, a goblin character could use halfling mechanics without changing anything about the race except its story. A full-blooded orc can use half-orc mechanics, and a githyanki can get away with using githzerai statistics.

### PLAYER CONSENT

Use caution when allowing players to play evil characters. Disruptions aside, many players are uncomfortable with the idea of playing evil adventurers or participating in games that focus on such characters. Dungeons & Dragons is a game of heroism, where good fights against evil. Therefore, evil characters turn the game on its head and might create situations where evil wins and creatures of virtue and goodness suffer for it.

Even though you might be amenable to allowing evil characters, be mindful of all players' interests, and be sure every participant is comfortable with the direction the game will take before embarking on such a journey.

## Managing Evil Characters

Few Dungeon Masters are willing to consider allowing players to take up evil adventurer roles, and for good reason. One out-of-control evil character causes friction in a group. Unless somehow checked, the entire game can be derailed. Of course, interesting roleplaying and story opportunities arise from the occasional use of an evil adventurer or adventuring party. In the right situation and with proper planning, you can turn what might have been a disruptive experience into a rewarding one.

## Cooperative Play

Dungeons & Dragons establishes two sides—good and evil—in the cosmic struggle. The game expects players to fight for good or at least lean in that direction. At some level, this expectation stems from the idea that the best D&D games are the ones that demonstrate heroism, cooperation, and boldness. Adventures assume characters will pit their talents against a cast of villainous foes and monsters, explore dangerous environments, and wrest fabulous treasures as spoils. Alignment has nothing to do with a character's ability to participate in these scenarios. It does, however, have everything to do with how a character engages in the scenario and his or her willingness to see a quest to its conclusion.

The difficulty many players encounter is that the evil alignment suggests a license to behave badly in the game. By scribbling evil in the alignment box, a player is somehow no longer obligated to participate in the team effort. Personal interests trump any quest the adventurers might undertake. And when competing agendas clash, conflict results—conflict that tears the party apart.

Evil characters might be self-interested scoundrels, but it is almost always in their best interest to throw in their lot with other characters. A lone adventurer stands little chance of defeating a dragon or surviving an encounter with a beholder, but an adventurer with powerful allies in tow can. Even villains understand their best chance of survival comes from surrounding themselves with like-minded allies.

The trick is to remind players their responsibilities extend beyond personal objectives to encompass protecting the links that bind the party together.

## Unity

Even a party of lawful good adventurers will have a hard time finding success if each character pursues a different agenda. You shouldn't expect a party of evil characters to have any more success in a similar situation. The strongest and most unified adventuring parties have clear missions in which their objectives are more important than characters' personal agendas. In

other words, the major quest is always more important than a character's minor quest. As long as a party has an objective of equal importance to each of its members, you'll find evil characters can set aside their private ambitions long enough to achieve the party's goals. Use any or all of the following techniques to keep your players focused on the goal, whether you have one evil adventurer or an entire party full of evil characters.

JAMES ZHANG

## Positive Connections

The most powerful tool for encouraging unity is to urge players to build positive connections between their characters. Have each player connect his or her character to at least one other adventurer in the party. Establish these connections during character creation to ensure they figure into characters' identities and motivations. The more connections you create between individual characters and the larger quest, the less likely players are to lose sight of what they're doing.

Good link options include siblings, romance, debts, shared enemies, enduring friendship, and shared beliefs.

## Common Enemy

Evil characters turn on one another when they regard each other as potential enemies. When suspicions are left to fester, betrayal and treachery tear a group apart in little time. In addition to positive connections, you can keep a party together by presenting an enemy more threatening than the enemies they see among themselves. If characters feel threatened by a common foe, they will have little choice but to work together to survive.

The common enemy should be a campaign villain (page 43). You should create personal connections between the foe (or foes) and each adventurer to ensure personal enmity. For example, in an Underdark campaign, the common enemy might be dark elves or a particular drow house. Or adventurers might find themselves fighting a cult dedicated to Torog, a demon lord, or an archdevil. Then again, a good-aligned adventuring party could be a powerful threat that surfaces from time to time when the do-gooders make it their quest to put down evil's champions.

## Patron

Connections and common enemies can offer some success at keeping an evil adventuring party together. But sometimes you might need to take a stronger hand to keep the group united, and that's when a patron can help. A patron is a character, organization, or power that employs adventurers as agents in the world. A patron sends characters on missions and either rewards them for their successes or punishes them for their failures. A patron can appear at the start of your campaign, in which case adventurers are likely goons or lackeys. Or a patron might emerge later, approaching the characters after they have made names for themselves.

For a patron to work in your campaign, evil adventurers must fear him or her more than they fear each other. Thus, a patron must be powerful, dangerous, and more villainous than the adventurers. He or she must have a connection to each character in the group to dissuade defections and treachery within the ranks. To coerce characters to act, a patron might threaten characters' loved ones (a good choice for unaligned adventurers), feed their addictions, withhold information about some important objective, or lend aid. A patron can also offer wealth, power, glory, and status to encourage loyalty.

Even though the classic patron is often a major villain, your group's patron need not be. The party might

be a shadowy arm of a good institution; a sect in service to a dark god; or a branch of an organization committed to toppling a corrupt government, politician, noble, merchant, or monster, such as a dragon or mind flayer. Certain campaigns might suggest other patrons. For example, githyanki characters might serve Vlaakith, and drow parties could work for a powerful priestess.

Service to a patron should not be a permanent situation. Your players are likely to plot against their patron and should, eventually, overcome their employer and take his or her place or gain independence. After their association ends, the patron could fade from the story or become a common enemy, depending on how the confrontation unfolds.

# Evil Adventuring

*"I love adventurers. They're so . . . tasty."*

– Ashardalon

Although evil characters require special considerations to encourage teamwork and cooperation, they are still adventurers and thus undertake many of the same exploits heroes do. Characters still chase after treasure, explore ancient ruins, and fight monsters. Alignment doesn't alter much about what they do; it only influences how and why they do it.

### ONE-SHOT ADVENTURES

Given the pitfalls of using evil adventurers, you might be hesitant to invest time and energy in creating a full-blown campaign. Rather than build adventures for such characters, you could run a one-shot adventure related to your regular campaign.

**Reversed Dungeon:** Have players assume the monsters' roles. Players create characters of a single race, such as kobold or goblin, and start the game inside a dungeon environment. They explore, fight other monsters, and pit themselves against adventurers who invade their lair.

**Behind the Scenes:** Instruct players to create goons in the employ of a campaign villain, preferably one their regular characters have not yet met. The evil adventurers go on a mission that sets up a future adventure for their regular characters, such as murdering an important person, stealing a treasured item, or sabotaging a plan or important story development. When the one-shot adventure wraps up, collect the evil characters' sheets and use the villains against the heroes in a future adventure.

## Motivation

One key difference between evil adventurers and their good or unaligned counterparts is their motivations for adventuring. Evil characters aren't likely to risk their lives to help the innocent and are not going to help those in need without compensation. Traditional adventure hooks might not work, so you will have to find other ways to draw players into the story.

**Greed:** The reward for performing a service must outweigh its risks. Even then, evil adventurers are likely to take more than they were offered. For example, they might rob their employers or claim their reward without completing their task. Adventurers are also apt to dicker over their fees, so you should set the payment low and allow players to haggle for a higher price. Do not, however, give characters the full reward up front. They should claim their prize when they complete the mission and can prove it.

Also, be ready for adventurers to double-cross their employers. Don't be surprised when characters return from a mission and then sack the town they just saved. You should never quash players when they are roleplaying. If you leave a situation open for their exploitation, let them do it to the best of their ability—even if doing so upsets your plans. Instead, think about the consequences of the characters' actions, and adapt the story to accommodate them.

**Revenge:** Even though the promise of reward can drive an evil party, revenge is a far stronger motivator. Evil characters are less likely to forgive slights or let a defeat go unpunished, as is evidenced when they plot against each other. Don't be afraid to harass characters during their adventures to draw them deeper into the plot. Be aggressive with your villains. Have them send goons and monsters after the adventurers. It won't take long for players to turn their attention to the source of their troubles and devote every resource toward destroying their foes.

**Power:** Evil adventurers crave power. Adventuring gives them a chance to gain levels and find magic items and other booty. The promise of personal power can draw a party into an adventure, but it can also turn its members against each other when they squabble about who gets what.

Hinting at great rewards and vast power should be sufficient to lure adventurers into accepting a mission. When it's time for characters to acquire magic items, give prizes out in groups to avoid conflict about ownership. Alternatively, you can offer specialized rewards, such as divine boons, legendary boons, and grandmaster training, to particular characters.

# Methods and Consequences

Good and unaligned adventurers typically walk lightly through the world. They might wreak havoc in a dungeon environment and wipe out infestations of nasty creatures, but between adventures, they are usually well behaved. Evil characters offer no such assurances. Their motivations and methods for achieving their objectives are what make them evil. They murder, steal, betray, and perform all kinds of nasty actions. Each time characters indulge their darker impulses, you must decide what consequences, if any, they face.

Resist the temptation to drop the hammer of justice on them. Evil characters are hardly evil if they don't do bad things. You wouldn't deny a paladin the chance to risk his or her life to save an innocent, so you shouldn't deny a thief the opportunity to pick pockets in a crowded inn or an assassin the chance to knife a victim in a dark alley. Let players play, within reason. Sacking a town, murdering an innkeeper, poisoning a merchant, or some other action is fine as long as it aligns with a character's personality.

However, if adventurers satisfy their evil tendencies too often, they should suffer consequences. Ambushing too many caravans eventually attracts the attention of a local government or an adventuring band. Killing townspeople results in demands for justice and an official search for the culprit. Civilization cannot tolerate unchecked evil and moves to contain dangerous elements to safeguard its future.

Keep track of what characters do and where they do it. Think about how the world would react to characters' actions, and come up with suitable consequences for those actions. A few close calls with righteous knights and witch hunters should be enough to curb players' enthusiasm for carnage and mayhem.

Of course, wicked characters don't have to be destructive and uncontrolled. They might be subtle or cunning, revealing their evil tendencies only in special situations. Evil characters are still people and, thus, their moral failings manifest in a variety of ways. Urge players to look beyond obvious caricatures and to regard their characters as complex individuals who are willing to act in ways others find objectionable.

# Adventure Ideas

It's not difficult to create adventures or adapt existing adventures to accommodate evil characters. Like heroes, wicked adventurers can profit from fighting evil, chasing rare items, and exploring dangerous environments. Of course, how you hook them is apt to differ (see "Motivation" above).

The following plot options can form the foundations of new adventures or be woven into existing adventures to infuse them with a darker essence.

## Ambitious Deception

To get into a noble's good graces, characters launch a smear campaign against their enemies in the noble's court. They might attempt to fabricate evidence and commit crimes to blame on their foes. One mistake, however, can unravel everything and bring the noble's vengeance down on their heads.

## Ambush a Caravan

Adventurers learn a caravan laden with treasure and goods is bound for some distant port. When they strike, characters find it is under heavy guard and must fight for their lives. If characters defeat the guards and plunder the goods, they find a curious item of significant value, an item whose theft earns them a powerful enemy.

## Betray a Hero

A famous adventurer learns about the evil characters' talents and recruits them to right a wrong or destroy a vicious monster. If they betray their employer, leaving him or her to die while they make off with the treasure, the hero somehow escapes certain death or returns as an undead monster. Whatever the case, the hero wants revenge against the traitorous party.

## Corrupt a Hero

Adventurers work to persuade a famous hero to embrace darkness. They might kill the character and turn him or her into an undead monster, use temptation, or methodically destroy things and people their target loves until he or she succumbs to darkness.

## Destroy a Good Creature

Characters hunt good creatures for sport, to harvest something from them, or to steal their treasures. Common targets include metallic dragons; good fey creatures, such as unicorns; and servants of good gods.

## Destroy a Temple

Adventurers plunder a temple or holy site dedicated to Erathis. Temples are famous for their riches and, thus, are ideal targets for irreverent, greedy miscreants. They might kill its attendants or burn the site to the ground. Of course, such actions earn adventurers a slew of new enemies, including paladins, clerics, and possibly even Erathis's angels.

## Found an Evil Temple

Seeking a boon from an evil god or dark power, the adventurers set out to found an evil temple in their patron's name. To do so, they must find a relic,

consecrate it in darkness, and perform a sacrifice on the blasphemous altar they raise.

## Get Revenge

After a rival group, organization, or villain knocks adventurers on their backsides, they immediately plot revenge. Players know any attack against the offending party will only result in more conflict. To truly destroy their foe, the adventurers must destroy everything their enemy cherishes until it has nothing left.

## Murder a Hero

A sly villain hires the characters to assassinate a well-liked and prominent hero. Players must gain intelligence about their target, make arrangements, and accomplish the deed. Of course, after their victim keels over, they invite retribution from their target's friends and won't find shelter from their employer. Also, efforts taken to return the murdered hero to life could further complicate matters.

### ADAPTING PUBLISHED ADVENTURES

Published adventures expect characters to be good or unaligned, and most hooks and quests depend on it. You can still use these adventures for evil characters, but you will need to alter the circumstances to accommodate far darker motivations.

**Compensation:** Increase the monetary reward for completing a quest by 50 to 100 percent and deduct this value from the treasure the adventure rewards. A big reward can replace a hook that relies on goodwill or doing the right thing.

**Player Driven:** Rather than presenting hooks to players, let them drive their involvement. Maybe a dungeon holds a powerful magic item a character wants, an important clue, or the adventurers' common enemy.

**Active Enemies:** Evil adventurers are particularly likely to skip out on their employers and not finish their mission. To combat this tendency, have enemies actively attack characters after they've begun the adventure. Repurpose skipped encounters as surprise attacks to hook players back into the plot.

**Switching Sides:** Evil adventurers are not above switching allegiances mid-adventure. Serving the adventure's villain might be more profitable than helping the people who hired them. In the villain's employ, characters might undertake different missions. If that's the case, reskin monsters (for example, turning gnolls into elves) in skipped encounters so the missions make sense.

## Perform an Evil Ritual

Characters find a dark ritual that could increase their power or spread despair in the world. To complete the ritual, adventurers must obtain a particular focus. The focus might be a despicable object or a victim to sacrifice to the dark powers.

## Raid a Community

Characters raid a community for supplies, treasure, or slaves. A quick attack takes defenders by surprise and hands adventurers a decisive victory. Not long after, a local lord recruits a good adventuring party to hunt down the wicked adventurers before they can attack again. To survive, characters must either confront their trackers or find a place to lay low.

## Rob a Grave

During an adventure, characters learn about a coveted Dawn War relic hidden in an exarch's tomb. Nine angels protect the site. To breach the inner vault, characters must carve a path through the guardians or survive a gauntlet of challenges before facing the exarch's restless ghost. If they secure the relic, the spirit curses them. If cursed, characters must find a way to lift the malediction or die.

## Sow Discord

Characters actively work to dismantle a government or person of power. They could spread discord, destroy buildings, incite riots, commit murder, and perform any number of other destabilizing actions, all while concealing their involvement in the resulting upheavals.

## Spark a War

Adventurers learn a valuable treasure was lost somewhere in a ruined castle a large humanoid tribe overran. Rather than storm the site, they attempt to convince a rival tribe to attack. They could use kidnapping, sniper attacks, or false accusations about the chieftain's daughter to frame the holed-up tribe. Minor skirmishes won't draw away enough attention from the castle's defenses, though. What adventurers need is a full-blown war and heavy casualties. Such a distraction should prove enough for adventurers to explore the ruins without interference.

## Steal a Treasure

Having learned about a magnificent item a local lord possesses, adventurers plot to sneak into the lord's castle. If they manage to sneak past the guards and breach the inner sanctum, they discover an expansive treasure hoard. On the way out, laden with spoils, the lord's only child blocks their escape. If adventurers kill

the heir in their bid to escape, they must contend with the righteous wrath of the wronged noble while trying to find a way to sell off the treasure that now names them killers.

# Campaign Themes

*"This world, I fear, has outlived its usefulness."*
—Emirikol the Chaotic

Campaigns featuring evil characters typically have darker themes tied to one of the three major expressions of evil: domination, corruption, and annihilation (see Chapter 1).

The following campaign themes can form the bones of new campaigns or be mixed with existing themes to bring out more sinister atmospheres and tones.

## Conquest

A simple campaign theme, conquest is not limited to particular alignments. In a conquest campaign, characters want to seize power and hold it. They might aim for temporal power, waging war across the world to forge a new and dark empire, or they could set their sights higher, venturing into the Astral Sea, the Abyss, or another plane to carve out a realm for themselves.

Characters spend much of their time amassing power, building armies, and waging war against their neighbors. While securing the territory they have claimed, they also quest for weapons and rituals to use against enemies and engage in negotiations to forge alliances with other lands and powers. If the campaign moves into the planes, adventurers could build a vast network in the natural world and use it to fuel strikes into other realms.

## Deicide

Killing a god is no small act, and wicked characters are not the only adventurers who could have a motive for doing so. Evil gods, for example, could be plotting to destroy the world or irrevocably damage it. To give such a campaign a nefarious spin, evil adventurers could target the gods to steal their power or destroy them for kicks rather than trying to foil plots. The gods are among the game's most powerful beings. As such, they are well prepared to handle threats against them.

Characters spend much of their careers fighting off the gods' servants, dealing with dark forces to grow their power, and venturing into the game's most dangerous locations to face off against their chosen foes. At the campaign's end, adventurers might face their enemy alone in his or her dominion, or they could face several gods who have come together to end the threat to their reigns.

## Destroy the World

Many campaigns focus on saving the world from a catastrophe. In this campaign, however, adventurers are the agents of its undoing. Characters might be active instruments in the world's demise—turning gods against each other, rousing the primordials, or calling forth an elder evil—or they might be pawns in a mad god's cosmic game to rip Creation apart.

Regardless of their roles, characters face a lonely, hostile world as both good and evil forces attempt to thwart their efforts. If adventurers are active agents of the world's destruction, they might enlist the aid of sinister forces, such as demons or slaads. In contrast, adventuring pawns might be surprised when such creatures come to their aid. In the end, characters die, complete their task, or switch camps to try to stop the cataclysm they've helped set in motion.

## Evil Against Evil

This campaign pits evil adventurers against evil opponents. Since evil is inherently destructive, it turns on itself when it can spread no farther. Perhaps evil has already won, and the last lights in the world have been extinguished. Despite being evil, the characters are the world's last hope against annihilation. Alternatively, adventurers might be agents of a dark power or servants of a dark god on a quest to defeat their patron's enemies. In any event, they are anti-heroes, and through their efforts, the world will live or die.

## Evil Against Good

Characters represent evil's best hope in triumphing over the light. Perhaps good drove back the darkness in a recent conflict, and now characters must restore the balance. Or maybe players are running beastly adventurers who are driven to spread mischief and suffering wherever they go until a force rises up to stop them.

At the start of this campaign, characters might hatch foul plots and commit heinous deeds to weaken good's hold. As the evil adventurers gain power, they find more dangerous foes opposing them, ranging from powerful adventuring groups to divine servants. This campaign likely culminates when characters confront a major and dominant force for good and defeat it.

## Other Campaign Themes

To adapt the following *Dungeon's Master Guide* campaign themes (pages 134–36) to accommodate evil adventurers, recast what is at stake and how adventurers are involved. If you want a simple game with little narrative structure, consider running a "Dungeon of the Week" campaign, in which alignment has only a minimal impact. The "On a Mission" theme is also easy to use. Just be sure to choose a goal that aligns with characters' identities. For example, adventurers could set out to recover the fabled *Book of Vile Darkness*, explore Bael Turath's ruins, or wage war against metallic dragons serving Tiamat.

Even "The Ultimate Villain" theme can be adapted to suit evil characters. For instance, an evil group might oppose a demon lord on principle or fight against a noble archfey in the Feywild. You don't have to set the villain as a being of godlike power either. Maybe characters take on a gold dragon that has subjugated the Nentir Vale's populace.

"World-Shaking Events," "Unfolding Prophecy," "Divine Strife," and "Primordial Threat" are as likely to feature evil characters as they are good ones. For instance, many wicked adventurers are happy with the world as it is. So whether a threat comes from the Far Realm or a primordial villain awakening in the Elemental Chaos, evil adventurers are likely to team with heroes to prevent a power shift. Additionally, prophecy doesn't care about good or evil. It chooses players in its drama from both sides. Finally, the gods have set aside their moral differences in the past and can do so again to contain a common threat. Not even Zehir wants a world with the Chained God free. Thus, his mortal servants could find themselves fighting alongside Bahamut's to combat the Cult of the Elder Elemental Eye.

As you can see, evil characters can be protagonists. Despite employing different and perhaps unsettling methods, they can still pursue objectives normally assigned to heroes. You need only shape your story's circumstances so evil characters' motivations line up with the campaign's objective. Thus, even though they're thralls to darkness, they are still advancing the plot in meaningful and interesting ways.

# Campaign Arcs

*"Were you sent by that bloated, filth-ridden failure, the Lord of Flies? If so, I must tell you—you can do better."*

—Glasya

The most effective use of vile darkness elements is to sprinkle them into an existing campaign, so pure evil can magnify an adventure's stakes. Deviant behavior in a combat encounter, a sinister environment, or a lethal disease can all go a long way toward conveying evil in its purest form without seeming over the top. The trick to incorporating vile darkness concepts is to use them to emphasize threats and reinforce major story components. When applied in this way, vile darkness preserves its power and reminds players of what exactly they are fighting.

The following campaign arcs can serve as the basis for vile campaigns. Rather than provide a blow-by-blow account of what happens, each entry includes a broad description of events that should occur at each tier. Use these arcs as frames on which to construct your own adventures.

## War for Hell

For all his fawning and servile promises, the archdevil Baalzebul has chaffed under Asmodeus's curse. Of

SAM WOOD

course, he earned it for his part in sparking the Reckoning of Hell, wherein the archdevil led an uprising against Asmodeus. If not for the traitor Geryon, Baalzebul might have ousted the supreme ruler of the Nine Hells. Instead, he remains bound in a slug-like form. Having spent ages amassing power and brokering alliances with demon lords, the Lord of Flies stands ready to reclaim his mantle and continue the work he began so long ago.

## Heroic Tier: As Above, So Below

This campaign begins with a murder. Characters are called to investigate because the victim was an influential figure (for example, a noble, a merchant, a priest, or a wizard). More murders follow the first. In each case, the target was an influential person. Through their efforts, adventurers discover the victims were secret followers of Asmodeus and the Six-Fingered Hand, a vicious cult dedicated to the demon lord Graz'zt, is responsible for the slayings.

Shortly after characters defeat a Hand faction, more cultists surface, and they release fearsome demons that rampage across the countryside. After defeating these threats, adventurers discover Graz'zt's devotees are conspiring to cleanse the land of Asmodeus's influence. With some nasty plot probable, characters dig deeper between adventures and discover a connection between the Six-Fingered Hand and a diabolist named Ruel.

Tracking down Ruel is not an easy task. Adventurers eventually discover he haunts a crumbling castle. Fighting their way through monsters and hazards, adventurers strike at the castle and confront Ruel in a terrible battle. Just as Ruel dies, he cries out to the Lord of Flies, begging to be saved. This utterance reveals an archdevil might be involved and hints at troubles brewing in the Nine Hells.

## Paragon Tier: Drawn into Darkness

Characters' efforts have not gone unnoticed. Glasya, sensing her father's peril, sees an opportunity for her own advancement. The archdevil dispatches her aspect in the guise of Ashari, a priestess of Ioun, to recruit the adventurers. Ashari claims her goddess fears unrest is churning in the Nine Hells. She asks characters to travel to Sigil to investigate and report back by using a magic item she provides. Ashari recommends adventurers speak with Shemeshka the Marauder, a dangerous but well-connected raavasta (*Manual of the Planes*, page 136) almost certain to have the information she needs.

On reaching Sigil, characters discover Shemeshka isn't easy to find, but trouble sure is. They wind up embroiled in escapades and side treks that divert them whenever they draw too near the elusive fiend. During their adventures in Sigil and beyond, characters learn demonic hordes are mustering for war in the Abyss, Graz'zt might be responsible, and the archdevil Bel has laid siege to the infernal city of Dis.

The situation turns darker when adventurers finally locate Shemeshka, who reveals a plot to unseat Asmodeus. If it succeeds, even the planes could be ripped asunder. The raavasta explains that Asmodeus alone can control the darkness contained in his ruby scepter. And if the relic falls into the wrong hands, it could reignite the Dawn War. Finally, Shemeshka reveals—with proper compensation, of course—Geryon is moving to murder Glasya and claim her realm. Such an act would weaken the lord of Nessus enough that his enemies might succeed in ousting him.

The paragon tier concludes when adventurers race to the Nine Hells to save Glasya from Geryon's attack. Characters must infiltrate the Nine Hells, battle countless devils, and reach the archdevil's palace, where Geryon and his yugoloth thugs trap them. Just as adventurers defeat Geryon, word reaches them that demons have invaded Avernus.

## Epic Tier: Battle for Baator

War in the Nine Hells dominates the epic tier, and adventurers must decide whether to choose sides.

When the epic tier begins, Graz'zt and lesser demon lords crush the Dark Eight (a covenant of pit fiends) and shatter Bel's armies from behind. Dispater rallies his defenders for a time. But as weakened as they are from Bel's siege, the outcome appears hopeless.

Regardless of whether Glasya was killed, Baalzebul successfully pins her death on Levistus, an easy task since the archdevil Levistus ages past slew Bensozia, Asmodeus's consort. In a rage, Asmodeus commands Mephistopheles to destroy Levistus and orders Baalzebul and Mammon to shore up Dis's defenses. Meanwhile, Belial reveals secret ways into the city to allow the demonic host to spill inside. Thus, Dis falls before aid can arrive. When Baalzebul arrives, he, Belial, and Graz'zt join forces, coercing Mammon into accompanying them, as they march against the lord of the Nine Hells.

Adventurers are not idle while these plots hatch. They have several potential patrons: Glasya, Asmodeus, or Baalzebul. Depending on with whom they ally, adventurers find themselves drawn into the plot. They might fight to conquer or save Dis, stall the demonic hordes on their descent into the Nine Hells' bowels, or reveal Baalzebul's hand in all the treachery.

The ideal outcome sees adventurers uniting Levistus and Mephistopheles (rulers of the Nine Hell's most frigid layers) to throw back the upstarts and thus restore order to the Nine Hells. However, if characters make too many missteps, Asmodeus could be deposed and a new power could rise in his place. The consequences for such an event are left to you to decide.

## Hunger of the Nine-Tongued Worm

One by one, the faint lights strung along civilization's frontier gutter as darkness, embodied by the warlord Korthak Maal, swallows them.

Rumor outweighs fact when it comes to Maal. Reports claim the mating of an orc witch and a demon bred him. Others say he is the last living son of deceased King Elidyr and is cursed to walk the world as a revenant until all traces of Nerath are erased. Some have whispered Maal is nothing more than a chieftain clad in lies designed to spread terror as his uncounted hordes tumble out from the night.

Regardless, Korthak Maal has never known defeat, and no force has been able to slow his march. It is against this backdrop the campaign begins.

### Heroic Tier: Invasion of the Nentir Vale

Promises of glory and riches, and perhaps the responsibility to protect one's homeland, inspire adventurers to journey to the Nentir Vale (as described in the *Dungeon Master's Guide*), where a seething host is heading. A call to arms has been raised in the town of Fallcrest, and all the land's heroes are converging to raise an army to throw back the evil masses.

Along the way, characters happen upon a sacked hamlet littered with rotting corpses atop which carrion eaters feast. An investigation of the ruins reveals not everyone fell to the sword. Tracks leading away from the hamlet indicate some villagers were marched away.

Following the tracks leads adventurers to an old ruin where orc scouts in service to the warlord Maal have staked their claim. When battling the orcs, characters notice their enemies' atypical forms and behavior. As each orc is slain, something tiny slithers away from its twitching corpse. It appears these orcs were infected with tsochar parasites (see Chapter 4). The battered prisoners are also infected with the parasites, as evidenced by their strange behavior and mutations.

Exploring the ruins reveals an underground complex filled with pungent, writhing alien creatures. Adventurers eventually enter a temple-like chamber deep below the surface world. Foreign carvings and invocations to the Nine-Tongued Worm decorate the earthen walls. While inspecting the domed room, filthy monstrosities boil out from the darkness.

If characters survive the confrontation, they manage to reach Fallcrest in time to contribute to the vale's defense. From this point forward, the heroes undertake missions to fight the horde, including engagements against the warlord's champions.

The heroic tier ends when characters participate in a grand battle against the invading army. Their contributions on the battlefield allow the vale's defenders to drive back the enemy, at least for a time. Yet the victory is bittersweet, because adventurers find more foreign worms wriggling among the dead—and not all of them slithered from their foes.

### Paragon Tier: Evil Within

With the threat to the Nentir Vale contained, at least for now, adventurers are free to research the troubling phenomenon and any specimens they might have acquired along the way. After much fruitless searching, characters come away with only a name: Uri Tantovar. An occultist and well-known expert on all things strange, he vanished after looking into an unusual occurrence in the Dawnforge Mountains. Having no other leads, adventurers head off in search of Tantovar.

UDON WITH CHRIS STEVENS

During the trek, players have several chances to undertake other adventures. Each reveals a bit more about what happened to Tantovar. It appears he and his companions vanished as they searched for a pulsing light in the hills. Adventurers eventually gain the information they need to reach the site, where they run into a creature that used to be Erin, one of Tantovar's companions. Mutated beyond recognition, she's accumulated several monstrous allies and has been troubling the surrounding lands. Defeating her reveals what happened to Tantovar; he found the light, and when it flared, he vanished.

Reaching this dead end, characters return to the Nentir Vale, where they discover a terrible plague has crept across the region from the west. Madness and mutation afflict everyone who contracts the disease. Old allies from the war beg the adventurers, who haven't yet been exposed, to find a cure. More investigation reveals the plague is connected to the parasite, and cultists are being accused of intentionally spreading it.

The paragon tier ends when characters raid the cult's stronghold, battle through its alien servitors, and cleanse the infection from the site.

## Epic Tier: The Scholar Returns

Destroying the cult ends the sickness, and adventurers are lauded across the vale. Before long, however, dire news reaches their ears. Korthak Maal has returned and is leading an even larger army. Scouts report soldiers under the warlord's banners are twisted mutants that scramble and claw, and they are completely under Maal's thrall. If destroying the cult eradicated the plague, perhaps killing the warlord can unmake the gruesome host.

Now in the epic level, characters should have little problem dropping in on the villain. When they do, they discover he's in the process of opening a rift to the Far Realm. As the portal yawns wide, characters learn Korthak Maal is Uri Tantovar, and he's returned to reveal his true master, the Nine-Tongued Worm, to the world.

After adventurers defeat Tantovar, they must contend with the rift. They have the power to temporarily seal it. But to permanently shut the portal, adventurers need to repair the fabric of time and space. To do so, they must travel to the lost dominion of Shom (*Manual of the Planes*, page 107) and find a creation sigil that can repair the damage. If they fail, the Nine-Tongued Worm, Mak Thuum Ngatha, is sure to break free.

The journey to Shom is perilous, requiring a long expedition through the Astral Sea. The party must battle githyanki pirates, aberrant horrors, and ancient abominations while they track down the dominion. Such work might require dubious bargains and full-blown expeditions. Eventually, adventurers locate Shom and are free to explore its desolate deserts in search of the fabled Lost City where they recover the sigil from the scourge dragon guarding it.

SKAN SRISUWAN

Having gained the creation sigil, characters must race back to the portal in the natural world. Just as they arrive, Mak Thuum Ngatha breaches the wards and emerges. While adventurers perform the ritual to unlock the sigil's power, they battle the tentacled horror leaking into reality.

The campaign concludes when characters drive back the elder evil or die trying.

CHAPTER 3

# Vile Encounters

*"Through my many adventures, I have had cause to interact with creatures most profane, and these encounters have taken place in some of the most desperate and alarming environments. I have peered into the Abyss and evaded demons thirsting for my blood and slavering for my flesh. I have walked the Old One's gallery and gazed at the walls, lined with skulls of those he had slain during his rise to power. I have witnessed the fiery Nine Hells, glimpsed the impossible vistas of the Far Realm, and descended into the lower planes to wage war against Chaos itself. Each time, I was astonished by the sheer diversity of those that mortals have deemed evil and delighted in the sheer ingenuity displayed in their myriad horrible forms. Truly, while this book has proved invaluable in my own efforts to ensnare gods beneath my fabulous abode, to say nothing of my magical research, I fear it cannot do justice in describing the extent to which shadow truly darkens the world."*

–Zagig Yragerne

THERE ARE places in the world where unspeakable acts have been performed, spots where the very laws of nature have been bent and fissured with vile magic. These shadowed demesnes bear the mark of vile darkness's expansion, and once sullied, they are rarely made clean again.

Adventurers have many opportunities to encounter such sites. From sprawling dungeon complexes to ruined cities, heroes venture to the darkest places to confront evil's lackeys. From floating earthmotes to shattered battlefields, brave heroes beard their foes in their lairs and witness firsthand what is at stake if they fail to win the day.

This chapter presents a variety of tools to help you showcase evil's influence, including vile terrain, curses, diseases, traps, and hazards. It also offers tips and tricks for building encounters featuring truly evil adversaries.

# Creating Vile Encounters

*"The path to power is fraught with difficulties. Arrayed on all sides are those do-gooders who believe it their duty to obstruct your efforts. It is not enough to arm yourself against these foes, for each one slain only underscores your apparent threat and inspires others to continue the work begun by those with whom you already dealt. In effect, slaughtering adventurers will consume your time and thus frustrate your long-term plans.*

*"A better solution for dealing with such enemies is not to confront them, but rather to lure them onto battlefields of your choosing—ones adequately prepared for the inevitable hero intent on your death. My tomb has served me well in this regard. The heroes believe I reside there, hiding in some deep vault waiting for the final death only an adventurer can deal. I, in fact, am nowhere close to the tomb. I trust in the traps and guardians I set there to keep the ruse alive and lure tomb robbers, group by group, to an unspeakable end. Thus have I been able to go about my business untroubled by their sort . . . untroubled by interference of any kind."*

—Acererak

Fighting evil is a frequent cause for adventure. Whether battling goblins in the Chaos Scar or venturing into the Underdark to breach the Vault of the Drow, D&D campaigns often feature evil monsters in deadly environments. Each quest completed is a setback to the forces of darkness pitted against civilization, the good, and the world itself. Yet just because these encounters include evil creatures and take place in sinister places doesn't mean they qualify as vile encounters.

A vile encounter is more than battling orcs menacing a frontier village; it's more than defeating a necromancer raising an undead army, or slaying the dragon in its lair. While these scenarios pit the heroes against villainous agents, in themselves they aren't vile unless they have some truly heinous quality to set them apart from other encounters.

For example, the orcs might raid the village to round up prisoners whose sacrifice will complete a ritual, calling forth an aspect of Gruumsh to terrorize the countryside. The necromancer, to bolster the number of dead available for animation, might unleash a horrific plague to prime a community for his dark magic.

In each example above, the villains pursue terrible objectives, ends so foul they leave the world changed for the worse. Creating undead is an evil act, but murdering the living to swell the numbers of zombies and skeletons is vile. Raiding a village and burning it to the ground is evil, but subjecting prisoners to untold horrors before cutting their throats for a profane ritual is vile. In short, these encounters demonstrate vile darkness in action, and showcase evil as an active and destructive force in the world.

## Vile Encounter Basics

Every encounter relies on the notion that the objectives sought by two or more forces have come into conflict. One side seeks an end and finds its efforts to attain its objective frustrated or thwarted by the opposition. Orcs guard a temple passage from intruders and the adventurers must move through the same temple to find the Shrine of Apollyon. The conflict's resolution is the heart of the encounter's story.

Vile encounters are no different from other encounters in this regard. In each instance, the adventurers find themselves confronted by enemies seeking an end counter to their own. A vile encounter, however, differs from others by the nature of the objective, the methods used to attain it, the opposition, environment, risks, and consequences for failing to thwart the opponent's agenda. In each case, these elements involve evil's pursuit of its most common goals: domination, corruption, or annihilation.

Creating a vile encounter or transforming an existing encounter into a vile one requires modifying these various elements so they demonstrate one of these aspects of evil. Not every vile encounter needs to or even should incorporate all of these elements, but so long as you offer one or two, you will create a different atmosphere for what would otherwise be a normal combat challenge.

### Objective

The conflict driving combat encounters is created by mutually exclusive objectives. The easiest way to "evil up" an encounter is to modify the opposition's goal so that it corresponds with one of the three major expressions of evil. The following suggestions offer ways you might add elements of domination, corruption, or annihilation to your antagonist's objective.

#### Domination

An objective that works to spread evil in some way falls under the domination category. This might be something as simple as pure conquest, in which the villains place victims under their control or authority, or more complex, such as when the antagonist tempts a player character or someone else to commit an evil act. Should the opposition succeed in its goal, evil gains control over the target.

**Example:** A mind flayer's servants abduct several innocent townsfolk, believing they are Dream Keys, individuals able to open a portal to the Far Realm when properly motivated. When the adventurers confront the illithid, they find the victims have already been focused

to the task, and the only certain way to stop the portal from opening is to execute them.

## Corruption

Corruption encounters are those in which the villains work to magnify an extant evil and increase darkness's hold on a person, object, or place. The initial pollution has already occurred, so it falls to the villains to increase evil's prominence. Simple corruption encounters are those where the stakes are immediately clear, such as a vile cultist performing a ritual to draw more demons from a tear in reality or to spread a disease beyond a contaminated village's borders. More complex corruption encounters often focus on the evil within the adventurers or nonplayer characters, whose temptations are not always apparent from the start.

The best corruption encounters are those whose stakes are revealed partway through or even at the end of the scene. The adventurers might believe they fight one sort of enemy, only to learn they have a different and far deadlier foe. Unlike domination encounters, which are typically straightforward, corruption encounters can and should be subtle yet their consequences far-reaching.

**Example:** A succubus kills and then impersonates an individual who is important to a player character in order to get close to the adventurer and turn him or her to darkness. This nonplayer character should be a spouse, a lover, a parent, or a mentor. The succubus remains in this guise for many years, subtly influencing the player character, urging the hero to undertake strange missions that often have unsettling consequences. When the succubus finally reveals its true nature, the adventurer should be shaken and conflicted about what to do, since it is not clear where the devil begins and where the lost ally ends.

## Annihilation

The mere intention to kill or destroy the player characters does not make an encounter an annihilation encounter. Most battles feature opposition driven by this motivation. For the encounter to be truly vile, the target marked for destruction must be something good, innocent, and pure. The goal should be destruction or desecration for its own sake. This is mindless violence, performed by creatures so consumed by evil that they cannot behave in any other way. Annihilation encounters are easy to construct since you only need to determine what it is that evil wants to eliminate. Complexity increases with the scope of the impending destruction. A simple annihilation encounter might feature a demon set loose in a town, while a complex example might feature a death cult performing a ritual to lure Atropus, the World Born Dead, to darken the skies and end existence.

**Example:** Unhinged devotees of Juiblex, the Faceless Lord, infiltrate a frontier community. In order to breed the slimes they worship, they unleash a vile plague in the streets. Whenever an infected person dies, slime slithers free from the corpse. The encounter pits the adventurers against the cultists. When they destroy the cultists, the characters discover there is no cure.

# Tactics

Objectives set the stage for a vile encounter by giving you a solid foundation for what is at stake. Though a vile objective is important, unless you demonstrate the creature's evil, the encounter will play out like any other. Tactics, then, are key.

What the creatures do and how they do it convey evil more than any other aspect of the encounter. Truly evil creatures are not likely to fight fairly. They might use disturbing spells or pursue courses of action the players should find reprehensible. You can demonstrate a creature's vile tendencies by using any of the following.

**Betrayal:** Vile monsters might exploit their allies to gain an advantage. They attack their allies to clear a path to reach the adventurers or use powers that sacrifice injured allies to damage the adventurers or to just recover from its own injuries. For example, a demon just called forth might kill its summoner first before attacking the player characters.

**Disturbing Effects:** You can describe a monster's powers in a way that reveals its vile nature. You might describe the sounds of screaming souls when a monster makes a fire attack. A character hit by a psychic attack might experience visions of loved ones dying in horrible ways. You can even make weapon attacks vile by describing how the villain strikes at sensitive areas, trying to maim the player character.

**Kill Dying Characters:** A vile monster will take the time to dispatch a dying adventurer. A vile wraith will certainly pause long enough to finish off a fallen adventurer if it can create another wraith. Although this is a viable tactic for vile monsters, it is one you should use sparingly.

**Lingering Effects:** An encounter with a vile monster should leave a lasting impression on the players. This might be something as simple as a scar or a wound that never quite heals, or it could be a disease or a curse (see page 29). During extended rests, the adventurers might suffer from nightmares after these encounters, or believe fervently that the monster might return at any time.

## Opposition

Evil creatures are an obvious choice for stocking a vile encounter. The key is to use creatures likely to work toward the encounter's stated objective. In thinking about the opposition, always keep in mind a creature's story, its place in the world, and what causes it fights for. Demons are great candidates for annihilation encounters. Devils do well in both corruption and domination encounters. Although there are exceptions, most orcs prefer to chop up their foes rather than tempt others toward evil or nurse existing evil until it flowers. A night hag would find it more useful to take prisoners, later extracting their souls for some unspeakable purpose, than to just kill the adventurers outright.

Evil creatures aren't exclusive to vile encounters. Sometimes using a good or an unaligned creature in a vile encounter creates a far more shocking experience to the players. A gold dragon is all the more fearsome when possessed by a demon or driven mad by some evil treasure that found its way into the dragon's hoard.

Always consider the monsters' powers. Look for potent combinations to test your players. For an easy example, if you have a monster that deals extra damage to targets granting combat advantage, be sure to include other creatures that can daze, knock prone, or restrain to increase the extra damage's frequency. Monsters that can spread diseases, drain healing surges, spawn allies from dead adventurers, or deliver effects that can last beyond the encounter's duration are good choices.

Finally, your monster choice should reinforce the encounter's narrative. The monster should define or add to the encounter's objective and its stakes, and convey the proper mood for such an evil scenario.

## Environment

You can enhance vile encounters by setting them in evocative environments that help communicate the encounter's objective. An appropriate environment can offer ways for the player characters to achieve their goals beyond simply slaughtering their opponents. Environmental tweaks might add extra complications and offer unexpected ways to defeat the enemies, or tools for those enemies to get an edge against the adventurers.

A vile encounter's environment doesn't always have to be a place steeped in evil. Desecrated temples, bizarre laboratories, and portals to malign realms are all suitable. Don't overlook places where evil seeks to gain a foothold. Vile darkness doesn't wait for heroes to root it out; it's an active and aggressive force, ever seeking to expand its influence through the planes. For this reason, these encounters are can take place where good holds sway. Healing houses, temples dedicated to good gods, idyllic communities, druid groves, tombs of fallen heroes, knight chapter houses, and similar locations can be excellent backdrops for vile encounters.

Ultimately, the environment should do three things: establish the stakes, reveal insights into the enemies' objectives, and reinforce the threat posed by vile darkness. Battling orcs on a desolate crag is something players expect to do. Discovering an orc tribe invading a sylvan paradise sacred to Corellon is startling, and the consequences for failure are far greater than the adventurers should allow.

## Consequences

If the adventurers fail to defeat the enemies featured in a vile encounter, the world should be worse off. An encounter centered on summoning a demon might see that demon released to wreak havoc in a nearby community if the adventurers fail to contain it. Failing to prevent the goblins from burrowing under the Healing Lodge might cause it to collapse into the earth.

Make the players aware of these consequences from the start. You can be direct and set the stage up front, or you might foreshadow the implications in prior adventures and encounters. Doing so helps ensure that the players will make stopping the evil a priority.

If the adventurers fail to thwart the evil plan, be prepared to go through with it. Try not to back down from the encounter's implications, even if doing so would spare a prized nonplayer character or important location. A catastrophic failure can set up future adventures and give the surviving player characters a powerful motivation to right the wrong they had a hand in creating.

# Vile Terrain

*"Dungeons are the ultimate expression of cruelty. They exist for one purpose—to kill. How wickedly marvelous!"*

—Iggwilv

The terrain described here supplements the fantastic terrain presented in the "Terrain Features" appendix of the *Rules Compendium*™. While these terrain features showcase evil's many expressions, other fantastic terrain such as blood rock and defiled ground is equally suited to vile encounters.

## Agony Amplifier

Many clichéd stories claim that there is power in pain, and that instinctive reactions to agony can be harnessed and used to great effect. The agony amplifier lends validity to these theories by broadcasting one creature's pain to all those around it. Profane runes form the outer edge of such a ring, binding mental magic into its vile form.

**Effect:** An agony amplifier typically covers a space 3 squares on a side. Whenever a creature in that space takes damage, each other creature in the space takes 5 psychic damage per tier. If no other creature is in the agony amplifier, the triggering creature takes 5 extra psychic damage per tier.

**Usage:** An agony amplifier is most likely to be found in a dark priest's temple or wizard's lair. These circles are useful for convincing fiendish creatures to serve the binder that called them. They can also be used effectively by creatures that immobilize or restrain. Such creatures can lock down victims and then pile on the pain.

## Carnage Stone

There are places in the world where evil has triumphed. These dark, blighted areas bore witness to great and terrible slaughter. Each innocent cut down on these sites leaves an imprint on the stone. Their psychic anguish bleeds out from their dying bodies and infuses the rock below. Creatures who travel across these damaged sites see flashes of the slaughter, from the perspective of either predator or prey.

**Effect:** Whenever a creature ends its turn on a square containing carnage stone, roll a d6. On an odd number, the creature falls prone. On an even number, the creature must make a melee basic attack as a free action against a random adjacent creature. If there are no adjacent creatures, the creature takes 5 psychic damage per tier.

**Usage:** Place carnage stone in sites that witnessed a terrible slaughter. Old battlefields, sites of genocide, and other dark ruins are good locations. Carnage stone adds an unpredictable element to combat, potentially shifting the battle for or against the adventurers each round.

## Festering Corruption

The Feywild and Shadowfell bleed into the natural world, and vice versa. There are tales about travelers vanishing into Faerie while walking a lonely road at night. Likewise, most rural communities know well there are nights when the dead walk and when the shadow reaches out from the underworld to snatch the living.

Planar bleeds rarely last for long. From time to time, a bleed lingers long enough to leave an impression, and the memory of the merged planes lives on for anywhere from hours to centuries. Festering corruption is an example of one such memory, and it results when a part of the Shadowfell oozes into the natural world. Little can survive the dark plane's touch. Affected areas feature dead grass underfoot, bones littering the ground, and skeletal trees whose clattering branches rattle with each gust. Only the most filth-hardened creatures can survive in these places for long.

**Effect:** An area of festering corruption is usually no larger than 4 squares on a side. Festering corruption has two effects, one for the living and one for the undead.

Whenever a living creature ends its turn in an area of festering corruption, it must make a saving throw. On a save, there is no effect. On a failed saving throw, the creature takes 5 necrotic damage per tier and is slowed until the end of its next turn.

Whenever an undead creature ends its turn in an area of festering corruption, it gains a +2 bonus to attack rolls and its speed until the end of its next turn.

**Usage:** Festering corruption results in places where someone or something has compromised the planar boundary's integrity. Dark rituals, shadow magic, or the creation of powerful undead can all create pockets of festering corruption.

## Forgotten Soul

The legends concerning the Raven Queen's rise to power suggest there is great power in souls, a power many vile creatures work to exploit. Most souls manage to pass through Letherna's gates for whatever fate awaits the dead, but a few find their final journey thwarted. Forgotten souls are wretched entities prevented from moving on because they are confused, imprisoned, or waylaid in some other way. Despair consumes them, and they infect the living with their sorrow.

**Effect:** A forgotten soul typically occupies 1 square. It does not block line of sight or effect, but creatures cannot move through its space.

On initiative count 10, a forgotten soul moves 1 square in a random direction into an unoccupied space.

Creatures adjacent to a forgotten soul grant combat advantage and take a –2 penalty to attack rolls. As well,

any creature that starts its turn adjacent to a forgotten soul must make a saving throw. On a save, nothing happens. On a failed saving throw, the creature is immobilized and takes 5 psychic damage per tier.

A creature can use a melee or a ranged attack to destroy a forgotten soul. The attack hits automatically, and the forgotten soul is removed from play. Forgotten souls are immune to close and area attacks.

**Usage:** Forgotten souls might linger individually or in small packs. They are most often found in dark dominions such as the Nine Hells, Pluton, or Shom, or in the most evil regions in the Shadowfell.

## Green Fog

A swirling green mist spreads across the ground, moving despite the lack of a breeze. As strange as the mists are, their sinister nature is not revealed until a creature vanishes into the fog. The mist transforms and corrupts the unwary soul, twisting it into a horrid mockery of what it once was. Unless the creature can somehow shake the green fog's effects quickly, the transformation will become permanent.

**Effect:** A patch of green fog covers an area 4 squares on a side. Squares in the fog are lightly obscured. Each round on initiative count 10, roll a d4. The green fog moves a number of squares equal to the die result in a random direction. Should the green fog move entirely out of the encounter area, remove the fog from play.

Any living creature that starts its turn in the green fog must make a saving throw. On a save, there is no effect. On a failed saving throw, the creature becomes a green fog mutant (save ends). Until the effect ends, the creature takes a –2 penalty to attack rolls, speed, and skill checks, but gains a +2 bonus per tier to damage rolls.

If a creature ends the encounter still subjected to the green fog's effects, the effects are permanent until the creature is the recipient of a Remove Affliction ritual or similar magic.

**Usage:** Green fog is not natural to the world; it originated in the Far Realm. For this reason, the queer mist only appears in tortured landscapes and warped terrain where the Far Realm's influence has been felt.

## Hellfire

Hellfire is a rare flame created by extracting energy from a tortured soul. Found almost exclusively in the Nine Hells' deepest reaches, these vile flames burn uncontrollably in areas where souls are gathered.

**Effect:** Whenever a creature that is not a devil enters a square containing hellfire or starts its turn there, it takes ongoing 5 fire and psychic damage per tier (save ends). If the creature is bloodied, the damage increases by 5. In addition, whenever a creature takes ongoing damage from hellfire, the creature cannot take opportunity actions or immediate actions until the start of its next turn.

**Usage:** Hellfire is common to the Nine Hells and rare elsewhere. Diabolists and those in service to Mephistopheles might know how to create hellfire and use it to ward their lairs.

## Larvae Pool

Among the many crimes one can lay at the feet of the night hags, the worst is their propensity for stealing souls bound to the Shadowfell. They warp their prisoners into squirming maggot forms called larvae, stuff them in bags, and slip away before anyone notices their villainy. The night hags use the larvae for their own dark rites and as currency for payment to other fiends in return for their loyalty or services.

**Effect:** A larvae pool covers a 2-square-by-2-square area and is difficult terrain. Any creature that ends its turn prone in the pool cannot crawl or stand up (save ends). Each time the creature fails a saving throw against this effect, the creature takes 5 damage per tier.

**Usage:** Larvae pools are found anywhere night hags are likely to haunt and might be guarded by demonic or devilish soldiers and brutes, especially those that can knock creatures prone.

KIERAN YANNER

## Lingering Evil

What might seem a trick of the eye could reveal some darker influence, a stain left by some profoundly wicked act. A revolting stench, dancing shadows, or weird chills can all indicate a lingering evil presence.

**Effect:** An area of lingering evil can be any size, though a 4-square-by-4-square space is common.

Good creatures take a –1 penalty to ability checks and skill checks made in the area of lingering evil. In addition, a natural or fey beast will not willingly enter its space. If forced, the beast is dazed until it exits.

**Usage:** Only the most profoundly wicked events create lingering evil. An evil god's appearance, a savage murder, or even a dark ritual can create an area of lingering evil. The phenomenon lasts in proportion to the creating event's duration, lasting for just a few minutes to centuries.

# Vile Curses

*"Do not speak to me of curses!"*

–Azalin of Darkon

A hag curses the knight who spurns her affections, barring him from ever finding love. A well-intentioned hero who kills a werebeast finds herself cursed to transform under the full moon's light. A band of heroes finds their flesh rotting and health failing after plundering a tomb king's vault. Curses are a staple in fantasy tales, and in the Dungeons & Dragons role-playing game, curses can prove as deadly as anything the heroes might fight.

A curse is an affliction gained as a result of a specific action or event. A character can become cursed after destroying an evil enemy, exploring a cursed site, or angering a great power. Once a character gains the curse, the affliction attacks the character each day, growing in intensity and severity. To lift the curse, a character must usually undergo a quest or make restitution for the act that triggered it, though powerful rituals might remove the curse as well.

## Curses in the Game

There are several ways a character might gain a curse. Use curses sparingly. You can use a curse to drive the story, and thus draw the adventurers into a new quest, or you can use one to reflect a particularly vile adversary whose evil lives on even after an encounter ends.

### Bestow Curse

Evil priests, wizards, and similar sorts might level a curse against their enemies.

**Standard Actions**

**Bestow Curse ✦ Encounter**

*Attack:* Ranged 10 (one enemy); the curser's level + 3 vs. Will

*Hit:* At the end of the encounter, the target makes a saving throw. On a failed saving throw, the target gains the curse of [curse name] (stage 1).

### Dying Curse

You can add the following power to a creature's statistic block. The creature should be a major villain in the game.

**Triggered Actions**

**Dying Curse ✦ Encounter**

*Trigger:* An enemy drops the curser below 1 hit point.

*Attack (No Action):* Close burst 3 (triggering enemy in the burst); the curser's level + 3 vs. Will

*Hit:* At the end of the encounter, the target makes a saving throw with a –2 penalty. On a failed saving throw, the target gains the curse of [curse name] (stage 1).

## Cursed Locations

Certain places steeped in evil can also impart curses. Make sure you give the players plenty of warning so they know what they are risking when they explore the site. A character who performs the action triggering the curse is subjected to an attack: the character's level + 3 vs. Fortitude; on a hit, the character makes a saving throw. On a miss, the target gains the curse of [curse name] (stage 1).

## A Cursed Existence

Each curse has stages of increasing severity. Most curses have four stages:

- ✦ Stage 0 (the curse is dormant)
- ✦ Stage 1 (the curse's initial effect)
- ✦ Stage 2 (the curse's more severe effect)
- ✦ Stage 3 (the curse's worst effect)

The effect that curses the creature specifies the stage of the curse that applies. Once a creature is cursed, the creature is subjected to that stage's effects.

Unless the curse is removed from the creature, it might progress at the end of the creature's next extended rest.

## Progression

A curse might worsen over time. A creature can try to resist the curse by making a skill check. The creature must fight the curse by itself and can receive no aid from its allies.

**Skill Checks:** Until the curse ends, the creature must make a skill check as specified by the curse at the end of each extended rest to determine if the curse's stage changes or stays the same. A curse specifies two DCs. A check result that equals or exceeds the higher

DC causes the stage to decrease by 1 (thus reducing the curse's effects). If the result equals the lower DC or a number between it and the higher DC, the curse remains at its current stage. A lower check result causes the curse's stage to increase by 1 (thus intensifying the curse's effects).

Some curses have more than two DCs or require skill checks at different times.

**Reaching a New Stage:** When a creature reaches a new stage of the curse, it is subjected to the effects of the new stage right away. Unless a curse description says otherwise, the effects of the new stage replace the effects of the old one.

**Dormancy:** Unlike a disease, a curse does not end when a character reaches stage 0. Instead, the curse becomes dormant. At the end of the creature's next extended rest, it must make another skill check to see if the curse worsens. You cannot reduce the curse's stage beyond 0.

**No Final Stage:** There is no final stage for curses. Until the curse ends or is lifted (see below), its effects can weaken or intensify each day.

## Lifting the Curse

Lifting a curse is not a matter of waiting it out. If a creature does nothing, the curse stays around for the rest of the creature's life and persists even if the creature is slain and later raised from the dead. To end the curse, a character must complete a quest described in the curse's description. You can replace the quest with another that better fits your campaign. Once the character completes the quest, the curse ends.

A character can also lift the curse by receiving a Remove Affliction ritual or similar magic. At the DM's discretion, some curses are so potent that they cannot be lifted by common ritual magic and require a special quest or unique ritual to lift.

When a character ends the curse, he or she gains experience points as if he or she had completed a minor quest of his or her level.

### MORE CURSES

The curses presented here build on the curses presented in Peter Schaefer's article "Unearthed Arcana: Curses (Foiled Again)" (*Dungeon* 182). The article provides another take on how to use curses in the game. There are some differences in how they are used, but they are compatible with those included here.

# Sample Curses

The following curses provide a broad sampling of curses encountered in the world. You can use the curses at any level. Simply set the curse's level to be equal to that of its source (usually a creature) and then use skill check DCs appropriate for its level.

## Accumulated Years

The dreaded curse of accumulated years causes a creature's body to age at a rapid rate. The mind remains as sharp as it ever was, but the flesh fails, bones become brittle, and hair turns to snowy white. Hags and nymphs are notorious for using this curse to punish those who spurn their advances or frustrate their plans.

**Accumulated Years** — **Variable Level Curse**

*You feel the weight of accumulated years in the whitening of your hair, the mass of wrinkles and spots appearing on your skin, and the blurriness in your vision.*

**Stage 0:** The curse is dormant.

**Stage 1:** While affected by stage 1, the target takes a –2 penalty to Strength, Dexterity, and Constitution ability checks and skill checks.

**Stage 2:** While affected by stage 2, the target takes a –2 penalty to Strength, Dexterity, and Constitution ability checks and skill checks. In addition, creatures more than 5 squares away from the target have partial concealment against it.

**Stage 3:** While affected by stage 3, the target takes a –2 penalty to Strength, Dexterity, and Constitution ability checks and skill checks as well as weapon attack rolls. The target is slowed, and creatures more than 5 squares away from the target have partial concealment against it.

**Stage 4:** While affected by stage 4, the target takes a –5 penalty to Strength, Dexterity, and Constitution ability checks and skill checks. In addition, the target is blinded, slowed, and weakened.

**Check:** At the end of each extended rest, the target makes an Arcana or Endurance check.

*Lower than Easy DC:* The stage of the curse increases by one.

*Easy DC:* No change.

*Moderate DC:* The stage of the curse decreases by one (if at stage 0, there is no change).

**Lifting the Curse:** Perform a service for an evil hag (heroic tier), steal a kiss from an archfey (paragon tier), or bathe in the Pool of Eternal Youth (epic tier).

## Misery Eternal

The sinister atmosphere evoked by the Shadowfell stems from the incredible dangers embodied by its inhabitants. It is home to death giants, undead, and countless other creatures. Yet creatures do not alone make this plane dangerous. There are places where the land itself is as great an enemy as any monster. The curse of misery eternal often falls on those who explore the Shadowfell's darkest regions, where shadow energy pools and grows stagnant, poisoning the landscape with death's power.

**Misery Eternal** **Variable Level Curse**

*A cold bleakness grips your thoughts. It drags you down into a melancholy from which there is no escape.*

**Stage 0:** The curse is dormant.
**Stage 1:** While affected by stage 1, whenever the target rolls a natural 20 on an attack roll, skill check, or ability check, the target must roll again and use the second result, even if it is also 20.
**Stage 2:** While affected by stage 2, the target is affected by stage 1, and the target's normal complement of actions on its turns does not include a minor action.
**Stage 3:** While affected by stage 3, the target is affected by stages 1 and 2. In addition, the target becomes insubstantial against all damage except force damage and radiant damage. If the target drops below 1 hit point, it dies.
**Check:** At the end of each extended rest, the target makes a Religion check.
*Lower than Easy DC:* The stage of the curse increases by one.
*Easy DC:* No change.
*Moderate DC:* The stage of the curse decreases by one (if at stage 0, there is no change).
**Lifting the Curse:** Drop a good creature to 0 hit points (heroic tier), spend a day and a night in the dark lands (paragon tier), or travel to the Empyron on Celestia and drink ambrosia from a sacred cup (epic tier).

## Noisome Vapors

What at first seems to be a humiliating affliction reveals its true threat when the sickening odors become pungent enough to kill. Characters who explore the more fetid corners of the Abyss or who battle slaads might gain this affliction.

**Noisome Vapors** **Variable Level Curse**

*A rancid odor follows you and grows worse with each passing day until no one can stand to be around you.*

**Stage 0:** The curse is dormant.
**Stage 1:** While affected by stage 1, all living creatures adjacent to the target take a -2 penalty to attack rolls.
**Stage 2:** While affected by stage 2, all living creatures within 2 squares of the target take a -2 penalty to attack rolls. In addition, when a living creature ends its turn in a square adjacent to the target, that creature is weakened until the end of its next turn.
**Stage 3:** While affected by stage 3, all living creatures within 3 squares of the target take a -2 penalty to attack rolls. In addition, any creature that ends its turn within 3 squares of the target takes 5 poison damage (10 at 11th level, 15 at 21st level), and it is weakened until the end of its next turn.
**Check:** At the end of each extended rest, the target makes an Arcana check.
*Lower than Easy DC:* The stage of the curse increases by one.
*Easy DC:* No change.
*Moderate DC:* The stage of the curse decreases by one (if at stage 0, there is no change).
**Lifting the Curse:** Carry a toad in your pocket for a week (heroic tier), kill a slaad of your level or higher in single combat (paragon tier), or swallow a single drop of the River Styx (epic tier).

## Sentient Tumor

The Far Realm's intrusion into the natural world brings with it madness and mutation. The myriad aberrant creatures capering in the dark places give proof to this alien realm's threat. A brush with these creatures is sometimes all it takes to become afflicted with the Far Realm's influence.

**Sentient Tumor** **Variable Level Curse**

*A bulge in the flesh is one thing. A flicking eye in the center of the undulating mass is something else entirely.*

**Stage 0:** The curse is dormant.
**Stage 1:** While affected by stage 1, the target gains an unsightly growth bearing an eye in the center. The target gains a +2 bonus to Insight checks and Perception checks.
**Stage 2:** While affected by stage 2, the growth swells in size. Whenever the target is first bloodied, it is dominated until the end of its next turn. The tumor always directs the target to attack an ally.
**Stage 3:** While affected by stage 3, the target rolls two initiative checks at the start of combat. On each of its turns, it rolls a d6. On an odd number, the tumor chooses the target's actions, causing it to attack its allies or approach them if they are out of range. On an even number, the target acts normally.
**Check:** At the end of each extended rest, the target makes an Arcana or a Dungeoneering check.
*Lower than Easy DC:* The stage of the curse increases by one.
*Easy DC:* No change.
*Moderate DC:* The stage of the curse decreases by one (if at stage 0, there is no change).
**Lifting the Curse:** Convince a foulspawn to accept the tumor as a gift (heroic tier), cut a portion of the tumor away and fling it into the Far Realm (paragon tier), or shatter one of the seals containing the Chained God (epic tier).

## Tomb King's Wrath

Those who have plundered the vaults of ancient kings whisper of the curse that haunts those who touch the fabulous treasures therein. The curse causes flesh to fester and rot. Victims who succumb to the curse collapse into piles of dust, dispersed in the lightest breeze. Powerful mummies curse their treasures to discourage robbers from disturbing their rest.

**Tomb King's Wrath** **Variable Level Curse**

*Tumescent black boils appear on your skin that burst with a touch. The rot from these wounds spreads quickly to consume your body.*

**Stage 0:** The curse is dormant.
**Stage 1:** While affected by stage 1, the target has vulnerable 5 to all damage.
**Stage 2:** While affected by stage 2, the target has vulnerable 10 to all damage and takes a -2 penalty to attack rolls.
**Stage 3:** While affected by stage 3, the target has vulnerable 10 to all damage, takes a -2 penalty to attack rolls, and is weakened. If the target drops below 1 hit point, it dies instantly, and its remains turn to dust.
**Check:** At the end of each extended rest, the target makes a Religion check.
*Lower than Easy DC:* The stage of the curse increases by one.
*Easy DC:* No change.
*Moderate DC:* The stage of the curse decreases by one (if at stage 0, there is no change).
**Lifting the Curse:** Spend one week in the desert without food or water (heroic tier), convince a mummy to lift the curse (paragon tier), or travel to the Forgotten City and place a sacrificial offering on the altar of a dead god (epic tier).

## Werewolf Lycanthropy

Accepted lore claims lycanthropes are humanoids that can transform into beasts and back again. There are tales, however, of mortals cursed by Melora or Sehanine for some crime they committed against nature. Each time the full moon rises, the transgressor transforms into a savage beast. Other cursed creatures can pass on their affliction through bite attacks, in which case the curse replaces the monster's disease.

This curse is designed for werewolves, though you can adapt it for other kinds of lycanthropes by changing the form the creature assumes.

**Werewolf Lycanthropy** **Variable Level Curse**

*The rising moon awakens the beast within and it will stop at nothing to be free.*

**Stage 0:** The curse is dormant.
**Stage 1:** While affected by stage 1, the target takes a -2 penalty to Will.
**Stage 2:** While affected by stage 2, whenever the target becomes bloodied, it makes a melee basic attack as a free action against an ally adjacent to it.
**Stage 3:** While affected by stage 3, whenever the target is hit by an attack, it makes a melee basic attack as a free action against an ally adjacent to it.
**Stage 4:** While affected by stage 4, the target becomes a werewolf under the DM's control, but only on nights of the full moon. The werewolf's bite exposes targets to this curse, rather than werewolf moon frenzy.
**Check:** At the end of each extended rest, the target makes a Nature check if it is at any stage but 4.
*Lower than Easy DC:* The stage of the curse increases by one.
*Easy DC:* No change.
*Moderate DC:* The stage of the curse decreases by one (if at stage 0, there is no change).
**Lifting the Curse:** Bestow the curse to one good creature of your level or higher (heroic), seek out a werewolf lord and convince it to lift the curse (paragon), or gain an audience with the Maiden of the Moon and subject yourself to her judgment (epic). At the DM's discretion, a Remove Affliction ritual performed on the target also lifts the curse.

**Werewolf Bite** **Curse Attack**

*You sink your fangs into another creature to rend the flesh and spread your curse.*

**At-Will**
**Standard Action** **Melee** 1
**Target:** One creature
**Attack:** Your level + 5 vs. AC
**Hit:** 2d6 + your level damage. If this attack bloodies the target, the target must make a saving throw at the end of the encounter with a -2 penalty. On a failed saving throw, the target contracts the curse of werewolf lycanthropy (stage 1).

# Vile Diseases

*"Issue forth and multiply, my children! Work your evil! Show these mortal meat bags no mercy! I want to see eyeballs bleed, boils burst, and skin slough from bones!"*
– Phraxas the Oinodemon

Though capable of creating much misery and suffering, disease isn't usually innately evil. Knowingly spreading disease, however, is evil, and certain creatures, such as slaads, do so without reservation.

Some plagues stand out from the rest. They are strange and unsettling diseases whose effects are so profound and so horrific that they qualify as being evil. This section presents several of the more notorious diseases adventurers might face. Some diseases affect the body, while others target the mind. All, however, leave their victims far worse off than they were when they began.

## Contracting a Disease

Each entry includes details on how a creature might be exposed to the disease. Diseases transmitted by monster attacks require close contact and thus aren't transmitted by weapon attacks. Instead, they transfer by melee attacks that lack the weapon keyword such as slam, claw, bite, and so on.

If a monster has such a natural attack, you can add the following power to its statistics block.

**Triggered Actions**
**Spreading the Disease** (disease)
*Trigger:* This creature hits an enemy with a melee attack that lacks the weapon keyword.
*Effect (No Action):* At the end of the encounter, the target makes a saving throw. On a failed saving throw, the target contracts [disease name] (stage 1).

If the monster does not have a melee attack that lacks the weapon keyword, you can give the monster the following attack power.

**Standard Actions**
**✝ Infectious Touch** (disease) **✦ At-Will**
*Attack:* Melee 1 (one creature); monster's level + 3 vs. Fortitude
*Hit:* At the end of the encounter, the target makes a saving throw. On a failed saving throw, the target contracts [disease name] (stage 1).

For diseases that rely on environmental exposure, the disease's description includes the method for exposure: touch, ingestion, or inhalation. Should the character come into contact with the disease, the disease's description includes whether infection is automatic or requires a successful attack roll against the creature.

For more information on diseases, refer to the *Rules Compendium*.

# Sample Diseases

The following diseases provide some examples of vile diseases encountered in the world. You can use the diseases at any level. Simply set the disease's level to be equal to that of its source (usually a creature) and then use skill check DCs appropriate for its level.

## Deathsong

Deathsong was one of the dead god Nerull's many gifts to the world. His priests would spread the infection wherever they went, to offer souls to their dark master. This hideous disease takes its name for the howling chorus rising from its victims as it causes flesh to wither and blacken. Once infection sets in, it doesn't take long for the disease to run its course. The flesh simply dies and bones pop and snap until the victim's life blessedly gutters out in a pungent flood.

An infected creature automatically exposes the character it touches to the disease. At the end of its next short or extended rest, the creature must make a saving throw. On a failed saving throw, it contracts deathsong (stage 1).

**Deathsong** **Variable Level Disease**

*You would hear the disease ravage your body in the crackling of your skin and popping of your bones if you could just stop screaming.*

**Stage 0:** The target recovers from the disease.
**Stage 1:** While affected by stage 1, the target takes a –2 penalty to skills checks and ability checks based on Strength, Dexterity, and Constitution.
**Stage 2:** While affected by stage 2, the target takes a –2 penalty to attack rolls, skills checks, and ability checks based on Strength, Dexterity, and Constitution. In addition, the target is dazed.
**Stage 3:** The target dies.
**Check:** At the end of each short rest and extended rest, the target makes an Endurance check if it is at stage 1 or 2.
*Lower than Easy DC:* The stage of the disease increases by 1.
*Easy DC:* No change.
*Moderate DC:* The stage of the disease decreases by 1.

## Demon Fever

The Abyss's depths are fertile ground for all manner of diseases. One of the most common is demon fever, a horrid infection carried by some demons and transmitted through their natural attacks. Those afflicted by the disease find dark thoughts creeping into their minds, thoughts of violence and death.

**Demon Fever** **Variable Level Disease**

*A fever rages through you, making you flushed and angry. You see enemies everywhere, and the only thing you want to do is kill.*

**Stage 0:** The target recovers from the disease.
**Stage 1:** While affected by stage 1, the target takes a –2 penalty to attack rolls. In addition, the target loses a healing surge.
**Stage 2:** While affected by stage 2, the target loses a healing surge. Whenever the target is first bloodied during an encounter, it takes 5 extra damage per tier, and the target must spend its standard action each round to make either a charge attack or a melee basic attack against the nearest ally (save ends).
**Stage 3:** While affected by stage 3, the target loses all healing surges. Whenever the target is first bloodied during an encounter, it takes 10 extra damage per tier, and until the end of the encounter, the target must spend its standard action each round to make either a charge attack or a melee basic attack against the nearest ally.
**Check:** At the end of each extended rest, the target makes an Endurance check if it is at stage 1 or 2.
*Lower than Easy DC:* The stage of the disease increases by 1.
*Easy DC:* No change.
*Moderate DC:* The stage of the disease decreases by 1.

## Faceless Hate

A magical disease designed to punish those who give into their hatred, faceless hate fills a creature with uncontrollable anger. The most awful aspect of this disease is revealed when the creature's facial features slough away, leaving behind smooth and unblemished skin. At this point, the creature is doomed to blind rage until it dies from starvation or thirst.

A creature that kills a creature infected with faceless hate becomes exposed to the disease. The creature must make a saving throw at the end of the encounter. On a failed save, it contracts faceless hate (stage 1).

**Faceless Hate** **Variable Level Disease**

*Anger builds inside you. It is blinding rage that cannot be sated until everything around you is dead.*

**Stage 0:** The target recovers from the disease.
**Stage 1:** While affected by stage 1, the target must make every opportunity attack that it can, and its allies provoke opportunity attacks from it as if they were its enemies (they are not otherwise considered its enemies).
**Stage 2:** While affected by stage 2, the target must make every opportunity attack that it can, and its allies provoke opportunity attacks from it as if they were its enemies (they are not otherwise considered its enemies). In addition, while the target is bloodied, it is blinded but has blindsight 5. If the target does not hit with an attack on its turn while bloodied, it takes 5 psychic damage per tier at the end of its turn.
**Stage 3:** While affected by stage 3, the target's eyes and mouth vanish. The target is blinded but has blindsight 5. The target's alignment changes to evil if it wasn't evil already, and it treats all creatures as enemies. Finally, whenever the target starts its turn with at least one creature within 5 squares of it, the target must use its standard action on its turn to make an attack if possible.
**Check:** At the end of each extended rest, the target makes an Endurance check if it is at stage 1 or 2.
*Lower than Easy DC:* The stage of the disease increases by 1.
*Easy DC:* No change.
*Moderate DC:* The stage of the disease decreases by 1.

## Melting Fury

This fearsome disease is quite rare since it spreads by handling undead flesh, an act few have occasion or inclination to perform. The disease, infused as it is with shadow energy, causes flesh to rot and organs to melt until only stained bones remain. The exposed skeleton soon animates and wanders about until destroyed.

Not all undead flesh carries this disease, but it is common to creatures associated with Kyuss, the Worm that Walks. When a creature touches or ingests the flesh, the disease attacks the creature: disease's level + 3 vs. Fortitude. On a hit, the creature contracts melting fury (stage 1).

**Melting Fury** **Variable Level Disease**

*As the disease progresses, your flesh becomes wet and slimy. Any pressure at all causes your flesh to tear and blood and filth to spill forth.*

**Stage 0:** The target recovers from the disease.
**Stage 1:** While affected by stage 1, the target has vulnerable 5 to all damage.
**Stage 2:** While affected by stage 2, the target has vulnerable 10 to all damage, and when the target takes damage from an attack that lacks a damage type, each creature adjacent to the target is exposed to the disease. At the end of the encounter, an exposed creature must make a saving throw. On a failed saving throw, the target contracts melting fury (stage 1).
**Stage 3:** The target dies as the flesh melts away into a fetid pool. After 24 hours, the remains animate to become a decrepit skeleton (*Monster Vault*, page 255).
**Check:** At the end of each extended rest, the target makes an Endurance check if it is at stage 1 or 2.
*Lower than Easy DC:* The stage of the disease increases by 1.
*Easy DC:* No change.
*Moderate DC:* The stage of the disease decreases by 1.

## Psychic Parasites

The psychic parasite is a miniscule creature that infiltrates a sentient creature's brain and feeds on its thoughts, memories, and—for some—its psionic energy. A creature infected by psychic parasites can pass them onto other creatures through bite attacks, claw attacks, and the like, as well as through psionic attack powers that target Will. A creature might also become exposed to psychic parasites in places inhabited by aberrant creatures. Inhaling the air in these places allows the disease to make the following attack: the disease's level + 3 vs. Will. On a hit, the target contracts psychic parasites (stage 1).

**Psychic Parasites** **Variable Level Disease**

*What begins as a faint buzzing in your ears intensifies until you can no longer concentrate on what is going on around you.*

**Stage 0:** The target recovers from the disease.
**Stage 1:** While affected by stage 1, the target takes a -2 penalty to Insight checks and Perception checks. If the target has the Psionic Augmentation class feature, it regains 1 less power point after a short rest, though not after an extended rest.
**Stage 2:** While affected by stage 2, the target takes a -5 penalty to knowledge checks, monster knowledge checks, Insight checks, and Perception checks. If the target has the Psionic Augmentation class feature, it cannot regain power points by taking a short rest.
**Stage 3:** While affected by stage 3, the target is unconscious and cannot be awakened.
**Check:** At the end of each extended rest, the target makes an Endurance check if it is at stage 1 or 2.
*Lower than Easy DC:* The stage of the disease increases by 1.
*Easy DC:* No change.
*Moderate DC:* The stage of the disease decreases by 1.

## Scarlet Plague

The scarlet plague is one of the more famous epidemics to strike the world. Efforts to stamp it out have never been successful. The disease simply appears somewhere else. Its victims experience vertigo and stabbing pain that intensifies until blood seeps from the pores. Many sufferers also find their bones warping and twisting, or even growing sharp thorns that punch through the skin from the inside.

The disease spreads by inhaling the breath of an infected creature. Thus proximity is usually enough to require a creature to make a saving throw. On a failed saving throw, the creature contracts red death (stage 1).

**Scarlet Plague** **Variable Level Disease**

*Pain shoots through your limbs. The world seems to spin around you. Not long after, you find blood seeping out from your pores.*

**Stage 0:** The target recovers from the disease.
**Stage 1:** While affected by stage 1, the target takes a -2 penalty to attack rolls, skill checks, and ability checks.
**Stage 2:** While affected by stage 2, the target takes a -2 penalty to attack rolls, skill checks, and ability checks. In addition, whenever the target misses with an attack or is moved by a pull, push, or slide, the target falls prone.
**Stage 3:** The target dies.
**Check:** At the end of each extended rest, the target makes an Endurance check if it is at stage 1 or 2.
*Lower than Easy DC:* The stage of the disease increases by 1.
*Easy DC:* No change.
*Moderate DC:* The stage of the disease decreases by 1.

# Vile Traps and Hazards

*"In retrospect, I might have gone a little overboard. The best traps make their prisoners suffer and scream. Adventurers who visit my tomb die too quickly."*

—Acererak

Traps and hazards are common obstacles to adventurers. There are some dangers, though, that have such wicked effects that those who run afoul of them face death or something worse than death. The following assortment reflects the kinds of wicked devices one might find in and around the lairs of the world's worst villains and supplements those traps and hazards described in the *Dungeon Master's Kit* and the *Dungeon Master's Guide*.

## Crypt Thing

Thought to be some form of malevolent undead guardian, a crypt thing is in fact an advanced magical trap designed to protect a valuable treasure. All crypt things are brown or black-robed skeletons seated in high-backed chairs. A crypt thing rolls initiative and attacks on its turn when a living creature enters the room it occupies.

The crypt thing can speak and will converse with creatures that talk to it. Even if the adventurers get the crypt thing talking, it does not break off its attack. A crypt thing knows information about its location and all adjacent rooms and answers one question per turn as a free action.

A character can identify a crypt thing with a successful DC 32 Arcana or Religion check.

BRIAN SNODDY

**Crypt Thing** **Level 18 Trap**
Object XP 2,000

**Detect** automatic **Initiative** +10
**HP** 100
**AC** 30, **Fortitude** 30, **Reflex** 25, **Will** –
**Immune** necrotic, poison, psychic, forced movement, all conditions, ongoing damage

**Standard Actions**

**False Disintegrate** (illusion) ✦ **At-Will**
*Attack:* Ranged 5 (one creature); +21 vs. Will
*Hit:* The target is stunned and invisible (save ends both).

**Baleful Teleport** (force, teleportation) ✦ **Recharge** ⚅ ⚄ ⚃
*Attack:* Ranged 5 (one creature); +21 vs. Will
*Hit:* The crypt thing teleports the target 4d20 squares in a random direction. Roll a d6 to determine direction: 1, up; 2, down; 3, north; 4, south; 5, east; 6, west. The crypt thing does not need line of sight to the destination space. If that space is occupied or is blocking terrain, the target takes 20 force damage and is thrust into the nearest unoccupied space. If the target is teleported into open air, it falls. The target does not get a saving throw to negate the teleportation.

**Triggered Actions**

**Claw** ✦ **At-Will**
*Trigger:* A creature adjacent to the crypt thing attacks it.
*Attack (Immediate Reaction):* Melee 1 (triggering creature); +23 vs. AC
*Hit:* 4d8 + 8 damage.
*Effect:* The crypt thing can push the target 1 square.

**Countermeasures**

✦ **Disable:** Arcana or Religion DC 32. Allies can use Arcana, Religion, or Thievery to aid the Arcana or Religion check, using the aid another action. *Failure (27 or lower):* The crypt thing recharges *baleful teleport* and uses it as a free action.
✦ **Trace:** Arcana DC 32. *Success:* The character discovers the destination space of a creature hit by either of the crypt thing's standard action attacks.
✦ **Negotiate:** Diplomacy DC 32 (standard action). *Success:* The crypt thing truthfully answers one question about the room it occupies, what it guards, and about its nature. If asked about one of its victims, it insists the creature was disintegrated.

## Death Mold

Molds, slimes, and other fungi thrive in the Underdark. Adventurers learn to give such growths a wide berth, since one never knows when an otherwise innocuous infestation is actually poses a significant threat. Death mold is one of the nastier growths, rampant in the lightless tunnels below the Shadowfell's surface. This hazard is deemed particularly deadly, since it isn't content to simply kill. Those slain by its spores instantly rise up as ravenous zombies.

A patch of death mold typically covers an area of 8 contiguous squares. A character can identify death mold with a successful DC 28 Dungeoneering or Nature check.

| Death Mold | Level 12 Hazard |
|---|---|
| Terrain | XP 700 |
| **Detect** Perception DC 20 | **Initiative** – |
| **Immune** attacks | |

**Triggered Actions**

**Attack** (necrotic) ✦ **At-Will**

*Trigger:* A living creature enters or starts its turn within 3 squares of the death mold.

*Attack (Immediate Reaction):* Close blast 3 (living creatures in the blast, including the triggering creature); +15 vs. Fortitude

*Hit:* 2d6 + 14 necrotic damage. A Small or Medium target dropped below 1 hit point by this attack dies and immediately becomes a death mold zombie. The zombie rolls initiative and acts on its turn under the Dungeon Master's control.

*Miss:* Half damage.

**Countermeasures**

✦ **Dormant:** A character can use a radiant attack power to render the death mold dormant in a target square or squares in the attack's area. No attack roll is necessary. Until the end of the character's next turn, creatures do not trigger attacks from the dormant mold.

✦ **Destroy:** A character can use a fire attack power to destroy the death mold in a target square or squares in the attack's area. No attack roll is necessary.

| Death Mold Zombie | Level 12 Brute |
|---|---|
| Medium natural humanoid (undead) | XP 700 |
| **HP** 147; **Bloodied** 73 | **Initiative** +7 |
| AC 24, **Fortitude** 25, **Reflex** 21, **Will** 22 | **Perception** +8 |
| **Speed** 4 | |
| **Resist** 10 necrotic; **Vulnerable** 10 fire | |

**Traits**

**Dormant Corpse**

Whenever the zombie takes radiant damage, it falls prone.

**Standard Actions**

**Slam** ✦ **At-Will**

Attack: Melee 1 (one creature); +17 vs. AC

Hit: 2d12 + 12 damage.

**Triggered Actions**

**Spore Burst** (necrotic) ✦ **Recharge** ⚄ ⚅

*Trigger:* An enemy hits the zombie with a weapon attack.

*Attack (Immediate Reaction):* Close burst 2 (living creatures in the burst); +15 vs. Fortitude

*Hit:* 3d6 + 12 necrotic damage. A Small or Medium target dropped below 1 hit point by this attack immediately dies and becomes a death mold zombie. The zombie rolls initiative and acts on its turn under the Dungeon Master's control.

| | | |
|---|---|---|
| **Str** 22 (+12) | **Dex** 12 (+7) | **Wis** 15 (+8) |

| **Alignment** unaligned | **Languages** – | |

# Far Realm Anomaly

The Far Realm is relentless in its efforts to invade the natural world. Ever does it press against the boundaries, crawling across the barriers in search of even the smallest crack through which its mutants and aliens might emerge. Once through, the creatures widen the crack and release a flood of corrupting energy. A Far Realm anomaly is a place where the Far Realm has chipped away at the barriers and can now bleed somewhat into the world.

**FAR REALM ANOMALY MUTATION**

| d20 | Result |
|---|---|
| 1 | The target bleeds internally, instantly taking damage equal to its bloodied value. |
| 2 | One of the target's arms becomes useless. The target cannot use the arm. |
| 3 | One of the target's legs becomes useless. The target is slowed. |
| 4 | The target's eyes explode as stubby tentacles erupt from its eye sockets. The target is blinded. |
| 5 | The target's mouth seals shut. The target cannot speak. |
| 6 | The target's ears grow wings and fly away. The target is deafened. |
| 7 | The target's legs fuse into a fish tail or a snake tail. The target takes a -3 penalty to speed. |
| 8 | The target's tongue grows too long for its mouth. |
| 9 | The target grows an unsightly growth on its head. The target cannot wear hats or head slot magic items. |
| 10 | The target loses all its body hair. |
| 11 | The target grows profuse body hair. |
| 12 | A small, screaming vestigial twin protrudes from the target's torso. The target cannot gain surprise unless the vestigial twin is silenced or killed. The twin has 1 hit point, defenses equal to the target's, and no attacks. If the twin is killed, the target loses a healing surge and takes damage equal to its healing surge value. |
| 13 | The target grows a strange hump on its back. |
| 14 | The target's arms become tentacles. The target can no longer wear gloves, gauntlets, or rings, and weapon attacks made by the target take a -2 penalty. |
| 15 | The target acquires an extra eye in an unusual place, gaining a +1 item bonus to Perception checks. |
| 16 | The target's legs become freakish and muscular until the end of the encounter. While its legs are altered, the target gains a +1 item bonus to speed. |
| 17 | The target's skin thickens until the end of the encounter. While its skin is thick, the target gains a +1 item bonus to AC and Fortitude. |
| 18 | The target gains 15 temporary hit points. |
| 19 | The target grows wings until the end of the encounter. While it has wings, the target gains a speed of fly 4 (clumsy). |
| 20 | The target vanishes into the Far Realm. It is removed from play and takes ongoing 10 acid and psychic damage (save ends both). When the effect ends, the target returns to play in an unoccupied space of the DM's choice within 3 squares of the space where it vanished from. |

The anomaly looks like someone grabbed the air and crunched it into a ball, an effect created by the anomaly's ability to bend light. It hovers in the air, about four feet from the ground. A character can identify the anomaly with a successful DC 30 Arcana or Dungeoneering check.

| **Far Realm Anomaly** | **Level 15 Hazard** |
|---|---|
| Object | XP 1,200 |
| **Detect** Arcana or Perception DC 22 | **Initiative** +9 |
| **Immune** attacks | |
| **Traits** | |
| ☼ **Distortion Field** ✦ **Aura** 3 | |
| Ranged attacks against creatures in the aura take a -2 penalty to the attack roll. | |
| **Standard Actions** | |
| ✧ **Attack** (polymorph, psychic) ✦ **Recharge** ⚄ ⚅ | |
| *Attack:* Close burst 3 (non-aberrant creatures in the burst); +18 vs. Fortitude | |
| *Hit:* 2d6 damage plus 2d6 psychic damage, and the target mutates. Roll a d20 on the Far Realm Anomaly Mutation table. Unless otherwise specified in the mutation, the effects are permanent. The cleric power *holy cleansing*, the Remove Affliction ritual, or similar magic can end the effect. | |
| **Countermeasures** | |
| ✦ **Disable:** Arcana DC 30. *Failure (25 or less):* The anomaly's attack recharges and it uses it immediately as a free action. | |

# Glyph of Changes

Magical glyphs are a popular alternative to mechanical traps. These inscriptions hold a great deal of power that releases with dramatic effect once a creature triggers it. The glyph of changes is one of the most powerful glyphs. Creatures caught in the trap's burst are disoriented as they figure out they've just been transformed into mice.

| **Glyph of Changes** | **Level 20 Minion Trap** |
|---|---|
| Object | XP 700 |
| **Detect** Perception DC 34 | **Initiative** – |
| **Immune** attacks | |
| **Triggered Actions** | |
| ✧ **Attack** (polymorph) ✦ **Encounter** | |
| *Trigger:* A creature enters a square containing the glyph. | |
| *Attack (Immediate Reaction):* Close burst 5 (creatures in the burst); +23 vs. Fortitude | |
| *Hit:* The target turns into a Tiny mouse for 1d6 hours. | |
| *Miss:* The target turns into a Tiny mouse (save ends). | |
| *Effect:* As a mouse, the target is dazed, and the only actions it can take are to shift or walk. All of the target's equipment transforms with it. The cleric power *holy cleansing*, the Remove Affliction ritual, or similar magic can end the effect. | |
| **Countermeasures** | |
| ✦ **Disable:** Thievery DC 34. *Failure (29 or less):* The glyph is triggered. Allies can use Thievery or Arcana to aid the Thievery check, using the aid another action. | |

# Iron Boot

Few traps are as cruel as the dreaded iron boot. The trap consists of two blades stretched apart and held in place. When a creature puts pressure on the trigger plate, the blades snap shut to sever the limb. Most iron boots are hidden by a piece of false flooring painted to look like stone or wood.

| **Iron Boot** | **Level 2 Minion Trap** |
|---|---|
| Object | XP 31 |
| **Detect** Perception DC 20 | **Initiative** – |
| **Immune** attacks | |
| **Triggered Actions** | |
| ↓ **Attack** ✦ **Encounter** | |
| *Trigger:* A creature enters the trap's square. | |
| *Attack (Immediate Reaction):* Melee 1 (triggering creature); +5 vs. Reflex | |
| *Hit:* 1d6 + 2 damage, and the target is grabbed by its foot, if it has one (escape DC 18). Until the grab ends, the target takes ongoing 5 damage. Each time the target makes an escape attempt against the grab, the target takes 5 damage. If the trap drops the target below 1 hit point, the target loses the foot. A creature with a lost foot is considered to be balancing and treats all surfaces as unstable (see the Acrobatics skill in the *Rules Compendium*). A creature can regain the missing foot through the cleric power *holy cleansing* or similarly powerful restorative magic. | |
| *Miss:* Half damage, and the target is immobilized until the end of its next turn. | |
| **Countermeasures** | |
| ✦ **Disable:** Thievery DC 20. *Success:* The iron boot is jammed and cannot attack. | |

# Lunacy Mist

Sometimes the Feywild's intrusion into the natural world—by planar breach, portal, or other planar phenomenon—can cause the plane's magical energy to infuse otherwise ordinary meteorological events, such as rain, fog, and snow. Lunacy mist is a rare example, and it behaves like normal fog except for the glittering golden motes drifting through the clouds.

Lunacy mist typically covers 20 contiguous squares. A successful DC 15 Perception check lets a character spot the golden motes. A DC 23 Arcana or Nature check identifies the fog as lunacy mist. Holding one's breath in the mist does nothing to stave off its effects. It is possible to fight back against its influence through physical effort.

| **Lunacy Mist** | **Level 6 Hazard** |
|---|---|
| Terrain | XP 250 |
| **Detect** automatic | **Initiative** – |
| **Immune** attacks | |

**Traits**

**Lightly Obscured**

Squares in the mist are lightly obscured.

**Triggered Actions**

**Attack** (poison) ✦ **At-Will**

*Trigger:* A creature starts its turn in the mist's space.

*Attack (Opportunity Action):* Melee 0 (triggering creature); +9 vs. Will

*Hit:* 1d8 + 4 poison damage, and the target is subjected to lunacy (save ends). Until the effect ends, the target rolls a d6 at the start of its turn before taking any actions to determine the mist's effects.

- ⚀ The target is stunned until the start of its next turn.
- ⚁ The target is dazed until the start of its next turn.
- ⚂ The target takes 5 poison damage and is slowed until the start of its next turn.
- ⚃ The target's first action this turn must be a basic attack or a charge against the creature closest to it. If no creature is within range, the target is dazed until the start of its next turn.
- ⚄ The target takes a -2 penalty to attack rolls until the start of its next turn.
- ⚅ No effect.

**Countermeasures**

✦ **Avoid:** Endurance DC 23. The target can make an Endurance check when entering the mist as a free action. *Success:* The target gains a +4 bonus to Will against the mist until the end of the target's next turn.

# Mirror of Life Trapping

The mirror of life trapping ensnares the vain by drawing the creature into the mirrored surface. Once ensnared, there is no escape until another creature looks into the mirror.

A mirror of life trapping is usually a full-length mirror hanging on a vertical surface. If there's a creature trapped inside the mirror, it appears on the surface, behaving in a manner appropriate for a trapped creature. A character can identify the trap as a mirror of life trapping with a successful DC 26 Arcana check.

| **Mirror of Life Trapping** | **Level 10 Trap** |
|---|---|
| Object | XP 500 |
| **Detect** automatic | **Initiative** – |
| **HP** 50 | |
| **AC** 5, **Fortitude** 10, **Reflex** 5, **Will** – | |
| **Immune** necrotic, poison, psychic, forced movement, all conditions, ongoing damage; **Vulnerable** 10 thunder | |

**Triggered Actions**

**Attack** ✦ **At-Will**

*Trigger:* A creature that is not blind or blinded starts its turn adjacent to the mirror.

*Attack (Opportunity Action):* Melee 1 (triggering creature); +13 vs. Will

*Hit:* The target is trapped in the mirror. While trapped in the mirror, the target is removed from play. If there is already a creature trapped in the mirror, the effect ends for that creature, which returns to play in an unoccupied space within 3 squares of the mirror.

*Miss:* The target is dazed until the start of its next turn.

**Countermeasures**

✦ **Destroy:** Reducing the mirror to 0 hit points destroys it but automatically kills any creature trapped inside.

# Rot Grub Pit

A concealed pit is a useful and simple obstacle to keep enemies from reaching important locations, but rarely is a pit enough to deter an adventurer from pressing on. The cruelest trapsmiths, however, find more success by filling the bottom with disturbing creatures. Rot grubs, then, are perfect additions to these traps.

A creature that can see the rot grubs at the bottom identifies them as such with a successful DC 14 Nature check.

| **Rot Grub Pit** | **Level 4 Trap** |
|---|---|
| Object | XP 175 |
| **Detect** Perception DC 21 | **Initiative** – |
| **Immune** attacks | |

**Triggered Actions**

**Attack** ✦ **Encounter**

*Trigger:* A creature enters one of the trap's four squares.

*Attack (Immediate Reaction):* Melee 1 (triggering creature); +7 vs. Reflex

*Hit:* The target falls 20 feet to the bottom of the pit, taking 2d10 damage and falling prone.

*Miss:* The target returns to the last square it occupied, and its movement ends immediately.

*Effect:* The false floor opens, and the pit is no longer hidden. Any creature that starts its turn in the pit is exposed to rot grub infestation. At the end of the encounter, the target must make a saving throw. On a failed saving throw, it contracts rot grub infestation (stage 1).

**Countermeasures**

✦ **Disable:** Thievery DC 21. *Success:* The false floor is jammed and cannot attack.

✦ **Destroy:** Dealing 10 or more fire damage removes the rot grub infestation from the bottom of the pit.

**Rot Grub Infestation** — **Level 4 Disease**

*Wriggling worms burrow through flesh, gobbling up important tissue and life energy as they feast.*

**Stage 0:** The target recovers from the disease.
**Stage 1:** While affected by stage 1, the target loses a healing surge and gains vulnerable 5 necrotic.
**Stage 2:** While affected by stage 2, the target loses two healing surges. The target also takes a –4 penalty to skill checks.
**Stage 3:** The target dies and, if Small or Medium in size, immediately becomes a rot grub zombie under the DM's control.
**Check:** At the end of each extended rest, the target makes an Endurance check if it is at stage 1 or 2.
*11 or Lower:* The stage of the disease increases by 1.
*12 to 17:* No change.
*18 or Higher:* The stage of the disease decreases by 1.

**Rot Grub Zombie** — **Level 8 Skirmisher**
Medium natural humanoid (undead) — XP 350

**HP** 86; **Bloodied** 43 — **Initiative** +9
**AC** 22, **Fortitude** 20, **Reflex** 19, **Will** 17 — **Perception** +2
**Speed** 6
**Immune** rot grub infestation

**Standard Actions**

**Slam ✦ At-Will**
*Attack:* Melee 1 (one creature); +13 vs. AC
Hit: 2d6 + 9 damage.

**Flailing Slam ✦ At-Will**
*Attack:* Melee 1 (one creature); +13 vs. AC
*Hit:* 2d6 + 9 damage.
*Effect:* Before or after the attack, the zombie can shift 1 square.

**Rot Grub Hunger** (disease, necrotic) **✦ Recharge** ⚄ ⚅
*Attack:* Melee 1 (one creature); +13 vs. AC
*Hit:* 2d6 + 9 damage plus 2d6 necrotic damage.
*Effect:* If the target is bloodied, it must make a saving throw at the end of the encounter. On a failed saving throw, it contracts rot grub infestation (stage 1).

**Triggered Actions**

**Corpse Collapse ✦ Encounter**
*Trigger:* The zombie drops to 0 hit points.
*Effect (No Action):* A rot grub swarm appears in an unoccupied square adjacent to the zombie.

| | | |
|---|---|---|
| **Str** 20 (+9) | **Dex** 16 (+7) | **Wis** 6 (+2) |
| **Con** 14 (+6) | **Int** 4 (+1) | **Cha** 13 (+5) |

**Alignment** unaligned — **Languages** –

**Rot Grub Swarm** — **Level 4 Brute**
Medium natural beast (swarm) — XP 175

**HP** 63; **Bloodied** 31 — **Initiative** +3
**AC** 15, **Fortitude** 15, **Reflex** 14, **Will** 15 — **Perception** +2
**Speed** 5 — Darkvision
**Resist** half damage from melee and ranged attacks;
**Vulnerable** 10 against close and area attacks

**Traits**

**Swarm Attack ✦ Aura** 1
Any enemy that starts its turn in the aura takes 5 damage plus 2 damage for each additional rot grub swarm adjacent to the enemy.

**Swarm**
The swarm can occupy the same space as another creature, and an enemy can enter its space, which is difficult terrain. The swarm cannot be pulled, pushed, or slid by melee or ranged attacks. It can squeeze through any opening that is large enough for at least one of the creatures it comprises.

**Clumsy Attacker**
The rot grub swarm cannot make basic attacks.

**Standard Actions**

**Infesting Bite ✦ At-Will**
*Attack:* Melee 1 (one creature); +9 vs. AC
*Hit:* The target takes ongoing 5 damage (save ends).
*First Failed Saving Throw:* The target takes ongoing 10 damage (save ends).
*Second Failed Saving Throw:* The target takes ongoing 15 damage (save ends).

| | | |
|---|---|---|
| **Str** 10 (+2) | **Dex** 13 (+3) | **Wis** 11 (+2) |
| **Con** 13 (+3) | **Int** 2 (-2) | **Cha** 4 (-1) |

**Alignment** unaligned — **Languages** –

# Symbol of Death

Powerful wizards and priests who study Supernal can learn certain words of power to transform their environments. Binding such a word into a physical symbol traps its potential until triggered. The symbol of death is the most deadly of all, since when triggered it can snuff out all life in a large area.

**Symbol of Death** — **Level 29 Minion Trap**
Object — XP 3,750

**Detect** Arcana or Perception DC 41 — **Initiative** –
**Immune** attacks

**Triggered Actions**

**Attack** (necrotic) **✦ Encounter**
*Trigger:* A creature enters a square containing the symbol of death.
*Attack (Immediate Reaction):* Close burst 3 (living creatures in the burst); +32 vs. Fortitude
*Hit:* 10d10 necrotic damage. If this reduces the target to 30 hit points or fewer, the target dies.
*Miss:* Half damage.

**Countermeasures**

**✦ Disable:** Thievery DC 41. *Failure (36 or less):* The glyph is triggered. Allies can use Thievery or Arcana to aid the Thievery check, using the aid another action.

CHAPTER 4

# Villains & Monsters

JOHN STANKO

*"I have never understood why so many of my peers find it necessary to reveal themselves to the world. Is it not more useful for your enemies to wonder and guess at who was behind the latest trouble washing up on their shores? Arrogance serves you not at all in pursuing your objectives. Give into petty, human needs and you will find your objectives drifting out of reach and your enemies converging against you. Instead, gird yourself in secrecy. Let your proxies act on your behalf, and keep them ignorant about whom they serve and what exactly you hope to achieve. In my experience, the lands are filled with potential servants. Should one fall, you will always be able to find another to take its place."*

–Szass Tam

EVIL TOUCHES the world in many ways. One can find its stain in places where great crimes and horrors have been wrought, in items fashioned with cruel intent, and in the plots set in motion by truly heinous villains. To truly understand evil as an agency, one must examine those creatures in its thrall, to peer into corruption's depth and examine the underlying motivations driving such agents to serve the darkness that hungers.

This chapter presents a variety of tools for creating and using opponents in vile encounters. It details all the following:

- **Creating Villains:** Constructing a villain's statistics block is just a matter of creating a new monster, but creating a memorable and evocative villain requires going a few steps beyond.
- **Monster Themes:** From chaos beasts to slaves of the Nine Hells, the monster themes included in this chapter help you transform ordinary monsters into terrifying adversaries.
- **New Monsters:** Several new monsters illustrate how vile darkness can manifests in your campaign world.
- **Organizations:** Several organizations offer disturbing power groups you can use to test and entertain the player characters.

# Creating Villains

*"Imagine my surprise when I discovered that I could make ink out of pain. Now, sit still and be quiet. Your suffering will end shortly."*

—Shathrax the Mind Flayer

It is one thing to know evil is out there as a shadowy force, but quite another to put a face to the evil and know there is an active agent in darkness's cause. The villain gives evil an identity. It gives a face and name to the hordes of evil creatures, the endless tide of demons and monsters crawling out from the festering blackness to bring ruin and suffering to the world. A villain is the mind behind evil's plotting, the agency that will not stop until he, she, or it achieves whatever dark end it desires.

This section helps you create compelling and interesting villains, specifically those in thrall to vile darkness. Before diving into the particulars, it is first important to set villains apart from other creatures. A villain is not just some creature you use to populate the last combat encounter in an adventure. A villain is not just a stat block that is born, lives, and dies in the space between when characters roll for initiative and when the villain's hit points drop to 0. A villain is a crafted identity. It is the player characters' nemesis and a major force in the campaign setting. The villain's decisions, actions, and intentions should alter the heroes' circumstances and drive them through adventure after adventure.

## Villainous Concept

Having a strong working concept at the outset makes all other decisions you make about the villain easier. The villain is a story device, a tool you can use to construct adventures, plot a campaign, and link a succession of expeditions together to construct a larger and more satisfying story. To construct a concept, you should consider how you want to use the villain and the villain's broad identity.

## Scope

A villain is, at heart, a story element you can use to add tension, drama, and excitement to your games. While all villains are realized characters, the amount of work you should put into your villains depends on how much you plan to use them. A villain might have a negligible impact on a particular game session, but it exists within a particular narrative frame, interacting with the characters through a single adventure or for the life of an entire campaign. Before you make any other decisions about your villain, decide to what degree you want the villain to operate in your world.

### The Adventure Villain

Most villains exist within the confines of a single adventure or, at most, a small set of adventures. In these cases, the villain figures prominently in the adventure's story and its actions directly influence the various challenges and threats the heroes must overcome. The adventure's typical climax involves a contest between the heroes and the villains in a dramatic set-piece encounter.

In *Keep on the Shadowfell*, the heroes vie against the deranged cultist Kalarel, who intends to reopen a dangerous rift to the Shadowfell, while the insane alienist Malachi hunts the *Tear of Ioun* in the "Madness Trilogy" (*Dungeon* 161–163) to free a creature from the Far Realm. In both examples, the villains directly shape the adventures' plots and halting their designs and defeating them occur in the climax of each story.

Since these characters rise and fall within the space of an adventure or two, you don't need to invest as much time to develop these villains. Instead, the enemy's objective becomes the central tension in the scenario in which they appear, and their methods for obtaining that objective function as the adventure's plot. Thwarting the villain's aim is usually sufficient to remove the villain as an enemy, though complications and choices can transform adventure villains into tier villains or even campaign villains.

### The Tier Villain

The tier villain has much in common with the adventure villain, in that this villain tends to shape the story of the adventures the heroes undertake. Instead of existing within one or two adventures, the tier villain is a persistent and dangerous foe throughout an entire tier of play. To insulate themselves from the characters, such foes often use adventure villains as henchmen and lackeys. As the adventurers defeat these underlings, they learn more about their true nemesis's identity. Each adventure brings the heroes closer to the inevitable confrontation with their opponent, often at the tier's end.

Sarshan, the shadar-kai villain from *Dungeon* magazine's Scales of War adventure path, is a good example of a heroic tier villain. As the heroes become drawn into the plot, they discover a mastermind behind the various plots at work in the world, and that the villains they've been fighting are all servants of the same master. Not long after cresting the heroic tier, the adventurers get their chance to defeat the villain who has troubled them for so long.

Since the tier villain works throughout an entire tier, the villain's identity is not always obvious from the start. Instead, the adventurers discover the villain's identity as they undertake adventures related to the villain's plot. Each victory draws them nearer to the final

confrontation with their foe until, usually, the villain has no choice but to confront the heroes. As an adventure villain might become a tier villain, a tier villain might evolve into a campaign villain, particularly if the villain escapes the final confrontation more or less intact. Then again, the tier villain might serve the larger campaign villain and thus by defeating this foe the heroes discover what is really behind the conflict in the grander story.

### The Campaign Villain

A campaign villain, sometimes referred to as an arch-villain, opposes the adventurers through two or more tiers, acting as the focal antagonist through many of the heroes' adventures. Such a villain need not be "front and center" in every adventure, but he, she, or it looms over everything. The lesser villains that the adventurers fight usually connect in some fashion to this greater enemy, and the plots of the campaign villain unfold on a grand scale.

Campaign villains tend to be the major movers and shakers in the world. Orcus is the campaign villain from *Keep on the Shadowfell* all the way to the conclusion in *Prince of Undeath*. Similarly, Tiamat is the campaign villain in *Dungeon* magazine's Scales of War adventure path. While neither Orcus nor Tiamat show up in the heroic tier, the adventurers pit themselves against their agents. When the player characters climb through the paragon tier, they begin to understand the villain behind their challenges. And when they finally progress through the epic tier, the heroes have the chance to confront with the true foes.

A campaign villain need not span all three tiers. If you're running a campaign across the heroic and paragon tiers, defeating the campaign villain might be the capstone event for when the adventurers reach 21st level. These villains often employ several tier villains and adventure villains through whom the player characters can learn the identity of their archnemesis.

## Connections

Once you've identified the villain's scope and longevity, your next step is to determine the extent to which the villain is connected to the heroes.

### The Detached Villain

The villain has no or little connection to the player characters. A detached villain has his or her own agenda independent of the adventurers' actions and probably not aware of the adventurers at the start. Most villains from published adventures are detached since the characters discover the villain's efforts and then work to combat them, rather than the villain taking an active hand against the adventurers.

In the Dragonlance novels, Takhisis is an example of a detached villain.

### The Tangential Villain

A tangential villain is one with tenuous connections to the player characters. The characters might encounter and defeat the villain's agents in an earlier adventure, or the characters might be members or associates of an organization opposed to the villain's organization. In either case, the characters aren't likely to oppose the tangential villain unless fate conspires to place the villain's schemes in opposition to the party's goals.

A tangential villain in the Dragonlance® novels would be Lord Soth, given his connection to Kitiara.

### The Personal Villain

The villain has intimate connections with one or more player characters. The villain might be a sibling, rival, a former companion in the adventuring group, relation, or patron. The villain's plans likely involve the adventurers and are probably driven by revenge or a desire to exploit the characters' abilities for some dark end. Personal villains can be the most satisfying since the players have an interest in the villain beyond the simple objective of combating evil in the world. When creating a personal villain, it's best to establish multiple links to the adventuring group to ensure that several characters have strong connections to their foe.

Kitiara is an excellent example of a personal villain from the Dragonlance novels, since she was once a companion of the Heroes of the Lance.

## Archetype

The last step in creating your villain to decide its general nature or archetype. The following archetypes describe the most common types of villains found in the Dungeons & Dragons roleplaying game, but they are certainly not exhaustive. You might have some other idea that doesn't fit into these categories, or you might combine archetypes to construct something altogether different.

### The Abstract Villain

*"True evil can't be killed with a sword. A shame, really."*
—Kuyutha, Exarch of Bahamut

Not every villain has a face. Sometimes a force, a phenomenon, or some other agency can fill this role. Just because there is no single individual responsible for the villainous actions doesn't mean the Far Realm can't be the villain for an adventure or even a campaign. A plague, some form of evil weather, or pernicious mutation can also serve in this role.

Abstract villains are tough to combat. Defeating them isn't something that can be achieved in the same way as killing the mad wizard or deposing the evil king. Against abstract villains, the heroes might have to fight on many different fronts, finding unconventional solutions to achieving victory. Abstract villains often have lesser villains in their employ, which allows the entity to act in the world while also giving the adventurers someone to fight.

**Far Realm Incursion (Annihilation):** A secret society of heroes sealed a gate to the Far Realm long ago, but a virulent plague wiped out the order, and the protective wards placed upon the gate have deteriorated due to years of neglect. Alien energies from the Far Realm seep through newly formed cracks, threatening to warp and twist the natural world unless something is done to contain them.

## The Created Villain

*"I live for the moment when I can to turn something pure into something perverse."*

—Graz'zt

A created villain is forged by the player characters' actions, inactions, decisions, or failures. Often the adventurers are aware of what exactly led to the villain's creation. In some cases, the villain might be a former member of their party. Allowing the heroes to know the villain before he or she becomes their nemesis creates interesting tension when the heroes must fight someone they once considered a friend.

In some cases, the villain is not someone the characters know well, but someone victimized by their actions. It might be the daughter of a knight they murdered in cold blood, a noble whom they offended, or a king whose quest they declined for selfish reasons.

**A Dish Served Cold (Corruption):** A village hires the adventurers to wipe out a goblin infestation. The heroes convince the mayor to pay a higher price, unaware that their demands will drain the village's coffers. A week later, after wiping out the goblins and claiming their reward, the adventurers leave the villagers with insufficient funds to carry them through the winter. A few locals lose family members to starvation and set into motion plans to get revenge on the greedy adventurers.

## The Deviant Villain

*"If I must destroy my own people to achieve ultimate victory, I will. Their sacrifices will not be forgotten."*

—Vlaakith CLVII

Slaves to darkness, the deviant is a villain who exists to further evil's interests in the world. These despicable characters are beyond redemption, shackled to the cosmic evil that forever struggles against good for dominance in the planes. Deviants are classic D&D villains, individuals who work evil for evil's sake—remorseless, wicked, and thoroughly corrupt.

Deviant villains often lack the long-term planning necessary to become tier or campaign villains. Instead, they are useful for demonstrating evil's influence in the world for an adventure or two.

**Red Herrings (Domination):** An ambitious merchant employs several agitators to speak out against the local authorities. Using the common folk's anger at perceived injustices, the merchant hopes to destroy the authority to distract attention from her plan to smuggle in a new and dangerous drug into the community.

## The Hidden Villain

*"To witness the greatest evil you will ever face, you need only look into a mirror."*

—Dispater

It is difficult to fight an enemy that never reveals itself. The hidden villain works from the shadows, wearing many different masks and organizing events through proxies loyal to the villain's cause. Such villains are often at the center of vast conspiracies, where seemingly unrelated events produce incremental advances toward the villain achieving his or her objectives.

A hidden villain is a good choice for a tier or campaign enemy since you have the time to develop the villain's plots in more subtle ways. Seeding the villain's presence in adventures and encounters lets the players discover their hidden enemy in a more organic fashion, while also building the sense of dread that their true enemy can be anyone and anywhere.

**Fallen Noble (Corruption):** A succubus infiltrates a duke's court masquerading as a courtier. There she seduces the noble and works to make him her slave in both body and soul. As the duke comes under her thrall, his corruption translates into dubious laws and a shadow falling upon the noble's court.

## The Villainous Organization

*"Without my peeps, I am blind."*

—The Xanathar

Not all villains operate alone. Many work together, forming cabals, cults, syndicates, and other organizations to work evil in the world. The villainous organization comprises several different villains, but is larger and more dangerous than any of its individual members. Destroying a cell or defeating a leader is merely a setback. A new cell will rise and a new leader will emerge to continue the organization's work in the world. The only way to truly defeat the organization is to wipe it out, root and branch.

For more examples, see the end of this chapter.

**Scarlet Brotherhood (Domination):** The Scarlet Brotherhood is a vast conspiracy of killers and mystics who work to restore greatness to their fallen empire. Most agents hide in plain sight, masquerading as advisors, priests, and scholars. Others display their loyalties in the open to strike fear in the hearts of their enemies. The Scarlet Brotherhood constantly seeks to expand its influence by infiltrating and dominating governments all over the world. Defeating one cell is fruitless since there's always another poised to take its place.

## The Rival Villain

*"I keep my enemies close, for they are my nourishment."*
—Eclavdra of House Eilservs

Friendly rivalry is common between adventuring bands. One group's success is often all it takes to prompt another group to do something better, find something more valuable, or defeat something far more evil. Rivalry, however, can have a dark side, and sometimes when one feels wronged or cannot compete with the other, envy sets in. Envy can make villains of almost anyone. A rival villain might be an individual adventurer or another adventuring group. Individual rivals might nurse a grudge against a player character and in doing so become corrupted through efforts to eclipse the character's power. Or, a rival adventuring group might tire of playing second fiddle to the heroes' achievements and become true enemies as tensions escalate.

**Fallen Paladin (Corruption):** Sir Reginald found middling success as an adventurer, but his archrival, one of the heroes, has always overshadowed his efforts. Tired of being ignored and underappreciated, Reginald seeks power to equal his rival and in doing so has become corrupted by it. Now Reginald plummets into darkness as a blackguard, and the further he falls, the deeper his hatred becomes.

## The Sympathetic Villain

*"War makes villains of us all."*
—King Kaius III

The sympathetic villain is a character who does evil for reasons the player characters can understand. Such a villain might be a vigilante, who takes justice in her own hands, by killing those she suspects of crimes. Another might be a benevolent tyrant who strips away freedoms to ensure that justice prevails. Or, the villain could have embraced darkness to save someone he or she loves. What makes these villains interesting is the "human" element, a quality players can understand and in certain circumstances might emulate.

TOMASZ JEDRUSZEK

**The Unhappy Solution (Annihilation):** Orcs spill out from the mountains each winter, bringing war to the Barony of Everstone, depleting people and resources with each passing season. Baron Umber is at his wit's end trying to throw back the hordes. He's raised armies, fortified his towns, and recruited mercenaries, but nothing he does seems to dissuade the orcs from returning the next year. Fearing annihilation, the baron has come up with the "unhappy solution" to his problems. Lacking the earthly means to deal with the threat, he's turned to a supernatural agency to help his people.

A shadar-kai witch named Caera offered to deal with the orcs by infecting them with a vile plague guaranteed to wipe them out. In exchange, she asks only for the baron's daughter. With some reluctance, the baron agrees and sends his daughter away. The next spring, the orcs do not appear and, though grieving for his daughter, the baron is relieved. Only then the plague spreads, coming down from the mountains with the snowmelt and infecting and killing his people by the hundreds.

## The Traitorous Villain

*"I was an adventurer—and a very good one, at that. But that was a past life, taken from me by the traitor, Rary. We were as brothers, he and I—at least, that's how I choose to remember it. A word of caution, young adventurers: Don't let that unslakable thirst for power get the better of you."*

—Tenser

The greatest victory evil can attain is to seduce the good and turn them to darkness. Evil has many temptations—power, wealth, lust, and more—to seduce, corrupt, and destroy champions of light. The traitor villain is just such a character, an individual tempted and ultimately corrupted by darkness.

These villains don't reveal their corruption right away. They keep their wickedness a secret until they can no longer conceal it. Sometimes these villains act as hidden foes to start, reveal themselves, and then later become some other kind of villain, such as deviant. In any event, these villains work best when the traitor is someone the adventurers love, trust, or believe in. This way, when the villain is unmasked, the character will have to wrestle with their loyalties to the character and also their outrage at what their former friend has become.

**Rook (Corruption):** For years, Rook traveled with the Company of Seven, fighting at the heroes' side against all manner of evils. To deal with the darkness found in the dungeons and ruins, Rook turned to the Raven Queen for guidance. He believed he saw her pale beauty on certain nights, a faint yet comforting presence. What Rook did not know was that this being whom he believed was the goddess was in fact a vile hag who wore her form. Long association with the monster eventually led to his spiritual corruption. Finding the hag's commandments at odds with his allies' mission, Rook abandoned his friends to become a thrall to darkness.

# Vile Monster Themes

*"Necromancy leads nowhere. It is a flawed school, a useless study for understanding shadow's true potential. Necromancy cannot create a self-perpetuating race of undead. Each zombie or skeleton raised requires incredible energy to sustain it. These servants consume all their creator's resources. So the answer doesn't lie in animating the dead. Instead, it exists in the shadow's own marrow.*

*"Cast off bits of darkness at Creation's dawn formed the Shadowfell. Thus, it should be possible to harness the creative energy within that realm to make something new, something that could create a self-perpetuating race not subject to divine intervention or the natural processes found in the world. Although I had many failures, I take pride in the vessels that carry this potential to new hosts and make them my servants."*

—Kyuss

Evil influences creatures in many ways. In some cases, darkness has swayed entire races, keeping them forever in its thrall. In others, evil infects, warps, and twists, compelling creatures to its service. Evil's influence can create lasting changes in ordinary people, awakening new power in them or blighting them with unspeakable transformations.

To weave specific evil narrative lines into your campaign, you can use monster themes to flesh out existing creatures. For example, a theme could represent a particular master's claim on a monster; a transformation that is a consequence of working for a wicked force; or an advantage of special training, devotion, or environmental influence.

This section presents new monster themes that evoke vile darkness's power. You can find additional themes in *Dungeon Master's Guide 2*, *Demonomicon*, and other DM books.

## Using Themes

Applying a monster theme to a creature allows you to customize its role and powers. Doing so is a simple process, involving picking an extra power or two and adding them to the creature's statistics block.

### Step 1: Choose a Theme

Each theme presented here offers a way to twist monsters toward a particular aspect of evil. Applying a theme demonstrates one of many ways vile darkness can transform creatures into useful servants. Choose a theme that best illustrates the story you want to tell through the combat encounter.

## Step 2: Choose a Monster

When you've chosen a monster theme, pick a monster to gain the theme's powers. Each theme description includes suggestions about which monsters best suit the theme, but you should select a monster that fits the encounter and adventure you have in mind.

Many themes and powers recommend specific roles. The power bestowed by the theme can emphasize a creature's existing role or allow a creature to act outside its normal role. However, be cautious about mixing roles. For example, giving a soldier power to a skirmisher might diminish the creature's mobility if it must stay near its target to benefit from the added power. Even though these powers evoke certain roles, adding them to a creature does not change its role. Any power that does not mention a specific role can meld easily with any creature. Finally, be aware that some powers give a creature the leader subrole, as noted in its text.

## Step 3: Choose Story Changes

Each monster theme supplies one or more powers that you can add to a creature and also includes story elements to turn an ordinary monster into a unique and compelling foe. Consider what it means to add these powers to a creature, how these abilities arise, and what obligations the monster might have to whoever or whatever instigated its transformation. Many themes also suggest physical changes.

Steps 3 and 4 are interchangeable. Since the powers suggest story and descriptive changes, you can opt to adapt the creature after you've made decisions about what powers to add.

## Step 4: Choose Powers

Choose one attack power and one utility power from those the theme supplies to add to a monster's statistics block. You can also add the skill modifications, but it isn't required.

You could add additional powers, but doing so would make the monster more complex to run and possibly more powerful that its level suggests.

Most powers use a creature's level to calculate its attack rolls and damage rolls.

**Attack Powers:** Each theme includes attack powers. Some offer a monster a new attack or the ability to impose some debilitating effect on its foes. Other powers provide enhancements to a monster's existing attack powers. Each power is written in the style of a normal monster power entry, with a header noting where to add the power to a creature's statistics block. A summary of optional story hooks and the most appropriate roles leads the entry.

**Utility Powers:** A theme's utility power options could include auras, healing powers, special movements, and situational benefits to a creature. Utility powers don't usually alter a monster's identity or its tactics in the same way an attack power does.

# Chaos Beast

*"Huungrreeeeee . . ."*

—Adventurer turned into a chaos beast

Before Creation, only chaos existed. Its raw, unformed substance was a churning soup of possibility that expanded and contracted with no apparent pattern, reason, or purpose. When the primordials imposed form on chaos to create the universe, it disturbed chaos's disorder. Since then, chaos has chipped away at the primordials' configuration as it struggles to return to its original state.

As the essence of chaos wears away at the Abyss, mortal minds, the boundaries to the Far Realm, and everything else in existence, chaos's hounds—the slaads—are busy capering through the Elemental Chaos waging war on Creation. Meanwhile, creatures that chaos directly touches become infected with corporeal instability—a disease that attacks a creature's core form—and usually die. Those that survive are known as chaos beasts. Nearly mindless, they are amorphous engines of destruction bent on spreading their plague and unmaking Creation. Brutes, lurkers, and skirmishers make the best chaos beast monsters.

On becoming a chaos beast, a creature loses its physical form and becomes a mass of deteriorating flesh with sensory organs. Memories and imagination flickering through its unraveling mind destabilize a monster's form, which causes it to cycle through different shapes even as it lashes out with warped appendages to spread its affliction.

**Origin:** The creature's origin changes to elemental.

**Skill Modifications:** +2 bonus to Endurance checks.

## Attack Powers

A chaos beast exists to create more chaos beasts, thus fighting the war against order one creature at a time.

### Corporeal Instability

This power infects a creature with raw chaos, an affliction that is essentially a disease. Creatures that contract the disease become shuddering heaps of spongy flesh and filth. As the disease runs its course, it becomes harder and harder for the creature to retain any form until it finally collapses under the weight of its corruption.

**Standard Actions**

**Corporeal Instability** (disease) ✦ **Recharge** ⚅

*Attack:* Melee 1 (one creature); level + 3 vs. Fortitude

*Hit:* 5 damage per tier, and the target makes a saving throw at the end of its next turn. On a failed saving throw, the target contracts corporeal instability (stage 1).

*Miss:* 5 damage per tier.

*Effect:* This creature takes 5 damage per tier.

**Corporeal Instability** — **Variable Level Disease**

*A creature afflicted by this disease undergoes a rapid transformation to become a boiling, writhing mass of melting flesh.*

**Stage 0:** The target recovers from the disease.

**Stage 1:** While affected by stage 1, the target is slowed.

**Stage 2:** While affected by stage 2, the target is dazed and slowed.

**Stage 3:** The target is no longer dazed or slowed. It regains all lost hit points and becomes a chaos beast under the DM's control. As a chaos beast, it gains the *corporeal instability* power.

**Check:** At the end of the target's turn, it makes an Endurance check if it is at stage 1 or 2.

*Lower than Easy DC:* The stage of the disease increases by 1.

*Easy DC:* No change.

*Moderate DC or higher:* The stage of the disease decreases by 1.

# Utility Powers

A chaos beast assumes a variety of disturbing shapes. Some of these forms give the creature unique ways to address challenges.

## Appalling Presence

Although a creature's mind is shattered when it becomes a chaos beast, one might on occasion recall its former form. At such times, the beast morphs into a mockery of its lost shell. Controllers and skirmishers make best use of this power.

**Triggered Actions**

**Appalling Presence** (fear) ✦ **Encounter**

*Trigger:* An enemy hits this creature while the creature isn't bloodied.

*Attack (Free Action):* Close burst 2 (enemies in the burst that can see this creature); level + 3 vs. Will

*Hit:* This creature can push the target up to 3 squares, and the target takes a –2 penalty to attack rolls (save ends).

## Slithering Mass

Lacking a solid physical form allows a chaos beast to flow over and through obstructions with ease. Skirmishers make best use of this power.

**Move Actions**

**Slithering Mass** ✦ **At-Will**

*Effect:* If this creature is marked, the mark ends. This creature can shift up to half its speed and ignores difficult terrain during this movement.

## Undulating Form

A chaos beast flows around danger, shifting its quivering bulk to avoid attacks. Brutes and soldiers benefit most from this power.

**Triggered Actions**

**Undulating Form** ✦ **At-Will**

*Trigger:* An enemy makes a melee or a ranged attack against this creature.

*Effect (Immediate Reaction):* This creature can shift 1 square.

TODD LOCKWOOD

# Devotee of Darkness

*"You mustn't speak ill of my Master. If you do, I shall have to hurt you."*

—Cyrus Belview

Count Strahd von Zarovich, Lord Soth, Victor Mordenheim, and many others command dark regions of the Shadowfell known as domains of dread. Cursed for their wickedness, they remain trapped in these domains for all eternity. They are both masters and prisoners of the lands they occupy. Shadows and fog mark the boundaries of their blighted lands, clear warnings to passersby to avoid entering these demesnes. Despite their confinement, these dark lords strive to extend their influence across the Shadowfell.

A devotee of darkness is a creature that pledges to serve one of the Shadowfell's many dark lords and accepts its master's brand. The servant surrenders its will, its very soul, in exchange for a measure of power from its patron. A devotee usually reflects the dark lord it serves. Thus, vampires often serve Strahd, and death knights typically work for Lord Soth.

**Origin:** The creature's origin changes to shadow.

**Skill Modifications:** +2 bonus to Intimidate checks.

## Attack Powers

A dark lord invests power in its chosen servant so the devotee can further the lord's plots in the world.

### Crushing Horror

A creature sworn to a dark lord has intimate knowledge of the curse trapping its master in the Shadowfell. This power reveals to an enemy the patron's depth of wickedness, which earned it the curse, leaving the opponent paralyzed with horror. Lurkers and soldiers can make best use of this power to pin down foes at a distance.

**Minor Actions**

**Crushing Horror** (fear) ✦ **Encounter**

*Attack:* Ranged 10 (one creature); level + 3 vs. Will

*Hit:* The target is immobilized and cannot take opportunity actions or immediate actions (save ends both).

*Miss:* The target is slowed until the end of its next turn.

### Dark Lord's Wrath

A devotee of darkness has earned its master's trust through constant and dedicated service. So to protect its asset, a dark lord infuses its servant with a fragment of its power to call upon when the devotee is in dire need of aid. Artillery and controllers benefit from taking this power.

CHRIS SEAMAN

**Standard Actions**

**Dark Lord's Wrath** (fear, psychic, zone) ✦ **Encounter**

*Attack:* Close blast 3 (enemies in the blast); level + 3 vs. Will

*Hit:* 1d10 psychic damage plus 5 psychic damage per tier, and this creature can push the target up to 3 squares.

*Effect:* The blast creates a zone that lasts until the end of this creature's next turn. Enemies in the zone take a -2 penalty to attack rolls.

## Utility Powers

Service to a dark lord often exacts a steep price from devotees.

### Call the Mists

Queer mists mark the borders to a dark lord's domain and trap doomed sufferers within the demesne while discouraging outsiders from entering. Some devotees, particularly artillery, controllers, and lurkers, learn to call upon these mists to protect them from harm.

**Minor Actions**

**Call the Mists** (aura) ✦ **Encounter**

*Effect:* This creature activates an aura 2 that lasts until the end of its next turn. The aura is lightly obscured. Any good creature that starts its turn in the aura is slowed (save ends).

*Sustain Minor:* The aura persists until the end of this creature's next turn.

### Cringing Retreat

Although gifted with a dark lord's favor, some devotees are craven. Because these servants' experiences leave them so damaged, they flee confrontation lest their fates worsen.

**Triggered Actions**

**Cringing Retreat ✦ Encounter**

*Trigger:* An enemy bloodies this creature.

*Effect (Free Action):* This creature shifts up to its speed and gains a +2 power bonus to all defenses until the end of its next turn.

### Unsettling Deformity

A dark lord's servant often bears gruesome marks denoting its allegiance. The dark lord might inflict these deformities as punishment, or the mutations might arise from the creature's proximity to evil. Devotees commonly suffer grotesque obesity, skeletal thinness, boils, humps, and withered limbs.

**Traits**

☼ **Unsettling Deformity** (fear) ✦ **Aura** 2

Enemies in the aura that can see this creature take a -2 penalty to attack rolls and Will.

# Doomdreamer

*"I have only one dream. I'm standing before the doors of a great, dark temple. With a crack of lightning and a peal of thunder, the doors unlock and swing open, and beyond . . . I see my destiny."*

—Lareth the Beautiful

The Chained God languishes in an extradimensional prison, yet this does not prevent him from influencing events in the natural world. Most know the Chained God in his aspect as the Elder Elemental Eye or through one of the princes of Elemental Evil who act on his behalf, but there are a few who have earned Tharizdun's attention. These dark vassals identify themselves as doomdreamers because they believe the Chained God has touched their dreams.

Doomdreamers come from humanoid ranks, with humans being the most common. This said, any creature that has risen high in an elemental cult might be touched by the dark god's madness. Doomdreamers can be of any role.

Doomdreamers are uniformly evil, often insane, and prone to deviant behavior. They are cruel and sadistic, delighting in their servants' infighting. Demons, elementals, or lesser foot soldiers enlisted to the cause of elemental evil attend these cultists. Doomdreamers do not often consort with lesser temples since it is in their best interest to keep the elemental cults ignorant about the god they serve.

**Skill Modifications:** +2 bonus to Religion checks.

## Attack Powers

Doomdreamers call upon dark magic bestowed on them by their dark master. Their powers foster madness, filling targets with horrific thoughts, or poisoning the soul, making victims slaves to the Chained God's will.

### Chill Soul

Doomdreamers can wither the flesh and rend the soul it holds. Soldiers sometimes adopt this power, as do any creatures that deal additional damage against foes granting combat advantage.

**Standard Actions**

✝ **Chill Soul** (cold, necrotic) ✦ **At-Will**

*Attack:* Melee 1 (one creature); level + 3 vs. Fortitude

*Hit:* 1d8 + 4 cold and necrotic damage, and the target grants combat advantage until the end of its next turn.

*Level 11:* 2d8 + 8 cold and necrotic damage.

*Level 21:* 3d8 + 12 cold and necrotic damage.

### Maddening Howl

The Chained God does not tolerate failure. His servants know they face oblivion if they perish. This power unleashes the fear and madness of what comes after in one horrific shriek that sounds when the creature dies.

**Triggered Actions**

✧ **Maddening Howl** (fear, psychic) ✦ **Encounter**

*Trigger:* This creature drops to 0 hit points.

*Attack (No Action):* Close burst 3 (creatures in the burst); level + 3 vs. Will

*Hit:* 5 psychic damage, and the target is dazed (save ends).

*Level 11:* 10 psychic damage.

*Level 21:* 20 psychic damage.

### Tharizdun's Touch

By channeling their dark god's power through their hands, doomdreamers can bind their foes in eldritch chains, holding them fast just as the gods bound their master in the Abyss.

**Standard Actions**

✝ **Tharizdun's Touch** (charm) ✦ **Recharge** ⚄ ⚅

*Attack:* Melee 1 (one creature); level + 3 vs. Will

*Hit:* The target is restrained until it succeeds on an Arcana or a Religion check (moderate DC of this creature's level) as a move action.

*Miss:* The target is slowed until the end of its next turn.

## Utility Powers

Doomdreamers use the following powers to commune with the Chained God—or so they think.

### Dark Communion

Tharizdun reveals the future to his most dedicated servants, offering shadowy visions of what might unfold. When a creature uses this power, it recalls an omen in a dream and gains a second chance at achieving a success.

**Triggered Actions**

**Dark Communion** (psychic) ✦ **Encounter**

*Trigger:* This creature makes an attack roll or a saving throw and dislikes the result.

*Effect (No Action):* This creature rerolls the attack roll or saving throw. If the attack roll hits or the saving throw succeeds, this creature gains 5 temporary hit points. If the attack roll misses or the saving throw fails, this creature is dazed until the end of its next turn.

*Level 11:* 10 temporary hit points.

*Level 21:* 15 temporary hit points.

### Insane Revelation

Madness reigns in the doomdreamer's mind. When a creature with this power surrenders to insanity, it might achieve great results or terrible failure.

**Minor Actions**

**Insane Revelation** ✦ **At-Will**

*Effect:* Roll a d6 to determine this power's effect.

⚀ This creature is blinded until the end of its next turn.

⚁ This creature is dazed until the end of its next turn.

⚂ This creature grants combat advantage until the end of its next turn.

⚃ This creature gains a +2 power bonus to all defenses until it is hit by an attack.

⚄ This creature gains a +2 power bonus to attack rolls until it misses with an attack.

⚅ This creature can take an extra standard action this turn.

### Vile Command

Doomdreamers that are strong of will can command the Chained God's demonic, elemental, and undead servants. If a doomdreamer lacks the necessary conviction to compel such creatures, Tharizdun punishes the fool for his weakness. Creatures with this power gain the leader subrole.

**Minor Actions**

**Vile Command** ✦ **Recharge** ⚄ ⚅

*Effect:* Ranged 5 (one ally who can hear this creature). The target makes a basic attack as a free action against an enemy this creature chooses. If the attack hits, the target also gains 5 temporary hit points. If the attack misses, the target takes 10 damage.

# Maenad

*"The Feywild is a realm of emotions run rampant. Even the trees, pebbles, and clouds have them. It can drive you mad."*
—The Prince of Frost

The Feywild is the world's bright reflection, and it does contain great beauty, but it is also home to terrible evil and ugliness. Hags grow fat on marrow sucked from the bones of those who cross their paths, sprites and pixies play lethal tricks on hapless fools who stumble into their traps, and fomorians rouse armies to enslave enemies in the world above.

Evil in this plane preys on the most powerful emotions of love and hate, lust and fear. It magnifies them until they consume a creature's every thought. Creatures afflicted by the plane's intensity become slaves to their emotions. They are erratic and strange, violent and aggressive. They don't care about the harm they inflict and the suffering they create. Known as maenads, they are a crazed host comprising numerous races and creatures united by their mad desire to feed their emotional cravings.

Maenads are often brutes and skirmishers, though controllers sometimes find themselves subject to the madness too. A maenad resembles a normal creature of its kind, but is wild and unkempt. The creature's eyes roll about in its head and blood spatters its teeth and body.

**Skill Modifications:** +2 bonus to Nature checks and Perception checks.

## Attack Powers

Maenads are aggressive in battle. They rip their opponents to pieces with their claws and teeth or even with just their bare hands. Most are afflicted by a wild frenzy that clouds their judgment until they lose all inhibition.

### Maenad Bloodlust

The madness afflicting maenads most often manifests as an uncontrollable and ferocious bloodlust, an eagerness to rend and tear anyone they can reach. Skirmishers are most likely to use this power.

**Triggered Actions**

**Maenad Bloodlust** ✦ **At-Will** (1/round)

*Trigger:* An enemy within a number of squares equal to this creature's speed becomes bloodied.

*Effect (Free Action):* The maenad moves up to its speed to a square adjacent to the triggering enemy and then makes the following attack.

*Attack:* Melee 1 (triggering enemy); level + 3 vs. Fortitude

*Hit:* 5 damage, and ongoing 5 damage (save ends).

*Level 11:* 10 damage, and ongoing 10 damage (save ends).

*Level 21:* 15 damage, and ongoing 15 damage (save ends).

### Maenad Frenzy

The maenads are best known for their unpredictable behavior. One moment, a maenad might be lucid and the next a wild, frothing berserker. Brutes do well by taking this power.

**Traits**

**Maenad Frenzy**

At the start of this creature's turn, roll a d6. On a 1, it is dazed until the start of its next turn. On a 6, it gains a +2 power bonus to attack rolls, and its melee attacks deal 1d6 extra damage.

### Rending Fury

The most ancient tales about the maenads are those recounting the wild women who tore children limb from limb. Echoes from these old tales sound in the desperate screams of those who fall into the maenads' clutches.

**Standard Actions**

**Rending Fury ✦ At-Will**

*Attack:* Melee 1 (one creature); level + 3 vs. Reflex

*Hit:* This creature grabs the target (escape DC moderate of this creature's level). Each time the target starts its turn grabbed by this creature, the target takes damage equal to 2 + one-half this creature's level.

## Utility Powers

The Feywild's influence on certain creatures manifests as madness, delusion, and unchecked aggression. The following powers display the different forms this madness might take.

### Feywild Madness

A creature with this power can shrug off some of the most debilitating conditions.

**Traits**

**Feywild Madness**

When this creature starts its turn subject to a dazing, stunning, or dominating effect, it can make a saving throw to end one such effect, even if the effect does not normally allow a saving throw.

### Indulge the Pain

Pain drives maenads to even more appalling acts of violence. The worse the injury, the greater the maenad's ferocity becomes.

**Triggered Actions**

**Indulge the Pain ✦ At-Will**

*Trigger:* This creature takes ongoing damage on its turn.

*Effect (Free Action):* This creature makes a basic attack.

# Moilian Dead

*"I like destroying pretty things."*

—Orcus

Eons ago, there was a city wholly in the thrall of demon-worshipers. Generations spent offering sacrifices to the Demon Lord of Undeath rewarded the people with the fiend's dread attention. But time and new ideas shifted the people away from darkness and toward the light. The demon lord, sensing their betrayal, cursed them all. He trapped them in an eternal slumber and then flung the city into the deepest reaches of the Shadowfell, where darkness would consume the graceful spires and elegant bridges, dragging all into oblivion. Moil was the city's name, and since its fall it has lured many treasure seekers and villains to explore its crumbling remains.

The citizens of Moil did not survive their eternal slumber, yet the sinister energies suffusing the dark lands have infused their corpses with terrible power. Now all sorts of undead roam the city, including zombies, ghouls, wraiths, and specters. The city's heritage combined with the intense unholy atmosphere gives these undead unusual and deadly capabilities.

The Moilian dead theme is available only to undead creatures and benefits creatures of any role.

**Subtype:** The creature gains the undead subtype if it doesn't have it already.

**Resistance:** A creature that has the Moilian dead theme gains resist 5 cold and resist 5 necrotic if it doesn't have them already. The resistance increases to 10 in the paragon tier and 15 in the epic tier.

**Vulnerability:** A creature that has the Moilian dead theme gains vulnerable 5 fire and vulnerable 5 radiant if it doesn't have them already. The vulnerability increases to 10 in the paragon tier and 15 in the epic tier.

**Skill Modifications:** +2 bonus to Stealth checks.

## Attack Powers

Moil's slow descent into darkness grips the city in a killing frost. Undead emerging from the ruins wield cold as a weapon.

### Deathly Frost

Moil's unwholesome coldness permeates the creatures stalking its ruins. Those confronting the Moilian dead must contend with the biting frost that rolls off these accursed creatures.

**Traits**

**Deathly Frost** (cold, necrotic) ✦ **Aura** 2

Any living creature grants combat advantage while in the aura and takes 5 cold and necrotic damage if it ends its turn there.

*Level 11:* 10 cold and necrotic damage.

*Level 21:* 15 cold and necrotic damage.

ZOLTAN BOROS & GABOR SZIKSZAI

## Freezing Doom

Within every Moilian dead is a spark of memory, an awareness of those choices that led to their miserable fate. Once released from their curse through final death, their freed souls erupt in a burst of killing cold.

**Triggered Actions**

**Freezing Doom** (cold) ✦ **Encounter**

*Trigger:* This creature drops to 0 hit points.
*Effect (No Action):* Close burst 1 (living creatures in the burst). The target takes 5 cold damage, and it is immobilized (save ends).
*Level 11:* 10 cold damage.
*Level 21:* 20 cold damage.

## Gift of Orcus

Some Moilian dead can transmit the curse that afflicted them so long ago to those who cut them down.

**Triggered Actions**

**Gift of Orcus** ✦ **Encounter**

*Trigger:* An adjacent enemy drops this creature to 0 hit points.
*Attack (No Action):* Melee 1 (triggering enemy); level + 3 vs. Will
*Hit:* The target falls unconscious (save ends).
*First Failed Saving Throw:* The target takes a -4 penalty to saving throws against this effect.
*Miss:* The target is slowed (save ends).

# Utility Power

Moilian dead sleep until roused by the presence of the living.

## Sense Life

Orcus's curse on the Moilian people consigned them to an eternity of sleep. The only thing that rouses them from their deathly slumber is proximity to the living, which gives the darkness granting them unlife impetus to snuff out the offending presence.

**Traits**

**Sense Life**

This creature knows the locations of all living creatures within 5 squares of it, even if it can't see them.

# Slave to the Nine Hells

*"Every devil wants to be your friend, and like a friend, he'll help you out of a jam, see. Need a few coins to get by? The devil's got a few to spare. Need a warm body to fill your bed? The devil knows the best ladies. Want status? Riches? Property? Power? The devil has the answers. He'll give you all you want and more. And what does he want in exchange? Just a little thing—a trifle, really. And it won't affect you in the slightest. All he wants is your soul."*

—Conner Smithson, Seeker of Virtue

Souls are the currency of the Nine Hells. The archdevils crave them, covet them, and will do anything to get them. The reason is simple: souls have power. Souls gave the Raven Queen the means to end Nerull's dark reign and claim his mantle. And before that, souls gave Nerull the power over life and death and the ability to seize the world in his skeletal grip. The archdevils would follow Asmodeus and his own rise to power by hoarding the souls necessary to complete their own apotheosis.

A great many souls are lost to the Nine Hells through fiendish corruption, while others are stolen en route to Letherna (the Raven Queen's demesne) by diabolical harvesters. Others find themselves damned by entering ill-advised agreements with tempters in life, only to find an eternity of torment for fleeting mortal wealth, pleasure, or some other distraction that won a devil its power. Those mortals who fall prey to these temptations are little more than slaves, for there is nothing they can do to escape the fate they earned. Archdevils are not above such deals, forging infernal pacts with warlocks and other mortals.

Unlike most monster themes, the follow powers are available only to creatures that have sold their souls to a particular devil or who profess allegiance to a particular archdevil. To cement the compact, the mortal creature accepts a special brand that denotes the fiend's ownership of their souls. When applying this theme to a creature, choose a brand from those described below. The creature gains the attack power and the utility power associated with that brand.

## Brand of Avernus

Avernus is a war-torn and barren landscape, punctuated by pitted and crumbling fortresses used to defend the Nine Hells against the demonic invasions sparked by the Blood War. Bel, the archdevil who nominally rules, recruits primarily brutes and soldiers to aid in the defense of his demesne.

**Skill Modification:** +2 bonus to Intimidate checks.

### Accursed Flames

Bel's slaves can call forth their master's power, which manifests as green flames that dance across their weapons. The flames defeat an enemy's fire resistance.

**Triggered Actions**

**Accursed Flames** (fire) ✦ **Recharge** ⚄ ⁞⁞

*Trigger:* This creature hits an enemy with a weapon attack.

*Effect (No Action):* The triggering attack ignores the target's fire resistance and deals 1d6 extra fire damage.

*Level 11:* 2d6 extra fire damage.

*Level 21:* 3d6 extra fire damage.

### Avernus Tactics

Bel has no illusions about his place in the Nine Hells' hierarchy. It is more important to him that his servants find success in battle for as long as they survive.

**Triggered Actions**

**Avernus Tactics** ✦ **At-Will**

*Trigger:* An adjacent enemy misses this creature with an attack.

*Effect (Immediate Reaction):* This creature can shift 1 square, and it gains combat advantage against the triggering enemy until the end of its next turn.

## Brand of Dis

Dispater passes on his constant paranoia to those in his service, alerting them to the myriad enemies and dangers lying in wait. Many creatures who bargain with this archdevil cloister themselves away, hiding in vast fortresses protected by insidious traps and obedient monsters. Dispater favors controllers and skirmishers.

**Initiative:** +2 bonus to initiative checks.

**Skill Modification:** +2 bonus to Insight checks.

### Imprisoning Advance

Slaves of Dispater know the value of a good escape route and thus use the power given to them to create a path to safety that leaves their enemies unable to give chase.

**Move Actions**

**Imprisoning Advance** ✦ **Recharge** ⚄ ⁞⁞

*Effect:* This creature gains a +2 power bonus to all defenses until the end of this turn and moves up to its speed. If an enemy makes an opportunity attack provoked by this movement, this creature can make the following attack against that enemy.

*Attack (Free Action):* Melee 1 (triggering enemy); level + 3 vs. Will

*Hit:* The target is immobilized until the end of its next turn.

### All-Around Vision

A slave of Dispater grows extra eyes all over its body to watch for treachery. These eyes, while unsightly, let the creature counter flanks.

**Traits**

**All-Around Vision**

Enemies can't gain combat advantage by flanking this creature.

## Brand of Minauros

Mammon, ruler of Minauros, is a cringing, wretched archdevil. He is an opportunist who knows how to flatter and connive to keep his throne. These traits infect those in his service and help them spread evil through unexpected ways. Lurkers and skirmishers are best served by gaining this brand.

**Skill Modification:** +2 bonus to Bluff checks.

### Cringing Presence

Slaves to Mammon appear weak and pathetic, exuding a harmless if disgusting presence that convinces enemies to pass them over. This same feeble appearance allows the slave to capitalize on an enemy's reluctance and strike while it foe's guard is down.

**Traits**

☼ **Cringing Presence** ✦ **Aura** 1

Any enemy in the aura that has more hit points than this creature takes a -2 penalty to attack rolls against this creature. Any enemy in the aura that has fewer hit points than this creature grants combat advantage to it.

### Mammon's Cunning

Mammon survives by learning everything he can about his enemies and then using this information to defeat their expectations. A creature with this trait can leap against foes with surprising ferocity or slip away, unnoticed.

**Traits**

**Mammon's Cunning**

This creature does not provoke opportunity attacks when charging. In addition, whenever this creature moves, its first square of movement does not provoke opportunity attacks.

## Brand of Phlegethos

Seductive Fierna inherited her throne from her father Belial, and she uses her power to feed her hedonistic impulses and to torment those under her power. Her father, however, is never far from her throne and manipulates her to further his interests. Soldiers, skirmishers, and lurkers often find service with this unholy pair.

**Skill Modification:** +2 bonus to Diplomacy checks.

TOMASZ JEDRUSZEK

### Wicked Fantasy

With a touch, a slave of Fierna can fill an enemy with unspeakable desire, flooding its senses with hideous fantasies that leave it gasping in pleasure and horror.

**Standard Actions**

ǂ **Wicked Fantasy** (charm, psychic) ✦ **Recharge** ⚄ ⁞⁞

*Attack:* Melee 1 (one creature); level + 3 vs. Will

*Hit:* The target is dazed and takes ongoing 5 psychic damage (save ends both).

*Each Failed Saving Throw:* This creature can slide the target 1 square.

*Level 11:* 10 psychic damage.

*Level 21:* 15 psychic damage.

### Pleasure from Pain

Service to Fierna and Belial warps a creature's pleasure senses. These creatures can only know ecstasy by experiencing or delivering pain.

**Traits**

**Pleasure from Pain**

Each time this creature takes damage, it gains a cumulative +1 power bonus to attack rolls until the end of its next turn, to a maximum bonus of +5. If this creature ends its turn without dealing damage on that turn, it is dazed until the end of its next turn.

# Brand of Stygia

Levistus regained control over Stygia after Asmodeus banished Geryon, but the archdevil remained locked within an icy prison. Thus Levistus relies on proxies to seduce mortals and give him their souls. Soldiers and lurkers are the most common creatures to gain this brand.

**Icewalk:** This creature gains icewalk.

**Skill Modification:** +2 bonus to Acrobatics checks.

## Stygian Prison

Levistus's power grows with each soul sent to Stygia. Slaves can use this power to imprison enemies in ice and speed them to their graves.

**Triggered Actions**

**Stygian Prison** (cold) ✦ **Encounter**

*Trigger:* This creature hits an enemy with a melee attack.

*Effect (No Action):* The target of the triggering attack is restrained (save ends). Whenever the target takes damage while restrained by this power, it takes 5 extra cold damage.

*Level 11:* 10 extra cold damage.

*Level 21:* 15 extra cold damage.

## Icy Panoply

When faced with losing a valuable servant, Levistus armors his slave in Stygian ice to give it the edge it needs to triumph over its enemies.

**Minor Actions**

**Icy Panoply** (cold) ✦ **Encounter**

*Requirement:* This creature must be bloodied.

*Effect:* This creature gains resist 20 to all damage. Each time this creature takes damage from an attack, reduce the resistance by 5. When the resistance drops to 0, the effect ends. While this creature has resistance granted by this power, its melee attacks deal extra cold damage equal to 2 + one-half its level.

# Brand of Malbolge

Glasya, daughter of Asmodeus and ruler of the Sixth Hell, is ambitious if she's anything. She uses her familial connection to Asmodeus to shield her from reprisals while engaging in endless plotting to expand her power throughout the Nine Hells and beyond. Glasya recruits any creature she can.

**Skill Modification:** +2 bonus to Thievery checks.

## Stolen Power

Some legends claim Glasya gained her power by killing another, more ancient archdevil who ruled Malbolge. This power lends credence to these tales, since her servants are quick to take that which does not belong to them.

**Minor Actions**

**Stolen Power** ✦ **Recharge** ⚄ ⚅

*Attack:* Ranged 5 (one creature); level + 3 vs. Fortitude

*Hit:* The target is weakened until the end of this creature's next turn.

*Effect:* This creature's attacks deal extra damage equal to 2 + one-half its level until the target is no longer weakened.

## Brimstone Escape

Glasya's gifts are not without a price. She cares nothing for her servants or their lives; she wants only their souls. So even though this power allows her slave to escape its enemies, it also afflicts the creature with terrible pain.

**Move Actions**

**Brimstone Escape** (teleportation) ✦ **Encounter**

*Effect:* This creature teleports up to 10 squares. It is then dazed until the end of its next turn.

JOHN STANKO

# Brand of Maladomini

As punishment for plotting to usurp his power, Asmodeus transformed Baalzebul into a horrid slug-like creature, a form suited to the pestilential domain he rules. This curse afflicts those who come into the Lord of Flies' service, slowly remaking them into their master's image. Baalzebul favors brutes and soldiers.

**Skill Modification:** +2 bonus to Stealth checks.

## Corrosive Grab

A slimy filth seeps from the creature's pores. While harmless to the creature that creates it, the slime burns through any other creature that touches it.

**Standard Actions**

**Corrosive Grab** (acid) ✦ **At-Will**

*Attack:* Melee 1 (one creature); level + 3 vs. Reflex

*Hit:* This creature grabs the target (escape DC moderate of this creature's level). Until the grab ends, the target takes ongoing acid damage equal to 2 + one-half this creature's level.

## Foul Excretions

Baalzebul's slaves can increase the slime's flow until its runs water from their bodies. As they slither across the battlefield, they leave behind slippery trails.

**Move Actions**

**Foul Excretions** (acid) ✦ **Encounter**

*Effect:* This creature moves up to its speed. Each square it exits becomes slimy until the end of the encounter. Whenever a creature enters a slimy square, it must make an Acrobatics check against a moderate DC of this creature's level or fall prone and take acid damage equal to 2 + one-half this creature's level.

# Brand of Cania

Mephistopheles is Asmodeus's chief rival and most dangerous foe. Fawning when he needs to be, he plots to usurp the god's throne and take his power for himself. Mephistopheles discovered how to use souls to create hellfire, a process he has thus far guarded.

**Skill Modification:** +2 bonus to Arcana checks.

## Secret of Hellfire

Mephistopheles allows his slaves to wield hellfire since using it destroys the user almost as quickly as it does the user's enemies.

**Standard Actions**

**Secret of Hellfire** (aura, fire, psychic) ✦ **Encounter**

*Effect:* This creature activates an aura 1 that lasts until the end of its next turn. Any enemy that enters the aura or ends its turn there takes fire and psychic damage equal to 5 + this creature's level (a creature can take this damage only once per turn).

*Sustain Minor:* The aura persists until the end of this creature's next turn, and each creature in the aura, including this creature, takes fire damage equal to 2 + one-half this creature's level.

## Rising Anger

Although Mephistopheles covets Asmodeus's power, it is his own wrath that proves his undoing time and again. This same unpredictable anger infects his servants.

**Traits**

**Rising Anger**

Whenever this creature misses with a melee or a ranged attack, it gains a +1 power bonus to attack rolls and a -2 penalty to all defenses. The bonus and penalty are cumulative. This creature loses them when it hits with an attack.

# Brand of Nessus

Asmodeus rules the Nine Hells from Nessus, the Ninth Hell. Invested with stolen divine power from the god remembered as He Who Was and armed with a fragment of evil chipped from the shard in the Abyss's bowels, Asmodeus is one of the most powerful gods in the planes. He does not often seduce mortals, knowing they will come to him voluntarily. Leaders, soldiers, and controllers are common slaves to Asmodeus.

Skill Modification: +2 bonus to Bluff checks.

## Dire Command

Those invested with Asmodeus's power gain a measure of the dark god's authority and can command other creatures to do as they wish.

**Standard Actions**

**Dire Command** ✦ **At-Will**

*Effect:* Ranged 5 (one ally). The target makes a basic attack as a free action against a creature of this creature's choice, with a +2 power bonus to the attack roll.

## Clever Switch

Enjoying favored status among other slaves to the Nine Hells, those enslaved to Asmodeus employ devious cunning to ensure that they survive battles with their enemies.

**Triggered Actions**

**Clever Switch** ✦ **Recharge** ⚄ ⚅

*Trigger:* An enemy hits this creature with a melee or a ranged attack.

*Effect (Immediate Interrupt):* This creature switches the target of the attack from itself to a creature adjacent to it, other than the triggering enemy.

# New Monsters

*"The most fearsome monster I ever saw had two arms, two legs, and one head, and on its head was a face with two eyes, two ears, one nose, and one mouth, and above this face grew a mop of hair. Everywhere else, the creature's flesh was mostly pink and bare. Mostly. Makes my slime crawl thinking about it."*

—Juiblex

As the Abyss spawns fiends aplenty to bring strife to creatures near and far, agents of the dark plot and connive to advance their masters' aims. The following monsters have spawned from evil's embrace to wrap existence in a tapestry of pain, humiliation, death, and torment.

# Angel, Fallen

Deicide is no small thing. A god's death causes dominions to tremble, the world to groan, and the demons below to howl in delight. Tremors spread through Creation as powerful beings scramble to claim portfolios the god released at the moment of its extinction. But despite the god's life force being snuffed out, its creatures are not freed from service.

Known as fallen angels, these immortal champions of a slain god are sheathed in grief and remain driven to do the work for which they were chosen.

## Lore

**Religion DC 20:** Most angels are independent agents. They wing through the Astral Sea running myriad errands and safeguarding the expanse they call home. The gods claim some angels as servants, soldiers, and emissaries, positions few would refuse. When an angel joins a particular god's retinue, it slowly transforms as a trickle of its master's physical and psychological characteristics seeps into its essence. Over time, the seepage drowns out the angel's memory of its life before joining its master. Thus, the deity's imprint consumes an ever-greater portion of the angel the longer the retainer serves.

**Religion DC 25:** When a god dies, its surviving angels are stripped of varying portions of their identities. The longest-serving angels morph into brittle travesties of their master. These fallen angels manage to cling to the fading threads of divine power and use it to serve the god posthumously. But their grief and rage taint their efforts, making them some of the most unpredictable and unstable dark forces in the Astral Sea.

## Encounters

Fallen angels take a vengeance oath against their god's slayer and its supporters and minions. These sundered immortals have no compunction against joining forces with foul creatures to accomplish their goals and can be found with abominations, elementals, demons, and undead.

Charismatic fallen angels could enlist other independent angels to their cause and might even confuse themselves with the god they once served.

# Fallen Angel of Winter

Khala, the goddess of winter, sought to imprison the world in an endlessly frigid state. The other deities rallied against her and throttled her bid to become mistress of the gods. They eliminated her, destroyed her realm, and scattered her servants, earning themselves the venomous regard of the fallen angels of winter.

Crackling with hate, this icy creature ambushes, frames, and hunts Khala's killers and their servants.

| **Fallen Angel of Winter** | **Level 13 Soldier** |
|---|---|
| Medium immortal humanoid (angel) | XP 800 |
| **HP** 128; **Bloodied** 64 | **Initiative** +12 |
| **AC** 29, **Fortitude** 27, **Reflex** 25, Will 23 | **Perception** +7 |
| **Speed** 6, fly 8 (hover) | |
| **Immune** fear; **Resist** 10 cold, 10 radiant | |
| **Traits** | |
| ☼ **Khala's Hate** ✦ **Aura** 3 | |
| While the angel is not bloodied, enemies in the aura have vulnerable 5 cold. | |
| **Angelic Presence** | |
| While the angel is not bloodied, attack rolls against it take a -2 penalty. | |
| **Standard Actions** | |
| ⨺ **Ice Spear** (cold, weapon) ✦ **At-Will** | |
| *Attack:* Melee 1 (one creature); +18 vs. AC | |
| *Hit:* 3d8 + 7 cold damage, and the target is immobilized until the end of the angel's next turn. | |
| ⇙ **Khala's Vengeance** (cold) ✦ **Encounter** | |
| *Requirement:* The angel must be bloodied. | |
| *Attack:* Close burst 3 (enemies in the burst); +16 vs. Fortitude | |
| *Hit:* 2d8 + 4 cold damage, and the target is immobilized and takes ongoing 10 cold damage (save ends both). | |
| *Aftereffect:* The target is slowed (save ends). | |
| *Miss:* Half damage, and the target is slowed and takes ongoing 5 cold damage (save ends both). | |
| **Str** 22 (+12) **Dex** 19 (+10) **Wis** 13 (+7) | |
| **Con** 16 (+9) **Int** 10 (+6) **Cha** 15 (+8) | |
| **Alignment** evil **Languages** Supernal | |
| **Equipment** scale armor, spear | |

## Fallen Angel of Winter in Combat

A fallen angel of winter is as merciless as a blizzard. It descends unseen from the cover of a wicked storm to wrap foes in cold and pierce their bodies with winter's bite.

# Fallen Angel of Sorrow

As exarch of the god now known as He Who Was, the ever-ambitious Asmodeus stole a sliver of the evil shard buried in the Abyss, and it swiftly corrupted him. Asmodeus then murdered his master and donned his mantle as ruler of Baator. Shocked, the other gods sealed the usurper away in his new dominion, which has since become known as the Nine Hells. But the grief of the fallen angels of sorrow could not be so easily banished.

Bereft of its good and peaceful god, a fallen angel of sorrow acts more like its nemesis than its former master. Devoted to Asmodeus's annihilation, this creature retains enough of its master's heart to weep as it rends flesh from bone.

| **Fallen Angel of Sorrow** | **Level 17 Artillery** |
|---|---|
| Medium immortal humanoid (angel) | XP 1,600 |
| **HP** 122; **Bloodied** 61 | **Initiative** +13 |
| **AC** 31, **Fortitude** 28, **Reflex** 29, **Will** 31 | **Perception** +14 |
| **Speed** 6, fly 8 (hover) | |
| **Immune** fear; **Resist** 10 radiant | |
| **Traits** | |
| ☼ **Sorrow** ✦ **Aura** 1 | |
| Any enemy in the aura that misses the angel with an attack is dazed until the end of the enemy's next turn. | |
| **Angelic Presence** | |
| While the angel is not bloodied, attack rolls against it take a –2 penalty. | |
| **Standard Actions** | |
| ⊕ **Flail** (weapon) ✦ **At-Will** | |
| *Attack:* Melee 1 (one creature); +22 vs. AC | |
| *Hit:* 2d10 + 7 damage, and the angel can push the target up to 2 squares. | |
| ➶ **Longbow** (weapon) ✦ **At-Will** | |
| *Attack:* Ranged 20 (one creature); +24 vs. AC | |
| *Hit:* 3d10 + 8 damage, and the target is slowed (save ends). This attack deals 2d6 extra damage against a slowed target. | |
| ✧ **Tears from Heaven** (fear, weapon) ✦ **Encounter** | |
| *Attack:* Area burst 1 within 10 (enemies in the burst); +22 vs. Will | |
| *Hit:* 4d10 + 8 damage, and the target cannot attack (save ends). | |
| *Miss:* Half damage. | |
| **Str** 18 (+12) **Dex** 21 (+13) **Wis** 22 (+14) | |
| **Con** 14 (+10) **Int** 12 (+9) **Cha** 24 (+15) | |
| **Alignment** unaligned **Languages** Supernal | |
| **Equipment** flail, longbow, 30 arrows | |

## Fallen Angel of Sorrow in Combat

A fallen angel of sorrow appears as a broken, mournful heap. It wails its despair, a tactic that disarms many foes. As tears streak its visage, it swiftly raises its bow and pierces its arrows and grief into enemy hearts. Brazen melee attackers find themselves dazed and heartsick in the fallen angel's presence, and mortal foes often find themselves weeping alongside their assailant as they fight to the death.

# Fallen Angel of Death

Nerull's angels carried plagues and death to the natural world. It was their task to harvest souls and bring them to their master. After the Raven Queen defeated the god and stole his power, the fallen angels of death fled to the Shadowfell's darkest corners, and over the centuries the constant exposure to necrotic energies perverted their life force.

| **Fallen Angel of Death** | **Level 21 Skirmisher** |
|---|---|
| Large immortal humanoid (angel, undead) | XP 3,200 |
| **HP** 197; **Bloodied** 98 | **Initiative** +18 |
| **AC** 35, **Fortitude** 35, **Reflex** 33, **Will** 32 | **Perception** +19 |
| **Speed** 8, fly 12 (hover) | Darkvision |
| **Immune** disease, fear, poison; **Resist** 15 necrotic, 15 radiant | |
| **Traits** | |
| ☼ **Nerull's Demand** ✦ **Aura** 5 | |
| Any enemy that makes a death saving throw while in the aura takes a –5 penalty to the roll. | |
| **Angelic Presence** | |
| While the angel is not bloodied, attack rolls against it take a –2 penalty. | |
| **Life Sense** | |
| The angel knows the location of all living creatures within 5 squares of it, and the angel's attacks against living enemies within 5 squares of it ignore concealment. | |
| **Standard Actions** | |
| ⊕ **Scythe** (weapon) ✦ **At-Will** | |
| *Attack:* Melee 2 (one creature); +26 vs. AC | |
| *Hit:* 3d12 + 9 damage. | |
| *Effect:* The angel can shift up to 2 squares. | |
| **Death's Hourglass** (necrotic) ✦ **Recharge** when the effect ends | |
| *Effect:* Ranged 10 (one creature). The target takes ongoing 30 necrotic damage until the end of the encounter. The target or an ally adjacent to it can end this effect by succeeding on a standard action DC 35 Religion check or two standard action DC 26 Religion checks. The effect automatically ends when the angel drops below 1 hit point. | |
| **Minor Actions** | |
| **Death's Decree** (necrotic) ✦ **At-Will** (1/round) | |
| *Effect:* Ranged 5 (one creature subject to *death's hourglass*). The target takes 15 necrotic damage, and the angel can shift 1 square closer to the target. | |
| **Skills** Insight +19 | |
| **Str** 26 (+18) **Dex** 23 (+16) **Wis** 19 (+14) | |
| **Con** 21 (+15) **Int** 18 (+14) **Cha** 21 (+15) | |
| **Alignment** evil **Languages** Supernal | |
| **Equipment** scythe | |

## Fallen Angel of Death in Combat

Cut loose from its master, a fallen angel of death soars across the night sky, searching for souls to feed a hunger that cannot be slaked.

A fallen angel of death points its bony finger at an enemy and then flips over its hourglass. As each grain drops to the lower chamber, the fallen angel's foe feels its life force ebbing away. Then the angel gets to work using its scythe to reap its harvest of souls.

# Demon, Hordeling

The Abyss, abetted by impressively creative demon lords, is an ever-churning womb that spits out demons in countless shapes and sizes. Each fiend is a manifestation of the darkness welling up from the evil shard lodged in the realm's heart.

Hordelings are the least of demonkind. These tiny, cunning fiends emerge from the poisoned landscape with a passionate hatred for all things. No two hordelings are physically alike. The Abyss arms these demons with unpredictable numbers of claws, fangs, stingers, horns, and spurs to enable them to contribute to the circle of birth, pain, and death that keeps the Abyss alive.

## Lore

**Arcana DC 27:** Demons do not reproduce; they destroy. Their inability to procreate in no way diminishes their numbers, though, because the Abyss spawns new demons from the used up bits of dead ones. From somewhere deep inside the realm's layers, pure evil impregnates raw elemental substance, causing new demons to rise up and carry on with the business of chaos and evil.

In theory, a hordeling might eventually evolve into another kind of demon. But these creatures are typically lobbed across battlefields, crushed underfoot, consumed, or slaughtered willy-nilly in demon games before they get much of a chance to experience living.

## Encounters

Hordelings spring up throughout the Abyss, and other demons pass their time tormenting these teeny fiends or crunching them between their teeth. In places of great carnage, such as after Blood War battles, these demons are more numerous, since plenty of raw material is available to replenish their numbers.

| **Hordeling Mob** | **Level 11 Elite Brute** |
|---|---|
| Gargantuan elemental humanoid (demon, swarm) | XP 1,200 |
| **HP** 276; **Bloodied** 138 | **Initiative** +9 |
| **AC** 23, **Fortitude** 24, **Reflex** 23, **Will** 21 | **Perception** +7 |
| **Speed** 5 | Darkvision |
| **Resist** half damage from melee and ranged attacks; **Vulnerable** 10 to close and area attacks | |
| **Saving Throws** +2; **Action Points** 1 | |
| **Traits** | |
| ☼ **Swarm Attack** ✦ Aura 1 | |
| Any enemy that starts its turn in the aura takes 10 damage. | |
| **Swarm** | |
| The mob can occupy the same space as another creature, and an enemy can enter its space, which is difficult terrain. The mob cannot be pulled, pushed, or slid by melee or ranged attacks. It can squeeze through any opening that is large enough for at least one of the creatures it comprises. | |
| **Standard Actions** | |
| ⨭ **Gnashing Host** ✦ **At-Will** | |
| *Attack:* Melee 1 (one creature and each creature in the mob's space); +16 vs. AC | |
| *Hit:* 2d8 + 13 damage, and the target is slowed until the end of the mob's next turn. | |
| **Move Actions** | |
| **Flowing Mob** ✦ **Recharge** when first bloodied | |
| *Effect:* The mob shifts up to its speed. | |
| **Triggered Actions** | |
| **Breakaway Hordeling** ✦ **At-Will** (1/round) | |
| *Trigger:* An enemy hits the mob. | |
| *Effect (No Action):* Up to four hordeling breakaways (roll a d4 to determine the exact number) appear in squares within 2 squares of the mob. They can appear in occupied squares and act on the mob's turn. Hordeling breakaways created in this fashion are worth no experience points. | |
| **Scattering Swarm** ✦ **Encounter** | |
| *Trigger:* A close or an area attack hits the mob. | |
| *Effect (Immediate Interrupt):* The triggering attack deals only half damage to the mob. | |
| **Str** 21 (+10) **Dex** 18 (+9) **Wis** 15 (+7) | |
| **Con** 18 (+9) **Int** 3 (+1) **Cha** 5 (+2) | |
| **Alignment** chaotic evil **Languages** – | |

| **Drawn to Pain ✦ At-Will** | |
| *Trigger:* An enemy within 3 squares of the hordeling is bloodied by an attack. | |
| *Effect (Immediate Reaction):* The hordeling can shift up to 3 squares to a square in the triggering enemy's space. | |
| **Str** 13 (+6) **Dex** 21 (+10) **Wis** 15 (+7) | |
| **Con** 18 (+9) **Int** 3 (+1) **Cha** 5 (+2) | |
| **Alignment** chaotic evil **Languages** – | |

## Hordeling Mobs in Combat

An individual hordeling is little more than a nuisance. Gather them up by the hundreds, however, and they present a serious threat. A hordeling mob is a frenzied swarm of maws, stingers, horns, and claws that tear enemies into bloody ribbons. Being bathed in foes' blood further excites the fiends, and eager hordelings occasionally pop out of the mob to lap up the liquid before attacking from a new position.

# Devil, Wrath

The secret to corrupting a mortal lies in allowing the creature to author his or her own downfall. Present temptations, lure the fool onto corruption's path, and then creep silently in the victim's wake as his or her decisions lead to the Nine Hells.

Similar to the succubi and imps tasked with gathering mortal souls for their masters, a wrath devil roams the natural world, preying on people who indulge in erratic behavior and allow their passions to rule them.

## Lore

**Arcana DC 29:** Despite their hunger for mortal souls, devils rarely enter the natural world, some scholars insist. They say devils cannot visit the natural world without a mortal's invitation. Other sages mock such assertions, saying fear is driving their research. These scholars believe devils are everywhere, hidden as they watch and wait for the best time to entice a mortal into finding succor in darkness. What truth is known is that while devils are glad to accept any soul, they crave those belonging to powerful individuals. The brighter a soul shines, the more energy the Hells can squeeze from it.

According to legend, a devil exists for every mortal failing. Indeed, devils seem bred to target specific weaknesses, striking at their quarries where they are most vulnerable. A succubus preys on lust-consumed creatures, while an imp targets ambition-ruled mortals. Meanwhile, a wrath devil exploits the anger burning in mortal hearts. It goads its targets to give into hatred and impulsively act on their passions.

## Encounters

When a wrath devil is near, self-control frays and tempers flare. It has a knack for escalating violence and driving mortals mad with uncontrollable anger. A wrath devil uses its victims to work evil and thus become consumed by it.

While in the Nine Hells, a wrath devil uses bearded devils as bodyguards. While in the natural world, succubi and duergar are its common companions.

ERIC DESCHAMPS

| Wrath Devil | Level 13 Controller |
|---|---|
| Medium immortal humanoid (devil) | XP 800 |
| **HP** 128; **Bloodied** 64 | **Initiative** +10 |
| **AC** 27, **Fortitude** 24, **Reflex** 25, **Will** 27 | **Perception** +14 |
| **Speed** 6 | Darkvision |
| **Resist** 10 fire | |
| **Standard Actions** | |
| ⨺ **Claws** ✦ **At-Will** | |
| *Attack:* Melee 1 (one creature); +18 vs. AC | |
| *Hit:* 2d8 + 12 damage. | |
| ⚚ **Compel Anger** (charm, psychic) ✦ **At-Will** | |
| *Attack:* Ranged 10 (one creature); +16 vs. Will | |
| *Hit:* 2d6 + 6 psychic damage, and the target takes a free action to charge or make a basic attack against a creature the devil chooses. If this attack hits, the target is dominated (save ends). | |
| *Aftereffect:* Until the end of the encounter, the target treats its allies as enemies only for the purpose of making opportunity attacks. The target must make opportunity attacks if provoked. | |
| **Move Actions** | |
| **Driven by Hate** (charm) ✦ **At-Will** | |
| *Effect:* Ranged 5 (one creature dominated by the devil). The devil slides the target up to 3 squares. | |
| **Triggered Actions** | |

## Wrath Devil in Combat

A wrath devil stays out of melee combat if it can, preferring to incite violence from a distance, acting as though it has nothing to do with the brutal scene unfolding. The devil has its nose in a book or drinks its ale as it works to turn foes against each other. When mortal blood is flowing freely and unconscious bodies litter the scene, the devious creature stands up gracefully and hefts its quarry over its shoulder. A wicked, lopsided grin stretches across the wrath devil's face as it begins its return trip to its master.

# Dragonspawn, Nhagruul

Nhagruul, the deformed wizard who sought to use the *Book of Vile Darkness* to conquer and enslave the world, left behind many dark legacies. The Nhagruul dragonspawn are among the most fearsome remnants of his schemes. The psychotic mage grew the dragonspawn in his laboratory from evil dragon eggs his apprentices stole. The wizard used his own demonic essence to corrupt the embryos. When the eggs hatched, twisted, dragon-like monstrosities magically connected to Nhagruul greeted their maker, and they instinctively bent their necks to the greater wicked power.

At the height of Nhagruul's influence, the dragonspawn were formidable and cunning beasts that could magically outmaneuver even the most accomplished magi. When the *Book of Vile Darkness* consumed Nhagruul, the dragonspawn weakened and grew desperate. Eventually, the monsters turned on one another as they vied for territory and treasure. It's unknown how many of the creatures survived the rivalry. In the years since, the survivors have withdrawn to their secluded lairs, and their memories of Nhagruul and the glory days have faded away with their magic.

## Lore

**Arcana or History DC 29:** Dragonspawn are the foul progeny of the demon-wizard Nhagruul, who incubated their eggs in festering pools of demonic slime. Dozens of these wyrmlings were born linked to the mage's evil essence, but Nhagruul destroyed the most heinously deformed ones.

Few Nhagruul dragonspawn have survived since the dark wizard's destruction (or disappearance, as some attest). Although it's hard to mistake them for true dragons, Nhagruul dragonspawn possess certain characteristics in common with their draconic ancestors, including leathery wings and breath weapons.

No two Nhagruul dragonspawn look exactly alike. Their draconic features blend hideously with the more monstrous traits of the vile wizard who spawned them. For this reason, they are often referred to in historical accounts as "vile dragons," though this name hardly captures the terror their appearances instill in would-be prey.

## Encounters

The hardiest of the Nhagruul dragonspawn live on civilization's fringes, making their lairs in deep caves, forests, and old ruins.

A Nhagruul dragonspawn attacks any dragon it encounters. After laying claim to a dragon's lair, a dragonspawn devours all but one of its victim's eggs. The dragonspawn corrupts the remaining egg with its

ERIC DESCHAMPS

saliva, bathing the shell in sputum several times a day until it hatches into a new Nhagruul dragonspawn.

| **Nhagruul Dragonspawn** | **Level 14 Solo Artillery** |
|---|---|
| Large natural magical beast (reptile) | XP 5,000 |
| **HP** 564; **Bloodied** 282 | **Initiative** +13 |
| **AC** 28, **Fortitude** 28, **Reflex** 24, **Will** 26 | **Perception** +16 |
| **Speed** 6, fly 8 | Darkvision |
| **Saving Throws** +5; **Action Points** 2 | |

**Traits**

**Action Recovery**

Whenever the dragonspawn ends its turn, any dazing, stunning, or dominating effect on it ends.

**Instinctive Ferocity**

On an initiative of 10 + the dragonspawn's initiative check, the dragonspawn can use *bite* or *fiery spittle* as a free action. If the dragonspawn cannot use a free action to make this attack due to a dominating or a stunning effect, then that effect ends instead of the dragonspawn making the attack.

**Standard Actions**

**Bite** (poison) ✦ **At-Will**

*Attack:* Melee 2 (one creature); +19 vs. AC

*Hit:* 2d6 + 10 damage, and ongoing 10 poison damage (save ends).

**Double Attack** ✦ **At-Will**

*Effect:* The dragonspawn uses *bite* against two different creatures.

**Fiery Spittle** (fire) ✦ **At-Will**

*Attack:* Ranged 20 (one creature); +19 vs. Reflex

*Hit:* 2d8 + 11 fire damage.

**Breath Weapon** (fire, poison) ✦ **Recharge** ⚄ ⚅

*Attack:* Close blast 5 (creatures in the blast); +17 vs. Reflex

*Hit:* 4d10 + 11 fire and poison damage.

*Miss:* Half damage.

**Frightful Roar** (fear) ✦ **Encounter**

*Attack:* Close burst 3 (enemies in the burst); +17 vs. Will

*Hit:* The target is dazed until the end of the dragonspawn's next turn.

*Aftereffect:* The target chooses to either take a –2 penalty to attack rolls until the end of its next turn or take a free action to move its speed away from the dragonspawn.

*Miss:* The target takes a –2 penalty to attack rolls until the end of the dragonspawn's next turn.

**Triggered Actions**

**Wing Claw** ✦ **At-Will**

*Trigger:* An enemy within 2 squares of the dragonspawn hits the dragonspawn with a melee attack.

*Attack (Immediate Reaction):* Melee 2 (triggering enemy); +19 vs. AC

*Hit:* 4d6 + 8 damage.

*Effect:* The dragonspawn flies up to 4 squares. This movement does not provoke opportunity attacks.

**Bloodied Breath** ✦ **Encounter**

*Trigger:* The dragonspawn is first bloodied.

*Effect (Free Action): Breath weapon* recharges, and the dragonspawn uses it.

**Skills** Intimidate +15, Stealth +18

| | | |
|---|---|---|
| **Str** 24 (+14) | **Dex** 22 (+13) | **Wis** 18 (+11) |
| **Con** 21 (+12) | **Int** 11 (+7) | **Cha** 17 (+10) |

**Alignment** chaotic evil **Languages** Abyssal, Draconic

## Nhagruul Dragonspawn in Combat

A hungry Nhagruul dragonspawn is not above gobbling up a cow or horse, but its hunt is unsatisfying if it doesn't elicit the screams of humanoid victims. A Nhagruul dragonspawn circles over a town, raining fire on buildings and people so it can luxuriate in the smell of fear and death. When its prey starts running, preferably while on fire, the monster swoops down to rip the creature apart with its poisonous teeth.

A Nhagruul dragonspawn isn't particularly smart, but it is cunning. When confronted in its lair, the beast stalks intruders in a manner similar to a great cat, creeping through the shadows and springing when interlopers are least prepared. When cornered, a dragonspawn lashes out to rake its opponent with its clawed wings.

# Filth Hag

Hags have strong ties to natural forces; yet being uniformly wicked, they lack nature's impartiality. A filth hag exemplifies the depth of corruption to which these wretched creatures gaily wallow.

## Lore

**Arcana DC 31:** A filth hag is never encountered without its offspring, a mountainous being shaped from a mixture of the hag's filth, garbage, mud, and leaves. The hag binds to its creation the souls of mortal males it's seduced, thus animating the son's foul body. The souls remain trapped until the animate is destroyed or the filth hag releases them, a gift these savage fey rarely grant.

## Encounters

A filth hag and its son haunt abandoned villages deep in Feywild or untamed wildernesses in the natural world. Ghouls and other undead are drawn to the promise of meat and thus can be found haunting the fringes of a filth hag's lair.

| **Filth Hag** | **Level 16 Skirmisher (Leader)** |
|---|---|
| Medium fey humanoid (shapechanger) | XP 1,400 |
| **HP** 155; **Bloodied** 77 | **Initiative** +15 |
| **AC** 30, **Fortitude** 30, **Reflex** 28, **Will** 26 | **Perception** +9 |
| **Speed** 8 (earth walk) | Low-light vision |
| **Traits** | |
| ☼ **Stench** ✦ **Aura** 2 | |
| Enemies in the aura grant combat advantage. | |
| **Standard Actions** | |
| ⓘ **Filthy Claws** (poison) ✦ **At-Will** | |
| *Attack:* Melee 1 (one creature); +21 vs. AC | |
| *Hit:* 2d8 + 5 damage, and ongoing 10 poison damage (save ends). | |
| *Effect:* The hag shifts up to 4 squares. | |
| **Goad Son** ✦ **Recharge** ⚄ ⁞⁞ | |
| *Effect:* Ranged 5 (one filth hag son). The target uses *slam* twice. | |
| **Minor Actions** | |
| **Devour Offspring** (healing) ✦ **At-Will** (1/round) | |
| *Effect:* Ranged 5 (one filth hag son). The target takes 20 damage, and the hag regains 15 hit points. | |
| **Change Shape** (polymorph) ✦ **At-Will** | |
| *Effect:* The hag alters its physical form to appear as a crone or young female of any Medium humanoid race until it uses *change shape* again or until it drops below 1 hit point. To assume a specific individual's form, the hag must have seen that individual. Other creatures who succeed on a DC 36 Insight check to discern that the form is a disguise. | |
| **Mother's Demand** ✦ **Encounter** | |
| *Effect:* Ranged 5 (one filth hag son). The target is dazed (save ends), and the hag gains 1 action point. | |

### Filth Hag and Son in Combat

A filth hag wears a maiden's form. The creature dances in the mud while its lumbering "son" smashes through other intruders. The hag toys with its enemies, inviting gullible males into its curvaceous embrace. If anyone draws too near, the stench of the hag's corruption reveals its true nature, as does the sharpness of the monster's wicked claws.

# TSOCHAR

The tsochar are Far Realm body thieves that have invaded the natural world. They are tasked with establishing a foothold for their dread master, the Nine-Tongued Worm.

## Lore

**Dungeoneering DC 25:** The tsochar are not so much a race as they are an extension of the elder evil known as Mak Thuum Ngatha, the Nine-Tongued Worm and Devourer of Worlds. Each tsochar is a tendril liberated from the great thrashing worm. It is sent into the natural world to prepare the way for the elder evil.

When it escapes the Far Realm, a tsochar's first task is to secure a viable body. The creature slithers into a victim's flesh and embeds itself in the target's brain. The parasite quickly detaches a victim's will, or cognitive awareness, from its mind, thus gaining total control over its new meat vessel.

## Encounters

The Nine-Tongued Worm drives its agents to amass and hoard magical power. The parasites, in their host vessels, search the world for relics, potent rituals, and anything else that might help them erect a stable passageway to the Far Realm that Mak Thuum Ngatha can traverse to enter the natural world. Tsochar are smart enough to ally with monsters that can serve or aid them in this purpose.

# Tsochar Parasite

Every tsochar infestation includes several tsochar that have yet to find suitable hosts.

| Tsochar Parasite | Level 9 Minion Controller |
|---|---|
| Small aberrant magical beast | XP 100 |
| **HP** 1; a missed attack never damages a minion. | **Initiative** +9 |
| **AC** 23, **Fortitude** 21, **Reflex** 22, **Will** 20 | **Perception** +7 |
| **Speed** 4, climb 4 | Darkvision |
| **Traits** | |
| **Hideous Grasp** | |
| While the tsochar has a creature grabbed, the tsochar gains a +2 power bonus to all defenses. | |
| **Standard Actions** | |
| ⊕ **Tentacles** (poison) ✦ **At-Will** | |
| *Attack:* Melee 1 (one creature); +13 vs. AC | |
| *Hit:* 8 poison damage, and the target is grabbed (escape DC 17). | |
| ⸸ **Burrow into Host** (poison) ✦ **At-Will** | |
| *Attack:* Melee 1 (one humanoid creature grabbed by the tsochar); +12 vs. Fortitude | |
| *Hit:* The target is dominated (save ends). While the target is dominated, the tsochar is removed from play, though it can still issue commands to the target. If the target is dominated at the end of the encounter, the tsochar takes full control of the target until the target drops below 1 hit point. A Remove Affliction ritual or similar magic can force a tsochar out of its host. | |
| *Aftereffect:* The tsochar appears in an unoccupied square adjacent to the target. | |
| **Skills** Stealth +14 | |
| **Str** 13 (+5) **Dex** 20 (+9) **Wis** 16 (+7) | |
| **Con** 18 (+8) **Int** 15 (+6) **Cha** 13 (+5) | |
| **Alignment** chaotic evil **Languages** Deep Speech, telepathy 10 | |

### Tsochar Parasite in Combat

A parasite understands its fragility and wastes no time seeking a host. The parasite latches onto any available humanoid and then burrows into its tender flesh to take control. Once it has enslaved its host, the tsochar and its host effectively become one until the host dies or the parasite is expelled.

# Tsochar Wearer of Flesh

After a tsochar finds a body, it sets out to find a superior one. It stalks a healthy and powerful individual whose form is more likely than its current vessel to withstand the dark work ahead.

The following statistics represent the tsochar parasite and its enslaved host.

| **Tsochar Wearer of Flesh** | **Level 9 Soldier** |
|---|---|
| Medium aberrant humanoid | XP 400 |
| **HP** 95; **Bloodied** 47 | **Initiative** +6 |
| **AC** 25, **Fortitude** 23, **Reflex** 20, **Will** 21 | **Perception** +12 |
| **Speed** 5 | Darkvision |
| **Immune** dazed | |

**Traits**

**Psychic Scream** (psychic) ✦ **Aura** 1
Enemies in the aura take 5 psychic damage whenever the tsochar takes psychic damage.

**Parasitic Mind**
At the start of its turn, the tsochar makes saving throws to end any stunning or dominating effect on it.

**Standard Actions**

**Longsword** (weapon) ✦ **At-Will**
*Attack:* Melee 1 (one creature); +14 vs. AC
*Hit:* 2d8 + 8 damage.
*Effect:* The target is marked until the end of the tsochar's next turn.

**Triggered Actions**

**Guarding Strike** ✦ **At-Will**
*Trigger:* An enemy marked by the tsochar shifts or makes an attack that does not include the tsochar as a target.
*Effect (Opportunity Action):* The tsochar uses *longsword* against the triggering enemy.

**Infestation Unveiled** ✦ **Encounter**
*Trigger:* The tsochar drops below 1 hit point from an attack that does not deal psychic damage.
*Effect (No Action):* A tsochar parasite appears in the tsochar's space or the nearest unoccupied square.

**Skills** Bluff +9

| | | |
|---|---|---|
| **Str** 20 (+9) | **Dex** 10 (+4) | **Wis** 16 (+7) |
| **Con** 15 (+6) | **Int** 15 (+6) | **Cha** 11 (+4) |

**Alignment** chaotic evil **Languages** Common, Deep Speech, telepathy 10
**Equipment** plate armor, heavy shield, longsword

## Tsochar Wearer of Flesh in Combat

A wearer of flesh keeps its true nature concealed and hides among other humanoids until the infestation has spread.

# Tsochar Worm Servant

A few tsochar have a superb connection to the Nine-Tongued Worm and act as its overseers in the natural world. Thus, a worm servant rules an infestation's tsochar in the name of the elder evil. It guides their spread through a community and coordinates their search for items to further their master's plans.

The statistics presented here represent the tsochar parasite and its enslaved host.

| **Tsochar Worm Servant** | **Level 9 Artillery** |
|---|---|
| Medium aberrant humanoid | XP 400 |
| **HP** 72; **Bloodied** 36 | **Initiative** +5 |
| **AC** 23, **Fortitude** 19, **Reflex** 21, **Will** 23 | **Perception** +12 |
| **Speed** 5 | Darkvision |
| **Immune** dazed | |

**Traits**

**Psychic Scream** (psychic) ✦ **Aura** 1
Enemies in the aura take 5 psychic damage whenever the tsochar takes psychic damage.

**Parasitic Mind**
At the start of its turn, the tsochar makes saving throws to end any stunning or dominating effect on it.

**Standard Actions**

**Scourge** (weapon) ✦ **At-Will**
*Attack:* Melee 1 (one creature); +14 vs. AC
*Hit:* 2d10 + 6 damage.

**Unhinging Visions** (psychic) ✦ **At-Will**
*Attack:* Ranged 20 (one creature); +14 vs. Will
*Hit:* 1d10 + 9 psychic damage, the tsochar can slide the target up to 2 squares, and the target grants combat advantage until the end of the tsochar's next turn.

**Madness Storm** (psychic) ✦ **Encounter**
*Attack:* Close blast 5 (enemies in the blast); +12 vs. Will
*Hit:* 2d8 + 11 psychic damage, and the target is dazed (save ends).
*Miss:* Half damage, and the target is slowed until the end of its next turn.

**Triggered Actions**

**Infestation Unveiled** ✦ **Encounter**
*Trigger:* The tsochar drops below 1 hit point from an attack that does not deal psychic damage.
*Effect (No Action):* A tsochar parasite appears in the tsochar's space or the nearest unoccupied square.

**Skills** Bluff +14, Religion +12

| | | |
|---|---|---|
| **Str** 10 (+4) | **Dex** 13 (+5) | **Wis** 16 (+7) |
| **Con** 12 (+5) | **Int** 17 (+7) | **Cha** 20 (+9) |

**Alignment** chaotic evil **Languages** Common, Deep Speech, telepathy 10
**Equipment** chainmail, scourge

## Tsochar Worm Servant in Combat

A worm servant is the most valuable member of a tsochar infestation. Other tsochar fight to protect it. The worm servant doesn't stand idly by though. It stays busy psychically bludgeoning enemy minds, filling them with Far Realm visions, while lesser tsochar physically strike against opponents.

# Noble Tsochar

A noble tsochar is a conduit of Mak Thuum Ngatha's magical might and dominates a battle to protect the colony. While a worm servant orchestrates the great worm's plans off the battlefield, a noble takes charge over any fighting that ensues.

The statistics presented below represent the tsochar parasite and its warped, enslaved host.

| **Noble Tsochar** | **Level 9 Elite Controller** |
|---|---|
| Medium aberrant humanoid | XP 800 |
| **HP** 184; **Bloodied** 92 | **Initiative** +6 |
| **AC** 23, **Fortitude** 19, **Reflex** 21, **Will** 24 | **Perception** +13 |
| **Speed** 5 | Darkvision |
| **Immune** dazed | |
| **Saving Throws** +2; **Action Points** 1 | |
| **Traits** | |
| ☼ **Psychic Scream** (psychic) ✦ **Aura** 1 | |
| Enemies in the aura take 5 psychic damage whenever the tsochar takes psychic damage. | |
| **Parasitic Mind** | |
| At the start of its turn, the tsochar makes saving throws to end any stunning or dominating effect on it. | |
| **Standard Actions** | |
| ⊕ **Tentacle** (poison) ✦ **At-Will** | |
| *Attack:* Melee 1 (one creature); +14 vs. AC | |
| *Hit:* 2d10 + 6 poison damage. | |
| ⚚ **Violet Lightning** (implement, lightning, psychic) ✦ **At-Will** | |
| *Attack:* Ranged 10 (one creature); +12 vs. Reflex | |
| *Hit:* 2d8 + 8 lightning and psychic damage, and the target is dazed until the end of its next turn. | |
| ⚚ **Double Attack** ✦ **At-Will** | |
| **Effect:** The tsochar uses *violet lightning* twice. | |
| ✲ **Insanity Vortex** (charm, implement, psychic) ✦ **Recharge** ⚄ ⚅ | |
| *Attack:* Area burst 1 within 10 (enemies in the burst); +12 vs. Will | |
| *Hit:* 3d6 + 10 psychic damage, and the target makes a melee basic attack as a free action against a creature the tsochar chooses. | |
| *Miss:* Half damage. | |
| **Minor Actions** | |
| **Pierce the Barrier** (psychic, zone) ✦ **Encounter** | |
| *Effect:* Area burst 2 within 10. The burst creates a zone that lasts until the end of the tsochar's next turn. Any enemy that ends its turn in the zone takes 5 psychic damage. As the zone ends, four tsochar parasites appear in unoccupied squares in the zone. | |
| **Triggered Actions** | |
| **Infestation Unveiled** ✦ **Encounter** | |
| *Trigger:* The tsochar drops below 1 hit point from an attack that does not deal psychic damage. | |
| *Effect (No Action):* A tsochar parasite appears in the tsochar's space or the nearest unoccupied square. | |
| **Skills** Arcana +12, Dungeoneering +13, Religion +12 | |
| **Str** 8 (+3) **Dex** 14 (+6) **Wis** 18 (+8) | |
| **Con** 12 (+5) **Int** 17 (+7) **Cha** 22 (+10) | |
| **Alignment** chaotic evil **Languages** Common, Deep Speech, telepathy 10 | |
| **Equipment** robes, orb | |

TSOCHAR

## Noble Tsochar in Combat

A noble tsochar does not fear exposure and throws its mental energy into the battle at hand. As the elder evil's vessel, the tsochar channels Far Realm power to fuel its potent magic attacks. If the situation becomes dire, the noble doesn't hesitate to tear a hole in reality and call Far Realm reinforcements to the scene.

COLIN FIX

# Vile Organizations

*"Destroy the book?! You can't destroy the book, you silly twit. Not that it can't be destroyed. It can. Just . . . not by you."*
–The Keeper of Scrolls

The moral decay coinciding with vile darkness's spread is not limited to the individual. Sometimes, the wicked find ways to overcome their divisive natures and work together to achieve incredibly dark objectives. The following organizations offer a sampling of groups sworn to evil.

## Chosen of the Sun

*"The final battle between good and evil is at hand."*

Civilization dies. Virtue gutters like a candle in the wind. The last days are at hand, and the righteous can no longer tolerate the wickedness driving the world to destruction's brink.

Chosen of the Sun adherents are self-appointed champions of good. They roam the countryside, arrogant in their certitude, judging and executing anyone they deem corrupt. Although they do combat genuine evil, they condemn anyone who does not share their beliefs as an enemy worthy of death.

### Lore

**Religion (hard DC):** The Chosen of the Sun rose in Nerath's waning days. Believing the gnoll and demon horde to be divine justice meted against a people who had allowed wickedness to prosper, the Chosen sped the empire's decline in a murderous crusade to purge evil, real or imagined, from their homeland. The Chosen have since splintered into numerous sects, all more vicious and bloodthirsty than their forebears.

### Goals and Methods

The Chosen believe they are soldiers in an apocalyptic war between good and evil, and that through corruption and decadence, evil has gained the upper hand. In these desperate days, righteous certainty is the only thing the Chosen have left.

These zealots root out the wicked and use burning, torture, and mutilation to make examples of them. They travel the countryside, roaming from community to community in search of evil's thralls. The Chosen's disciples know evil is a cunning adversary that can hide in the most virtuous communities. For this reason, the Chosen are quick to put anyone to the question. Pain is useful for clarifying a person's thoughts and revealing clues about corruptive actions the evildoer would eventually take.

### Organization

A few disorganized bands are all that's left of the vast armies that appeared following Nerath's fall. Scattered and shabby, they are little better than brigands and murderers. High Inquisitors have absolute authority in a band and act as judge, jury, and executioner for anyone who crosses the Chosen.

Under these demagogues are the soldiers, a motley mix of murderers, bandits, and mercenaries. They pay lip service to the Chosen's agenda and use the "noble" mission to justify their brutal behavior. A few people do join the Chosen because they believe they work in defense of good. Most, however, are just as evil as the enemies they claim to fight.

### Game Link: Judge and Jury

Rumors about a hidden demon cult draw the Chosen of the Sun to the village of Red Tree, or any other sleepy community the characters are passing through. After settling into the community, the Chosen begin holding sham trials to ferret out cultists. Perhaps an actual cult is rooted in the community, but the Chosen seem more interested in torturing villagers than dealing with an infestation.

## Dark Brotherhood

*"The only path to surviving the darkness is to embrace it."*

The Dark Brotherhood is a mysterious cabal founded on the belief that the duality of good and evil is an incorrect explanation for a cosmic force the chaotic evil god Tharizdun introduced into Creation. Disciples reject the idea of "good" and instead embraces the darkness that is slowly consuming all that is.

### Lore

**History (hard DC):** The Dark Brotherhood emerged ages ago as a secret society built atop the teachings of its founder Heinrich. A philosopher and magician of no little talent, Heinrich understood evil's emergence in Creation was not something intrinsic to reality; rather, it was an intrusion, an alien force the actions of one misguided deity brought into being. Knowing this, Heinrich postulated evil has no counter. What people call "good" is actually Creation's resistance to an invading force, much like how a healthy body reacts to disease. This disease is not something time or effort can cure. It is lethal. It is a ravenous cancer that will eventually devour reality.

Rather than fight the disease's progress, Heinrich believed that one must embrace evil to survive the process. When evil blankets reality, it will turn against itself, and then the Dark Brotherhood will be in the best position to destroy its rivals and inherit all that remains.

## Goals and Methods

The best way to understand the Dark Brotherhood and its goals is to consider the writings of its founder, the magician and philosopher Heinrich:

*"I will not deny we instinctively find certain actions distasteful, yet our abhorrence does not make these actions evil. Rather, it signals some instinctive quality, some unconscious recognition of wrongness. The wrongness is not a byproduct of idealized good or evil. Instead, it is our recognition that a certain agency is at work in the cosmos.*

*"Notions about good and evil are mortal definitions for what is the absence and presence of this agency. We define actions as good or evil based on how a particular choice impacts our moral sensibilities. Such thoughts are useful for building stable and peaceful societies, if that end is to be desired. But to apply these concepts to, for lack of a better term, vile darkness is inaccurate.*

*"You see, evil doesn't have an antithesis. Good doesn't exist. Creation is composed of the material Tharizdun's darkness has yet to touch and what it has touched. Now loosed, nothing can stop the taint. Fighting it is pointless. The end is inevitable. Rather than taxing ourselves in a misguided struggle, is it not better to use this power, to embrace its strength to ensure our survival in the time when evil has conquered absolutely?"*

The Dark Brotherhood has no interest in turning mortals to darkness; evil will triumph in the end. Dark Brothers and Sisters foster darkness already within others, nudging creatures closer to embracing the evil already inside them. To this end, Dark Brothers and Sisters conceal themselves behind inoffensive masks. They assume influential positions as advisors, priests, seers, and sages to guide creatures to the truth.

## Organization

The Dark Brotherhood is a far-reaching organization. Its agents are installed in communities across the known world. All Dark Brothers and Sisters are fully versed in the order's ancient teachings and have extensive resources available to use to protect themselves and influence others. Each agent has several underlings, but these lackeys usually have no idea who they're really serving. Most members are human, but the order doesn't discriminate against other races.

All disciples acknowledge the Keeper of Scrolls as their leader. The keeper safeguards the organization's lore, tracks its members, and moves resources to where they are most needed. A talented and famous wizard named Melphor currently holds this position. When not conducting the organization's business, he oversees the largest library in all the lands, which is located in the southern city of Armistice.

## Game Link: Puppet Master

The Cardamom Massacre was the final straw for the people of Westermont. Years of high tariffs and oppressive taxes, combined with brutal reprisals from the ducal palace, drove citizens to arm themselves. As adventurers enter the city, mobs storm the castle in the city's center, shouting for the duchess's head.

Many believe the fault lies with the duchess's advisor, a mage named Azaal. However, some people have begun to notice that most of these accusations are coming from one source, a seemingly harmless priest who just happens to be a secret agent of the Dark Brotherhood.

# Disciples of Nhagruul

*"The answers to all questions can be found in the Book."*

The *Book of Vile Darkness* gathers legends like a miser hoards gold. Many arcane scholars believe Vecna authored the tome, and its contents reinforce this theory. However, this hasn't stopped others from adopting the book as their own, which Nhagruul's disciples have done.

## Lore

**History (hard DC):** Nhagruul was a deranged wizard whose reign of terror marked a particularly dark chapter in the world's history. A master of magic, he allowed his profane research to twist his body and shatter his sanity. According to legend, as Nhagruul neared his life's end, he underwent an excruciating ritual to preserve his wicked knowledge for eternity. Using the wizard's blood, flesh, and bones, his servants constructed the *Book of Vile Darkness*. Into it they poured Nhagruul's every diseased thought as well as every terrible truth he had discovered.

His followers used the vile manuscript to seed evil and madness throughout the world. They would leave bound creatures in the open tome's presence. Its essence would billow from the pages to encase victims, drive them mad, warp their bodies, and regurgitate them as creatures of darkness before retreating back into the book.

In reaction, the Knights of the New Sun, a holy band of paladins, swore to destroy the disciples and their blasphemous book. They made great inroads against the dark servants, but Nhagruul's disciples divided the tome into three parts and sent the sections in opposite directions to safeguard the lore until a time when the Knights were no more.

## Goals and Methods

Since the sundering, the Disciples of Nhagruul have watched and waited for the right time to reassemble the book as they further the work of their namesake.

In that time, lesser creatures have replaced the Knights' old guard. Now only a feckless band remains.

With no enemies to halt them, the disciples are darting from the shadows to scour the land for the Thirds so they can reassemble the *Book of Vile Darkness* and bring about the apocalypse their founder intended.

## Organization

The disciples would be a disorganized and chaotic mess if it weren't for their new leader, the mind flayer Shathrax. After its efforts to secure the legendary *Tear of Ioun* failed, Shathrax retreated to the Underdark where it happened upon a cell of degenerate disciples. The mind flayer quickly defeated them and, from the consciousness it devoured, learned about the book. It has since gathered the remaining disciples and enslaved them to its cause, asserting that it alone can reassemble the book.

Shathrax commands the disciples from a flying fortress. Workshops that churn out evil magic items and vile spells are ensconced in the citadel's myriad rooms and corridors. The labyrinthine passages contain a veritable menagerie of horrors, ranging from undead to aberrant monsters the Far Realm's influence has twisted.

## Game Link: Last Knight

The Disciples of Nhagruul have secured two of the book's thirds and are on their way to recover the final segment. Shathrax believes the blood of a holy paladin is needed to mend the sundering's damage to the *Book of Vile Darkness*, so it has sent other minions to find, bind, and bring the last honorable Knight of the New Sun to the citadel, where the mind flayer intends to complete the ritual and set in motion Nhagruul's vile plan.

Opposed to the world's end, adventurers could chase after the third fragment, go after Shathrax, or try to free the Knight.

# Kargatane

*"What have we to fear from death when immortality is at hand?"*

What was originally the secret police for a now lost domain of dread, the Kargatane has emerged as one of the most powerful and dangerous organizations in the Shadowfell. Led by Lady Kazandra, Kargatane agents foment discord, murder, steal, and sabotage in accordance with their mistress's inscrutable goals. No one knows where the Kargatane is going to strike next or what it truly seeks, but everyone fears it.

## Lore

**History (hard DC):** Darkon, a domain of dread, was once a powerful fief in the Shadowfell. The lich lord Azalin ruled Darkon, making it a place of inflexible order and crushing despair. The Kargatane, Azalin's network of spies and assassins, was his greatest weapon. Under Lady Kazandra's command, its agents kept the people obedient to the dark lord's will. Azalin's reign came to an abrupt end, however, and when he vanished, Darkon went with him. In its place rose the terrifying Necropolis and its new master, Death.

Kazandra proved agile. Anticipating the changing circumstances and preferring to not be absorbed into the new regime, Kazandra summoned all of the Kargatane's agents to her, and together they withdrew into another land. Although the lich lord no longer props her up, Lady Kazandra's Kargatane remains one of the Shadowfell's most dangerous destabilizing forces.

## Goals and Methods

Eternal life is promised to any creature invited to join the Kargatane. Few members understand the immortality offered is to become a vampire.

While immortality is their hope, serving Lady Kazandra is their reality. Agents are allotted no independence, no freedom, and no personal will. Kazandra regards members as tools; as such, they are to be used until they are no longer useful. The Kargatane engages in all manner of sordid endeavors. Grave robbing, espionage, theft, and murder are but a few of its activities. All missions relate to Kazandra's larger goal of proving herself worthy to receive a domain of dread of her own.

## Organization

The great deception Kazandra perpetuates is that the immortality her servants crave will come from her directly. She is a vampire and a powerful one at that. She could transform her servants into vampires, but she withholds that gift to prevent rivals from rising up against her.

Volunteers are not invited to join the Kargatane. In fact, the organization eliminates petitioners who seek membership. Instead, it drafts potential candidates and does not accept refusals.

Members are living humanoids. The agency prefers inducting humans and half-elves because they can infiltrate most communities. If members need to identify themselves to other agents, they show their ampoules of crimson fluid attached to cords they wear around their necks. The fluid might look like blood, but it is a virulent toxin agents are required to drink if captured.

### Game Link: Murder Most Foul

A friendly acquaintance of the adventurers' winds up dead. Investigation suggests a villainous agency murdered the victim. Even though the Kargatane did kill the acquaintance, it's not the organization being fingered. Lady Kazandra's agency framed a rival organization. The Kargatane intends to draw characters into a conflict with its foes so its agents can quickly and quietly assassinate the organization's leadership.

## Servants of Xopos

*"Weep not, little friend. You have been given a great honor. Not everyone can give birth to a god."*

Whenever civilization falters, some believe the end is at hand. They search for signs in the upheaval, omens in the events that gnaw at stability and order. From deranged watchers who scour the heavens for the wandering star that is the World Born Dead to insane cultists devoted to the Elder Elemental Eye, the world has no shortage of alarming believers and beliefs. In each case, an urgency to hasten the end is present.

The Servants of Xopos is the latest in a long line of mortal organizations tasked with preparing the world for its end.

### Lore

**Arcana (hard DC):** Had the wizard Tyben not dared to summon a slaad, the Servants of Xopos would not exist. But Tyben's recklessness and unquenchable thirst for power led him to explore the essence of chaos. The act of calling Xopos the slaad into the natural world was not what doomed him, though. Tyben's fate wasn't assured until the wizard breached the magic circle, freeing the slaad. Xopos then implanted an embryo in Tyben's brain before rampaging about until it destroyed itself.

A mortal exposed to a slaad's embryo does not live long. The invader devours the mortal's mind and eventually burrows out of the victim's skull, growing rapidly until it becomes an adult slaad.

Aware of his peril, Tyben used magic to bind the embryo and retard its growth. Although it increased in size, it did so slowly, buying the wizard time to search for a way to escape death. The parasite's presence eventually drove Tyben mad, and in his lunacy, the wizard became convinced the slaads were gods.

### Goals and Methods

Tyben has carried the slaad embryo for so long it has fused with his brain matter. Where the human ends and the slaad begins is impossible to determine. Tyben believes it is his task to deliver the slaads into the world so they can return existence to the way it was before the primordials and gods imposed order on the chaos.

Exposing mortals to chaos phage (*Monster Manual* 3, page 179) is the quickest and easiest way to bring about the change Tyben desires. His Servants kidnap viable hosts and insert embryos in their heads. Sometimes, a Servant releases a host if doing so is apt to cause greater damage than holding onto a victim until the slaad tadpole breaks free. When Servants have infected a dozen or so hosts in one locale, they move on to trouble another community.

### Organization

It takes a special breed of madness to join the Servants of Xopos. Members are outsiders, exiles, and misanthropes. They regard their work as a sacred calling and tell victims that to be chosen as a vessel is an honor. Servants openly discuss their allegiances when asked. However, they are lucid enough not to volunteer information to people they suspect might try to stop them.

Since most Servants carry the chaos phage themselves, their time in the world is brief. Until the tadpoles kill them, they gather into small cells and coordinate their efforts to breed as widely as possible through a community. Usually one member per cell is not a carrier, and it falls to him or her to move the operation to another town when enough embryos have been placed to ensure a lively brood.

### Game Link: Surrogates

While traveling through the countryside, adventurers come upon a town that the Servants of Xopos have infiltrated. Slaad embryos have been implanted in several prominent citizens, and slaads are hatching from heads at a rapid rate.

CHAPTER 5

# Dark Rewards

*"Have you the courage to take what is offered? That is the question I most often pose to the adventurers whose fortunes I have read. Too often, there is bluster and bravado. Rarely do I find substance in those I meet. They claim to have strength, claim to have power, yet I have spied the truth in the cards and in the swirling mist darkening my crystal ball. Oh yes, I intrigue them with cryptic warnings and tantalizing hints, yet I know that once they set foot on the road to the Master's castle, their future is certain, their doom at hand. Death's shadow chills the road, as his scythe plucks at life's strings.*

*"Why risk death? The darker the shadow, the greater the rewards. All the easy treasures have been plucked from the land, leaving only the unexplored darkness to offer up wonders to those with the courage to claim them. This is why the heroes leave their homes. Oh, there may be some noble cause, some princess in need of rescuing, but it is always the promise of riches and wealth that keeps the darkness fat on so-called adventurers."*

—Madame Eva

DEATH IS hardly the worst fate one can find fighting evil. Disease and curses, terrible afflictions that kill the body and mind, loss of loved ones, failure and a world overrun by wickedness are all things a would-be hero might face. Vile darkness has many weapons with which it might defeat the good, and not all are obvious. These perils take the form of deadly monsters and environments, but they can also come from the very rewards adventurers hope to gain.

The magic items and alternative rewards presented in this chapter are all touched in some way by darkness. Some items are cursed and prevent heroes from reaching their full potential in battle. Other items include a selection of divine boons granted by the dark gods. In each case, the items and rewards offer great power at a risk to those who use them.

You might be tempted to seed many of these items in your campaign. Do so with caution. Magic items and alternative rewards have a direct effect on a player character's ability to contribute to the game, and some items can wreak havoc on the play experience. Reserve the items for players who do well with roleplaying challenges and would enjoy playing through the danger that owning such items brings.

CHRISTOPHER MOELLER

# Cursed Items

*"I sell only the finest merchandise. My potions of healing are to die for—a recipe handed down to me by my mother, gods bless her soul."*

—Alluvius Ruskin of Sigil

Magic item creation can have unexpected results when the creator tries to craft something beyond his or her abilities. Most cursed items were created by accident, though some wicked makers create them intentionally, to laugh as their wielders march toward doom.

A cursed item usually appears benign. The wielder knows all of the item's powers, but the properties remain hidden until triggered. Once a character triggers the property, the character cannot get rid of the item by any means short of a Disenchant Magic Item ritual, a Remove Affliction ritual, or similar magic.

## Berserk Weapon

The *berserk weapon*'s wielder finds self-control fading and vicious anger swelling in his or her heart.

**Berserk Weapon** — Level 4+ Uncommon

*The cruel weapon feeds your hate, goading you to greater and greater acts of violence.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 4 | +1 | 840 gp | Lvl 19 | +4 | 105,000 gp |
| Lvl 9 | +2 | 4,200 gp | Lvl 24 | +5 | 525,000 gp |
| Lvl 14 | +3 | 21,000 gp | Lvl 29 | +6 | 2,625,000 gp |

**Weapon:** Axes, hammers, heavy blades
**Enhancement Bonus:** Attack rolls and damage rolls
**Critical:** +1d12 damage per plus

**Property**

While you are bloodied, you treat all creatures as enemies, and you must make opportunity attacks when provoked.

**† Attack Power ✦ Daily** (Free Action)

*Trigger:* You are bloodied by an attack.
*Effect:* Make a melee basic attack using this weapon against a random creature adjacent to you.

## Boots of Many Steps

These mismatched boots promise unmatched mobility with only the slightest risk. Yet the longer one wears them, the greater the chance for the curse to reveal itself. Too many jumps can send the wearer into a dark and sinister place, a realm of endless corridors and passages.

**Boots of Many Steps** — Level 17 Uncommon

*This mismatched pair of boots help you cross distances in an instant.*

**Feet Slot** 65,000 gp

**Property**

Whenever you roll a natural 1 on an attack roll or a saving throw, you are removed from play (save ends). When the effect ends, you reappear in the square you last occupied or in the unoccupied square nearest it.

**Utility Power** (Teleportation) ✦ **Encounter** (Move Action)

*Effect:* You teleport up to a number of squares equal to your speed.

## Cloak of Poison

While the infamous *cloak of poison* can be deadly to its wearer, the cloak provides unexpected benefits to those with the courage to wear it.

**Cloak of Poison** — Level 5+ Uncommon

*The heavy cloak feels oily and has a faint chemical smell.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 5 | +1 | 1,000 gp | Lvl 20 | +4 | 125,000 gp |
| Lvl 10 | +2 | 5,000 gp | Lvl 25 | +5 | 625,000 gp |
| Lvl 15 | +3 | 25,000 gp | Lvl 30 | +6 | 3,125,000 gp |

**Neck Slot**
**Enhancement Bonus:** Fortitude, Reflex, and Will

**Property**

Whenever you roll a natural 1 on an attack roll or a saving throw, you take ongoing 10 poison damage (save ends). You can end this effect by removing the cloak as a minor action.
*Level 15 or 20:* Ongoing 15 poison damage.
*Level 25 or 30:* Ongoing 20 poison damage,

**Attack Power** (Poison) ✦ **Encounter** (Immediate Reaction)

*Trigger:* An adjacent enemy hits you with a melee attack.
*Effect:* The triggering enemy takes ongoing 5 poison damage (save ends).
*Level 15 or 20:* Ongoing 10 poison damage.
*Level 25 or 30:* Ongoing 15 poison damage.

## Cursed Weapon

A *cursed weapon* commits its wielder to fighting one enemy at a time.

**Cursed Weapon** — Level 1+ Uncommon

*This weapon feels comfortable in your hands.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 1 | +1 | 360 gp | Lvl 16 | +4 | 45,000 gp |
| Lvl 6 | +2 | 1,800 gp | Lvl 21 | +5 | 225,000 gp |
| Lvl 11 | +3 | 9,000 gp | Lvl 26 | +6 | 1,125,000 gp |

**Weapon:** Any
**Enhancement Bonus:** Attack rolls and damage rolls
**Critical:** +1d8 per plus

**Property**

The first time during an encounter you hit an enemy with an attack using this weapon, you take a -2 penalty to the attack rolls of attack powers that do not include the enemy as a target. This penalty lasts until the end of the encounter or until the enemy drops to 0 hit points.

## Potion of Delusion

Created by a twisted mind or perhaps from a ritual gone awry, the *potion of delusion* makes the drinker believe he or she has been healed when in truth the entire effect is an illusion. When characters gain this potion, it always appears to be a potion of healing.

**Potion of Delusion** **Level 5 Uncommon**

*You feel a surge of energy but are surprised to find none of your wounds have healed.*

**Consumable:** Potion 50 gp

**Utility Power ✦ Consumable** (Minor Action)

*Effect:* You drink the potion and lose a healing surge. You gain 10 temporary hit points, and you shift 1 square toward the nearest enemy.

# Divine Boons

The gods sometimes take notice of mortals who perform great deeds on their behalf. Should the god be moved by this act, he or she might grant a boon to the mortal. Any god can bestow a boon, not just those gods the adventurer favors. An evil god, for example, might bestow a boon onto a good hero as a temptation or a reward for some inadvertent service. Regardless of the reason (and sometimes the reasons are unknown), gaining a divine boon is often a life-changing event. As with all alternative rewards, divine boons typically fade after about five levels (see *Dungeon Master's Guide 2*).

## Asmodeus's Dread Authority

When a character gains *Asmodeus's dread authority*, a sinister sigil appears in the palm of his or her left hand. The symbol shines when the character calls on the boon's power.

**Asmodeus's Dread Authority** **Level 3+ Rare**

*Asmodeus invests you with the authority he uses to rule the Nine Hells.*

| | | | |
|---|---|---|---|
| Lvl 3 | 680 gp | Lvl 23 | 425,000 gp |
| Lvl 13 | 17,000 gp | | |

**Alternative Reward:** Divine Boon

**Attack Power** (Charm) ✦ **Encounter** (Minor Action)

*Attack:* Ranged 10 (one creature); the boon's level + 5 vs. Will

*Hit:* The target is subject to your dread authority (save ends). Until this effect ends, you can slide the target 1 square as a free action at the start of each of its turns.

*Level 13:* Slide the target up to 2 squares.

*Level 23:* Slide the target up to 3 squares.

**Attack Power** (Fire) ✦ **Daily** (Minor Action)

*Effect:* Ranged 10 (the creature subject to your dread authority). The target chooses either to fall prone or to take 5 fire damage.

*Level 13:* 10 fire damage.

*Level 23:* 15 fire damage.

## Bane's Battle Acumen

A character who gains *Bane's battle acumen* assumes a sinister appearance. His or her eyes grow black and through them the character can see opportunities on the battlefield.

**Bane's Battle Acumen** **Level 3+ Uncommon**

*The Iron General is the consummate warrior and those with his favor gain a measure of his tactical genius.*

| | | | |
|---|---|---|---|
| Lvl 3 | 680 gp | Lvl 23 | 425,000 gp |
| Lvl 13 | 17,000 gp | | |

**Alternative Reward:** Divine Boon

**Property**

Whenever you roll a natural 19 or 20 for an attack roll using a weapon, one ally within 5 squares of you can shift 1 square as a free action.

*Level 13:* The ally shifts up to 2 squares.

*Level 23:* One ally within 5 squares of you can shift up to 2 squares as a free action, or two allies within 5 squares of you can each shift 1 square as a free action.

**Utility Power ✦ Daily** (Free Action)

*Trigger:* You roll initiative.

*Effect:* You can slide each ally within 5 squares of you 1 square.

*Level 13:* Slide up to 2 squares.

*Level 23:* Slide up to 3 squares.

## Gruumsh's Bloodthirsty Wrath

Gruumsh desires only to spread strife and sow destruction in the mortal world. On gaining this boon, the character tears out his or her own left eye. The organ returns when the boon fades away.

**Gruumsh's Bloodthirsty Wrath** **Level 3+ Rare**

*Destruction and carnage are the only things able to quell Gruumsh's appetite for chaos.*

| | | | |
|---|---|---|---|
| Lvl 3 | 680 gp | Lvl 18 | 85,000 gp |
| Lvl 8 | 3,400 gp | Lvl 23 | 425,000 gp |
| Lvl 13 | 17,000 gp | Lvl 28 | 2,125,000 gp |

**Alternative Reward:** Divine Boon

**Property**

You gain temporary hit points equal to this boon's level the first time you drop an enemy to 0 hit points during an encounter.

**Attack Power** (Healing) ✦ **Daily** (Free Action)

*Requirement:* You must be bloodied.

*Trigger:* You hit an enemy with a melee attack.

*Effect:* After the attack, you make a melee basic attack against a random creature adjacent to you. If this attack hits, you can spend a healing surge.

## Lolth's Fickle Favor

Since her fall, Lolth's sanity has frayed and splintered until she has become a petty, scheming monster. She cares nothing for her worshipers, and when she grants her boon it is only to escalate the conflict troubling her servants. Character who gain this boon hear faint voices and sees things watching them from the shadows.

**Lolth's Fickle Favor** — Level 3+ Rare

*The Demon Queen of Spiders is a fickle goddess, as likely to offer a gift as she is to bestow a curse.*

| | | | |
|---|---|---|---|
| Lvl 3 | 680 gp | Lvl 23 | 425,000 gp |
| Lvl 13 | 17,000 gp | | |

**Alternative Reward:** Divine Boon

**Property**

You gain resist 5 poison and a +1 item bonus to Stealth checks.
*Level 13:* Resist 10 poison and +3 item bonus to Stealth checks.
*Level 23:* Resist 15 poison and +5 item bonus to Stealth checks.

**Utility Power** (Illusion, Teleportation) ✦ **Encounter** (Immediate Reaction)

*Trigger:* An enemy bloodies you with an attack.
*Effect:* Roll a d8. On an odd number, you are dazed until the end of your next turn. On an even number, you teleport up to a number of squares equal to the die roll and become invisible until the end of your next turn.

## Tharizdun's Madness Spiral

Tharizdun is silent. No prayer reaches his ears. No commandment escapes his prison. His priests are left to learn about their deity through the scant fragments written by raving lunatics or from the princes of elemental evil who claim to represent the Chained God's interests. From time to time, a devoted servant might experience an unsettling dream, a window into the madness afflicting the dark god, and use this madness as a weapon.

**Tharizdun's Madness Spiral** — Level 12 Rare

*Although the Chained God is silent, the god's will is revealed in the mad actions of its followers.*

**Alternative Reward:** Divine Boon 13,000 gp

**Property**

You gain a +2 item bonus to saving throws against charm effects, fear effects, and ongoing psychic damage.

**Utility Power ✦ Encounter** (No Action)

*Trigger:* You make an attack roll and dislike the result.
*Effect:* You reroll the attack roll and use the second result. If the second die roll is less than 11, you are stunned until the end of your next turn after resolving the attack.

## Tiamat's Insatiable Greed

On rare occasion, Tiamat finds it to her advantage to bestow a boon on a particularly valuable follower, provided she gets a greater return on her investment. Characters with this boon grow multicolored scales across their backs, scales that spread to their arms and legs.

**Tiamat's Insatiable Greed** — Level 5+ Rare

*Tiamat commands her followers to let no slight go unpunished and to take what they want.*

| | | | |
|---|---|---|---|
| Lvl 5 | 1,000 gp | Lvl 20 | 125,000 gp |
| Lvl 10 | 5,000 gp | Lvl 25 | 625,000 gp |
| Lvl 15 | 25,000 gp | Lvl 30 | 3,125,000 gp |

**Alternative Reward:** Divine Boon

**Property**

You gain a +1 item bonus to damage rolls against any creature that has damaged you since the end of your last turn.
*Level 10:* +2 item bonus.
*Level 15:* +3 item bonus.
*Level 20:* +4 item bonus.
*Level 25:* +5 item bonus.
*Level 30:* +6 item bonus.

**Utility Power ✦ Daily** (Minor Action)

*Effect:* One ally you can see loses a use of a daily magic item power, and you regain the use of an expended daily magic item power for a magic item you possess of the same level or lower.

## Torog's Inescapable Suffering

One can hear the faint groans from the King that Crawls in the deep reaches of the Underdark. Torog endures the humiliation of his prison and the pain from his broken body and expects his followers to be as he is, agonized and enslaved to his demands. Those who receive his boon feel their bones grind in their flesh.

**Torog's Inescapable Suffering** — Level 4+ Rare

*Torog instructs his servants to embrace their agony, for only through pain can one unite the mortal with the divine.*

| | | | |
|---|---|---|---|
| Lvl 4 | 840 gp | Lvl 24 | 525,000 gp |
| Lvl 14 | 21,000 gp | | |

**Alternative Reward:** Divine Boon

**Property**

While you are bloodied, you gain a +1 item bonus to attack rolls.

**Utility Power ✦ Daily** (Free Action)

*Trigger:* You hit an enemy with a melee attack.
*Effect:* Each creature adjacent to you is immobilized and takes ongoing 5 poison damage (save ends both).
*Level 14:* Ongoing 10 damage.
*Level 24:* Ongoing 15 damage.

## Vecna's Dark Secret

Vecna guards the darkest secrets of the cosmos, hoarding ancient lore and mystical power to keep it from rivals. He does this not out of fear, but to amass the tools he needs to ascend even higher. Characters who earn the god's favor become pale, and shadows ring their eyes.

**Vecna's Dark Secret** — Level 9+ Uncommon

*Vecna rewards your service with forbidden knowledge and a taste of what undeath has to offer.*

| | | | |
|---|---|---|---|
| Lvl 9 | 4,200 gp | Lvl 29 | 2,625,000 gp |
| Lvl 19 | 105,000 gp | | |

**Alternative Reward:** Divine Boon

**Property**

Gain a +2 item bonus to knowledge checks.
*Level 19:* +4 item bonus.
*Level 29:* +6 item bonus.

**Utility Power ✦ Daily** (Minor Action)

*Effect:* Choose one ally within 5 squares of you. Until the end of the encounter, that ally gains vulnerable 5 necrotic, you gain resist 10 necrotic, and you deal 1d6 extra necrotic damage on attacks that deal necrotic damage.
*Level 19:* Resist 15 necrotic and 2d6 extra necrotic damage, and vulnerable 10 necrotic for your ally.
*Level 29:* Resist 20 necrotic and 3d6 extra necrotic damage, and vulnerable 15 necrotic for your ally.

## Zehir's Shadow Cloak

As lord of darkness, serpents, and assassins, Zehir attracts the worst sorts. Killing is not just a means to an end; killing is a prayer, a ritualistic offering to the dark god. Characters who gain this boon acquire a black serpent tattoo on a place easily concealed by clothing such as the back, arm, or leg.

**Zehir's Shadow Cloak** — Level 8+ Rare

*Each life ended at your hands honors the Lord of Darkness. Kill often and without hesitation, and the god's favor will be yours.*

| | | | |
|---|---|---|---|
| Lvl 8 | 3,400 gp | Lvl 28 | 2,125,000 gp |
| Lvl 18 | 85,000 gp | | |

**Alternative Reward:** Divine Boon

**Property**

While you have total concealment from a creature, you are insubstantial to that creature's attacks.

**Attack Power** (Poison) ✦ **Encounter** (No Action)

*Trigger:* You hit a creature with a melee or a ranged attack.
*Effect:* The target takes ongoing 5 poison damage (save ends). This damage ignores any resistance.
*Level 18:* Ongoing 10 poison damage.
*Level 28:* Ongoing 15 poison damage.

# Sinister Items

*"Sinister is the hand that wields the item, not the item itself."*
—Kas

The following items are not cursed, but their properties and powers are certainly dark.

## Bracers of Suffering

Shadar-kai fight a constant battle against the ennui defining their existence. Some go so far as to mutilate themselves so they can at least feel something. The *bracers of suffering*, called a *gal-ralan*, helps focus the wearer's mind. Once fitted over the arm, the spines inside bite deep into the flesh.

**Bracers of Suffering** — Level 9 Uncommon

*The sharp spikes adorning each bracer bite into your flesh when you fit them over your arms.*

**Arms Slot** 4,200 gp

**Properties**

✦ Your maximum hit points are reduced by 5.
✦ You gain a +1 item bonus to saving throws against charm effects and effects that stun, daze, or dominate.

## Flesh-Eating Rod

The pain and suffering this implement inflicts make it desirable only to the cruelest wielders.

**Flesh-Eating Rod** — Level 7+ Rare

*This blacked iron rod is carved with horrid demons cavorting and killing all along its length.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 7 | +2 | 2,600 gp | Lvl 22 | +5 | 325,000 gp |
| Lvl 12 | +3 | 13,000 gp | Lvl 27 | +6 | 1,625,000 gp |
| Lvl 17 | +4 | 65,000 gp | | | |

**Implement:** Rod
**Enhancement Bonus:** Attack rolls and damage rolls
**Critical:** +1d10 damage per plus

**Property**

Whenever you use this implement to make an attack that deals ongoing damage to an enemy, that enemy takes a -2 penalty to its saving throws to end the ongoing damage.

**Attack Power** (Acid) ✦ **Encounter** (No Action)

*Trigger:* You hit and damage an enemy with an attack using this rod.
*Effect:* Reduce the damage the target takes by 5, and the target takes ongoing 5 acid damage (save ends). Each time the target takes the ongoing damage, you can slide it 1 square as a free action.
*Level 12 or 17:* Reduce by 10, ongoing 10 acid damage.
*Level 22 or 27:* Reduce by 15, ongoing 15 acid damage.

# Girdle of Skulls

The skulls adorning this belt can create undead servants to protect you in battle.

**Girdle of Skulls** **Level 12 Rare**

*By plucking a skull from the belt, you can call forth a skeleton to do your bidding.*

**Waist Slot** 17,000 gp

**Property**

The girdle starts with four charges. When you take an extended rest, the item regains one charge.

**Utility Power ✦ Daily** (No Action)

*Trigger:* You reduce a creature to 0 hit points or fewer.

*Effect:* The girdle gains a charge (maximum of four).

**Utility Power** (Summoning) **✦ Encounter** (Minor Action)

*Requirement:* The girdle must have at least one charge.

*Effect:* Expend a charge. You summon a skeletal warrior in an unoccupied space within 5 squares of you. The skeletal warrior is an ally to you but not to your allies, and it lacks actions of its own. Instead, you spend actions to command it mentally, choosing from the actions in its description. You must have line of effect to the skeletal warrior to command it. You and it share knowledge but not senses.

When the skeletal warrior makes a check, you make the roll using your game statistics, not including any temporary bonuses or penalties.

The skeletal warrior lasts until it drops to 0 hit points, at which point you lose a healing surge (or hit points equal to your surge value if you have no surges left). Otherwise, it lasts until you dismiss it as a minor action or until the end of the encounter.

**Skeletal Warrior** **Level 12 Summoned Creature**

Medium shadow animate (undead)

**HP** 40; **Healing Surges** none, but you can lose a healing surge for the creature if an effect allows it to spend one

**AC** 28, **Fortitude** 24, **Reflex** 26, **Will** 22

**Speed** 7

**Standard Action ✦ At-Will**

*Attack:* Melee 1 (one creature); +17 vs. AC

*Hit:* 2d8 + 11 damage, and the target is marked until the end of the skeletal warrior's next turn.

**Minor Action ✦ At-Will** (1/round)

*Effect:* The skeletal warrior walks, shifts, runs, stands up, squeezes, or crawls.

**Opportunity Action ✦ At-Will**

*Trigger:* An adjacent enemy marked by the skeletal warrior shifts or uses an attack power that doesn't target the skeletal warrior.

*Attack:* Melee 1 (triggering enemy); +17 vs. AC

*Hit:* 2d8 + 11 damage.

# Midnight Blade

An assassin's weapon if ever there was one, the *midnight blade* masks its true potential when inspected in bright light. In darkness, all the flaws fade when a soft violet light washes the weapon from point to pommel.

**Midnight Blade** **Level 12+ Rare**

*A weapon forged for dark deeds works best when cloaked in shadow.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 12 | +3 | 13,000 gp | Lvl 22 | +5 | 325,000 gp |
| Lvl 17 | +4 | 65,000 gp | Lvl 27 | +6 | 1,625,000 gp |

**Weapon:** Heavy blade, light blade

**Enhancement Bonus:** Attack rolls and damage rolls

**Critical:** +1d8 per plus, or +1d12 per plus in dim light or darkness

**Properties**

- ✦ You gain darkvision.
- ✦ You take a -2 penalty to attack rolls when attacking with this weapon in bright light.
- ✦ You gain a +1 item bonus to attack rolls when using this weapon in darkness.

**Utility Power** (Aura) **✦ Daily** (Minor Action)

*Effect:* You activate an aura 2 that lasts until the end of the encounter or until you dismiss it as a free action. Bright light in the aura becomes dim light, and dim light in the aura becomes darkness.

# Obsidian Wand

Shaped from an obsidian shard, this wand is adept at channeling arcane magic and shadow magic, making it a preferred implement for those who deal in dark magic.

**Obsidian Wand** **Level 3+ Rare**

*When you channel magic through the wand, you feel it grow as cold as the grave.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 3 | +1 | 680 gp | Lvl 18 | +4 | 85,000 gp |
| Lvl 8 | +2 | 3,400 gp | Lvl 23 | +5 | 425,000 gp |
| Lvl 13 | +3 | 17,000 gp | Lvl 28 | +6 | 2,125,000 gp |

**Implement:** Wand

**Enhancement Bonus:** Attack rolls and damage rolls

**Critical:** +1d10 necrotic damage per plus

**Attack Power ✦ Daily** (Standard Action)

*Effect:* As the wizard's *ray of enfeeblement* power. If this attack reduces the creature to 5 hit points or fewer, the creature dies.

**Attack Power ✦ Daily** (No Action)

*Trigger:* You reduce a creature to 15 or fewer hit points with an attack power using this wand.

*Effect:* The creature dies.

**Ray of Enfeeblement** **Wizard Attack 1**

*You point three fingers at your foe, curling them like talons. Weird green mist streams from your enemy's flesh, carrying away its strength.*

**Encounter ✦ Arcane, Implement, Necromancy, Necrotic**

**Standard Action** **Ranged** 10

**Target:** One creature

**Attack:** Intelligence vs. Fortitude

**Hit:** 1d10 + Intelligence modifier necrotic damage, and the target is weakened until the end of your next turn.

**Miss:** Half damage.

# Ring of Domination

A hag coven forged the *ring of domination* to steal the hearts of men. With only power enough to construct a single ring, the hags vied for the trinket's ownership. It wasn't long before they turned against each other to own the ring truly. While they fought, their slaves rose up and slew them all.

**Ring of Domination** **Level 24 Rare**

*The Rellanic script drifting across the ring's surface tells a tale of a wicked hag who seduced mortal men.*

**Ring Slot** 525,000 gp

**Property**

You gain a +5 item bonus to Bluff, Diplomacy, and Intimidate checks.

**Attack Power** (Charm, Psychic) ✦ **Daily** (Minor Action)

*Attack:* Ranged 10 (one creature); +29 vs. Will. You take 15 psychic damage.

*Hit:* The target is dominated (save ends). Each time the target fails a saving throw to end the effect, you or one ally you can see takes 15 psychic damage.

If you've reached at least one milestone today, the target takes a -2 penalty to saving throws to end the effect.

# Serpentine Knife of Zannad

The *serpentine knife of Zannad* is one of several treasures wrested from a lost empire's haunted remains. Its story has carved a path of murder and suffering through recent history. Assassins have used it to commit terrible murder, while death cults have killed to find it, even when only chasing rumors. The knife has great value to Zehir's priests, since it helps focus divine energy and is also the perfect tool for dark deeds committed in the god's name.

WAYNE ENGLAND

**Serpentine Knife of Zannad** **Level 5+ Rare**

*This wavy blade doubles as a weapon and an implement.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 5 | +1 | 1,000 gp | Lvl 20 | +4 | 125,000 gp |
| Lvl 10 | +2 | 5,000 gp | Lvl 25 | +5 | 625,000 gp |
| Lvl 15 | +3 | 25,000 gp | Lvl 30 | +6 | 3,125,000 gp |

**Weapon:** Dagger

**Enhancement Bonus:** Attack rolls and damage rolls

**Critical:** +1d8 poison damage per plus

**Properties**

✦ You gain an item bonus to skill checks made as part of a ritual. The bonus equals the dagger's enhancement bonus.

✦ The dagger can be used as a holy symbol. It adds its enhancement bonus to attack rolls and damage rolls. You do not gain your weapon proficiency bonus to an attack roll when using the dagger as an implement.

**Attack Power** (Poison) ✦ **Encounter** (No Action)

*Trigger:* You hit an enemy with an attack using this dagger.

*Effect:* The target takes ongoing 5 poison damage (save ends). This damage ignores any immunity or resistance to poison.

*Level 15 or 20:* Ongoing 10 poison damage.

*Level 25 or 30:* Ongoing 15 poison damage.

**Utility Power** ✦ **Daily** (Free Action)

*Trigger:* You perform a coup de grace using the dagger and kill the target.

*Effect:* You gain a +5 power bonus to skill checks made as part of the next ritual you perform before the end of your next extended rest.

# Skull of Terror

Druids, shamans, and other primal magic-users create *skulls of terror* as a last resort to drive back those who would despoil the wilderness. The totem fills their thoughts with monstrous images and sensations of pain and suffering.

**Skull of Terror** **Level 5+ Uncommon**

*Channeling primal magic through the skull infects your enemies with an overwhelming urge to flee from your presence.*

| | | | | | |
|---|---|---|---|---|---|
| Lvl 5 | +1 | 1,000 gp | Lvl 20 | +4 | 125,000 gp |
| Lvl 10 | +2 | 5,000 gp | Lvl 25 | +5 | 625,000 gp |
| Lvl 15 | +3 | 25,000 gp | Lvl 30 | +6 | 3,125,000 gp |

**Implement:** Totem

**Enhancement Bonus:** Attack rolls and damage rolls

**Critical:** +1d6 damage per plus

**Property**

You gain a +1 item bonus to the attack rolls of fear powers and charm powers used with this totem.

**Attack Power** (Fear) ✦ **Daily** (No Action)

*Trigger:* You hit a creature with an attack using this totem.

*Effect:* You push the target up to its speed. If the target ends its next turn closer to you than where it started the turn, you regain the use of this power.

CHAPTER 6

# The Vile Tome

*"Destroying the book is easy, cutter. You need only three things: the Ritual of Endings and Beginnings, the Well of Many Worlds, and a death wish."*

–Rule-of-Three, cambion

THE GREATEST prize any servant of darkness can win is without a doubt the *Book of Vile Darkness*. There are more fabrications than truths about this dark work, yet it surely offers power beyond any mortal reckoning. Wicked beings have claimed this tome at various points in history, each time blotting the world with sinister deeds and vile acts. Sometimes the book finds its way into less villainous hands. When it does, tragedy almost always follows.

"The Vile Tome" is a short set of encounters you can add to an ongoing campaign to describe what happens when the *Book of Vile Darkness* falls into heroes' hands. The various encounters detail key events that can occur during the paragon tier as the adventurers grapple with the dread power in their hands. Unlike other adventures, the encounters described here do not immediately follow each other. Instead, you decide when to use them based on when they would be most appropriate to your campaign.

This chapter presents four encounters.

- The heroes find the book amid the ruins of a shattered fortress and battle demons.
- Hounded by agents of evil, the heroes stumble upon a crazy knight with a sordid tale.
- The heroes pursue a lead that could help them destroy the book–or master it.
- The future of the cosmos hangs in the balance as the heroes use the Well of Many Worlds to empower or destroy the Book of Vile Darkness.

In addition to the adventure itself, this chapter includes the *Book of Vile Darkness* artifact and support for introducing the item, dealing with its influence, and getting rid of the artifact once the adventurers have had enough.

CHRISTOPHER MOELLER

# Adventure Background

The *Book of Vile Darkness* has a long and sordid history in the world, but that history's darkest chapter tells of the dread mage Nhagruul, who used his own flesh, blood, and spirit to reconstruct the tome. Nhagruul hoped to allow his followers to spread madness and destruction across the world. Riding to counter their foul deeds came a bright order of chivalry, a religious society devoted to Pelor's purifying light. As Nhagruul's twisted henchmen worked their evil, the Knights of the New Sun rode out to meet them, putting their foes to the sword or cleansing their souls in the pyre's purifying flames. Fearing they would lose their prize, Nhagruul's disciples divided the book into three parts and hid them where the knights would never find them.

Long years later, when the New Sun had faded to pale shadows of their former might, Nhagruul's disciples stirred again to remake that which was sundered and usher in a new age of darkness. One knight, a hero named Grayson, risked his soul to thwart the disciples' mad ambition. Though he was tempted time and again to embrace evil, he clung to his faith and purpose. After a climactic battle, Grayson defeated the wicked mind flayer Shathrax, who sought to steal the *Book of Vile Darkness*'s power for itself. The death of the mind flayer triggered the collapse of Shathrax's flying fortress, and the vile tome was buried amid the rubble.

Although Shathrax did not manage to master the artifact, his effort proved sufficient for the artifact to recombine itself on its own. As it slowly knits itself back together, the tome casts out its influence, seeking a new owner to be tempted. To be corrupted. To be *destroyed*.

### BOOK OF VILE DARKNESS: THE MOVIE

This adventure uses elements taken from the film *Dungeons & Dragons: The Book of Vile Darkness*. You need not have seen the movie to use this material, nor do you have to assume its events took place in your campaign. You should freely adapt the material presented here as you see fit.

# Adventure Synopsis

"The Vile Tome" puts an artifact of dreadful power in the player characters' hands. The adventurers might resist its corrupting influence and set out to destroy it, or they might fall prey to its evil power and become ruled by it. In either case, the events described here unfold as written.

The *Book of Vile Darkness* is far more than a magical book. It is a blot on the world, a shadow cast by the seed of darkness festering in the depths of the Abyss. The tome does not have to wait long for some pliable creature to pluck it from the rubble of Shathrax's fortress; this time, it's happening when the adventurers reach the ruins.

A band of demons newly escaped from their fortress prison sift through the keep's remains, looking for people to kill, when the shadow demon senses the book. The adventurers have a chance to defeat the demons before they can make off with the treasure and thereby secure the book for themselves. The book conceals its true power for a while, letting the adventurers think they might have come across some useful magic item rather than an artifact of terrible power.

On gaining the *Book of Vile Darkness*, the characters are free to continue their other quests. From time to time, the adventurers might pick up clues about the book's identity from its evil character and dark power. Researching the book eventually points the adventurers to Nhagruul. The demonic archwizard is long dead, and his followers were supposedly destroyed during the last effort to reconstruct the tome. The best hope the adventurers have of learning more about the book is to travel to Nhagruul's tomb.

The adventurers know they've arrived at the tomb when they find a hideous statue erected to honor the vile mage. There, a disciple of Nhagruul and his wicked allies spill out from the surrounding forest to wrest the artifact from the party. If the characters prevail and keep the tome, they can commune with Nhagruul's spirit to learn that their objective waits for them at the fabled Well of Many Worlds.

If the characters want to master the artifact and its dread power, they must perform a ritual at the Well to summon evil from other realities and recreate the manuscript. If they wish to destroy the book, they must perform the same ritual, but draw forth good from all the worlds to completely destroy the book. In either case, there are others who want the tome for themselves, and these forces converge on the Well to stake their claim.

# Running the Adventure

"The Vile Tome" puts a dangerous and evil artifact in the player characters' hands, and presents one possible outcome of the acquisition. Since artifacts are expected to linger, it is best to allow the characters to experiment with the book and deal with the repercussions over several adventures. Each story element described could occur during the time the characters possess the artifact, and so you should find ways to insert these elements into your game after the characters first gain the artifact. Although the characters lack the means to destroy the artifact, they can always walk away from it. If they do, the Book of Vile Darkness might trouble them again when it appears in an enemy's clutches or falls into an ally's hands.

## Expanding the Adventure

By spreading out the encounters across the paragon tier, you have the opportunity to add additional encounters and complications to the story. It's expected your other adventures will shoulder a lot of this weight, but you can also extend sequences and add more challenges, expanding this adventure into a short campaign. Look to the rules presented in this book for ideas, opponents, and rewards appropriate for this adventure's plot.

### CORRUPTION EFFECTS

Each time a character who is not chaotic evil uses a power with a corruption effect, he or she must immediately make a saving throw. On a save, the character takes 5 damage per tier. On a failed saving throw, the character gains 1 corruption point. When a character's corruption points equal his or her highest ability modifier, the character's alignment shifts one step toward chaotic evil (lawful good to good, good to unaligned, unaligned to evil, or evil to chaotic evil). The character's corruption point total then drops to 1 + 1 for each time the character's alignment has shifted.

A character can remove any corruption points gained by using the Remove Affliction ritual, undergoing a quest for atonement, or some other powerful magic as the DM decides.

Dungeon Masters should consider adding corruption effects to other aspects of their vile darkness campaign. For example, a DM might rule that a character with the cultist theme who uses ritual sacrifice to kill a helpless prisoner has gained a corruption point. The slow but inexorable slide into wickedness and depravity can be modeled with corruption effects.

# The Book of Vile Darkness (Artifact)

The *Book of Vile Darkness* is appropriate for paragon tier adventurers.

Many powers granted by this item have corruption effects (see the "Corruption Effects" sidebar).

**Book of Vile Darkness** **Paragon Level**

*A blasphemous tome whose pages are stained with unspeakable knowledge, this vile work reveals evil's darkest secrets.*

**Artifact:** Implement (tome)
**Enhancement Bonus:** +4 to attack rolls and damage rolls
**Critical:** +4d6 damage, or +4d10 damage against non-evil creatures

**Properties**

- ✦ You gain a +3 item bonus to Arcana checks, History checks, and Religion checks.
- ✦ Implement attack powers using this tome deal 2d10 extra damage to good-aligned targets.
- ✦ Whenever you gain a corruption point from using a power granted by this tome, an ally within 5 squares of you also gains a corruption point.
- ✦ If you are chaotic evil, all non-evil creatures must make opportunity attacks against you when you provoke them.

**Attack Power ✦ Daily** (No Action)
*Trigger:* You hit an enemy with an attack using this tome.
*Effect:* The enemy takes 1d10 extra damage. You gain 1 corruption point.

**Utility Power ✦ Encounter** (No Action)
*Trigger:* An enemy gains an effect that a save can end from an attack power using this tome.
*Effect:* The enemy takes a -2 penalty to saving throws until the triggering effect ends. You gain 1 corruption point.

**Utility Power ✦ Daily** (No Action)
*Trigger:* You miss with an encounter attack power using this tome.
*Effect:* The miss becomes a hit. You gain 1 corruption point.

**Utility Power ✦ Daily** (No Action)
*Trigger:* You use a summoning power with this tome.
*Effect:* The summoned creature gains a +2 power bonus to all defenses, and its attacks deal 1d10 extra damage. You gain 1 corruption point.

## Lore

**Arcana or Religion DC 18:** Scrawled across each page of this strange and sinister book are invocations to evil, essays on dark magic, and descriptions of the most sinister forces in the cosmos. Although the theme is constant throughout, different hands and voices suggest many have added to the book's contents at various times. Perusing the book's odd pages, which consist of a mix of parchment, hammered metal, cloth, and other materials, conveys a sense of dread and seductive wonder.

**Arcana or Religion DC 25:** Divining the book's original author is a fruitless enterprise, since it is impossible to discern which parts were added and which are original. Many tales point to Vecna as the first author,

claiming he wrote the book in the months before the Great Betrayal cost him his eye and hand. Others have suggested darkness itself inspired the book, compelling those in its thrall to bind a fragment of their souls into the tome, both to record their insights and to give the book its power.

**Arcana or Religion DC 34:** Sages claim many copies of the *Book of Vile Darkness* exist, but all are lesser volumes, crude reproductions of the true work. Though there have been efforts to destroy the book in the past, each time the tome manages to reconstitute itself, as if it possessed a will to exist—a will that exerts dark influence over its wielder. Those who study its foul pages find their souls darkening and shriveling, until they become thralls to the darkness of the void.

As powerful as the tome appears, some sages have speculated that the artifact that surfaces from time to time is but a projection of the true *Book of Vile Darkness*. These theories suggest that each world—each reality—has its own *Book of Vile Darkness*, recording the insights and discoveries of the worst villains inhabiting that time and place. If one could draw forth the essence of evil from other worlds and combine them into one cosmos-shattering whole, one could become mightier than the gods. Similarly, the only way to truly end the book's threat to the world would be to draw the combined goodness from these worlds and use it to destroy the tome permanently.

## Goals of the Book

- ✦ Reveal the book's secrets to a worthy servant and convince that servant to draw from its power.
- ✦ Magnify the book's sinister power by recording new evils into its pages.
- ✦ Spread evil and darkness across the world through conquest and corruption.
- ✦ Defeat good in every quarter until evil reigns supreme.

## Roleplaying the Book

The *Book of Vile Darkness* is aware. Thanks to the soul fragments binding wicked ideas and writings to its pages, the book possesses a dim cunning and a drive to spread despair and suffering throughout the world. It senses when it is handled or examined, and can conceal its darker subjects to appear less sinister to a viewer whose alignment differs from its own. The book's great power should tempt the character to tap into the magic it contains and use it in place of whatever implement the character normally would wield. The more the character uses the book, the greater his or her corruption grows until the wielder becomes chaotic evil (see the "Corruption Effects" sidebar).

Although possessed of intelligence, the book has no means to communicate outside the words on its pages.

WAYNE ENGLAND

This said, the book can move words around on the page so the reader can divine its intentions and objectives, should he or she earn the book's trust.

**CONCORDANCE**

| Starting Score | 5 |
|---|---|
| Owner gains a level | +1d10 |

### Pleased (16–20)

*"The words and diagrams that once swam across these pages have stopped their errant movement. I can now divine the awful truths this book contains."*

The *Book of Vile Darkness* is greatly pleased with the character's corruption and trusts the character with the dark knowledge its pages contain.

**Enhancement Bonus:** +5 to attack rolls and damage rolls
**Critical:** +5d6 damage, or +5d10 damage against non-evil creatures

**Properties**

- ✦ You gain a +5 item bonus to Arcana checks, History checks, and Religion checks.
- ✦ Implement attack powers that deal damage using this tome deal 3d10 extra damage to good-aligned targets.
- ✦ Whenever you gain a corruption point from using a power granted by this tome, each ally within 5 squares of you also gains a corruption point.

**Attack Power** (Charm, Fear) ✦ **Daily** (Standard Action)

*Attack:* Close burst 3 (creatures in the burst); your level + 5 vs. Will

*Hit:* If the target is non-evil, you can push it up to its speed, and it is dazed (save ends). If the target is evil, it is dominated until the end of your next turn.

## Satisfied (12–15)

*"I have proven myself a worthy servant of the book and I can now see greater meaning and power in its pages."*

The book sinks foul claws into the reader's soul, twisting it toward wickedness. As a reward for the character's gradual slide into darkness, the book reveals a useful secret.

**Attack Power ✦ Encounter** (Minor Action)

*Effect:* Ranged 5 (one Large or smaller unattended, nonmagical object). The target takes 4d20 + your level damage. This damage ignores any resistances.

## Normal (5–11)

*"There is power in this book. I must steel my heart and mind to master it."*

The book conceals much from its wielder, though it hints at great power and terrible magic in the concepts that seem to crawl on every page.

## Unsatisfied (1–4)

*"Try as I might, I cannot block the sinister visions assailing my mind. The book's power is too great."*

If the wielder resists the book's influence, the artifact grows angry and fearful that its wielder will somehow seek to destroy it or, at the very least, contain it. It actively works against its wielder until it finds a more reliable servant.

**Properties**

- ✦ You gain vulnerable 5 to all damage.
- ✦ The first time you become bloodied each encounter, the tome dominates you until the end of your next turn. It compels you to attack your allies or moves you into danger.

## Angered (0 or lower)

*"I cannot bear this burden much longer. If I do, I fear I will go mad!"*

The book loathes its wielder and uses its full power and influence to destroy what it considers its enemy.

**Enhancement Bonus:** +3 to attack rolls and damage rolls
**Critical:** +3d6 damage, or +3d10 damage against non-evil creatures

**Properties**

- ✦ You gain vulnerable 5 to all damage.
- ✦ You treat allies as enemies for the purposes of your attack powers. In addition, you must make opportunity attacks against your allies when possible.
- ✦ Each time you take damage while you are bloodied, you must make an attack as a free action using an at-will attack power against an ally you can see.

## Moving On

*"I am doomed!"*

The *Book of Vile Darkness* devours its owner's soul, leaving behind a living and unresponsive husk. Black flames burn away the artifact until nothing but greasy ash remains. The place of the artifact's disappearance is forever cursed; nothing will grow there, and people who linger in the area sicken and die. As for the owner, nothing short of divine intervention will restore the devoured soul. Convincing a god to assist such a villain is a quest in its own right.

The book is not gone from the world for long. Some despicable soul will find a way to reconstruct the tome, by ritual or by quest, and those who look for the terrible book are bound to find it.

# Using the Encounters

This adventure works best when you mix the encounters and events described here with another adventure so that thoughts of the *Book of Vile Darkness* fester in the background, periodically coming to the fore as the characters fight against its influence or try to master its teachings.

You'll need the *Rules Compendium* to run this adventure and for rolling random treasures. The tactical encounters use the poster map included with this product, so keep it handy.

# Encounter 1: Devastation of Shathrax

**Combat Encounter Level 13 (4,800 XP)**

The adventure begins when the characters come across the ruins of Shathrax's floating fortress. They might hear about a "mountain falling from the sky" and investigate, or they might simply come across the crater en route to some other location. If the adventurers aren't quite ready to find the artifact, you could foreshadow this encounter by letting them hear rumors about the ruined fortress and whispers about how evil creatures roam the devastated lands.

Unless the characters approach stealthily, they are seen and attacked by a gang of demons that survived the destruction of Shathrax's fortress. The adventurers should discover the *Book of Vile Darkness* either during or after the fight.

**Light:** Bright light during the day (sunlight), dim light at night (moonlight).

**Monsters:** 1 vile shadow demon (S), 2 mezzodemons (M), 2 demonic savage minotaurs (D), 4 dretch lackeys (L). The demons sift through the ruins in search of victims and plunder. The shadow demon senses that the *Book of Vile Darkness* is near.

**Perception DC 20 (40 at night without darkvision or low-light vision):** The character sees a black book protruding from the rubble (in the square marked "B" on the map). It has a strange and sinister appearance.

**When the adventurers arrive at the crater, read:**
*Rubble litters the landscape all around a deep crater. Twisted corpses lie here and there, tangled in the ruin. Picking their way through the debris are a pair of hulking minotaurs, two insectile fiends wielding tridents, and several bickering blobs of flesh. Flitting over them all is a shadowy figure that oozes menace.*

This encounter takes place on the battle map. Place the characters in their start area and monsters as shown on the map.

**Tactics:** Until a character attacks the shadow demon, it spends its actions moving and searching. Each time it makes a Perception check (a move action), it searches a 5-square-by-5-square space. If the adventurers haven't found the artifact by the third round, the shadow demon searches the area where it waits.

Should it come under attack, it uses *abyssal horror* to drive off its enemies to give it time to resume its search. Once it gets the book or it can no longer search for it, it goes on the offensive, using *fleeting shadow* to move into a flank and then following up with *vile possession*.

The mezzodemons block the adventurers from closing on the shadow demon and use *skewering tines* and *poison breath* to keep enemies in place.

The savage minotaurs charge the adventurers, attacking with claws and then springing away with *goring attack* to punish artillery.

The dretch gang up on the closest enemy, hoping to overwhelm it with their vile auras.

| **Vile Shadow Demon (S)** | **Level 12 Elite Lurker** |
|---|---|
| Medium elemental humanoid (demon) | XP 1,400 |
| **HP** 184; **Bloodied** 92 | **Initiative** +17 |
| **AC** 26, **Fortitude** 22, **Reflex** 26, **Will** 24 | **Perception** +13 |
| **Speed** 0, fly 8 (hover); phasing | Darkvision |
| **Resist** 15 necrotic | |
| **Saving Throws** +2; **Action Points** 1 | |
| **Traits** | |
| ☼ **Shadow Shift** (necrotic) ✦ **Aura** 1 | |
| Any enemy in the aura that hits the shadow demon with a melee attack takes 5 necrotic damage. | |
| **Insubstantial** | |
| The shadow demon takes half damage from all attacks, except those that deal force damage. Whenever the shadow demon takes radiant damage, it loses this trait until the start of its next turn. | |
| **Standard Actions** | |
| ⊕ **Claw** (necrotic) ✦ **At-Will** | |
| *Attack:* Melee 1 (one creature); +15 vs. Reflex | |
| *Hit:* 2d8 + 7 necrotic damage, plus 1d8 necrotic damage if the shadow demon has combat advantage against the target. | |
| ⸸ **Vile Possession** (charm, psychic) ✦ **Recharge** when no creature is affected by *vile possession* | |
| *Attack:* Melee 1 (one creature granting combat advantage to the shadow demon); +15 vs. Will | |
| *Hit:* 4d6 + 4 psychic damage, and the target is dominated (save ends). While the target is dominated, the shadow demon is removed from play. | |
| *Aftereffect:* The shadow demon returns to play in an unoccupied square of its choice within 5 squares of the target. | |
| ✧ **Abyssal Horror** (fear) ✦ **Recharge** ⚄ ⁞⁞ | |
| *Attack:* Close blast 5 (enemies in the blast); +15 vs. Will | |
| *Hit:* The shadow demon pushes the target up to its speed, and the target grants combat advantage (save ends). | |
| ✧ **Abyssal Void** (necrotic, zone) ✦ **Recharge** when first bloodied | |
| *Attack:* Close burst 2 (enemies in the burst); +15 vs. Fortitude | |
| *Hit:* 2d10 + 6 necrotic damage. | |
| *Miss:* Half damage. | |
| *Effect:* The burst creates a zone of darkness that lasts until the end of the shadow demon's next turn. The zone blocks line of sight for all creatures that cannot see in darkness. Any enemy that starts its turn in the zone takes 5 necrotic damage and is immobilized until the start of its next turn. | |
| **Minor Actions** | |
| ⸸ **Void Rake** ✦ **At-Will** (1/round) | |
| *Effect:* The shadow demon uses *claw*. | |
| **Triggered Actions** | |
| **Variable Resistance** ✦ **2/Encounter** | |
| *Trigger:* The shadow demon takes acid, cold, fire, lightning, or thunder damage. | |
| *Effect (Free Action):* The shadow demon gains resist 20 to the triggering damage type until the end of the encounter or until it uses variable resistance again. | |
| **Skills** Arcana +15, Bluff +15, Stealth +18 | |

|---|---|
| Large natural humanoid | XP 600 each |
| **HP** 140; **Bloodied** 70 | **Initiative** +8 |
| **AC** 23, **Fortitude** 25, **Reflex** 22, **Will** 20 | **Perception** +7 |
| **Speed** 8 | |

**Standard Actions**

**⊕ Claws ✦ At-Will**

*Attack:* Melee 2 (one or two creatures); +16 vs. AC. If the minotaur targets only one creature, it can make this attack twice against that creature.

*Hit:* 2d6 + 5 damage, and the minotaur grabs the target (escape DC 19) if it has fewer than two creatures grabbed.

**⸸ Impale ✦ At-Will**

*Attack:* Melee 1 (one creature grabbed by the minotaur); +14 vs. Fortitude

*Hit:* 5d8 + 13 damage. The target falls prone and is no longer grabbed by the minotaur.

**Triggered Actions**

**⸸ Goring Assault ✦ At-Will**

*Trigger:* An enemy within 10 squares of the minotaur hits it with a ranged or area attack.

*Effect (Immediate Reaction):* The minotaur charges the triggering enemy.

| | | |
|---|---|---|
| **Str** 22 (+11) | **Dex** 16 (+8) | **Wis** 15 (+7) |
| **Con** 20 (+10) | **Int** 5 (+2) | **Cha** 7 (+3) |

**Alignment** chaotic evil **Languages** Abyssal, Common

# Features of the Area

**Book of Vile Darkness (B):** If the shadow demon finds the artifact before the adventurers and grabs it, the shadow demon gains a +2 bonus to attack rolls and defenses until it drops to 0 hit points or until the end of the encounter.

**Corpses:** Corpses are scattered throughout the fortress wreckage, and residual magic from the shattered stronghold gives them a semblance of life. The corpses attack living creatures, and a corpse can be destroyed by spending a standard action to attack it (no attack roll necessary).

**Triggered Action**

**⸸ Corpse Attack ✦ At-Will**

*Trigger:* A Medium or smaller living creature starts its turn in a square containing a corpse or adjacent to it.

*Attack (Opportunity Action):* Melee 1 (triggering creature); +16 vs. Reflex

*Hit:* The target is grabbed (escape DC 20). Each time the target ends its turn grabbed by a corpse, it takes 10 damage.

**Rubble Mounds:** Great heaps of rubble litter the slope down to the crater's bottom. It costs 3 squares of movement to enter a rubble mound's space. In addition, the mounds grant cover to creatures standing behind them.

**Treasure:** In addition to finding the *Book of Vile Darkness*, adventurers searching the rubble find two treasure rolls on the Treasure by Party Level table (*Rules Compendium*, pages 298-302).

# Gaining the Artifact

The characters can recover the *Book of Vile Darkness* after defeating the demons picking through the rubble of Shathrax's fallen fortress. **Read:**

*You have found a massive book: a dark thing, crudely made and adorned with sinister decorations. The spine is a shrieking face held in place with nails and barbed wire. A toothy metal hasp keeps the black covers shut. Metal wing shapes reinforce the edges, resembling those of a bat or demon. Strange runes and diagrams have been painted on the black leather covers, the skins stretched taut over concealed boards. There is a strangeness about this tome, a sort of wrongness that speeds the heart and raises hairs.*

Savvy players will guess that the tome is none other than the *Book of Vile Darkness*. Even if they don't, they should get a sense of the book's sinister nature. Good characters might be inclined to destroy the book, but, as an artifact, nothing they try will even scratch its cover. Not even the Disenchant Magic Item ritual will destroy it. This leaves the adventurers with two options: They can leave it behind—making it likely that some other passerby will find it—or they can take it with them.

## Consequences of Possession

The first character to open the *Book of Vile Darkness* and examine its contents becomes its owner. From this examination, the character learns the book's essential characteristics including its enhancement bonus, critical dice, its first two listed properties, and its first power. Each time the character takes an extended rest and studies the book, reveal another power or property; you can also reveal an extra power or property if the character is evil or chaotic evil.

Don't announce the artifact's capabilities to the entire group. Pull the player aside or use notes to communicate this information. This way, it's up to the player to decide which discoveries to keep secret and which ones to share.

A character under the book's influence is going to perceive the world in a slightly different way. You can use any of the following descriptions to reinforce the artifact's dark power. You might share these openly or in secret with the players.

**Decay:** Food tends to spoil around the owner, and even water develops an acrid taste.

**Disturbing Voices:** The owner hears faint whispers. Although the words are incoherent, every once in a while, the owner hears things like "kill," "read," and "worship."

**Nightmares:** The owner experiences vivid nightmares wherein he or she is betrayed, harmed, or maimed by his or her companions.

**Paranoia:** The owner senses that his or her companions are watching. From time to time, the owner imagines a companion staring at the book.

**Shadows:** Shadows seem to bend and flicker around the owner.

**Stench:** Good creatures have a sickening odor, making it hard for the owner to be around them without gagging.

**Unwholesome Visage:** The owner sees others in the very worst light, each flaw magnified until it eclipses all other features. A sore on the lip might pulsate evilly, while things might crawl in the spaces between dirty teeth.

# Encounter 2: Knight of the New Sun

**Combat Encounter Level Varies**

At some point after the adventurers have had the *Book of Vile Darkness* for a while, they encounter a Knight of the New Sun rotting in a crow cage suspended from a pole at a crossroads. He is nothing like the Knights of old; he's a broken man who allowed addiction and despair to shatter his faith.

*Ahead, you spy a cage swinging on the end of a chain hanging from a wooden frame. Ravens cling to the metal bars, a shrieking host grown fat on rotten meat. At your approach, the ravens flap away in a rage. With the birds gone, you can see inside the cage. A tangle of limbs crammed inside present a grisly feast. With a start, you realize that not all of the limbs are dead, as you see a wild-eyed man with gray skin and slack mouth, his lips cracked and bleeding.*

The man in the cage is Paulus, a fallen Knight of the New Sun. The local magistrate locked him inside after he was judged guilty of murder. The knight did indeed kill a man for his coins, to feed his addiction to the drug baccaran. He's near death, having had no water for almost three days. If the adventurers give him water or use a healing power such as healing word, he regains strength enough to talk.

Paulus reveals a sorry tale, from the pride and honor of joining the Knights, to his first encounter with baccaran and subsequent addiction, to the wicked deed that placed him in the cage. Fill in the details as you like to add color to his story. While his tale might be interesting to some, the information Paulus has about the order and the *Book of Vile Darkness* is the real point of this interaction. Paulus can reveal all the information in the adventure background and as many clues about the artifact as you like. You might also reveal information about the Disciples of Nhagruul (see Chapter 4). If the adventurers reveal that they carry the book, Paulus starts screaming incoherently and tearing at his skin with dirty nails until his voice finally gives out and he collapses from exhaustion.

The wretched knight is too weak to be of any other use. Even if rescued from the cage, his wounds tended, he will die in a few days. He simply lacks the will to live.

## Development

The world shudders at the *Book of Vile Darkness*'s return. There's no shortage of villains who would do anything to get their hands on the tome. The longer the adventurers carry the book, the more likely they are to face enemies drawn by the artifact's evil.

You can use the following encounters to demonstrate the growing interest in the artifact. Feel free to substitute different creatures or add more encounters.

### Undying Ambition

**Level 12 Encounter (XP 3,850)**

- 1 lich necromancer (level 14 elite controller; *Monster Vault*, page 183)
- 2 master vampires (level 12 lurker; *Monster Vault*, page 283)
- 3 putrescent zombies (level 11 minion brute; *Open Grave: Secrets of the Undead*™, page 196)

A lich necromancer and its undead henchmen pick up the adventurers' trail. The lich sends the zombies forward to keep the adventurers busy long enough for the vampires to snatch the artifact using their *dominating gaze*. The vampires and lich break off the attack if the lich gains the book.

### Disciple of Shathrax

**Level 14 Encounter (XP 5,500)**

- 1 mind flayer thrall master (level 14 elite controller [leader]; *Monster Vault*, page 205)
- 2 arena-trained ogres (level 14 brute; *Monster Vault*, page 219)
- 6 derro thugs (level 14 minion brute; *Monster Manual 3*, page 49)

On learning of its master's death, a mind flayer acolyte of Shathrax sets out to continue the villain's work. It knows Shathrax's plan and eventually learns that the adventurers have the book. The mind flayer instructs its servants to kill all the characters except for the book's owner, whose brain it intends to devour. By doing so, the mind flayer hopes to gain whatever knowledge the owner has of the book.

## Demon Directive

**Level 14 Encounter (XP 5,400)**

- 3 abyssal eviscerators (level 14 brute; *Monster Vault*, page 47)
- 3 babaus (level 13 skirmisher; *Monster Vault*, page 45)

A demon lord dispatches foot soldiers to take the book from the adventurers. The demon lord doesn't risk a direct confrontation to avoid showing its hand to its rivals. The demons are unsubtle and aggressive. They prefer to take the treasure from the adventurers' corpses.

# Encounter 3: Nhagruul's Legacy

**Combat Encounter Level 16 (7,600 XP) and Skill Challenge Level 17 (3,200 XP)**

Although Nhagruul is long dead, his evil essence lives on in the *Book of Vile Darkness*. Nhagruul has not enjoyed his time inside the artifact and desperately wants to be free. He has little power independent of the book, but he might influence the artifact's owner by shifting words on the tome's pages or whispering into his or her mind. If, however, the characters have been good and avoided using the artifact, they probably come across Nhagruul's name in their own research or by talking with Paulus. It should be clear that the means to destroy the artifact lie with this dreadful being.

In any event, the adventurers should at some point come across the Idol of Nhagruul in a twisted and dark forest. The characters might seek it out or, failing this, stumble across it.

**Light:** Bright light during the day (sunlight), dim light at night (moonlight).

**Monsters:** 1 disciple of Nhagruul (D), 1 chaos beast deep hulk, 2 crazed ogre dreadnoughts (O), 4 Nhagruul fanatics (F). All of the monsters are hidden when the characters arrive.

**Perception DC 22:** The character spots the closest hidden enemy.

**When the adventurers arrive at the scene, read:**
*The dense forest gives way to a clearing. Several monoliths, each carved with screaming humanoid faces, stand in a circle around a statue depicting a monstrous humanoid dressed in robes and fraught with horrid mutations.*

Nhagruul's disciples raised a statue here to honor their master. They suspect, but are not certain, that a fragment of their master's soul is trapped within the stone. A few surviving disciples and monstrous allies watch the statue in the hope their master will give them a sign.

The disciple and fanatics hide in the woods. The ogres hide behind two menhirs, waiting for the order to strike. The chaos beast deep hulk (not shown on the map) is underground and burrows up to join the fight once the combat begins. These creatures attack when spotted or when the adventurers come within 3 squares of the statue.

This encounter takes place on the battle map. Place the characters in their start area, but don't place the monsters until they're presence becomes known.

**If the characters fail to notice the hidden monsters, read:**
*Several robed, flail-wielding humanoids spill out from the trees, while two hulking ogres clad in plate armor complete with skull masks step out from behind the stones. One shouts, "The book! Give us the book!"*

**When the deep hulk appears, read:**
*The ground splits wide to reveal a horrid monster: a strange, almost humanoid horror with rainbow-colored chitin plates covering its limbs and torso and great claws that end in curling talons. Strange lights play in its multifaceted eyes, while tentacles wriggle free from its body and its colors swirl and change.*

**Tactics:** The creatures want the *Book of Vile Darkness* and sacrifice their lives to get it.

The disciple of Nhagruul hangs back behind its allies, hurling *death by thorns* at enemies it can see. The disciple then draws his flail and charges.

The deep hulk burrows up in a space near the adventurers and leads with *double attack*. If it grabs a character, it spends its action point to use *corporeal instability*. Henceforth, it alternates between *maddening gaze* and *double attack* until *corporeal instability* recharges.

The ogres charge into the front ranks, attacking with their greatswords each round. Once they become bloodied, they use *insane rage* to keep opponents locked down.

The fanatics skirt the battlefield's edges to hit ranged attackers from behind.

**Disciple of Nhagruul (D)** **Level 16 Controller (Leader)**
Medium natural humanoid, human XP 1,400

**HP** 153; **Bloodied** 76 **Initiative** +13
**AC** 30, **Fortitude** 26, **Reflex** 30, **Will** 28 **Perception** +7
**Speed** 6

**Traits**

☼ **Palpable Evil** (fear) ✦ **Aura** 2
Enemies in the aura take a -2 penalty to all defenses.

**Standard Actions**

⨺ **Flail** (weapon) ✦ **At-Will**
*Attack:* Melee 1 (one creature); +21 vs. AC
*Hit:* 2d10 + 8 damage, and the disciple can slide the target 1 square.

⚚ **Soul Rot** (necrotic, psychic) ✦ **At-Will**
Attack: Ranged 10 (one creature); +19 vs. Will
Hit: 2d8 + 5 necrotic and psychic damage, and the target cannot shift, use opportunity actions, or use immediate actions until the end of the disciple's next turn.

⚚ **Death by Thorns** ✦ **Encounter**
*Attack:* Ranged 10 (one, two, or three creatures); +19 vs. Fortitude. If the disciple targets only one creature, it gains a +4 bonus to the attack roll.
*Hit:* 2d8 + 7 damage, and the target is dazed and takes ongoing 15 damage (save ends both).
*Miss:* Half damage.

**Triggered Actions**

⇜ **Deranged Laughter** (fear) ✦ **Encounter**
*Trigger:* The disciple becomes bloodied.
*Effect (No Action):* Close burst 2 (enemies in the burst). The disciple pushes the target up to half its speed. Until the end of the encounter, the disciple takes a -2 penalty to all defenses.

**Stern Command** ✦ **Recharge** ⚁ ⚅
*Trigger:* An ally within 5 squares misses on an attack.
*Effect (Immediate Interrupt):* The triggering ally rerolls the attack roll. If it misses, the ally takes 10 damage.

**Str** 12 (+9) **Dex** 21 (+13) **Wis** 8 (+7)
**Con** 17 (+11) **Int** 24 (+15) **Cha** 20 (+13)

**Alignment** chaotic evil **Languages** Common
**Equipment** robes, flail

**4 Nhagruul Fanatics (F)** **Level 14 Minion Skirmisher**
Medium natural humanoid, human XP 250 each

**HP** 1; a missed attack never damages a minion. **Initiative** +13
**AC** 28, **Fortitude** 28, **Reflex** 26, **Will** 25 **Perception** +6
**Speed** 6
**Immune** fear

**Standard Actions**

⨺ **Flail** (weapon) ✦ **At-Will**
*Attack:* Melee 1 (one creature); +19 vs. AC
*Hit:* 11 damage.
*Effect:* The fanatic can shift 1 square to a square adjacent to the target.

**Triggered Actions**

**Hate** ✦ **At-Will**
*Trigger:* An enemy within 5 squares drops an ally of the fanatic to 0 hit points.
*Effect (Immediate Reaction):* The fanatic shifts up to 5 squares and uses *flail* against the triggering enemy.

**Str** 22 (+13) **Dex** 19 (+11) **Wis** 8 (+6)
**Con** 17 (+10) **Int** 11 (+7) **Cha** 16 (+10)

**Alignment** chaotic evil **Languages** Common
**Equipment** robes, flail

**2 Crazed Ogre Dreadnoughts (O)** **Level 14 Soldier**
Large natural humanoid XP 1,000 each

**HP** 140; **Bloodied** 70 **Initiative** +12
**AC** 30, **Fortitude** 28, **Reflex** 24, **Will** 26 **Perception** +12
**Speed** 8

**Traits**

**Threatening Reach**
The dreadnought can make opportunity attacks against enemies within 2 squares of it.

**Standard Actions**

⨺ **Greatsword** (weapon) ✦ **At-Will**
*Attack:* Melee 2 (one creature); +19 vs. AC
*Hit:* 1d12 + 11 damage, and the target is immobilized until the end of the dreadnought's next turn.

**Minor Actions**

⇜ **Insane Rage** ✦ **At-Will** (1/round)
*Requirement:* The ogre must be bloodied.
*Attack:* Close burst 1 (enemies in the burst); +17 vs. Will
*Hit:* The target is slowed until the end of the dreadnought's next turn.
*Effect:* The target is marked until the end of the dreadnought's next turn.

**Triggered Actions**

**Dreadnought's Resolve** ✦ **Recharge** ⚁ ⚄ ⚅
*Trigger:* The dreadnought fails a saving throw.
*Effect (No Action):* The dreadnought rerolls the saving throw with a +2 bonus.

**Skills** Athletics +19
**Str** 24 (+14) **Dex** 16 (+10) **Wis** 20 (+12)
**Con** 20 (+12) **Int** 8 (+6) **Cha** 23 (+13)

# Features of the Area

**Forest:** Squares containing forest are lightly obscured and difficult terrain.

**Menhirs:** These 10-foot-tall stones bear carvings of screaming faces and count as blocking terrain. A DC 16 Athletics check is required to climb a menhir, and its top is difficult terrain.

**Carnage Stone:** Whenever a creature starts its turn on a square containing carnage stone and before the creature does anything else, the DM rolls a d6. On an odd number, the creature falls prone. On an even number, the creature makes a melee basic attack as a free action against a random adjacent creature. If there is no target, the creature takes 10 psychic damage.

**Statue of Nhagruul:** This 15-foot-tall statue depicts a monstrously deformed humanoid in robes. The statue is blocking terrain, and a DC 16 Athletics check is required to climb on top of it. If a character brings the *Book of Vile Darkness* within 3 squares of the statue, the statue animates. If this happens while the battle is raging between the characters and the emissaries of Vecna, the statue does not attack but instead waits until the battle is resolved before addressing the survivors (see below).

# Skill Challenge: Dealing with the Idol

The statue of Nhagruul animates if the *Book of Vile Darkness* comes within 3 squares of it.

**When the statue animates, read:**
*Dust spills from the hideous statue as it turns to face you. Its monstrous features contorting with hate, it bellows, "You dare bring that wretched tome here?"*

The book's presence enrages the corrupted spirit trapped inside the statue. The spirit recalls enough about its mortal crime—reassembling the *Book of Vile Darkness*—to be of assistance to the adventurers, whether they hope to master its power or destroy it. Coercing the spirit to give up its secrets is the skill challenge. The challenge ends when the characters make six successful checks, at which point they convince the spirit to reveal the Ritual of Endings and Beginnings, or they gain three failures, at which point the idol attacks.

**Level:** 17 (3,200 XP).

**Complexity:** 2 (requires 6 successes before 3 failures).

**Time Frame:** Each character can make a check in this challenge once per round as a standard action.

**Primary Skills:** Arcana, Bluff, Diplomacy, History, Insight, Intimidate.

*Bargaining with the Spirit (Bluff or Diplomacy DC 23 if they intend to destroy the book, DC 31 if they intend to harness its power):* The characters can explain why they have the artifact and what they intend to do with it. A successful check earns the adventurers one success in the challenge, with an additional success for every 5 points by which the check result beats the DC.

*Observing the Statue (Insight DC 23; maximum 1 success):* A character can learn much about the spirit haunting the statue by watching and listening. On a successful check, the character learns that the spirit fears the book and gains one success toward the challenge.

*Recalling Ancient Lore (Arcana or History DC 23):* The character recalls lore about Nhagruul or his enemies that could be used to the party's advantage. A successful check earns the adventurers one success toward the challenge, and a success by 5 or more grants the adventurers a noncumulative +2 bonus on all Bluff and Diplomacy checks made until the end of the skill challenge. On a failed check, the adventurers earn a failure in this challenge and take a noncumulative -2 penalty to Bluff and Diplomacy checks until the end of the encounter.

*Threatening the Spirit (Intimidate DC 23):* A character can threaten the spirit by brandishing the book. If the character beats the DC by 5 or more, he or she also removes one failure.

**Success:** If the adventurers earn 6 successes before acquiring 3 failures, Nhagruul's spirit tells the characters that they must perform the Ritual of Endings and Beginnings at the Well of Many Worlds to either destroy the book or harness its power. The spirit reveals the well's location and the procedure for destroying the tome (see "Ritual of Endings and Beginnings" in Encounter 4).

**Failure:** If the adventures earn 3 failures before acquiring 6 successes, the spirit disappears, and the statue becomes a stone golem and attacks until destroyed. Within the rubble of the destroyed golem, the characters find a scroll with the Ritual of Endings and Beginnings scrawled on it, but it doesn't specify where the ritual must be performed. The characters might learn about the Well of Many Worlds from a divination ritual, a friendly nonplayer character, as information gained during another adventure, or with a DC 32 Arcana check (at your discretion).

| **Stone Golem** | **Level 17 Elite Soldier** |
|---|---|

# Encounter 4: The Well of Many Worlds

**Encounter Level 18 (11,600 XP)**

The Well of Many Worlds is the most powerful portal in the planes. Unlike most portals, it connects to all places at once. While useful for a quick transit, it can also be used to draw objects, and possibly creatures, forth. Research indicates that the Well of Many Worlds is the party's best hope for destroying the *Book of Vile Darkness*—or mastering its power.

The well provides the means by which the adventurers can rid themselves of the accursed artifact or harness its ultimate power. There, they can perform the Ritual of Endings and Beginnings to call forth good or evil from other worlds and use those forces to augment or destroy the tome.

The Well of Many Worlds can be anywhere you need it to be. It might be deep in the Underdark, on an abandoned astral dominion such as Pluton or Shom, or somewhere in the Realm of Dreams. Run this encounter at some point before the artifact moves on.

**Arcana DC varies:** The character knows the effects of the reality holes (DC 17), temporal disturbances (DC 23), and obelisks (DC 33) in the vicinity. See "Features of the Area" for details.

**Light:** Bright light.

**Monsters:** 1 angel of vengeance (A), 2 spell howlers of Vecna (S), 8 angel of valor veterans (V).

**When the adventurers arrive at the scene, read:**
*Four 20-foot-tall obelisks rise atop a rocky hill. Multicolored lights shine from the hilltop, filling the air with a scintillating glow. Here and there, you spy clouds of pink mist, iridescent gusts of wind, and other strange distortions.*

Before the characters can begin the Ritual of Endings and Beginnings, creatures in service to Vecna show up to thwart their efforts.

This encounter takes place on the battle map. Let the players place their miniatures on the map, and then place the creatures as indicated.

**When Vecna's servants appear, read:**
*A howling wind fills the air, presaging the appearance of a dreadful host. An enormous angel wreathed in fire and ice clutches two bone longswords, while smaller, man-sized creatures appear in the air to all sides. Two skinless humanoids scuttle across the ground, pain and madness evident in their twisted features.*

The mighty angel speaks, its voice the sound of thunder: "Cease this fool's errand and surrender yourselves

to the Whispered One's will. Should you comply with haste, your deaths will be mercifully swift."

**Tactics:** The creatures are under orders to destroy the adventurers and bring the *Book of Vile Darkness* back to Vecna.

The angel of vengeance uses *sign of vengeance* against the one carrying the artifact and then teleports to that character's side, where it uses *double attack*. The angel follows the character until it is destroyed or until it gains the book. Once it does, it flies off with the artifact.

The angels of valor fight to keep the other adventurers busy while their powerful ally recovers the book. Meanwhile, the spell howlers keep back, peppering the characters with ranged attacks. The veterans and the howlers fight to the death.

**Angel of Vengeance (A)** **Level 19 Elite Brute**
Large immortal humanoid (angel) XP 4,800

**HP** 426; **Bloodied** 213 **Initiative** +13
**AC** 31, **Fortitude** 33, **Reflex** 29, **Will** 33 **Perception** +16
**Speed** 8, fly 12 (hover)
**Immune** fear; **Resist** 15 cold, 15 fire, 15 radiant
**Saving Throws** +2; **Action Points** 1

**Traits**

**Cloak of Vengeance** (cold, fire)
While the angel is not bloodied, attack rolls against it take a –2 penalty, and any creature that hits the angel with a melee attack takes 10 cold and fire damage.

**Standard Actions**

**Longsword** (cold, fire, weapon) ✦ **At-Will**
*Attack:* Melee 2 (one creature); +24 vs. AC
*Hit:* 4d10 + 12 cold and fire damage.

**Double Attack** ✦ **At-Will**
*Effect:* The angel uses *longsword* twice.

**Minor Actions**

**Sign of Vengeance** ✦ **Encounter**
*Effect:* Ranged sight (one creature). Until the end of the encounter, the angel can teleport adjacent to the target as a move action.

**Triggered Actions**

**Coldfire Pillar Transformation** (cold, fire, polymorph) ✦ **Encounter**
*Trigger:* The angel is first bloodied.
*Effect (Free Action):* The angel becomes a 6-square-high pillar of fire and ice until the start of its next turn. While in this form, it is immune to all damage. When the effect ends, the angel makes the following attack.
*Attack:* Close burst 2 (enemies in the burst); +22 vs. Reflex
*Hit:* 2d8 + 18 cold and fire damage.

**Skills** Insight +21
**Str** 27 (+17) **Dex** 18 (+13) **Wis** 25 (+16)
**Con** 13 (+10) **Int** 19 (+13) **Cha** 26 (+17)

**Speed** 6

**Standard Actions**

**Maddening Touch** (psychic) ✦ **At-Will**
*Attack:* Melee 1 (one creature); +21 vs. Will
*Hit:* 2d8 + 12 psychic damage.

**Word of Force** (force) ✦ **At-Will**
*Attack:* Ranged 10 (one creature); +23 vs. Fortitude
*Hit:* 2d10 + 15 force damage.

**Word of Doom** (psychic) ✦ **At-Will**
*Requirement:* The spell howler must be affected by *horrific visage*.
*Attack:* Ranged 10 (one creature); +23 vs. Will
*Hit:* 2d8 + 6 psychic damage, and the target is dazed until the end of the spell howler's next turn.

**Word of Madness** (psychic) ✦ **Recharge** if the power misses
*Attack:* Melee 1 (one creature); +21 vs. Will
*Hit:* 2d8 + 5 psychic damage. The spell howler slides the target up to 3 squares, and the target makes a basic attack as a free action against a creature of the spell howler's choice.

**Word of Pain** (necrotic) ✦ **Encounter**
*Attack:* Ranged 10 (one creature); +23 vs. Fortitude
*Hit:* 4d10 + 10 necrotic damage.
*Miss:* Half damage.

**Triggered Actions**

**Horrific Visage** (psychic) ✦ **Encounter**
*Trigger:* The spell howler is first bloodied.
*Attack (No Action):* Close burst 2 (enemies in burst); +22 vs. Will
*Hit:* 2d6 + 4 psychic damage, and the spell howler pushes the target up to 3 squares.
*Effect:* Until the end of the encounter, the spell howler cannot use any powers except *maddening touch* and *word of doom*.

**Str** 15 (+11) **Dex** 13 (+10) **Wis** 15 (+11)
**Con** 16 (+12) **Int** 22 (+15) **Cha** 18 (+13)

**Alignment** unaligned **Languages** Supernal
**Equipment** chainmail, greatsword

## Ritual of Endings and Beginnings

Any character with the Ritual Caster feat can perform the Ritual of Endings and Beginnings. The characters must use 7,000 gp of residuum. The ritual takes 1 hour to perform; during this time, the caster must concentrate on drawing forth the essence of good or evil from the Well of Many Worlds.

During the ritual's performance, the *Book of Vile Darkness* vanishes from its owner's hands and reappears over the well, as swirling darkness or light rises up from the well's depths to assail the tome. At the end of the ritual, the adventurers can hurl the book into the well, destroying it by choosing a destructive destination (into the heart of the sun, for example) and then succeeding on a DC 32 Arcana check (up to four allies can aid on this check). On a failed check, the book breaks apart, and vile darkness spills into a multitude of different worlds, sparing its owner the doom faced when the artifact moves on but unleashing unimaginable evil upon the planes.

If the characters channel evil from the well and keep the compiled *Book of Vile Darkness*, see "Ending the Adventure" for what happens next.

## Features of the Area

**Obelisk:** A character adjacent to an obelisk can, with a DC 32 Arcana check, use the following power against a target of his or her choice (as a standard action). If the skill check fails, the obelisk attacks the character instead.

**Standard Actions**

**Obelisk** (psychic, teleportation) ✦ **At-Will**

*Attack:* Close burst 10 (one creature in the burst); +21 vs. Will

*Hit:* 2d8 + 8 psychic damage, and the target teleports 1d6 squares in a random direction.

**Reality Hole:** A creature that enters a square containing a reality hole is removed from play until the start of its next turn. When the effect ends, the creature returns to play in an unoccupied space adjacent to any reality hole on the map.

A character with line of sight to a reality hole can end the effect by spending a standard action to make a DC 23 Arcana check. On a success, the creature removed from play is returned in an unoccupied space of the character's choosing.

**Temporal Disturbance:** When a creature starts its turn in a square occupied by or adjacent to a temporal disturbance, roll a d6. On an odd number, the creature is slowed and takes a –2 penalty to attack rolls until the start of its next turn. On an even number, the creature gains an extra move action and gains a +2 power bonus to attack rolls until the start of its next turn.

**Well of Many Worlds:** Any creature that enters the Well of Many Worlds is removed from play as it vanishes to another plane or an alternate natural world (DM's choice). A character can choose the destination as a free action by succeeding on a DC 32 Arcana check. While removed from play, the creature can take a standard action to make a DC 32 Arcana, History, Insight, or Perception check. On a success, the character reappears in an unoccupied space adjacent to the Well of Many Worlds. Any object dropped into the Well of Many Worlds travels to a random plane and is lost.

# Ending the Adventure

The adventure ends when the adventurers successfully destroy the *Book of Vile Darkness*, when they bind the other books to create the ultimate *Book of Vile Darkness*, or when the artifact moves on, leaving its former owner a soulless husk. If the adventurers imbue the book with evil from other worlds, the act proves so destructive and so profoundly evil that the characters responsible are destroyed utterly as pure, concentrated evil washes out across the planes. Whether this destroys the cosmos or simply sets the stage for a future campaign is up to you.

# FACE CERTAIN DEATH. BRING A FRIEND.

Assemble a hardcore party of adventurers and discover if you have what it takes to survive the most challenging missions you've ever faced.

D&D® Lair Assault Organized Play program offers master tacticians, rules experts, and min/maxers an all-new gaming experience where the difference between victory and defeat depends on your game knowledge, ability to adapt, and a little bit of luck.

Each challenge can be played through in just a couple hours, but most players will have to make multiple attempts before they emerge victorious. Stores can run sessions at any time, and each D&D Lair Assault challenge lasts a few months. So gather your wits, bring extra character sheets, and pick up some *D&D Fortune Cards™*— you'll need 'em.

# The Book of Vile Darkness™

## Player's Book

Robert J. Schwalb

# Introduction

*"You're adventurers, aren't you? I used to be an adventurer, back before I got turned into a demon. I was also a king. Yeah, a king! With a great kingdom and a million loyal subjects! Say, is that the* Book of Vile Darkness *you got there? Y'know, they only made nine copies. I have the other eight. Wouldn't mind adding that one to my collection."*

—Fraz-Urb'Luu, Demon Prince of Deception

The *Book of Vile Darkness* corrupts all who come into contact with it. Its pages contain the wisdom, musings, and mad ravings of evil gods, demons, archwizards, liches, dragons, and other mighty beings. By opening its covers and thumbing through its contents, one can achieve great power—at the cost of one's life, soul, sanity, or all of the above. Such is the nature of evil, and such is the nature of this unholy tome.

Adventurers, not surprisingly, are among the most tempted to seek out the *Book of Vile Darkness*, drawn by the promise of power and too arrogant to think they could fall victim to its destructive tendencies. What they find in its pages are disturbing images and countless ways to inflict pain and terror on their enemies. What they don't see is the path down which the book guides them—a path leading to their own annihilation and the destruction of everything they hold dear—for the power and the allure are oftentimes too great to ignore.

The book you hold in your hands is aimed at players and provides new options for adventurers of any alignment, although the contents are even more tempting to characters who are evil-curious or rotten to the core. These new options include:

- Starting on page 9, five new character themes: cultist, disgraced noble, infernal slave, reaver, and vile scholar.
- Starting on page 20, five new paragon paths: blood-crazed berserker, contract killer, demonologist, idol of darkness, and vermin lord.
- Starting on page 28, the Exemplar of Evil epic destiny.
- Starting on page 29, a selection of divine devotion feats, divinity feats, and vile feats.

If you're looking for magic items of evil bent, you won't find them here; however, a number of them appear in Chapter 5 of the accompanying Dungeon Master's book. Read about them at your own peril!

# Playing Evil

*"What you condemn as evil, I call a willingness to do whatever it takes to succeed. I have done terrible things and I take no pride in those acts. But I would do them again, a thousand times, if it meant reaching such heights."*

—High Cardinal Krozen

If you're a player interested in trying out an evil character, this book is for you. The Dungeons & Dragons roleplaying game recommends you avoid choosing the evil alignment for good reason. Evil characters cause problems. Not only must the players contend with their enemies on the battlefield but also they must keep an eye on their evil-minded companions. Furthermore, evil adventurers tend to become alienated as a result of their actions. In time, they are no longer welcome in any community that knows them or knows of them. An evil adventurer's career is often brutish and short, ending with quests left unfulfilled and the campaign a failure.

Given all this, why bother playing an evil character? In truth, many reasons exist: You might be looking for a change of pace or a roleplaying challenge, your DM might be running a one-shot adventure suitable for evil characters, or you might be hankering for an object lesson in behavior and consequences. If that's your wont, don't let the rules dissuade you from trying something new.

## Proceed with Caution

Playing an evil adventurer is usually not a good idea. Some players take the evil alignment as a license to behave badly and an excuse to cause mischief and suffering whenever and wherever the opportunity arises. Evil characters seem to have a hard time honoring agreements and are quick to turn against their allies. They aren't about to risk their necks for a town on the edge of civilization without a considerable reward. Even if they take that job, there's no guarantee that they won't double-cross the town by taking the money and running.

Despite the problems evil characters can cause, such a play style can work. If you embrace the following suggestions, you can mitigate the challenges and enjoy a successful, if sinister, adventuring experience.

## Cooperative Game

Dungeons & Dragons is a cooperative game. Player characters work best when they work together, and most D&D encounters are built around this assumption. That one or more of the heroes are evil doesn't change this fact or alter your responsibility to your teammates. You might not like the people you work with, but if you expect them to watch your back, you had better watch theirs. Nothing dictates that evil

characters are unable work within an adventuring group. They can contribute to the group dynamic as their role demands.

To ensure the group remains together, it's critical that you shield your companions from whatever wickedness you intend. In sum, you must avoid stealing from, maiming, exploiting, and murdering the other members of your party. One way to keep everyone in check is to make sure you have a strong reason for being together in the first place. You might serve a more powerful master, follow the same god, be from the same homeland, or pursue a common goal, such as wiping out all orcs, elves, or dragons. If everyone can agree to a party-binding element from the outset and can create a plausible explanation for maintaining this truce, your group should find success.

## Be Considerate

Playing an evil adventurer gives you a chance to explore the dark side: to be the ruthless killer, to steal without regard for the victim, to dabble in dark magic, and to bargain with terrible powers. Although such options and other, more dreadful actions are possible, always consider the feelings of other players at the table. Avoid offending other players by exploring taboo subjects. Many people play D&D as an escape from real world problems and ugly truths. Games that focus too much on the sinister have limited appeal for many gamers.

Before play begins, talk with the Dungeon Master and the other players to determine what events they want to avoid and what subjects they'd rather not explore. Respect these limits and don't test them. Doing so ensures the game remains fun for everyone involved.

## Understand the Implications

Good adventurers earn fame and notoriety from their achievements, gaining advocates among the people they help and accolades for the monsters they defeat. Evil adventurers gain few of these rewards. Their actions lead to infamy, enemies, and scorn. In place of open gates and celebrations, evil characters find closed doors and suspicious stares. The more evil these characters do, the harder it becomes for them to find haven and move safely through the world.

A reckless, insane killer might not care about the implications, but an adventurer probably should. Needlessly and wantonly closing off havens and cutting off access to supplies makes it harder to survive and complete any given mission. Always keep in mind the repercussions of your actions, thinking about how your choices impact your character's chances for survival in the long term.

# Evil Adventuring Groups

*"I assure you, paladin king, that if I had a sword in hand, I would willingly cut out your heart, here and now."*

—Artemis Entreri

You cannot do enough to ensure that the evil adventuring group stays together. No matter how much you prepare, no matter how many connections you make to other characters, no matter how much you discuss limits and player comfort levels, odds are significant conflict will arise. If handled poorly, the group's destruction is almost certain to follow. The trick is to prevent that level of discord from happening in the first place. The best way to do that is to focus on strengthening the connections between the characters.

Before you get down to the business of creating your character, it's a good idea to work with your fellow players to construct a strong group identity. One of the best ways to accomplish this goal is to adopt a group concept. Simply put, the group concept describes the reasons why you work together. The following group concepts are especially tailored for evil adventurers. Feel free to tweak them to fit a different group concept.

ERIC DESCHAMPS

## Agents of Evil

Fear is a good motivator for ensuring some level of cooperation. As agents of evil, your characters are a powerful villain's champions and lackeys. You could be agents of an organization such as the Aurum in the world of Eberron or the Zhentarim in Faerûn, or you might work for a powerful warlord or wizard. Chances are you work together because you have an idea about what will happen if you don't. Your dark master is quite terrible—angering him, her, or it is not a good idea.

So who is your dark master? You should enlist your Dungeon Master to see how your employer fits into the campaign. What kinds of tasks does your patron assign you? At some point, someone had to have failed your patron. What happened to him or her? Are you loyal to your patron or do you plot treachery? Do you serve out of your own free will or are you little better than slaves?

## Criminals

Your group is a criminal outfit assembled from disparate individuals, each of whom brings a different talent to the group's cause. You might be professional killers who take dangerous missions to eliminate hard-to-reach targets. You could be an upstart thieves' guild trying to establish a foothold in a new city. Perhaps you are brigands waylaying caravans and travelers on the wilderness's darkest roads. Or are you pirates who lost their ship to a hated rival?

A number of questions must be answered. What is your criminal enterprise? Who founded the group? How did you each come to join? Have you made any enemies yet? If so, who are they and why are they out for your blood?

## Devotees of a Dark God

Religion unites many individuals, including those in your group. You all share the same faith—a mutual pledge to attend one dark god, archdevil, demon lord, or some other dreadful being.

Which power do you serve? How did you find yourself in that entity's service? Who in the group is the spiritual leader? This character need not be a member of a divine class. What kinds of missions do you undertake? Dark powers often have a number of enemies. Who are most important as far as your party is concerned? Do you have rivals? Is it a friendly rivalry or something decidedly darker?

## Family Ties

Familial ties might be enough to keep your group together. Not every adventurer has to be a blood relative, however. Perhaps two or three characters in the party are noble kin and everyone else acts as an advisor, companion, retainer, or bodyguard. For example, two or three players could play drow while the rest are mercenary soldiers. Alternatively, most characters could be half-orcs from the same tribe, perhaps with a human and an orc as cousins.

In a family ties approach, race is particularly important. Most adventurers should be from the same race. If you choose a different race, come up with a reason why your character is considered part of the family.

## Fugitives

Your group committed some grievous crime and is now on the run. Maybe you were bandits who killed the duke's son. You could be deserters from an army, having left before the orcs wiped out your legion (perhaps with some aid from the party). You might be criminals who managed to escape prison by working together.

In the fugitives scenario, your shared predicament has forced you to depend on each other to escape certain death and survive in the world. What is your story? What hardships have you had to survive? Who hunts you? Why do you stay together and what ensures you will stay together in the weeks and months ahead?

## Mercenaries

Many evil adventuring groups are no more complicated than a band of sellswords. They travel the world, selling their services to the highest bidder. When the money runs out, they move on to serve a different master. You are such a group of mercenaries. Over time, you've found that you work well together despite your differences.

How did you come together? What kinds of masters have you served so far? Have you double-crossed anyone? If so, are they still out there, nursing a grudge? Who won't you work for? Why?

## Survivors

Your characters were once members of a powerful, evil organization. An adventuring band struck your base, wiped out the group's leadership, and scattered the rest. Stripped of your community and driven to the frontier, you must find some way to make ends meet.

As usual, several questions arise. What was the organization? Was it a cult, a secret society, or some political institution? Who destroyed the group and why? What did your organization do to merit its destruction? How did your party escape? How do you feel about the attackers? Do you want revenge or do you fear them still?

# Creating an Evil Adventurer

*"Sane is boring."*

—Jarlaxle

When it comes to character creation, evil adventurers are little different from other types of characters. You still choose a class, race, feats, and powers, then purchase equipment. For the most part, the options available to good and unaligned heroes serve just as well for evil characters. *Power strike*, for example, proves as effective for an evil fighter as it does for a good fighter. Exceptions in both story and mechanics do exist, however, and they are discussed below.

## Archetypes

Nearly all adventurers are heroic in some way. Their jobs lead them into dangerous places, where they spend their time battling monsters and thwarting dastardly plots. Upstanding heroes fight against the darkness to protect the last bastions of light and goodness left in the world.

On the surface, evil adventurers look and act like other adventurers. They tromp through the same kinds of dungeons and fight the same kinds of monsters. Where they differ is in the motivations that drive them into these places.

Most evil adventurers fall into one of three archetypes. These categories describe in broad strokes how the character might behave and what goals he or she pursues. You don't have to choose an archetype, but look them over as you think about the kind of character you want to create.

### Antihero

The most palatable option for adventuring groups, the antihero is a classic archetype in fantasy fiction, films, and television stories. These characters often pursue good ends, but in ways other people find objectionable.

Antiheroes compromise their morals and ethics by performing despicable deeds they believe they have to commit. Few are the means these dark adventurers won't employ. They might commit murder, steal, torture to extract information, threaten innocents, and commit any number of other heinous acts. As much as they regret these actions (if at all), they see them as necessary to achieve a greater end that might actually be noble were the methods not so reprehensible.

If you're thinking about playing an evil character in a party of good or unaligned adventurers, the antihero is the best archetype to play. You share your allies' goals even if you do go about achieving them in disturbing ways. You are probably insightful enough of know how your companions view your actions, and you know the limits of what they will tolerate. As a result, you might conceal your activities from them to avoid causing disruption. Even so, you're not likely to apologize for your actions should they come to light.

Michael Moorcock's Elric is an excellent example of an antihero.

### Nonhero

Only the naïve believe all adventurers have the world's best interests in mind. Sure, certain shining examples might save the village from certain destruction or brave the bowels of the Abyss to stop some demon lord from invading the natural world—all for altruistic reasons. Still, extraordinary people who selflessly champion the weak and fight against evil's advance are the exception, not the rule.

Most people are not so noble. They are content to go about their lives, attend to their responsibilities, and look after their own. Among these "regular folk," the ones who set out to adventure do so for other reasons: revenge, wealth, glory, or something else. All in all, they do not possess high-minded goals. For the most part, they are in it strictly for themselves.

Self-interest as a driving motivation tends to make nonheroes unaligned or evil. These characters fit into mixed alignment groups with only a little friction as long as they are compensated for their efforts or convinced a job will profit them even if no immediate financial rewards are offered. Nonheroes work best in groups of other nonheroes, usually working together for the same objectives.

The characters in Glen Cook's *Black Company* novels are good examples of nonheroes. They'll work for nearly any sort of employer, provided they receive their regular pay.

### Villain

The last evil adventurer archetype is the villain. In some ways, the villain is a fusion of the antihero and the nonhero, but without the good parts. Basically, villains do evil because they want. Rather than help people in need, villains exploit them. Rather than destroy evil monsters, villains enslave them. Villains are truly the bad guys.

A villain is rarely an appropriate addition to a good or unaligned adventuring group. Villains oppose anything and everything a hero fights for. They create needless friction and complications for the group. It won't take long before a confrontation results. The best outcome possible is for the villain to go his or her own way; the worst results in character death and dissolution of the party.

In certain instances, a villain party member could work. Your adventurer might be replaced by an evil doppelganger and your DM might let you play that

character for a time until the villain's unmasked. Alternatively, the party might join forces with your villain character to defeat a common foe, though such arrangements are fraught with tension and often short-lived. Outside these and similar situations, you should probably avoid introducing a villain to a nonevil group even if the other players are on board.

A villain is best used in groups made up of other villains and nonheroes. Such story lines hardly resemble a normal adventuring experience because the characters are not likely to undertake the same kinds of missions. Even if they do, they do so for some sinister purpose. Villainous groups go on missions to destroy good enemies, prowl through dungeons in search of evil magic items, recruit evil humanoids to besiege a castle or invade a city, and endeavor toward other goals that nonevil adventurers are so often called upon to stop. A villainous group lasts only as long as the players refrain from plotting against each other. So tenuous are the ties that the discovery of a single magic item desired by two characters might be enough to tear the group apart. For this reason, villainous groups are best used for short campaigns spanning, at most, a tier.

## Goals

Think about what your character wants, why he or she wants it, and what your character will do to get it. Consider tying these elements to other characters in the group to strengthen the party bond. Establishing a strong motivation and behavior before you play helps you portray the character in an appropriate manner while still contributing to the group effort.

## Alignment

Choose the alignment that best fits your character's story concept. For an evil adventuring party, the best alignment choices are unaligned and evil. Chaotic evil can work, but you must find a story excuse for why you're willing to work with others for an extended period. If you're playing a one-shot adventure, any alignment will do.

## Personality

Come up with a few personality traits that best express your character's identity, behavior, and general nature. Pick from the personality traits described in *Heroes of the Fallen Lands*™ and *Heroes of the Forgotten Kingdoms*™ or from those described here. Where possible, demonstrate your most positive traits during interactions with the other player characters, and save your most negative traits for exchanges with monsters and NPCs.

**PERSONALITY TRAITS**

| | |
|---|---|
| Angry | Hedonistic |
| Avaricious | Hidebound |
| Brutish | Introspective |
| Craven | Jaded |
| Cruel | Lazy |
| Deceitful | Lustful |
| Detached | Mischievous |
| Deviant | Nihilistic |
| Diabolical | Pliable |
| Dishonorable | Proud |
| Domineering | Quiet |
| Erratic | Scheming |
| Extravagant | Strange |
| Focused | Treacherous |
| Foolish | Unhinged |
| Gluttonous | Uptight |
| Haughty | Wrathful |

## Appearance

Decide whether your character shows any outward sign of his or her alignment. Your character might conceal a darker nature behind a pleasing façade. Conversely, your character might demonstrate his or her dark side through style of dress, body art, ritual scarification, jewelry, and other adornments.

## Background

Although your background might not affect your character much during his or her adventures, having an idea about why your character chose the path he or she did can help you develop the character's personality and motivations during play. For an evil adventurer, the biggest question you should answer is how your character came to be evil. Were you born this way? Are you a product of your upbringing? Did some other event change your outlook, enabling or compelling you to commit dark or unspeakable deeds?

## Powers

When choosing powers, consider whether the flavor of the power should be tweaked to account for your evil nature. For example, if you have a power that deals radiant damage and you think it would befit your character's nature to have the power deal necrotic damage instead, discuss it with your DM. If he or she allows it, change the damage type.

# Arcane Evil

*"All other paths to power are riddled with flaws. A sword can break. A mind can hesitate. Faith falters, nature dies, and light banishes shadow. Magic? Magic is forever."*

—Rary the Traitor

Arcane magic is everywhere. It pervades the cosmos as residual energy left from creation. The paths to its mastery are various, and there are few limits to what it can accomplish in the right or wrong hands.

Many speculate that arcane magic was founded in the Elemental Chaos. It is possible that a monumental form of arcane magic was used to fashion the world from disorder. If the Elemental Chaos spews arcane energy, the Abyss no doubt taints such magic to one degree or another. Nothing touched by the Abyss remains unsullied. It could be that a thread of Abyssal darkness worms through all arcane magic. If so, that darkness might be enough to nudge those standing at the precipice into evil.

Most arcane spellcasters believe that their work attracts the best and worst from all races, promising power, glory, and wealth to any capable of controlling it. They claim that, just as a beautiful sword might be used for evil ends, so too can magic be a terrible weapon. Although some arcane masters forge pacts with evil beings to grow their magical mastery and others scribe spells of singular wicked nature to feed their own sinister interests, goodly arcane magicians maintain that it not arcane magic that is to blame but rather the infinitely corruptible hearts of mortals.

Evil arcane characters adventure to master new spells and gain power. They use their amassed wealth and prestige to raise towers and citadels within which they perform experiments that lead to a greater understanding of magic. Like Vecna, they might aspire to become liches or gods, or like Iggwilv they might broker deals with powerful extraplanar entities. In either case, the ultimate goal is immortality.

# Divine Evil

*"I whip my servants thrice daily: once after morning prayer, once before they go to sleep at night, and once when the mood strikes me."*

—Verminaard

One does not have to look far to locate evil in the cosmos. Certainly, the Abyss holds evil enough. But what about the evil above? What of the calculating, vengeful dark gods who embody evil in their perfect, divine forms? Do they not affect the world? Are their hands not felt in the murders and betrayals, the slaughter and the hatred pervading the natural world? Many are the horrific deeds done in their names.

Evil divine characters seek to please the gods they worship, to rise through the ranks of the clergy and become champions of the faith, divine exarchs, or demigods. They impose the will of their gods upon lesser creatures and use their faith like a hammer to smite infidels.

## The Dark Gods

Before the Chained God's fall and subsequent Dawn War, the deities represented certain amoral concepts—traits reflecting the ordered universe they hoped to shape. Tharizdun brought morality to the cosmos when he created the Abyss. His foul deed released evil into the multiverse and sundered the divine harmony forever. Since his fall, some gods have declared for the light, while others have embraced darkness. Those deities trapped in the middle long for a return to the perfection that once was.

Eight major evil gods exist. Two have fallen so far from their divine origins, they root in the Abyss with the demon lords against whom they once fought. The rest pursue other agendas, their unholy goals often at odds with those of their holier peers. For more details on the evil gods, see *Rules Compendium*™, page 46.

## Divine Magic

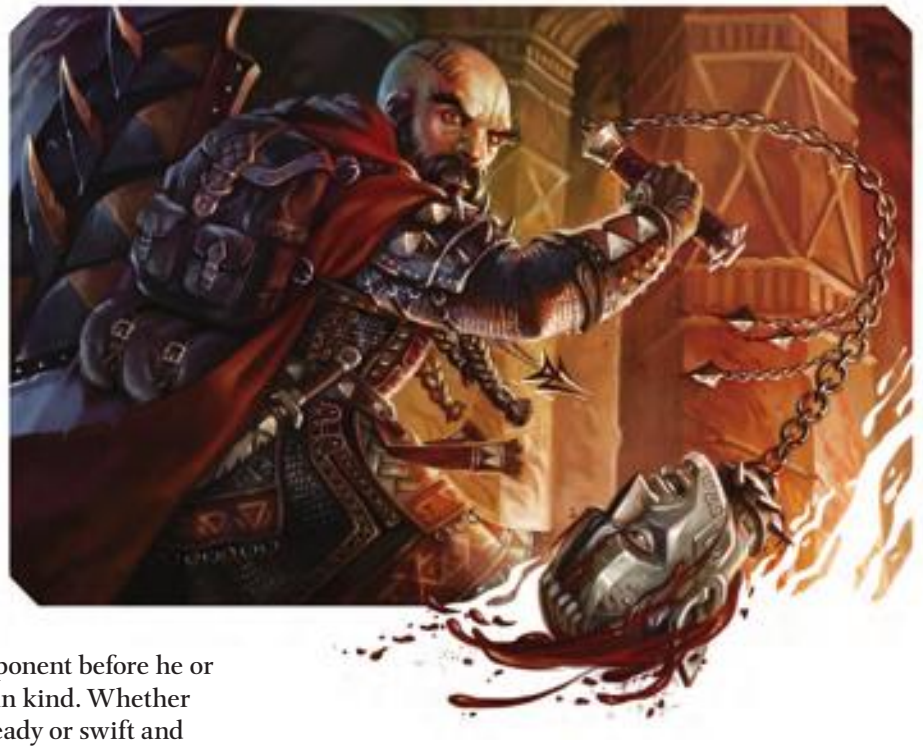
A common fallacy attributes divine magic to the gods. In fact, divine magic is a force apart from the deities. Indeed, it is the magic that gives the gods their power and status in the planes. Most mortals interact with divine magic by asking for access from their deity. If the mortal is a prized servant, the god might comply. Some divine characters can harness divine power directly, but such ability is reserved for the most cherished devotees of all.

Because divine magic exists apart from the deities, divine powers from one god are similar to those of another god. The intended outcome might be different, but the prayers are more or less the same. For this reason, one can find both Vecna's and Pelor's priests scorching enemies with radiant energy. Nonetheless, some evil gods have strong ties to particular themes that are best expressed through damage types. You might talk with your Dungeon Master about swapping out the radiant damage type for a different damage type more appropriate to your character's faith. Examples include fire for Asmodeus, necrotic for Vecna, and poison for Zehir.

# Martial Evil

*"It is proper that the strong master the weak, and the powerful rule the powerless."*

—Warduke



It is difficult to say that any particular moral imperative naturally invests the martial classes. One needs only the willingness to learn the tricks and maneuvers, and the courage to set into the world to win one's fortune.

That said, evil's rationale for staking a claim on martial power is telling. The goal of martial prowess is to degrade an opponent before he or she has the opportunity to respond in kind. Whether one's martial damage is slow and steady or swift and brutal, the objective is to do unto others before they do unto you. The means to this end are bloodshed, pain, and mayhem. All in all, evil is decidedly comfortable with martial power, whether it manifests in bludgeoning, slashing, or piercing. For evil, a journey filled with pain and dismemberment is as satisfying as the ultimate defeat of the enemy. Good cannot make such a claim with respect to martial power.

Evil martial characters adventure for many of the same reasons as other adventurers. They are simply less likely to lend their swords, hammers, and arrows to a cause without proper compensation, whether that is money or some more vile reward. Altruism is a foreign notion. Revenge, on the other hand, is a common motivation and might be treasured more deeply by an evil warrior.

# Primal Evil

*"It is not enough to respect nature; you must fear it. This is why I entrust my nganga with the power to bend the spirits to their will. Only under my firm control will the spirits stay their teeth and claws. Only then will we thrive."*

—Lalali-Puy

Primal magic flows from the spirit world, a realm that is both a part of the natural domain and somehow separate from it. Primal spirits pervade the spirit world; from them flows great magic. The spirits guard the world against intrusion from both the Astral Sea and the Elemental Chaos. They want no part in the cosmic struggle between the gods and their elemental counterparts. Since the time of the Dawn War, the spirits have shielded the world from outside interference. As long as they remain, no deity or primordial is permitted to violate the ban upheld for eons.

Protecting the world implies self-sacrifice, an act some people might describe as good or noble. Also, considering the pristine beauty of the primeval forests, the windswept mountains clawing at the heavens, and the scintillating vistas of the great oceans, the primal spirits are easily seen as agents of life and plenty.

## GNAW

No primal spirit strictly abides by any mortal conception of good and evil. Nonetheless, a few primal entities are marked by an undeniable darkness. Whisper is a capricious spirit, a trickster, and a bringer of monsters. The Primal Beast is violence personified, a wrathful hunter that preys on all. Still, neither of these beings evokes the terror inherent in Gnaw.

Legend has it that Gnaw is the misbegotten child of Whisper and the Primal Beast. Once Gnaw clawed free from the womb, Whisper cast it away, sickened by what she had brought into being. Having never known a mother's affection, Gnaw exists at the edges of the spirit world, always creeping and crawling, surviving on the leavings of more powerful spirits.

As the spirit of creeping things, scavengers, and eaters of the dead, Gnaw revels in twitching corpses alive with vermin, in the drone of carrion flies as they propagate, and in the vulture's screech as it circles the dying. Primal peoples appease this dark spirit by offering viscera, by burning their dung, and by cowering in the hours before dawn in hopes of keeping his killing presence at bay.

ANNA CHRISTENSON

As much as the primal spirits are creations of living creatures, personifications of the world's many forms, they are also agents of death and decay. For life to thrive, the living must die. To make room for the new, the old must be cleared away.

Many primal champions stand apart from the cosmic struggle between good and evil. Preserving the world's natural states is of far greater import than the petty squabbles between the virtuous and vile. Because those beholden to darkness often seek ruination and destruction, unaligned primal characters often throw in their lot with the good. Still other primal adventurers find nature's dark side more palatable. They choose to protect and facilitate the crucial processes of death and decay. Advancing these natural aspects does not guarantee that the individual attends evil, but the work they do requires a hard heart. Their tasks are also more effectively completed through an affinity for fetid places, for the carcass's pungent stench, and for the things that burrow and creep, skitter and crawl.

## Psionic Evil

*"My will can shatter mountains. Imagine what it can do to your bones."*

—Serenity, Fist of Zuoken

The ability to wield psionic energy appears in the very best, the very worst, and a fair number of those in between. Some gifted individuals use their psionic powers to fight the Far Realm threat, while others exploit the growing aberrant presence to increase their power.

The mind is a hive of evil thoughts. While those of heavy conscience use discipline and deprivation to quell these thoughts, others bereft of scruples and guilt embrace them to unlock the mind's full potential and, in so doing, become slaves to them.

Evil psionic adventurers use their unusual powers to coerce and torment their opponents. They infiltrate their enemies' minds and enslave them, or they hurl destructive force at foes to shatter bones and bodies. Once again, evil enjoys wielding its destructive power nearly as much as accomplishing its dark ends.

### PARAGON PSIONIC EVIL

*Psionic Power*™ offers great options for characters when they reach the paragon tier. Evil psions find great success as alienists and thrallherds, while evil monks might become unseen hands. You might tweak the story elements for other paragon paths to play up their sinister natures. The blackstone guardian for the battlemind and the anarchic adept for the ardent are strong choices.

## Shadow Evil

*"The darkness can devour you if you're not careful. Learn to master it, and you can train it to devour others."*

—Evard

Only those willing to trade a fragment of their souls for a shard of darkness can wield shadow magic. Such a bargain is not the sort of arrangement a good character relishes. A shadow adventurer might be comfortable as unaligned, but those that excel in their dark arts tend to give in, to one degree or another, to evil.

Rare is the shadow character who fights for the world's or its inhabitant's defense. Most such adventurers use shadow as a means to achieve personal goals. Assassins, in particular, embrace all that shadow offers to better hunt down and eliminate their victims. Blackguards, necromancers, and binders (as described in *Player's Option: Heroes of Shadow*™) turn from the light as a result of vice, knowledge, or power. These motivations easily place them within the grasp of evil. Only the rarest and most steadfast good-aligned master of shadows can survive long in the gloom. Evil, on the other hand, delights in darkness.

### SHADOW OPTIONS

For more information on the shadow power source, check out *Player's Option: Heroes of Shadow*. Many of the options in that book are appropriate for evil adventurers.

# Themes

*"One day I will stand among the gods and not have to look up to them."*

—Fzoul Chembryl

Your character's theme is a career, calling, or identity that describes who he or she is in the world. Just as race and class create basic definitions about who your character is, theme adds a third character component to help refine your story and identity. For example, you might be a human wizard who chooses the vile scholar theme, but "human vile scholar" might mean many different things. You might live on the outskirts of a village and sell dark lore and treasure maps to adventurers. Perhaps you live in an academy among other wizards and want to travel to see more of the world. Or perhaps you roam the forest or swamp, gathering lore and ritual components from monsters. Each theme can encompass several unique stories within the same concept.

This section presents five new themes, which are summarized on the table (see next page).

| Theme | Description |
|---|---|
| Cultist | Devotee to a dark power |
| Disgraced Noble | Fallen member of the aristocracy |
| Infernal Slave | Thrall to an archdevil |
| Reaver | Savage killer and plunderer |
| Vile Scholar | Seeker of forbidden lore |

Most character themes can accommodate members of a wide range of classes. Cultists might be clerics or blackguards dedicated to a dark god, or they might be assassins working from the shadows to honor Zehir. Then again, a cultist could be a fighter or a barbarian, a wild zealot blinded by deranged faith. The vile scholar suggests a wizard, yet could not a rogue steal forbidden books to unlock the lore within? In almost all cases, a theme is broad enough in concept to allow characters from any classes to choose them. There are exceptions and you're bound to find them in narrow-focus themes presented in other sourcebooks, in which case they include any requirements in the theme's entry.

## Choosing a Theme

A character can have only one theme, which you choose when you create your character. The theme you select grants the following benefits:

**Starting Feature:** Each theme includes one or more features that you gain when you select the theme. If a starting feature grants an attack power, keep in mind the following rules:

*Ability Scores:* Whenever you use a power that calls for your highest ability, you use your highest ability modifier. For example, if Strength is your highest ability and you use a theme power whose attack is "Highest ability vs. AC", you would make a Strength vs. AC attack. Damage and effects resulting from using the power might also use this notation.

*Implements:* Theme powers with the implement keyword can be used with any implement whose use you are proficient in. Unlike most implement powers, however, you need not have proficiency with an implement to use these powers. Using a theme implement power without an implement simply means you do not add an implement's enhancement bonuses or make use of a magic implement's powers or properties.

**Additional Features:** Most themes offer additional features at levels 5 and 10. You gain an additional feature automatically when you reach the appropriate level; it doesn't replace any of your class features.

**Optional Powers:** Some themes include a number of utility powers that you add to the ones you can choose from when you reach the appropriate level.

You can use retraining to replace a class power with an optional theme power or vice versa, exchanging one power for another power of the same type (at-will attack, encounter attack, daily attack, or utility). The new power must be of the same level as the old power or lower. You can also replace an optional theme power with a different optional power of the same theme, as long as the new power is the same type and is of the same level or lower.

**Background:** You can choose to use one of these themes as a background for your character. Each theme's "Background" sidebar mentions two or more associated skills. If you choose a theme as your background, then you gain a +2 bonus to checks with one of those associated skills, or you add one such skill to your class's skills list before you choose your trained skills.

## Themes in Character Creation

When creating your character, you can use a character theme to guide your choices. Themes are intended for use as creation tools, ways for you to add further detail to your character, to push beyond the limits of class and race, and maximize your customization options. Certainly, if you already have a class in mind, you can use a theme to improve or expand your character options. For example, if you're playing a fighter or a barbarian, you could choose reaver to escalate the carnage.

Character themes can also expand your character's capabilities on and off the battlefield. A theme's starting feature can let you do things outside your class role, perhaps taking on some of the defender responsibilities even though you're a striker or by boosting your attacks by giving you some striker potential.

Choosing your theme before your race or class can help build a character concept. From this concept, you can go on to choose race, class, feats, and so on to reinforce the idea that began with the theme.

Regardless of when you choose your character theme, look for ways to incorporate the theme into your character's background. Your theme might reflect the event that propelled you into your adventuring career, or your theme might reflect specialized training you underwent to prepare you for the objectives or destiny set before you.

## Gaining Themes at Higher Levels

If you don't have a theme, you can always adopt one at a higher level simply by going back and choosing the theme that best fits your character. Generally, taking a theme at a higher level results from a development in the campaign. Several themes included in this chapter are suitable for acquisition at any point in your career, and gaining the theme might result from completing a major quest, becoming corrupted, or succumbing to dark temptations in the game. You might find an evil magic item that lures you to explore forbidden lore, turning you into a vile scholar. Or having offended your king or been denied your birthright, you could become a disgraced noble on the path of vengeance rather than redemption.

Before you choose a theme, consult your Dungeon Master to come up with an explanation and method for gaining your theme. The DM might make the theme a reward for completing a major quest, especially if themes don't play a big part in his or her campaign. You might have to perform a sinister task for a dark power or perform an evil act. Then again, the DM might just let you take the theme without any requirements.

## Changing Character Theme

Although choosing a theme is a decision intended to last throughout your character's career, circumstances might arise where it makes sense in the campaign's story for your theme to change or even to drop the theme altogether. You might begin your career as a cultist and later break from your cult and survive by viciously slaughtering those who come after you. It would make sense for you to abandon your cultist theme and adopt the reaver theme (or some other theme) instead.

With the DM's permission, you can change your theme choice (under the auspice of retraining) when you gain a level. If you have any optional powers from your current theme or any feats that require it, you must first retrain those powers or feats to choices that don't have the theme as a prerequisite. When you do lose a theme, you lose all the features that it granted to you, including any items provided by those features.

# Cultist

*"My master is the Truth, the Way, and the Will!"*

Given the vital role that religion plays in many societies and the number of people who venerate gods, cults could find wider acceptance in the general population. After all, cults honor a higher power, a greater good, or a treasured ideal.

What sets a cult apart from other religious institutions is a fundamentally bad belief, a perception about the cosmos that is diametrically opposed to those held by right-thinking folk. A cult's creed could be based on an extraordinary interpretation of a god (any god, even a good one) that compels certain sinister practices in their worship. Another cult might elevate a demon lord, monstrous alien, or dark power to divine status. Cults could be founded by devotees of beings that exist only in their minds. Such strange and deviant belief breeds dangerous behaviors and attracts the attention of forces that champion the good. As a result, most cults are driven underground.

Cults spring up regularly the world over. Fear, uncertainty, and dissatisfaction foment offbeat beliefs and unwholesome ideas about how the world works and what the future holds. Cult leaders prey on doubts and superstition, drawing the disaffected and the despairing under their influence. One by one, adherents are brought under the cult's sway, abandoning families and work to find the salvation promised by following the one true path.

Few cults subscribe to peace and harmony. Such rewards must be earned, a task that is impossible to realize in the present state of affairs. Therefore, cults are subversive societies, working against governments and widespread faiths, all to attain whatever objective the cult was founded to achieve.

## Building a Cultist

When you choose the cultist character theme, spend some time thinking about the group and your affiliation. Work with your Dungeon Master to come up with a suitably interesting and dark society. Be sure to establish who or what it is that you serve and what it wants. Then, think about how you came to be part of the cult. How were you recruited? What were you promised? Once you joined, what responsibilities were you assigned? Are you one of the leaders or a devoted specialist follower? Have the higher-ups in the cult revealed the full extent of its power, or do they keep things hidden from you? Have your beliefs evolved since joining? Are you just as fervent as you were or have you become jaded about the organization?

**Class Prerequisite:** None. Any character can profit from being a cultist. Divine adventurers such as avengers, clerics, and paladins might serve a dark

god forbidden or reviled by other peoples. Alternatively, such characters might devote themselves to one of the archdevils, drawing their power from the Nine Hells directly. Other types of cultists, especially those pledged to beings or ideals other than gods, appeal strongly to other classes. Fighters and warlords might join militant cults, while wizards and sorcerers could favor primordial or aberrant groups. Psionic characters can also become prominent cultists, especially in those groups sworn to an alien being or elder evil. Finally, a cult might be made up of members from several different classes, suggesting a broader appeal rooted in some cosmological or social change.

**Race Prerequisite:** None. That said, while most cults will accept anyone into their ranks, some cults might have specific racial restrictions, as determined by the DM.

### BACKGROUND

Cultists don't have to be experts in religion, but they do need to learn how to get around and practice their heretical beliefs without arousing the suspicion of local authorities.

*Associated Skills:* Stealth, Streetwise.

## Starting Feature

All that you do, you do for your dark master. Still, you must constantly prove your worth. Using this power attracts your patron's attention. If you succeed, your master's blessing encourages you. If you fail, your master's ringing laughter staggers you.

**Master's Eye** **Cultist Attack**

*Your obsequious call draws attention to your deeds, risking your master's ire if you fail.*

**Encounter ✦ Shadow**
**Minor Action** **Personal**
**Effect:** If you make an attack this turn and hit with your first attack roll, the creature you hit takes 1d8 extra damage from that attack, and you gain 5 temporary hit points.

If the attack roll misses, or if you do not attack this turn, you grant combat advantage and are deafened until the end of your next turn.

*Level 11:* 10 temporary hit points.
*Level 21:* 15 temporary hit points.

## Additional Features

### Level 5 Feature

Your longevity sets you apart from most cultists. Whether luck, determination, or some unspeakable blessing was responsible for your survival thus far, you are convinced that your master watches over you.

**Benefit:** While you are bloodied, you gain a +1 power bonus to Fortitude and Will.

### Level 10 Feature

Devotion to a dark power has defined your life for some time. As a result, your fanatical belief unnerves those around you, particularly when you are angry.

**Benefit:** You gain a +2 power bonus to Intimidate checks.

In addition, during the first round of each encounter, enemies take a –2 penalty to attack rolls against you.

## Optional Powers

### Level 2 Utility Power

It takes unshakable belief to persevere in service to your particular patron. This devotion gives you the ability to push past obstacles, grasping victory where others succumb to defeat. This power draws strength from your zealous devotion, but it can also delude you into believing you are invincible.

ANNA CHRISTENSON

**Mad Confidence** — Cultist Utility 2

*Your master is with you. You cannot fail.*

**Daily ✦ Shadow, Stance**
**Minor Action** **Personal**
**Effect:** You enter the mad confidence stance. Until the stance ends, you grant combat advantage and gain a +4 power bonus to damage rolls.

## Level 6 Utility Power

No matter what dark power you serve, it craves blood and souls. Leading cultists oversee profane ceremonies during which living sacrifices are offered. *Ritual sacrifice* demonstrates your master's pleasure when you speed a creature to the grave.

**Ritual Sacrifice** — Cultist Utility 6

*By offering your latest victim to the dark master, you are rewarded with a surge of power.*

**Daily ✦ Healing, Shadow**
**Free Action** **Personal**
**Trigger:** You kill a nonminion creature.
**Effect:** Choose one of the following effects:
- ✦ You spend a healing surge.
- ✦ You gain a +1 power bonus to attack rolls until the end of the encounter.
- ✦ You gain a +5 power bonus to Arcana checks, Dungeoneering checks, Nature checks, and Religion checks until the start of your next extended rest.

## Level 10 Utility Power

Faith can carry a cultist only so far. Eventually, all cultists come to understand their place in the eyes of the dark master. They are nothing, tools to be used and discarded. Worse still, no guarantee of paradise after death exists. Self-preservation becomes paramount, even if it means sacrificing an ally to succeed.

**Reluctant Sacrifice** — Cultist Utility 10

*Shared pain transforms near failure into a resounding success.*

**Encounter ✦ Shadow**
**No Action** **Melee 1**
**Trigger:** You make an attack roll and dislike the result.
**Target:** One ally
**Effect:** You and the target each take damage equal to your level. You then reroll the attack roll with a +2 power bonus and must use the second result.

CHRIS SEAMAN

# Disgraced Noble

*"Don't let my reputation color your impression, my darling. The rumors are all lies, spurious tales told by enemies who resent my good fortune."*

Song and story profess that nobility carries a higher morality, that the aristocracy upholds honor, justice, truth, and valor. The hard truth is that this celebrated virtue is a myth—what distinguishes nobles from everyone else are the circumstances of their birth. Money, land, privilege: none of these things ensure good character and high ideals. In fact, such boons often create the worst villains.

If the masses pierce the veil of pomp and circumstance and see the noble for who he or she truly is, that vaunted individual is bound to tumble from great heights to wallow in the filth of the fallen. As a result, the aristocracy works hard to preserve the illusion, to maintain at least the veneer of respectability. Waging war against scandal and rumor, nobles fight to preserve their lifestyles, their fortune, and their lives.

No matter how cunning, some nobles succumb to temptation and forget their fragile position. Perhaps it was a careless moment, maybe it was a full assault on his or her character—no matter, the damage is done. A reputation, no matter how carefully nurtured, can be torn down in an instant. The fate of those nobles who topple, whose carefully constructed masks shatter, is one of disgrace and shame.

### BACKGROUND

Disgraced nobles don't spend as much time cavorting with society's elite as their more esteemed peers, but they still remember the rules of diplomacy. They are also practiced liars.

*Associated Skills:* Bluff, Diplomacy.

# Building a Disgraced Noble

Choosing the disgraced noble character theme suggests some past crime or action that destroyed your reputation. Cowardice, corruption, deviant behavior, cruelty, and any number of other flaws might lead to your downfall. What caused your fall from grace? Are the accusations true or were they fabricated by your enemies? Have you lost everything or do you still possess some influence? What have you done to escape your enemies? What would you do?

**Class Prerequisite:** None. Nobles include characters of any class.

**Race Prerequisite:** None. That said, your DM may impose a race prerequisite based on the social structures of his or her campaign.

# Starting Feature

Honor is for fools and dreamers. In life's grand ledger, a few achieve success and the rest are downtrodden. You learned long ago that your elevated position resulted from a willingness to do what you must. You're not at all above a bit of treachery on the battlefield to dispatch a troublesome foe.

**Dirty Deed** — **Disgraced Noble Attack**

*Seizing an opening, you shove a distracted enemy and send it sprawling, just as an ally strikes.*

**Encounter ✦ Martial**
**Standard Action** **Melee 1**
**Target:** One creature granting combat advantage to you
**Attack:** Highest ability modifier + 3 vs. Reflex
*Level 11:* Highest ability modifier + 5
*Level 21:* Highest ability modifier + 7
**Hit:** The target falls prone.
**Effect:** One ally of yours adjacent to the target can make a melee basic attack against the target as a free action.

# Additional Features

## Level 5 Feature

Rumors fly on whispers, and before you know it, your exploits, true or not, have sullied your "good" name. Rather than lament your infamous reputation, you embrace it. Unfavorable expectations about you prove a powerful ally in nearly all your endeavors.

**Benefit:** You gain a +2 power bonus to Bluff checks and Streetwise checks.

## Level 10 Feature

So many lives have been shattered and ruined by your hand that your numerous enemies are difficult to track. Thus, you find it advantageous to surround yourself with people who do not yet have cause to loathe you. Indeed, you offer them incentives to keep you alive.

**Benefit:** The power bonus to your Bluff checks and Streetwise checks increases to +4.

In addition, while you are not bloodied, allies within 2 squares of you who can see or hear you gain a +1 power bonus to saving throws.

# Optional Powers

## Level 2 Utility Power

Survivors know when to engage in a tactical or strategic retreat, and when to flee. When the cost might be a noble's life or limb, caution is indeed a virtue. When you use *disgraceful retreat*, you respond to an ally's fall in the most prudent manner. You run away.

**Disgraceful Retreat** — **Disgraced Noble Utility 2**

*An ally's fall makes clear that withdrawal is the better part of valor.*

**Encounter ✦ Martial**
**Immediate Reaction** **Personal**
**Trigger:** An ally within 5 squares of you falls unconscious.
**Effect:** You can shift 1 square and then move up to your speed + 2. You must end the move farther from your ally than you were when you began the move.

## Level 6 Utility Power

Being hounded by enemies has cultivated your survival instincts to the point that you're always ready for an attack. *Unabashed treachery* reflects the extent to which you will go to preserve your own life.

**Unabashed Treachery** **Disgraced Noble Utility 6**

*A quick step and a slight push places an ally in the path of harm intended for you.*

**Encounter ✦ Martial**
**Immediate Interrupt** **Melee 1**
**Trigger:** An enemy hits you with a melee or a ranged attack.
**Target:** One ally
**Effect:** The triggering attack hits the target instead of you. The triggering enemy grants you and the target combat advantage until the end of your next turn.

## Level 10 Utility Power

A good servant is hard to find and it's always regrettable when you have to sacrifice one. Still, what better service could such an individual provide than to suffer harm so that you might live?

**Regrettable Sacrifice** **Disgraced Noble Utility 10**

*With little more than a rueful pause, you undermine an ally to reinvigorate yourself.*

**Encounter ✦ Healing, Martial**
**Minor Action** **Melee 1**
**Target:** One ally
**Effect:** The target loses a healing surge. If the target can't lose a surge, he or she takes damage equal to his or her healing surge value. You then regain hit points equal to your healing surge value.

# INFERNAL SLAVE

*"I know what lies beyond the veil. That's why I'm sending you in my place."*

Free will shapes the infernal slave's identity. Whether the decision was made after careful consideration or in the heat of passion, the infernal slave agrees to sacrifice the future—a dimly understood afterlife, a shadowy doom not yet realized—in exchange for some immediate gain.

The boon could be something as base as wealth. Treasure chests filled to bursting, a prized jewel long coveted, a successful business venture: all translate into mortal comfort. The gain could be satisfaction of lust, carnal, material, or otherwise—a longing that would not be denied. The greatest lure, however, is power. Command over other people is intoxicating, as is the ability to do as one wishes without fear, without persecution, without regard for consequences.

These prizes are great temptations. To the infernal slave, they are immediate and full recompense for a sacrifice payable far off in the future. Some claim that the slave is doomed to an unspeakable fate, suffering and dying a thousand deaths at the hands of the cosmos's most vile entities, those god-killers called devils. But what do the naysayers truly know. Maybe the consequences are far less dire. One never knows what the future holds. Given the immediacy of the boon and the remoteness (and sheer conjecture) of the payment, the infernal slave considers the arrangement a true bargain.

In the end, an infernal slave comes to understand that he or she has bargained badly. The boon turns out to be fleeting, ruined by personal choice or circumstance. The bargainer becomes worse off than he or she was prior to making the deal. In this wretched state, the full horror of the pact is revealed and annihilation's imminence bears down with a hammer's force. The slave sees his or her doom in the shadows, hears the screaming souls as they burn in hellfire—a waking nightmare that never ends.

At that point, panic and horror shape the slave's existence. Escaping this fate comes to eclipse any other consideration. In this way, the devils gain a mortal thrall—a vessel to spread evil and corruption. Evil appears the only way out for the misguided fool who desperately seeks to escape the doom he or she willfully accepted.

## Building an Infernal Slave

As usual when choosing a theme, several questions should be asked. What bargain did you make to become an infernal thrall? How did you contact a devil and what were you promised? Why did you accept the Faustian pact? Do you cling to the hope that you can escape it, or have you accepted your hellish fate?

STEVE ELLIS

**Class Prerequisite:** None. Any character can become an infernal slave regardless of class.

**Race Prerequisite:** None. Characters of any race may become infernal slaves.

### BACKGROUND

In exchange for hellfire's gift, the devils demand you work evil in the world. They urge you to tempt, corrupt, and destroy. If you embrace this purpose, the fiends grant you the insight to know your victims' weaknesses as well as a better understanding of the art of deception.

*Associated Skills:* Bluff, Insight.

## Starting Feature

Diabolists believe Mephistopheles was the first to discover hellfire's power when he set fire to a soul that displeased him and bestowed its power to those mortals bent to his service. Now, all archdevils can arm their servants with hellfire, a destructive boon that can carry a high price.

**Hellfire Touch** — **Infernal Slave Attack**

*Clinging, searing blackness drawn from the Nine Hells erupts from your hand.*

**Encounter ✦ Divine, Fire, Necrotic**
**Minor Action** **Personal**
**Effect:** The next creature you hit with an attack before the end of this turn takes 5 extra fire and necrotic damage from that attack. Also, you slide that creature up to 5 squares. If you do not hit a creature with an attack before the end of the turn, you take 5 fire and necrotic damage.
*Level 11:* You deal or take 10 fire and necrotic damage.
*Level 21:* You deal or take 15 fire and necrotic damage.

## Additional Features

### Level 5 Feature

Your successes have earned you favor. As a reward, you acquire a disturbing brand or mark on your flesh. The sign might be an inverted star, a black handprint, or a Supernal rune. Irremovable, it declares to all with the proper knowledge that your soul belongs to the Nine Hells.

**Benefit:** While you are not bloodied, you gain a +1 power bonus to Fortitude, Reflex, and Will. While you are bloodied, you take a -1 penalty to those defenses.

### Level 10 Feature

The power granted by your infernal patron guarantees you a place in the Nine Hells. As your wickedness grows, the devils become more eager for the rich bounty your soul will bring. When you stand before death's door, hellfire bursts from you, portending your ultimate fate.

**Benefit:** Whenever you drop below 1 hit point, each creature adjacent to you takes fire and necrotic damage equal to 2 + your level.

## Optional Powers

### Level 2 Utility Power

You are a mortal agent charged with harvesting souls from other mortals and delivering them to your greedy masters. *Wicked temptation* gives you the means to single out an enemy and condemn it to a swift death. Allies who aid you in this effort are rewarded; those who fail feel the sting of your scorn.

**Wicked Temptation** — **Infernal Slave Utility 2**

*A fiery rune appears over your target's head, tempting all who see it to destroy the object of your scorn.*

**Encounter ✦ Divine, Fire**
**Minor Action** **Close** burst 5
**Target:** One creature you can see in the burst
**Effect:** Until the end of your next turn, the first creature to hit the target gains temporary hit points equal to 3 + one-half your level, and the first creature to miss the target takes 1d10 fire damage.

### Level 6 Utility Power

It doesn't take long for you to realize that the devils do not care if you live or die. Alive, you advance evil; dead, your soul descends into the fiery pits. Either way, the fiends win. You, however, are partial to the former fate. By experimenting with hellfire, you continue to elude the everlasting torment you have earned.

**Hellfire Step** — **Infernal Slave Utility 6**

*Greasy black clouds conceal your escape, filling the air with a sulfurous stench.*

**Encounter ✦ Divine, Teleportation, Zone**
**Move Action** **Close** burst 1
**Effect:** The burst creates a zone that lasts until the end of your next turn. The zone is lightly obscured, and creatures have vulnerable 5 fire while in it. You also teleport up to 5 squares.

### Level 10 Utility Power

At this point, the devils begin to value your continued existence. You have proven your prowess in spreading evil. The fiends offer you new incentives to serve their interests, gifting you with health or magical power. To earn these gifts, you must deliver a soul in your stead.

**Soul Snatcher** **Infernal Slave Utility 10**

*You consign the soul of a living foe to the Nine Hells and are rewarded for your dark deed.*

**Daily ✦ Divine, Healing**
**Free Action** **Personal**
**Trigger:** You kill a nonminion creature.
**Effect:** Choose one of the following effects:
✦ You spend a healing surge.
✦ You regain the use of an expended encounter attack power.

# Reaver

*"I take what I want, kill what I please, and do as I will."*

Fingers of smoke claw at the sky from the burning village. The bones of shops and houses smolder in the attack's aftermath, crumbling as the flames consume them. Bodies, black with crows, twitch and jerk with each peck and tear. Another community ravaged. More lives destroyed. Death reigns, feeding the reavers' insatiable bloodlust.

Ferocious reavers tumble out of civilization's fringes to plunder settled lands for food, goods, slaves, and mates. These grim-faced killers go about the bloody business of slaughter with a zeal that stops hearts and sends courage dribbling down their enemies' legs. They emerge from the darkness, sometimes in vast hordes on horseback or from dragon-prow longships. These fearsome howling warriors are bent on rapine and death, their cruel weapons rising and falling with a butcher's precision. When the reavers attack, none can hope for mercy or escape. They are purveyors of death, remorseless killers despoiling the world as they see fit.

## Building a Reaver

Because reavers place such a high value on combat prowess, warrior classes are most common to this character theme.

**Class Prerequisite:** None. Fighters, barbarians, blackguards, and rangers all excel as reavers. Reavers disdain honorable combat or finesse. Thus, knights, cavaliers, and paladins are typically unsuitable for this characters theme.

For all their fierceness in battle, reavers are often superstitious. Angry primal spirits, dark gods, and sinister powers intrude upon their daily lives. Druid, shaman, and warden reavers might lead raids into settlements and evoke the blessings of bloodthirsty spirits. Reaver clerics of Gruumsh or Kord call forth the violence of their gods to firm up courage and grant strength to their champions.

Reavers distrust other forms of magic. They deride those who employ arcane or psionic magic. The rare exceptions involve individuals who hold positions of great power and influence in a tribe. One reaver band might serve a vile magician; another might be under the thrall of a powerful psion, mind flayer, or similar

TOMASZ JEDRUSZEK

figure. In those cases, and at the whim of the overlord, a mage or psion might be accepted.

**Race Prerequisite:** None. Reavers are not exclusive to any particular race. One can find reavers among humans, dragonborn, half-orcs, and other communities. These peoples raid and plunder for the same reasons as their monstrous counterparts. Some reavers are primitives, isolation and hardship stripping away civilization's last vestiges. Others serve dark gods, violent ancestor spirits, or demons who demand blood sacrifice, define strength and ferocity as virtues, or simply fill them with bloodlust.

The savage races—orcs and gnolls—produce reavers in great numbers. Such races have no interest in cultivating their lands or building lasting communities. Raiding is their principle and preferred means of survival. What little culture they have is a warrior's creed centered on taking from others.

### BACKGROUND

You were raised from birth to withstand the heartless weather of your homeland and to greet your enemies with utter savagery—the kind of brutality that weakens the knees of even the most stalwart civilized folk.

*Associated Skills:* Endurance, Intimidate.

# Starting Feature

You live under a shadow cast by the savage warriors who came before you. You must prove that you possess sufficient strength, courage, and bloodlust to join them in song and story. You roar into battle, ever eager to douse your weapon in your victims' blood. *Vicious assault* turns your charge attack into a terrifying offensive.

**Vicious Assault** — **Reaver Attack**

*Building on the savagery of your initial assault, you lash out in all directions.*

**Encounter ✦ Fear, Primal, Weapon**
**No Action** **Special**
**Trigger:** You hit an adjacent enemy with a melee weapon attack.
**Effect:** Each creature other than you that is adjacent to the enemy takes 1[W] damage. In addition, you and each enemy within 2 squares of you grant combat advantage until the end of your next turn.

# Additional Features

## Level 5 Feature

Each battle is a chance to prove your might to your ancestors. As you reave, you display courage, skill, and ferocity. Your efforts fortify you and give you a grim and fearsome aspect.

**Benefit:** Whenever you reduce a nonminion enemy below 1 hit point, you gain a +1 bonus to melee attack rolls until the end of your next turn.

## Level 10 Feature

You are a killer. It is in your blood. It is how you live. Spilling blood feeds your unspeakable craving, giving you the drive to continue the slaughter until nothing lives.

**Benefit:** Whenever you use *vicious assault* or score a critical hit, you gain 10 temporary hit points.

# Optional Powers

## Level 2 Utility Power

Overwhelming force characterizes your fighting style. You spring forward, rushing to meet your foes and hewing victims to all sides. As the bodies drop like cordwood to the ground, you press on, driven by bloodlust to slaughter.

**Driven to Kill** — **Reaver Utility 2**

*One kill is never enough. Before your foe hits the ground, you leap to make the next attack.*

**Encounter ✦ Primal**
**Free Action** **Personal**
**Trigger:** You drop a creature below 1 hit point.
**Effect:** You shift up to a number of squares equal to your speed + 2.

## Level 6 Utility Power

You are a veteran of many battles and are accustomed to the hardships and injuries sustained in combat. Pain is expected, wounds embraced. The more damage your enemies inflict, the more ferocious you become.

**Killing Menace** — **Reaver Utility 6**

*An enemy's success incenses you. Your rising anger infects your enemies with dread, making them susceptible to injury.*

**Daily ✦ Aura, Fear, Primal**
**Immediate Reaction** **Personal**
**Trigger:** An attack bloodies you or damages you while you're bloodied.
**Effect:** You activate an aura 1 that lasts until the end of the encounter. Creatures in the aura have vulnerable 3 to weapon attacks.

## Level 10 Utility Power

Nothing can distract you from killing your enemy. You shake off beguiling magic, steeling your mind against confusion and doubt. You press on, slaughtering everything in your path.

**Pain Preserves** — **Reaver Utility 10**

*Pain clarifies your thoughts and purpose, rendering your mind nearly impervious to bewilderment.*

**Daily ✦ Primal**
**No Action** **Personal**
**Trigger:** You are bloodied and start your turn subjected to an effect that is dazing, dominating, or stunning you.
**Effect:** The triggering effect ends. Until the end of your next turn, you gain a +2 power bonus to attack rolls.

# Vile Scholar

*"I do not fear the darkness. I study it, even as it studies me."*

Certain things mortals were not meant to know. These ideas are so foul and so obscene that to understand them is never to be clean again. The gods and devils recoil from such vile darkness. Even demons pause before its wicked majesty.

Such considerations do not dissuade the vile scholar. He or she is not put off by disturbing concepts and horrid revelations. In fact, the vile scholar craves them, chases after them, and devours them.

The vile scholar is often an intellectual drawn to dark study. Some seek out the forbidden to unlock the darkest and most dangerous secrets the world has ever known. Others accumulate vile knowledge from profane texts to transform themselves into liches, to destroy a god, or to locate some powerful artifact. Whatever the reason, the darkness they explore afflicts them in body and mind, twisting them to evil. They become strangers to virtue and decency, slaves to their own corruption.

### BACKGROUND

Long, glorious hours of study have turned you into a veritable font of dark lore. Knowledge is, after all, the most formidable and remorseless of weapons.

*Associated Skills:* Arcana, History.

## Building a Vile Scholar

What distinguishes you from other academics is an enduring interest in the profane and forbidden. You study tomes filled with content so dark, your sanity begins to fray. The more effort you put into your studies, the more tricks and techniques you learn to harness the darkness in useful yet disturbing ways.

**Class Prerequisite:** None. Many vile scholars come from arcane traditions. Wizards, bards, warlocks, or sorcerers might have encountered a sinister tome during their training and become seduced by the power it promised.

Other debased students come from the divine persuasion. Service to a dark god might lead them to forbidden lore. An invoker of an evil deity could find the divine fragment impelling him or her to seek out lost lore, while a cleric could dabble in the strange to access more divine power.

Psionic characters might also dabble in the dark arts, especially if doing so expands their consciousness and helps them access even greater reservoirs of psionic energy. The secret to ever more potent psychic power might only be a scroll, tome, or crystal away, for those with the will to grasp it.

CHRIS SEAMAN

**Race Prerequisite:** None. Characters of any race can become vile scholars.

## Starting Feature

The first lesson you learn is the power contained in the Abyssal tongue. The most unhinged writings use this vile language to convey thoughts and concepts that mortal minds naturally shun. As your proficiency with this language grows, you learn to unlock its power to undo the creative forces that give your enemies form and function.

**Benefit:** You are fluent in Abyssal.

In addition, you gain a +2 bonus to Bluff checks, Diplomacy checks, and Intimidate checks when interacting with evil creatures. You also gain the *dark speech* power.

**Dark Speech** — Vile Scholar Attack

*Your Abyssal curse assaults a victim, rending body and mind with its profanity.*

**Encounter ✦ Fear, Implement, Shadow**
**Standard Action** **Ranged** 5
**Target:** One creature that can hear you
**Attack:** Intelligence, Wisdom, or Charisma vs. Fortitude, Reflex, and Will. You make a single attack roll and use it against each defense.
**Hit (Fortitude):** The target falls prone.
**Hit (Reflex):** The target grants combat advantage until the end of your next turn.
**Hit (Will):** You push the target up to its speed.

# Additional Features

## Level 5 Feature

Countless hours spent examining profane texts fills your mind with esoteric knowledge about the world and the creatures living in it. You can draw on this knowledge to unearth secrets to an enemy's downfall.

**Benefit:** You gain a +2 power bonus to knowledge checks, including monster knowledge checks made with Arcana, Dungeoneering, History, or Religion.

## Level 10 Feature

Mastering dark magic requires a willingness to make sacrifices, to do things no right-thinking person would. Such exploration alters how you see your companions. They are not comrades in arms but rather tools to exploit, to sacrifice, and to discard in your bid to attain true mastery over the darkness. The dark powers reward your willingness to forgo your allies with a surge of disturbing power that strengthens your dark magic.

**Benefit:** Whenever you use a close or an area attack power and attack one or more allies with that power, you gain a +2 power bonus to the attack rolls for that power.

# Optional Powers

## Level 2 Utility Power

You learn a dark hex that transforms an ally into a more useful servant. *Corrupt the flesh* creates intense pain as your target's body pops and cracks, flesh splitting to accommodate new growth. This transformational pain brings a deadliness of purpose.

**Corrupt the Flesh** — Vile Scholar Utility 2

*At your insistence, an ally screams in agony, then twists into the perfect killing machine.*

**Daily ✦ Shadow, Stance**
**Minor Action** **Ranged** 10
**Target:** One ally
**Effect:** The target assumes the flesh warp stance. Until the stance ends, the target gains a +2 power bonus to attack rolls and a +4 power bonus to damage rolls, but is slowed and grants combat advantage.

## Level 6 Utility Power

Exploring vile darkness inevitably leads you to the Abyss. That great, churning pit holds the truest expression of darkness's power. *Shadow of the abyss* lets you call and bind a demon to an ally you are not yet willing to sacrifice to ensure your companion's survival.

**Shadow of the Abyss** — Vile Scholar Utility 6

*Your swift and subtle gesture calls a fiend from the Abyss to infest an ally, lending its protection against elemental energy.*

**Encounter ✦ Shadow**
**Immediate Interrupt** **Close** burst 5
**Trigger:** An ally within 5 squares of you takes acid, cold, fire, lightning, or thunder damage.
**Target:** The triggering ally in the burst
**Effect:** The target gains resist 10 to the triggering damage type (or types) until the end of your next turn. Each creature adjacent to the target takes 5 damage of the same type.

## Level 10 Utility Power

Having pored over myriad forbidden sources, you unlock the secrets of creation and the means to undo it. When you use *vile undoing*, you unravel a creature's essential nature to defeat its resistances to your attack.

**Vile Undoing** — Vile Scholar Utility 10

*Your wicked curse turns a foe's reliable defense into its greatest weakness.*

**Daily ✦ Shadow**
**No Action** **Special**
**Trigger:** You hit an enemy that has resistance to your attack's damage type.
**Effect:** The enemy loses the resistance and gains vulnerability in its place (save ends both). The vulnerability equals the lost resistance.

# Paragon Paths

*"Do not shun the evil in your soul. Embrace it."*
—Baalzebul, the Lord of Flies

As one who has embraced evil, you walk a dark and dangerous road to greatness. Given the hardships you face, you might be tempted to become a blood-crazed berserker, contract killer, demonologist, idol of darkness, or vermin lord. Regardless of your choice, you continue to blaze a path for dark forces.

## Blood-Crazed Berserker

*"Kill! Kill! KILL!"*

**Prerequisite:** Fighter, evil alignment

You have fought myriad battles, each a contest to determine who was strongest, who was most worthy of the champion's mantle. You survived these battles through brute strength, speed, and toughness, but you always sensed something else, something truly monstrous, threatening to break free in the thick of battle. At one glorious point, your prowess grew mighty enough that the monster emerged. It burst through your self-control and transformed you into a raging killer. All finesse, planning, and moderation fell away. Only an unspeakable craving for blood and a terrible talent for producing it remained.

Fighters are distinguished by a mastery at arms and the rigorous control they apply in desperate situations. Every warrior must come to terms with anger in combat, to channel it in useful ways lest he or she become ruled by it. To fail is to wind up dead, skewered on an enemy weapon. Still, a few fighters surrender completely to their anger, girding themselves in hatred's armor and powering their strikes with rampant ferocity.

### Level 11: Blood-Crazed Action

Your bloodlust drives you to the brink of madness. Barely do you find self-control not to butcher everyone around you. When you dig deep and push beyond your normal limits, your hatred breaks free and sends you careening into the next foe.

**Benefit:** When you spend an action point to use an attack power, your charge attacks gain a +2 power bonus to attack rolls and a +4 power bonus to damage rolls until the end of your next turn.

BLOOD-CRAZED BERSERKER

### Level 11: Unstoppable Killer

You are violence incarnate, a destructive killing machine. You will not pause, let up, or stop. Through supreme force of will, you can shake off conditions that would hinder a lesser warrior.

**Benefit:** You gain a +2 bonus to saving throws against the dazed, dominated, immobilized, restrained, and stunned conditions.

### Level 11: Mutilating Strike

Moving across the battlefield, you leave tangled corpses in your wake—fitting punishment for those foolish enough to stand in your path.

**Mutilating Strike** **Blood-Crazed Berserker Attack 11**

*Your vicious strike inflicts an appalling wound that leaves your enemy reeling in shock and horror.*

**Encounter ✦ Martial, Weapon**
**No Action** **Special**
**Trigger:** You hit an enemy with a melee basic attack using a weapon.
**Effect:** The enemy takes 1[W] extra damage from the attack, and it is dazed until the end of your next turn.

CHRIS SEAMAN

## Level 12: Foaming Wrath

Only the bravest or most foolish foe dares face you in battle. If that unlucky enemy manages to bleed you, it unleashes a storm of pain. When you use this power, you gnaw on your shield or foam at the mouth, eager for the next chance to strike.

**Foaming Wrath** **Blood-Crazed Berserker Utility 12**

*Pain shatters what little restraint you retain, driving you forward to butcher your enemies.*

**Encounter ✦ Martial**
**Immediate Reaction** **Personal**
**Trigger:** An enemy bloodies you with an attack.
**Effect:** You gain temporary hit points equal to 10 + your Strength modifier. In addition, you gain combat advantage against the triggering enemy until the end of your next turn.

## Level 16: Bloodied Aggression

The greater your pain, the greater your threat on the battlefield. The injuries you sustain increase your strength, turning wild attacks into potentially killing blows.

**Benefit:** While you are bloodied, you gain a +1 bonus to attack rolls with melee weapons, and your melee weapon attacks can score critical hits on a roll of 19–20.

## Level 20: Maniacal Fury

Your hatred and anger are the stuff of legend. When sufficiently roused, you unleash your darker emotions, chewing through opponents in a brutal display. While in this state, you do not distinguish friend from foe. All are grist for the mill of your anger.

**Maniacal Fury** **Blood-Crazed Berserker Attack 20**

*Your towering wrath transforms you into a whirlwind of destruction. Relentless and uncaring, you strike out again and again.*

**Daily ✦ Martial, Stance**
**Minor Action** **Personal**
**Requirement:** You must be bloodied.
**Effect:** You assume the maniacal fury stance. Until the stance ends, your at-will attacks using a melee weapon deal 1[W] extra damage, and when any creature ends its turn adjacent to you, you must make a melee basic attack against that creature as a free action.

# Contract Killer

*"I have a message for you."*

**Prerequisite:** Evil alignment, trained in Stealth

Anyone can kill under the right circumstances. Every city boasts hundreds of people willing and able to do the deed, given the motivation. What differentiates you from other would-be killers is your consummate professionalism. You aren't deluded by a purported darkness deep in your heart or some religious obsession. You know your job and you do it well, without fuss, without mess. As a result, your employers return time and time again.

All kinds of rogues and assassins become contract killers. They take to this path because it provides a steady revenue stream while indulging their talents and inclinations. Scoundrels from other classes adopt this profession once they determine that their consciences raise no objection.

## Level 11: Killer's Action

Your astonishing agility creates openings where, only heartbeats before, none existed.

**Benefit:** When you spend an action point to use an attack power, each enemy adjacent to you grants combat advantage to you until the end of your next turn.

## Level 11: Killer's Aggression

You carefully choose the moment to strike. When you do, you do so with terrifying speed and accuracy.

**Benefit:** Whenever you hit an enemy granting combat advantage to you during your first turn in an encounter, the attack deals 1d6 extra damage to that enemy.

ANNA CHRISTENSON

## Level 11: Fulfill Contract

You are not just an ordinary killer. You eliminate specific targets for a very specific purpose. When you use *fulfill contract*, you identify your target and commit your every resource toward eliminating it.

**Fulfill Contract** — **Contract Killer Attack 11**

*Singling out an enemy ensures your attacks land with the desired accuracy, so you can reap the rewards for completing your mission.*

**Encounter ✦ Martial**
**No Action** **Special**
**Trigger:** Using an at-will attack power, you make an attack roll against an enemy that is granting combat advantage to you.
**Effect:** You gain a +3 power bonus to the attack roll, and the enemy takes 2d8 extra damage if the attack hits. If the attack bloodies the enemy or drops it to 0 hit points, you gain temporary hit points equal to 3 + one-half your level.

## Level 12: Next to Die

When you have settled on a target, you are inexorable. Only death can keep you from fulfilling your mission.

**Next to Die** — **Contract Killer Utility 12**

*You single out a target, pursuing it until it is no more.*

**Daily ✦ Martial**
**Minor Action** **Personal**
**Effect:** Choose one enemy that you can see within 5 squares of you. Until the end of the encounter, you gain combat advantage against that enemy, and you take a -2 penalty to attack rolls against creatures other than it until it drops to 0 hit points. In addition, whenever the enemy moves more than 2 squares on its turn, you can shift up to 2 squares as a free action.

## Level 16: Hidden Threat

You skulk in the shadows, patiently preparing for the perfect opportunity to strike.

**Benefit:** You gain a +1 bonus to attack rolls against enemies from which you are hidden.

In addition, you can use *fulfill contract* twice per encounter, but only once per turn.

## Level 20: Certainty of Death

Scrutinizing a target that you have marked for death reveals how best to exacerbate its injury.

**Certainty of Death** — **Contract Killer Attack 20**

*A vicious attack from a hidden position gives you the opportunity to eliminate the target with a single strike.*

**Daily ✦ Martial**
**No Action** **Special**
**Trigger:** You hit a bloodied enemy with an at-will attack power, and you are hidden from it.
**Effect:** The triggering attack deals 5d8 extra damage to the enemy, and it grants combat advantage until the end of your next turn.

ERIC DESCHAMP

# DEMONOLOGIST

*"The power of the Abyss is mine to command. Demon, obey!"*

**Prerequisite:** Any arcane class

You have nothing to fear from things you control. It's the things you can't control that can ruin you. As a demonologist, you know this lesson well. When you look into the eye of the Abyss, you have no doubt in your mind that you can learn to master it—one demon at a time, if need be.

You have never shrunk from looking into shady places to serve your ambition. The longer you peer into darkness, the more certain you become that the secret to overwhelming power is hidden in the Abyss.

As a consequence of your studies, you have gained the attention of a minor demon—a filthy quasit. Discussions with this companion have expanded your mind to grim new possibilities. At the same time, the lessons have dissipated any reservations that perhaps you have gone too far. The more you learn from this quasit, the greater the power you control. Thus far, you have blithely ignored a nagging suspicion that somehow things might go terribly wrong.

## Level 11: Demonic Companion

You have bargained with the Abyss and called forth a minor demon called a quasit. This creature is bound to aid your work and to serve as your companion during your adventurers.

### Demonic Companion

Your demonic companion obeys your commands without hesitation as long as you are conscious and aware. Your bond allows you to communicate with the quasit, enabling you to work together toward mutual goals.

**Benefit:** You gain a quasit companion. The quasit is a creature allied with you, but not with your allies.

You can communicate telepathically with the quasit as long as it is within 20 squares of you. You do not need line of sight or line of effect to do so.

Your quasit's level is equal to yours, and its hit points, defenses, and attacks are determined by your level, as noted in its stat block.

The quasit shares your healing surges. Whenever an effect requires your quasit to spend a healing surge, the surge is deducted from your total. When you use your second wind, your quasit also regains hit points equal to your healing surge value. At the end of a short rest, your quasit regains all its hit points.

THOMAS M. BAXA

If you die or your quasit drops below 1 hit point, it disappears. You have two ways of calling your quasit back.

- **Minor Action:** You take a minor action and lose a healing surge. Doing so causes your quasit to appear in your space with hit points equal to your healing surge value.
- **Short or Extended Rest:** You lose a healing surge at the end of the rest. Doing so causes your quasit to appear in your space with full hit points.

### Quasit Actions

As a creature under your control, your quasit relies on you for strict guidance while you are within 20 squares of it. You take actions so that it can act, and its initiative is the same as yours during an encounter.

**Standard Actions:** To take a standard action, your quasit needs you to take a standard action to command it to do so.

**Move Actions:** Whenever you take a move action, your quasit can also take a move action. Alternatively, you can stay put but take a move action to command your quasit to take a move action.

**Minor Actions:** To take a minor action, your quasit needs you to take a minor action to command it to do so.

**Free Actions:** Your quasit can take free actions without you taking an action to command it.

**Triggered Actions:** The quasit can take a triggered action only if you take the same kind of action to command it to do so. For example, if an enemy adjacent to your quasit companion provokes an opportunity attack from it, you must take an opportunity action to command the quasit to make the attack.

**Quasit Independent Actions:** Your quasit serves you against its will. If you are in a situation where you can't give the quasit commands, such as when you are unconscious, stunned, dominated, or more than 20 squares away from it, it acts under the Dungeon Master's control as your enemy. When you can issue commands again, the quasit comes under your control once more.

A quasit acting independently can take a standard, a move, and a minor action on its turn. It can also take opportunity actions and free actions, but cannot take immediate actions.

### Quasit

The quasit is a hideous creature, standing no more than a few inches tall. Thin to the point of gauntness, it ambles about on spindly limbs. When it speaks, it does so in a raspy, whispering voice, which seems to echo all around you.

**Quasit Companion**
Tiny elemental humanoid (demon)

**HP** your bloodied value | **Initiative** equal to yours
**AC** 15, **Fortitude** 11, **Reflex** 13, **Will** 15 (add your level to each defense) | **Perception** equal to yours + 2; Darkvision
**Speed** 8

**Traits**

☼ **Tempter's Influence ✦ Aura** 1
Enemies in the aura take a -2 penalty to saving throws.

**Standard Actions**

⨭ **Bite** (poison) ✦ **At-Will**
*Attack:* Melee 0 (one creature); your level + 5 vs. AC
*Hit:* 1d6 + your Intelligence modifier + your Charisma modifier damage plus 1d6 poison damage.

**Invisibility** (illusion) ✦ **At-Will**
*Effect:* The quasit becomes invisible until it makes an attack roll.

**Minor Actions**

**Demonic Lore ✦ Encounter**
*Effect:* You gain a +4 power bonus to the next Arcana, History, or Religion check you make before the end of your next turn.

**Triggered Actions**

⚚ **Vengeful Temptation** (charm) ✦ **Encounter**
*Trigger:* An enemy within 5 squares of the quasit attacks you.
*Attack (Immediate Reaction):* Ranged 5 (triggering enemy); your level + 3 vs. Will
*Hit:* The target is dazed (save ends). The effect also ends if the target makes an attack against one of its allies.

| | | |
|---|---|---|
| **Str** 8 | **Dex** 21 | **Wis** 14 |
| **Con** 11 | **Int** 10 | **Cha** 16 |

**Alignment** chaotic evil **Languages** Abyssal, Common

## Level 11: Demonic Action

The power of the Abyss infuses you. When you push further than your normal limits, darkness swirls about you, helping you withstand enemy attacks.

**Benefit:** When you spend an action point to take an extra action, choose acid, cold, fire, lightning, or thunder. Each creature adjacent to you takes 5 damage of the chosen type, and you gain resist 10 to that type until the end of the encounter.

## Level 11: Demonic Possession

You can draw forth demonic essence and use it against your foes. A creature affected by *demonic possession* grows pale. Shadows circle its eyes, and blasphemous runes appear on its flesh.

**Demonic Possession** — **Demonologist Attack 11**

*You bind a demon to your enemy's soul and bend the creature to your will.*

**Encounter ✦ Arcane, Charm, Implement**
**Standard Action** **Ranged** 5
**Target:** One enemy adjacent to your quasit companion
**Attack:** Intelligence or Charisma vs. Will
**Hit:** You slide the target up to a number of squares equal to its speed. The target then makes a melee basic attack as a free action against a creature you choose. The target has combat advantage for the attack and a +4 power bonus to the damage roll. If the attack misses, the attacker is dazed until the end of its next turn.

## Level 12: Unnerving Gaze

You have peered into darkness so often that it has changed you. Foes who confront you see the Abyss reflected in your eyes.

**Unnerving Gaze** — **Demonologist Utility 12**

*You turn toward an enemy and fix it with a disturbing stare.*

**Encounter ✦ Arcane, Fear**
**Immediate Interrupt** **Close** burst 3
**Trigger:** An enemy that can see you hits you while within 3 squares of you.
**Target:** The triggering enemy in the burst
**Effect:** The target takes a -4 penalty to the attack roll and grants combat advantage to you until the end of your next turn.

## Level 16: Demonic Summons

The creatures you summon hail from the Abyss. If not demons, they share their characteristics.

**Benefit:** Your quasit companion and any creatures you summon gain a +2 power bonus to damage rolls. In addition, these creatures gain resist 5 to one of the following damage types (choose when the creature appears): acid, cold, fire, lightning, or thunder.

## Level 20: Demonic Hordes

Darkness's hold on you is complete when you learn a spell that invites demons into the world. *Demonic hordes* tears reality so that the shadows of hordelings tumble free to rend your enemies.

**Demonic Hordes** — **Demonologist Attack 20**

*You rip a hole in reality, letting loose a horde of minor demons that claw, rend, and trip your foes.*

**Daily ✦ Arcane, Implement, Zone**
**Standard Action** **Close** blast 5
**Target:** Each creature in the blast
**Attack:** Intelligence vs. Fortitude
**Hit:** 2d8 + Intelligence modifier damage, and the target falls prone.
**Miss:** Half damage.
**Effect:** The blast creates a zone that lasts until the end of the encounter. While the zone persists, you can take a standard action to cause each creature in the zone to take 5 + your Intelligence modifier damage and fall prone. If the creature is already prone, it takes 5 extra damage.

# Idol of Darkness

*"The road I walk leads to darkness. Dare you follow?"*

**Prerequisite:** Paladin or cleric, evil alignment

Having embraced the dark side of divine magic, you are now ready to delve deeper into the forbidden, to fully embrace the power offered by the dark forces of the cosmos. Only those who have committed evil are invited to study these black arts. Through the filthy deeds you have done and the wickedness in your heart, you have proven yourself worthy.

Dabbling in occult mysteries carries a heavy price in body, mind, and soul. To harness the magic these entities offer, you must carve your flesh with blasphemies. To understand the rites, you must push your mind to madness's brink. To prepare your soul, you must indulge in every evil, wallowing in the horror of it all.

Where paladins fight for honor, good, and order, idols of darkness are treacherous, wicked, and capricious in their dealings. They kill for pleasure. They maim to learn from their victim's suffering. They never hesitate to feed their ambition and to grow their temporal power—they know that beyond the mortal coil lies only annihilation.

## Level 11: Unwholesome Resilience

Your encounters with evil have inured you to their toxic presence. You are better able to withstand minor venoms, the caress of an undead creature, and the foul plagues festering in the dark.

**Benefit:** You gain resist 10 necrotic and resist 10 poison. You also gain immunity to diseases of your level or lower.

## Level 11: Vile Darkness Action

Your corruption is a weapon. When your need is great, you can call forth a blinding cloud that burns your enemies' eyes and conceals you.

**Benefit: W**hen you spend an action point to take an extra action, you gain partial concealment against enemies while they are adjacent to you and a +4 power bonus to damage rolls. If you are bloodied, the concealment is total concealment. Either way, these benefits last until the end of your next turn.

## Level 11: Font of Despair

As evil's champion, you bring suffering and despair to the world. When challenged by multiple enemies, you lash out with a savage attack that reveals the depths of your corruption and commitment.

**Font of Despair** **Idol of Darkness Attack 11**

*You raise your weapon above your head and pronounce doom upon nearby foes. As they quail, you grow strong.*

**Encounter ✦ Divine, Fear, Weapon**
**Standard Action** **Close** burst 1
**Target:** Each enemy in the burst
**Attack:** Strength vs. AC
**Hit:** 2[W] + Strength modifier damage, and the target takes a –2 penalty to attack rolls and all defenses until the end of your next turn.
**Effect:** You can either make a saving throw, with a power bonus equal to the number of enemies you hit with this attack, or gain resistance to all damage until the start of your next turn. The resistance equals your Strength modifier.

## Level 12: Unholy Aura

Evil values your service and lends you its unholy conviction so that you can drive back your enemies or make them cower.

**Unholy Aura** **Idol of Darkness Utility 12**

*You whisper a prayer asking for protection. The evil within grows until none can bear to linger in your presence.*

**Daily ✦ Aura, Divine, Fear**
**Minor Action** **Personal**
**Effect:** You activate an aura 1 that lasts until the end of the encounter. Whenever a creature ends its turn in the aura, you can push that creature 1 square as an opportunity action.

TOMASZ JEDRUSZEK

## Level 16: Death-Driven

Death drives you. You respond to a dying creature with a sudden surge, fueled by the soul's horror at its unexpected departure.

**Benefit:** Once per round, when a creature within 5 squares of you drops below 1 hit point, you can take a free action to shift up to a number of squares equal to your Charisma modifier.

## Level 20: Dark Burden

You have borne the burden of your corruption for so long that you can scarcely feel its weight on your soul.

**Dark Burden** **Idol of Darkness Attack 20**

*As an enemy crumples beneath your devastating attack, the evil within escapes to torment all around you.*

**Daily ✦ Divine, Necrotic, Psychic, Weapon**
**Standard Action** **Melee** weapon
**Target:** One creature
**Attack:** Strength vs. AC
**Hit:** 5[W] + Strength modifier damage.
**Miss:** Half damage.
**Effect:** Each creature adjacent to you other than the target takes ongoing 10 necrotic and psychic damage (save ends). At the start of each of your turns, you can slide each creature taking this ongoing damage up to a number of squares equal to your Charisma modifier.

# Vermin Lord

*"Quiet now! Do you hear them? Can you feel them? My children are everywhere, eager to feast on your ripe flesh."*

**Prerequisite:** Druid, evil alignment

Your enduring interest in the lowliest creatures grants you power over them. You cement your connection when you invite vermin to inhabit your body, to nestle in your crevices and drink deep on your fluids. In exchange, the clicking and skittering creatures serve your command, lending their power to your efforts in championing darkness.

The vermin respond each time you wield primal magic. The more accustomed you are to these parasites, the more you learn to direct them in useful ways. Still, the cost to your body is severe. Forever more, your flesh bears the signs of the infestation you host.

## Level 11: Vermin Action

You are host to countless creeping and crawling insects. When you push yourself beyond your normal limits, they emerge from your body in a terrible cloud.

**Benefit:** When you spend an action point to take an extra action, each enemy adjacent to you takes poison damage equal to your Wisdom modifier, and you and each ally adjacent to you gain a +2 power bonus to all defenses until the end of your next turn.

## Level 11: Vermin Friend

You have an affinity for all manner of vermin and scavengers. You welcome their presence, suffering their stings and bites gladly.

**Benefit:** You gain resist 10 poison. At 21st level, the resistance increases to 15.

## Level 11: Maggots to Flies

This terrible evocation infests your enemies with maggots. They grow quickly into thick clouds of black flies that swarm and distract.

**Maggots to Flies** **Vermin Lord Attack 11**

*Your foes are horrified when squirming maggots bulge from their bodies, then transform into biting flies.*

**Encounter ✦ Implement, Primal**
**Standard Action** **Close** blast 3
**Target:** Each creature in the blast
**Attack:** Wisdom vs. Fortitude
**Hit:** 2d6 + Wisdom modifier damage, and you can slide the target up to 2 squares.
**Effect:** Until the end of your next turn, each target grants combat advantage and gains vulnerable 5 to all damage.

EVA WIDERMANN

## Level 12: Hive Mind

You can use primal magic to bond with your allies. Your party becomes a hive, able to act with one mind.

**Hive Mind** — **Vermin Lord Utility 12**

*Your consciousness worms its way into you allies' minds. You all now fight with a single purpose.*

**Daily ✦ Primal**
**Minor Action** **Close** burst 5
**Target:** You and each ally in the burst
**Effect:** Until the end of the encounter, each target can communicate telepathically with any of the other targets within 20 squares. In addition, enemies cannot gain combat advantage by flanking a target, and you can use a move action to slide another target within 10 squares of you up to 5 squares.

## Level 16: Wings of the Swarm

When you channel primal magic, the vermin infesting you take wing, lifting you where you wish to go.

**Benefit:** Whenever you use a primal encounter or daily attack power, you gain a fly speed of 6 until the end of your next turn.

## Level 20: From One to Many

Drawing on primal magic agitates the vermin you host. You surrender yourself to the swarm, joining your essence with theirs to terrorize your enemies.

**From One to Many** — **Vermin Lord Attack 20**

*Your body collapses into a seething cloud of ravenous insects. They devour anything in their path.*

**Daily ✦ Polymorph, Primal**
**Minor Action** **Personal**
**Effect:** You assume the form of a vermin swarm until the end of the encounter or until you end it as a minor action.

While in this form, you can occupy the same space as another creature; enemies can enter your space, which is difficult terrain to them; you cannot be pulled, pushed, or slid by melee or ranged attacks; and you can use the secondary power at will.

**Secondary Power** (Poison, Primal)
**Standard Action** **Melee** 1
**Target:** One or two creatures
**Effect:** Each target takes ongoing 20 poison damage (save ends). You then shift up to half your speed. Each time the target takes the ongoing damage, you can slide it 1 square as a free action.

# Epic Destiny

*"I used to sleep with the book under my pillow. It gave me the most wonderful nightmares! Then I loaned it to my daughter, and the little fool lost it."*

—Baba Yaga

At the pinnacle of your career, darkness defines you. You embody all that is corrosive, vile, and horrible. The exemplar of evil epic destiny epitomizes your profoundly dark nature.

## Exemplar of Evil

*"There is no stopping me now. I stand at the brink of immortality. The world will know my name and deeds forever!"*

**Prerequisite:** 21st level, evil alignment

You have walked through the darkest shadows to achieve your destiny. You have sacrificed companions, betrayed allies, and performed acts so despicable they are legendary. You are beyond temptation. You have passed through the veil of corruption and unmasked true evil. You bask in the awful glory of true wickedness.

It no longer matters why you descended into darkness. The past is trivial. What matters now is that you secure your place in the cosmos or destroy it in the process. Your destiny is to become one of the world's greatest antiheroes, to carve your name in the annals of history through blood and death. The objective you seek is what you were born to do, the act you were made to perform. You have come this far; you will not allow anything to stop you.

### Immortality

Your fate is not to create a good work, to stand at a god's side in the heavens, or to build a nation. Your fate is to become part of history, a nightmare in flesh and bone that torments generations to follow. You seek an end most terrible, a goal even the darkest gods would reel against. Your aim is singularly evil. Its fulfillment will leave the world forever after changed, undoubtedly for the worse. When you choose this epic destiny, you should have some notion of the evil outcome you hope to achieve. Communicate this idea with your Dungeon Master so he or she can devise the various goals you must meet to achieve this destiny.

## Level 21: Ability Score Increase

You might be a soulless butcher, a cunning opportunist, a vile cultist who consorts with demons, or a perverse spellcaster who dabbles in the darkest arts. Whatever you are, your abilities increase as a result, proving to all the significance of your threat.

**Benefit:** You increase two different ability scores by 2.

## Level 24: Epic Evil

Vile darkness drives your attacks. Each spell you cast, each swing from your weapon, leaves your enemies shrieking and maimed. The evil you work lingers in the tortured carcasses you create.

**Benefit:** When you kill a creature with an attack, its space becomes a zone that lasts until the end of your next turn. While in the zone or adjacent to it, any enemy of yours takes a –2 penalty to attack rolls and grants combat advantage.

## Level 26: Vile Assembly

You cannot fail. Even if you wanted to enter the void, the dark powers lending you strength would not allow it. When you fall, your body dissolves into a noisome slick or a mass of crawling vermin. Moments later, you reappear and continue your dreadful work.

**Vile Assembly** **Exemplar of Evil Utility 26**

*The dark forces are not about to let you die now, not when you are so close to achieving your ultimate purpose.*

**Daily ✦ Healing**
**No Action** **Personal**
**Trigger:** You drop below 1 hit point.
**Effect:** You regain hit points equal to your healing surge value, and you are removed from play. At the start of your next turn, you return to play in an unoccupied space within 10 squares of the space you last occupied.

## Level 30: Victory at Any Price

Your allies serve a purpose. They exist to help you fulfill your destiny. They are commodities to be drained as your dark will dictates. When you use this power, you debilitate an ally to impose a devastating fate on an enemy.

**Victory at Any Price** **Exemplar of Evil Utility 30**

*You sacrifice an ally to ensure a swift and certain victory.*

**Daily**
**No Action** **Close** burst 5
**Trigger:** You hit an enemy with an at-will or an encounter attack power.
**Target:** One ally in the burst who is not bloodied
**Effect:** The target takes damage equal to his or her bloodied value, and your hit becomes a critical hit.

WAYNE ENGLAND

# Feats

*"Where's the chapter about me?! Demon lord who achieved godhood, hello! Who in the Nine Hells wrote this thing?"*
–Lolth, Demon Queen of Spiders

Although intended for evil characters, any adventurer who meets the prerequisites can take these feats.

# Adventurer Feats

The feats described below are grouped into categories. Reviewing the feats in a category can help you find the best ones for your character. Other feats in the categories appear in *Heroes of the Fallen Lands* and *Heroes of the Forgotten Kingdoms*.

## Divine Devotion Feats

These feats indicate that you have pledged service to one of the gods, inviting that deity to take a central role in your life. You could serve as a priest or as a divine crusader, or could simply have strong religious convictions.

**DIVINE DEVOTION FEATS**

| | |
|---|---|
| Disciple of Darkness | Disciple of Trickery |
| Disciple of Destruction | Disciple of Tyranny |
| Disciple of Madness | Disciple of Vengeance |
| Disciple of Torment | Disciple of War |

## Divinity Feats

Clerics and other divinely powered adventurers can channel divine energy. In addition to divine powers granted by their classes, such characters can channel this power in ways that better reflect service to and favor from a god.

**DIVINITY FEATS**

| | |
|---|---|
| Asmodeus's Fiery Command | Tiamat's Bitter Vengeance |
| Bane's Instructive Stratagem | Torog's Binding Chains |
| Gruumsh's Battle Fury | Vecna's Final Command |
| Lolth's Cruel Sacrifice | Zehir's Dark Blessing |

## Enduring Stamina

The feats in this category let you resist certain types of damage and bounce back faster from injuries.

**ENDURING STAMINA FEAT**

| |
|---|
| Betrayal of Body |

## Steadfast Willpower

The feats in this category represent focus, discipline, and an indomitable mind.

**STEADFAST WILLPOWER FEAT**

| |
|---|
| Wicked Defiance |

## Asmodeus's Fiery Command [Divinity]

Asmodeus demands obedience from his servants. Those devotees who disobey are punished with a burst of hellfire.

**Prerequisite:** Channel Divinity class feature, must worship Asmodeus

**Benefit:** You gain the power *Asmodeus's fiery command*.

**Asmodeus's Fiery Command** **Feat Utility**

*Asmodeus rewards those who please him and destroys those who fail.*

**Encounter ✦ Channel Divinity, Divine, Fire**
**Minor Action** **Close** burst 3
**Target:** One ally in the burst
**Effect:** If the target hits an enemy with an attack before the end of the target's next turn, the target gains 5 temporary hit points. Otherwise, the target and each creature adjacent to him or her take 3 fire damage at the end of his or her next turn.
*Level 11:* 10 temporary hit points or 5 fire damage.
*Level 21:* 15 temporary hit points or 10 fire damage.
**Special:** You can use only one channel divinity power per encounter.

## Bane's Instructive Stratagem [Divinity]

Bane offers his followers a choice: rise to the challenge and experience great success, or fall short and face extinction.

**Prerequisite:** Channel Divinity class feature, must worship Bane

**Benefit:** You gain the power *Bane's instructive stratagem*.

**Bane's Instructive Stratagem** **Feat Utility**

*Bane shows the clear path to victory.*

**Encounter ✦ Channel Divinity, Divine**
**Minor Action** **Close** burst 3
**Target:** Each ally in the burst
**Effect:** The target gains a +1 power bonus to attack rolls until the end of your next turn. If the target's next attack hits an enemy, that attack deals 3 extra damage to the enemy. If the attack misses, the target grants combat advantage until the end of his or her next turn.
*Level 11:* 6 extra damage.
*Level 21:* 9 extra damage.
**Special:** You can use only one channel divinity power per encounter.

## Betrayal of Body

Taking advantage of your ally, you shed an affliction and bestow it on him or her.

**Benefit:** While you are suffering ongoing damage that lacks a type, you can transfer the ongoing damage to one ally adjacent to you as a free action. If you do so, the ongoing damage increases by 5.

## Disciple of Darkness

Zehir's blessing bends the shadows to your will, cloaking you and hiding your movements.

**Prerequisite:** Dexterity 13

**Benefit:** You gain a +5 feat bonus to Stealth checks made to hide while you are in darkness.

When you use your second wind on your turn and you are in an area of dim light or darkness, you become invisible until you make an attack or until the end of your next turn.

## Disciple of Destruction

Gruumsh urges his followers to revel in the slaughter, to wage eternal war until nothing remains. You can call on this destructive compulsion to punish injured enemies.

**Prerequisite:** Strength 13

**Benefit:** Whenever you bloody an enemy with an attack, that enemy takes 5 extra damage.

## Disciple of Madness

The unhinged mortals who struggle to interpret the Chained God's will often go mad from the effort. This lunacy helps them throw off distracting mental assaults.

**Prerequisite:** Charisma 13

**Benefit:** You gain a +2 feat bonus to saving throws against effects that daze, stun, or dominate you, as well as against ongoing psychic damage. In addition, whenever you succeed on a saving throw to end one of these effects, you can shift 1 square as a free action and gain a +2 bonus to all defenses until the start of your next turn.

## Disciple of Torment

Torog, called the Dark Jailer and Tormentor, rules the Underdark. The dark god offers pain and suffering to his followers, channeling the agony of his broken body through the willing vessels in his thrall.

**Prerequisite:** Charisma 13

**Benefit:** Enemies grant combat advantage while subject to effects caused by you that a save can end.

## Disciple of Trickery

Lolth advises her servants to use deception and trickery rather than direct confrontation. Your faith allows you to distract an enemy when the situation looks grim.

**Prerequisite:** Intelligence 13

**Benefit:** When you use your second wind on your turn, one or two enemies you can see grant combat advantage to you until the end of your next turn.

## Disciple of Tyranny

Asmodeus obliges his followers to gain and to hold power in the world. When hope wanes, you exert your will and direct an ally to a better position.

**Prerequisite:** Charisma 13

**Benefit:** When you use your second wind on your turn, one ally who can hear you can shift up to 3 squares as a free action.

## Disciple of Vengeance

Tiamat does not allow her followers to forgive slights and affronts. Each time you shrug off your injuries, your righteous anger deepens.

**Prerequisite:** Constitution 13

**Benefit:** Whenever you spend a healing surge to regain hit points, you gain a +1 bonus to attack rolls until the end of your next turn.

## Disciple of War

Bane expects his followers to perfect their talent for warfare, and your dedication keeps you focused on dominating the battlefield.

**Prerequisite:** Strength 13

**Benefit:** During your first turn in every encounter, you gain a +1 bonus to your first weapon attack roll, and the first creature you hit that turn takes 2 extra damage. Increase the extra damage to 3 at 11th level and 4 at 21st level.

## Gruumsh's Battle Fury [Divinity]

As one of Gruumsh's faithful, you can infect allies with his bloodlust and drive them to reckless violence.

**Prerequisite:** Channel Divinity class feature, must worship Gruumsh

**Benefit:** You gain the power *Gruumsh's battle fury*.

**Gruumsh's Battle Fury** **Feat Attack**

*An ally's violent success earns Gruumsh's reward. You channel divine power to inspire an ally to greater acts of violence.*

**Encounter ✦ Channel Divinity, Divine**
**Free Action** **Close** burst 3
**Trigger:** An ally within 3 squares of you drops a creature below 1 hit point.
**Target:** The triggering ally in the burst
**Effect:** The target can charge or make a basic attack as a free action. In addition, the target grants combat advantage until the end of his or her next turn.
**Special:** You can use only one channel divinity power per encounter.

## Lolth's Cruel Sacrifice [Divinity]

If you sacrifice an ally to an enemy's attack, Loth rewards your efforts with a surge of divine power.

**Prerequisite:** Channel Divinity class feature, must worship Lolth

**Benefit:** You gain the power *Lolth's cruel sacrifice*.

**Lolth's Cruel Sacrifice** **Feat Utility**

*You channel the goddess's blessing to save you from danger at an ally's expense.*

**Encounter ✦ Channel Divinity, Divine, Healing, Teleportation**
**Immediate Interrupt** **Close** burst 3
**Trigger:** An enemy hits you with an attack.
**Target:** One ally in the burst
**Effect:** You and the target teleport, swapping positions, and the target is hit by the attack, instead of you. You or one ally (other than the target) adjacent to you can then spend a healing surge.
**Special:** You can use only one channel divinity power per encounter.

## Tiamat's Bitter Vengeance [Divinity]

Any wrong done to you fills you with anger, driving you to do the same to the one who crossed you.

**Prerequisite:** Channel Divinity class feature, must worship Tiamat

**Benefit:** You gain the power *Tiamat's bitter vengeance*.

**Tiamat's Bitter Vengeance** **Feat Utility**

*You can channel Tiamat's wrath, gaining the revenge she demands above all else.*

**Encounter ✦ Channel Divinity, Divine**
**Immediate Reaction** **Personal**
**Trigger:** An enemy hits you with an attack.
**Effect:** You shift up to 3 squares. Until the end of your next turn, each time you or an ally hits the triggering enemy, it takes 2 extra damage.
*Level 11:* 4 extra damage.
*Level 21:* 6 extra damage.
**Special:** You can use only one channel divinity power per encounter.

## Torog's Binding Chains [Divinity]

Painful shackles hold your enemies in place.

**Prerequisite:** Channel Divinity class feature, must worship Torog

**Benefit:** You gain the power *Torog's binding chains*.

**Torog's Binding Chains** **Feat Attack**

*You channel your god's presence into your attack that causes shimmering chains to wrap around your foe.*

**Encounter ✦ Channel Divinity, Divine**
**No Action** **Melee** 1
**Trigger:** You hit an adjacent enemy with a melee attack.
**Target:** The enemy you hit
**Effect:** The target is immobilized (save ends). The target can end the effect by taking 5 damage as a free action.
*Level 11:* 10 damage.
*Level 21:* 15 damage.
**Special:** You can use only one channel divinity power per encounter.

## Vecna's Final Command [Divinity]

You can use your god's influence on the evil within to compel a random act of violence against your foes.

**Prerequisite:** Channel Divinity feature, must worship Vecna

**Benefit:** You gain the power *Vecna's final command*.

**Vecna's Final Command** **Feat Utility**

*You hold death back to allow the dying one final attack.*

**Encounter ✦ Channel Divinity, Divine**
**Immediate Interrupt** **Close** burst 5
**Trigger:** A creature within 5 squares of you drops below 1 hit point.
**Target:** The triggering creature in the burst
**Effect:** The target makes a basic attack against a creature you choose.
**Special:** You can use only one channel divinity power per encounter.

## Wicked Defiance

Your twisted mind proves agile against attacks that target your thoughts.

**Prerequisite:** Wisdom 15 or Charisma 15

**Benefit:** You gain a +2 feat bonus to Will. This bonus increases to +3 at 11th level and +4 at 21st level.

In addition, whenever an enemy targets you with an attack against Will, you can take 5 damage (10 damage at 11th level and 15 damage at 21st level) as an immediate interrupt to change the target to an ally adjacent to you. You cannot reduce this damage in any way.

## Zehir's Dark Blessing [Divinity]

As an enemy falls, you turn its death into a boon for an ally.

**Prerequisite:** Channel Divinity class feature, must worship Zehir

**Benefit:** You gain the power *Zehir's dark blessing*.

**Zehir's Dark Blessing** **Feat Utility**

*An ally's attack becomes an offering to Zehir. Darkness cloaks your companion, granting him or her sudden vigor.*

**Encounter ✦ Channel Divinity, Divine**
**Free Action** **Close** burst 5
**Trigger:** An ally within 5 squares of you drops a creature granting combat advantage to him or her below 1 hit point.
**Target:** The triggering ally in the burst
**Effect:** The target gains 5 temporary hit points. The target also gains partial concealment until the end of his or her next turn.
*Level 11:* 10 temporary hit points.
*Level 21:* 15 temporary hit points.
**Special:** You can use only one channel divinity power per encounter.

# Devour It Before It Devours You

"It's a glorious blasphemy, a condemnation of all that is good and pure. Gods and demons have obliterated it many times, but like evil itself, the book always returns to enslave, corrupt, and destroy. It's utterly marvelous."

–Asmodeus, Lord of the Nine Hells

"Only the most indomitable minds dare to look upon the malevolent thoughts and forbidden secrets bound herein. This corrupt tome is filled with deplorable wisdom. Evil permeates every word and image inscribed within it."

–Orcus, Demon Prince of Undeath

"Terrifying. This could be the last book you ever read."

–Mordenkainen the Archmage

# Introduction

**Every person** who plays the Dungeons & Dragons® roleplaying game has his or her own reasons and rewards for playing the game. Some players revel in working alongside their friends to achieve goals. Others enjoy exploring the stories crafted by the Dungeon Master and players as the campaign unfolds. Still others appreciate the opportunity to transport themselves beyond their everyday lives to a world of fantasy and adventure.

If you're reading this book, it's likely that you enjoy playing effectively at the table—building an interesting and powerful character, using your powers efficiently and wisely, creating compelling storylines, and working well as part of a team. If that's true, congratulations! You've come to the right place.

On the other hand, you might be struggling with the number of options available to your character. If you have difficulty deciding between one feat and another, or if your party can't seem to overcome the challenges placed in front of you by the DM, relax. We're here to help.

In this book, you'll find tips, tactics, anecdotes, and explanations, all designed to help make your games better. This book helps you optimize your characters, provides tips for managing character resources, advises you on solving age-old gaming challenges, and assists you in creating and managing effective adventuring parties. You'll also find ideas for how to create cohesive parties, how to enhance the capabilities of allies (buffing) and how to hinder the effectiveness of enemies (debuffing), and how to adapt your party's strategies to take advantage of the strengths of different combinations of characters.

### Where Can I Find That Power?

This book references classes, powers, feats, and other elements of the game from a variety of sources. To find the latest versions of these game elements, consult the D&D Compendium at www.wizards.com/dnd.

## Getting Into Character

"We spent last session really getting into our characters." That phrase can frighten some players, but it doesn't usually mean a whole session of amateur theater, in which the heroes sit around in a tavern interacting with nonplayer characters while the players trot out hammy accents and faux-medieval dialogue. It can mean constant edge-of-your-seat tension as you immerse yourself into the simulation of a deadly battle, or that shivery sense of wonder as you visualize the marvels that lie beyond the vault door that your character has just pried open. Getting into character is about reaching the point at which you are so strongly in tune with your character's emotions and goals that your experience of playing the game aligns with what really being in that situation might be like.

In other words, when you get into character, it feels like you're not just playing a game, you're living an adventure.

You start the cycle of getting into character by creating an interesting adventurer. The character needs to be interesting to you, so that you're drawn to seeing the world through that character's eyes. But don't forget that your character also need to be interesting to the Dungeon Master and to the other players, so that they want to involve your character in exciting events.

The process continues at the gaming table, when you actively listen to the other players (and the DM) and remove potential distractions that might come between you and your character. As you begin to identify with your character, you'll naturally do things at the table to express your character's identity. Your voice might reflect genuine anxiety when you say, "Let's get out of here before we get killed," or glee when you say, "Everyone fill your pockets with as many gems as you can carry." Hearing that emotional involvement helps the other players get into character, too, making the scene more real and vibrant for the entire group. This cycle is the essence of roleplaying, and without it your game can easily slide into little more than repetitive turn-taking.

For some players, that's all they want from Dungeons & Dragons. That style of playing is perfectly fine—as long as you're having fun, no one can tell you that you're playing the game wrong. Even the most

diehard roleplayer sometimes just enjoys blowing off steam with a simple dungeon crawl devoid of story.

But a roleplaying game can offer so much more than that, and most players—even dyed-in-the-wool character optimizers—can't play without injecting a bit of personality into their characters. So before we dive into the heavy stuff, let's talk about three basic ways to get into character by roleplaying.

## Roleplaying Is Action

"Show, don't tell" is the first rule of good drama. You define your character by the actions you choose to take in play. If you lead the charge into battle, or if you are the one to go to for esoteric knowledge, you demonstrate the essence of your character's identity.

Deeds speak louder than words, so the actions you take—or don't take—shape the image that you and the other players have of your character. Don't just write "brave" somewhere in the margin of your character sheet, display your character's bravery by challenging the toughest monster in the room or agreeing to stand up against the nastiest tyrant in the land.

You'll know you've been successful when the other players at the table can describe your character's personality as easily as if your character were their own.

## Roleplaying Is Choice

You express who you are through the decisions you make. When an adventure gives you a choice, the consequences of your choice shape your adventurer's life story. Get into character and let your character's unique concerns and motivations guide your decision so that the result is true to who you want your character to become.

Don't depend on the adventure to present your character with life-altering choices. Help the Dungeon Master create meaningful decisions for you by clearly and consistently expressing what matters to your character, and take the initiative to set up your own choices. Think ahead of time about objectives your character might pursue, and look for ways to achieve those goals through minor quests, interactions with nonplayer characters, or coordination with the other players.

## Roleplaying Is Other People

The process of building a character involves making the character vivid in your own imagination. But the difference between a character sheet and a character isn't really established until the character comes to life in the minds of everyone at the table. The greatest moments of roleplaying are group efforts. Come up with characterization hooks that your friends can latch onto, and build on the characterization hooks the other players throw out.

### How to Roleplay

No matter what you read or hear, there is no one correct way to play D&D (or any other roleplaying game). Some groups have fun rolling dice, slaying monsters, and leveling up. Other players gain the most enjoyment from long conversations between their characters and the DM, even if the dice never get rolled. Both of these groups are roleplaying, even if the table activity seems very different from one group to the other.

Don't listen to anyone outside your group who tells you that you aren't playing the game correctly. Above all else, play the game the way that makes it the most fun for you and for everyone else sitting at the table.

VICTORIA MADERNA

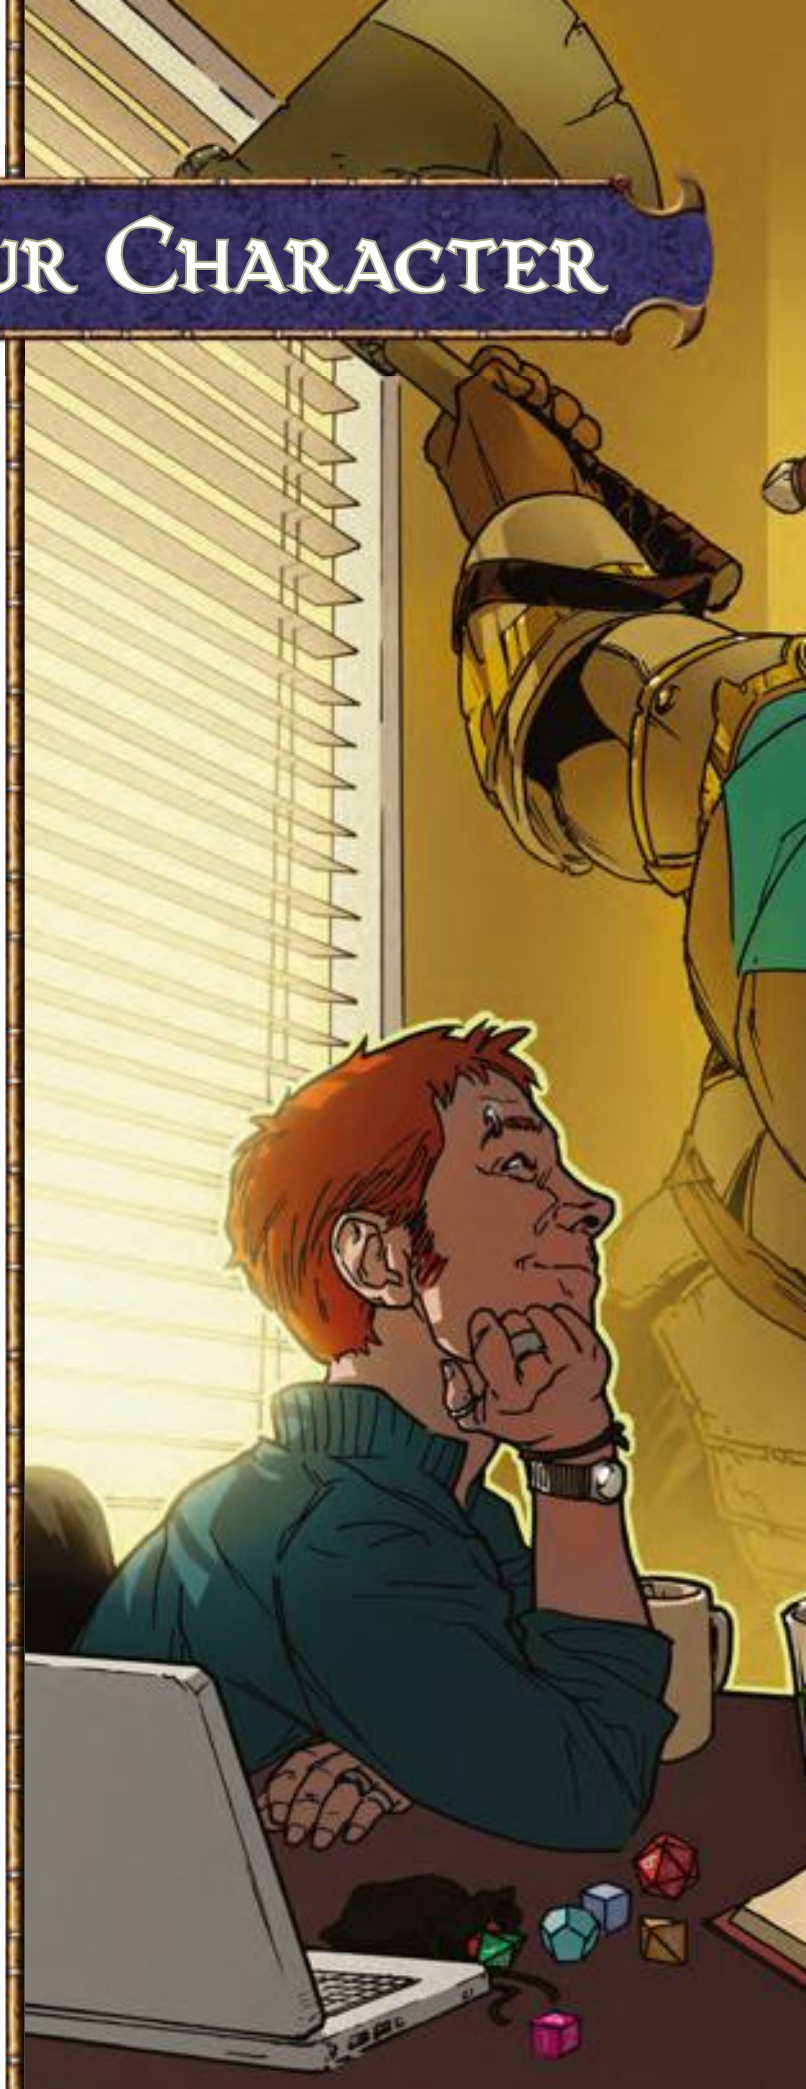
CHAPTER 1

# Building Your Character

**The process** of character design is one of the most enjoyable parts of any Dungeons & Dragons game. Some players are driven by a character's story. They research names and come up with elaborate backgrounds. Other players thrill to a mechanically optimized character who blasts through challenges with ease.

Most of us fall somewhere between these two extremes. We want a well-designed character who also has an interesting and compelling background. This chapter is for players in the middle of the spectrum. It guides you through the various aspects of character building and advancement, from the basics of your race and class to planning your epic destiny. It includes the following sections.

- **Know the Campaign:** The importance of the Dungeon Master's authority over his or her game.
- **Characterization Builder:** Painting the big picture to guide your choices.
- **Building a Foundation:** Concrete advice for making decisions about your character's class, race, and background elements, from both a mechanics perspective and a story perspective. Also includes tips on selecting powers, skills, and feats that you will enjoy using and that will add the most to your party as a whole.
- **Level Up!:** What to think about when you gain a level, including retraining and replacement advice.
- **Paragon Paths:** Get the most from your paragon tier character.
- **Epic Destinies:** Plan your character's destiny.
- **Advanced Options:** Explore the possibilities of multiclassing, hybrid character rules, and other unusual options.
- **How To . . . :** Each of these entries explores how specific mechanical choices can build a specialized character who maximizes his or her talents in a specific area.



KALMAN ANDRASOFSZKY

bla

There is no such thing as a perfect character, but you can build a character who is perfect for the game you'll be playing in. To do that, you need to learn about the campaign, and the best way to learn about a campaign is to talk to your Dungeon Master.

If the goal of a D&D game is to make inspiring music together, your character is your instrument. You'll feel out of place playing a xylophone if the rest of the group is playing punk rock, or an electric bass if the Dungeon Master plans to orchestrate a grand symphony. Approach the DM beforehand to find out what kind of campaign he or she plans to run and what kinds of characters would get the most out of it.

Sometimes, you find a DM whose preferences just don't match yours. This section also describes some warning signs that can signal later problems in the campaign. If you don't already know your DM's style, these signs can point out a game that you might want to avoid.

## Understand the World

Learning some details of the campaign setting chosen by the DM allows you to choose key world elements to attach to your character. When your character concept meshes with the themes and conflicts explored in the game, major events in the campaign can have meaningful repercussions for your character, and accomplishing the goals you set for your character is more likely to have an effect on the world around your character.

Campaign settings contain a multitude of themes, so talk to your Dungeon Master to understand where he or she wants to go with the game. For example, knowing that you'll be playing in Eberron isn't enough—you could be spending your time investigating shadowy crimes in the dark alleys of Sharn, or exploring the mysteries of the Draconic Prophecy across the entire continent of Khorvaire. However, if you know that the DM intends to focus on the dark continent of Xen'drik, you can choose a primal class and take wilderness-based backgrounds to feel at home in the jungle. Alternatively, you might choose for your character to be affiliated with a dragon-marked house likely to sponsor an expedition to Xen'drik, such as Orien, Lyrandar, or Cannith.

Even if you choose to design a character that goes against the grain of the campaign's themes, you should always ensure that you have a reason to participate in the action. You can expect an Eberron game that centers on house politics to involve tense scenes of diplomatic negotiations. Roleplaying a loud-mouthed half-orc whose uncouth presence inevitably disrupts the hushed halls of power might tempt you to forego such activity. Instead, give yourself a compelling reason to explore those halls of power and influence by making your character a scion of House Tharashk, or a hard-boiled investigator from Sharn who is empowered to dig out the rotten secrets of the dragon-marked houses . . . whether they like it or not.

**Warning Sign:** This is the first and most obvious place at which you can learn that a campaign isn't for you. If you can't get excited about the campaign setting or the themes chosen by the DM, you might find yourself growing bored easily. Boredom leads to distractions or skipped sessions, which lead to your feeling uninvolved and uninspired even when you're present. These feelings can easily rub off onto other players, and can ruin an otherwise solid campaign.

Many DMs avoid this problem by discussing the setting and themes with their players before choosing a setting. Encourage your DM to do the same. Talking about what the players and the DM expect from the world your game takes place in lets everyone at the table feel excited and involved even before the first d20 hits the table.

## Accept Limits

Many Dungeon Masters place restrictions on character creation options as part of building their own unique campaign settings, even when a setting is a variation on an existing world. Before you become committed to building your character according to a particular concept, make sure that it doesn't conflict with any limitations on character creation established for this campaign.

Rather than bridling at such limitations, see them as opportunities to challenge your preconceptions about various character combinations. You might find that working within tight restrictions spurs your creativity. Trying a campaign in which the players agree to an extremely restricted set of options—such as all martial characters or all dwarves—can allow the players to explore elements other than race and class that make characters unique.

Sometimes, a restriction might be a matter of the flavor of a class or a race: "I don't want drow player characters in my game, because in my campaign they're always villainous." You and your Dungeon Master might both be happy if you use the mechanical elements of the option but alter the flavor to suit the campaign. Even if the DM doesn't want drow player characters, he might be amenable to a special shadow-infused eladrin with racial traits fundamentally identical to the drow.

If you don't feel comfortable working within the limits set by the DM, negotiate for the elements that matter to you about making your character. A good DM knows that keeping players happy makes for a

fun game, so if you can make a reasonable case for changing the campaign restrictions to allow your preferred character type, he or she might bend on that point. Don't be rude or demean the DM's work; one of the joys a DM gets from the game is building a unique campaign world, just like players enjoy building unique characters.

Even if you don't have any issues with the limitations, talk to your Dungeon Master about the significance of the campaign restrictions he or she has established. Chances are you'll learn a lot more about the campaign than just which elements are restricted.

**Warning Sign:** A DM unwilling to negotiate or to help you understand why he or she has established limits on character options is likely to become a DM who isn't interested in letting your character perform unusual or unexpected actions in play. If you can't find a way to build a fun character within the DM's limitations, consider finding a different game.

## Solicit Recommendations

Don't just guess about the kinds of characters that might be rewarding to play when you can ask the one person who's most likely to know. Your Dungeon Master probably has plenty of ideas about backgrounds, classes, and concepts perfect for the adventures to come.

Once you understand the DM's recommendations, look for ways to put your own spin on those ideas. If he or she recommends primal characters for a wilderness-based campaign but you are most interested in the fighter class, you could decide to play a fighter raised in a barbarian tribe. Even if you don't use any of the DM's specific suggestions, these conversations can give you insights into how to build a character who meshes with the campaign, as well as an idea of what to expect in the gaming sessions to come.

**Warning Sign:** If you feel that the DM is unwilling to allow you to personalize his or her recommendations, you might have run into one of those rare Dungeon Masters who seek to use the players and their characters as proxies, effectively running the adventure and playing it simultaneously. Unless you're happy being a watcher, such a game isn't likely to be much fun for you.

## Immerse Your Character

The *Dungeon Master's Guide*® advises your DM on how to hook characters into an adventure by giving them motivations for getting involved in the action and caring about what's at stake. Make this job easier by providing sturdy handles for those hooks.

Use what you know about the campaign setting to create meaningful relationships between your character and various people, places, and organizations in the campaign. Craft one or more individual goals for your character, based on the themes your DM has described to you. When you find ways to make adventuring personal, you gain more than XP and gold for fulfilling the quest, you also advance your character's story.

Many gamers make hooking their characters difficult by building orphans who aren't tied down to anything in the world and who care only about themselves. Successfully resolving a conflict that threatens the people or things your character loves is more satisfying than rescuing an anonymous NPC. Choose background elements that are close to your heart, and give your character motivations and personal issues that give him or her a stake in the outcome of the adventure.

**Warning Sign:** Inexperienced DMs often make the mistake of holding too tightly to the story reins of the campaign. They don't want players to define anything in the world, even their own characters' places in it. Assure the DM that you don't want to derail or diminish the importance of his or her story, you just want to feel more involved in it. Once the DM gets over his or her initial concern, you might find that you've helped your DM build a better game. However, if your DM is reluctant to incorporate details about your character's background into the setting of the campaign, you might find that your interest in the game falls off after a few sessions.

## Know the Other Players

Ultimately, your character spends more time interacting with the other player characters around the table than with the setting and its nonplayer characters. Talk to the other players about their character concepts and about how your characters all fit together. During character creation, establish roleplaying relationships within the party. Build a connection between your character and at least two other characters, such as a shared background, a common friend or mentor, or a mutual goal. These connections can be mildly contentious—a friendly rivalry over who's the best talker, or contrasting beliefs or personalities. Just don't let the conflict overshadow the teamwork necessary for fun and success.

These interparty relationships are especially important in a far-ranging campaign. When you know the game will center on a limited geographical region, establishing strong connections to the local people and places makes sense. But when you and your companions head off into the wilderness or the Underdark with only one another for company for the next several sessions, you can ensure rich roleplaying interactions by establishing multiple, overlapping relationships among the characters.

**Warning Sign:** If you can't interest any of the other players in building these links between characters, you might have found a table of prima donnas more interested in describing their own characters' greatness than in helping you achieve it yourself.

# Characterization Builder

Everyone knows that the choices you make during character creation shape the experience of playing your character at the table. But some players think this applies only to your effectiveness in combat encounters and skill challenges. Every decision you make during character creation also influences your ability to get into character and, by extension, your friends' ability to do the same. Build a character who is fun to play and fun for your fellow players to interact with.

Characterization starts with a broad concept or image. Big ideas help your character stand out. They let you easily grasp the essence of your character's personality, and they help the DM and the other players at the table understand the context of the actions you take while in character. What's more, role-playing a character who has an oversized personality is engaging and fun. During play you'll find more opportunities to express a basic passion for gold, grog, or glory than to pursue a more refined interest, such as flower arranging.

Paint your concept with a few bold strokes, rather than detailing every little personality quirk. If you give your character too many peculiarities, you'll find that keeping track of them is difficult and none of them come up enough to stick in anyone's mind. Instead, choose one particular detail, such as vanity regarding personal appearance, that you can emphasize in many different situations.

## Concepts Lead to Goals

Think about your favorite characters from books, movies, or comics, and summarize each of these characters' essential concepts in a sentence or two. You'll find that the best ideas are simple, but they set up interestingly complicated ramifications when that basic concept is translated into action. As you develop your own character concept, focus on future goals.

Say your initial character idea is "My wizard escaped from the destruction of her father's keep with nothing more than his spellbook and the clothes on her back." This leaves your character's motivations and future directions vague. What's the importance of your past if it doesn't mean something about your future?

Include some aspect of your character's personal goals in that big picture. The same character might be described in this way, instead: "My wizard is driven by hatred for those who destroyed her father's keep, and by the fear that she will prove unworthy of his legacy by failing to master the spells in his spellbook." This tells both you and the Dungeon Master right away what the character wants to do: seek revenge and unravel the clues found in the cryptic notes in her father's grimoire.

## Playing It Forward

A solid concept helps you stay true to your characterization goals during character creation and gameplay. As you make choices during character creation, think about which options make sense for your idea, and how you might explain your chosen options in light of your character concept. Why does your chosen class present the right method of achieving your goals? What significance does your starting feat have in light of your character concept? Do your powers need new names or flavor text to describe how you use them?

Imagine that the player of the wizard described earlier felt drawn to the Wintertouched feat. The player might decide that her character's father's keep was made of ice and that she suspects that the spells and rituals in his grimoire were taught to him by a gelugon. Furthermore, the player decides that her flaming sphere spell works by first stealing heat from the nearby area. When she casts the spell, she describes how everyone feels a chill in the air just before the flames burst into life. That's a detail that everyone will remember.

A simple, unified concept also helps other players get on board so they can play along. Once you have a sentence that boils down the essence of your character, don't be shy about sharing it. When you put your figure on the table and announce, "My dwarf ranger, Rakshukshak, is the world's foremost expert on all manner of beasts—or at least he thinks he is," you immediately offer the group fun ways to interact with your character. One player might remember to turn to you and ask your opinion on each new creature the party encounters, giving you an opportunity both to roleplay your character and to take advantage of your investment in monster-knowledge skills. Another player might pick up on the hint that you don't take Rakshukshak's mastery too seriously and set himself up as your rival, with each of you seeking to outdo the other by inventing unlikely bits of monster trivia for the edification of your fellow adventurers and the entertainment of the group.

## Don't Fear the Cliche

When confronted with familiar races and classes, many players revert to stereotypes for those characters' actions. Rather than fearing this tendency or allowing it to straitjacket your creativity, embrace it and then tweak those stereotypes.

The good news about these built-in player expectations is that they help everyone get to super-awesome-let's-pretend time sooner. Without a familiar frame of reference, other players might struggle to understand who and what your character is.

As an example, take a look at the taglines provided at the start of each race's description in the *Player's Handbook*, as well as the "play this race if you want . . . " bullet points for each race. Do these statements embrace every potential member of the race equally? No—they set up in broad strokes what you can expect from a character of the race in question. Without that framework, a dragonborn just becomes a big scaly humanoid who can breathe fire. When you use preconceived notions as building blocks, you can spend less work establishing the baseline expectations of your character and more time on what makes you unique.

Embracing a stereotype need not limit your creativity or options. A seductive troubadour feels different from a fighting skald or a mysterious storyteller, but each character concept fits easily within the broad archetype of the bard class. Focus on one aspect of your class's archetype to exaggerate. Fighters are driven to prove themselves through conflict, so maybe yours is especially prone to rivalry. Then deepen your characterization by thinking about how the consequences of that aspect would have been reflected in your character's background. Does constant competition cause your fighter have to a tense relationship with a sibling? Is your fighter unwilling to talk about anything related to his or her most stinging defeat?

Once you establish that baseline element, you can create dramatic contrast by choosing a notable place to play against your archetype. A warlock fanatically devoted to carrying a treasured weapon is more memorable and interesting than a fighter who has the same obsession.

## Looking the Part

Helping others visualize your character's appearance can also establish your identity. When you introduce your character to the other players, describe what he or she wears. When the time comes to spend your adventuring wealth, shop for particularly utilitarian or extraordinarily flamboyant clothing, or specify exactly how an item being created for you should look.

Visuals at the table can help, too. Basing your character concept on a favorite miniature can inspire your creativity and also constantly reminds others of what your character is all about. Draw a portrait or search the Internet for an image that depicts your character's style and add that to your character sheet. If you use nametags or table tents to identify yourself in the game, add your illustration there, as well.

Don't overlook your character's equipment as a tool for establishing appearance and characterization. Compared to other aspects of character building, your choice of equipment offers plenty of room for creativity and flexibility. This goes beyond the obvious decisions of weapons and armor: Come up with a couple of interesting possessions to wear or carry around, such as a distinctive gold-plated whistle or a shrunken head in a lead-lined box. Of course, you'd better have an explanation ready for when the other players ask you what's going on with that box! Be reasonable, and don't expect any significant game effect from these items unless you work something out with your DM beforehand.

### The Motivations

Here's a brief rundown of the eight basic player motivations. See Chapter 1 in the *Dungeon Master's Guide* for more details.

**Actor:** You like to pretend to be your character, valuing your character's personality and motivations over mechanical elements.

**Explorer:** You want to experience the wonders of the game world, learning about the people, places, and history you encounter.

**Instigator:** You enjoy making things happen. You prefer action over planning, and sometimes make deliberately bad choices to see what happens.

**Power gamer:** You like to optimize your character, choosing the best mechanical elements to create a perfect build.

**Slayer:** You just love to kill monsters, and you prefer combat to any other situation.

**Storyteller:** You want to hear the ongoing story of the game. It's important that your character's background is significant to the game's narrative.

**Thinker:** You prefer to make careful choices, solving challenges and puzzles in an organized and methodical way.

**Watcher:** You like being part of the group, but you don't want to be the center of attention. You just want everyone to have fun.

# What's Your Motivation?

Every D&D player agrees that the game provides a unique kind of enjoyment and satisfaction unlike anything you get from other forms of entertainment. But different types of players are motivated to play by the different experiences they get out the game.

The *Dungeon Master's Guide* identifies and describes eight basic player motivation categories: actor, explorer, instigator, power gamer, slayer, storyteller, thinker, and watcher. Which one are you? Take this quiz and find out.

## Instructions

For each question, choose the answer that best applies. If you can't decide between two options, select them both. Then, find your answers in the key below. Add up the number of answers you gave for each motivation to see how important that motivation is for you.

**1. Deep in the Underdark, your party pursues a wizard who has betrayed you. Footprints lead one direction, but you hear something coming down the other tunnel. You say:**

A. "Let's ambush whatever's coming, because we know that'll be a fight. We could waste hours of time in these passages without meeting a single foe."
B. "My lust for revenge burns like alchemist's fire. Each moment it remains unquenched, I suffer. If these footprints might belong to my enemy, I must follow."
C. "The approaching noise is probably a mindless predator drawn by our lights. Our contact in the mage's guild said the wizard had apprentices—if these footprints aren't his own, they might have been left by a student who could lead us to him."
D. "According to my map, this tunnel leads to the duergar city. I see nowhere else the wizard might be headed. Let's get there first and learn something about the city that we can use against him when he arrives."

**2. Another player wants to set up an ambush in preparation for an upcoming combat encounter. Which argument is most persuasive?**

A. With a surprise round, a good initiative check, and an action point, your rogue gets combat advantage with three attacks before the enemies get to move.
B. Surrounding the enemies prevents them from escaping and spreading word of your presence, which could prevent problems for you later.
C. It gives you a chance to describe how your character learned to set up camouflage blinds and decoys while growing up in the Fellreeve.
D. The friend who proposed the ambush hasn't gotten the party to follow her suggestions lately.

**3. A social skill challenge with the prince of the Efreet broke down, and now the party has to fight their way out of the City of Brass. What explains the breakdown?**

A. Nobody in the party is trained in Insight, even though you told the paladin to swap her Heal training for Insight last time you all leveled up.
B. Who cares? It's time to stop talking and start kicking efreet butt!
C. During the skill challenge, you learned that the prince opposes the faction that can aid your quest. Publicly making an enemy of him will help you befriend his rivals.
D. The party had all the information it needed from the prince, so you used his crown of flame to light your pipe.

**4. During a session, the Dungeon Master notices you're writing something. You show her:**

A. A map of the dungeon, with notes indicating the possible location of areas you've heard the inhabitants talk about.
B. A list of suspects responsible for the mysterious crime wave hitting the characters' home city.
C. A note to the DM describing how you want to plant a forged love letter from the goblin empress in one of your comrade's backpacks.
D. Funny things people said during the session, to be added to the campaign's quotation list.

**5. Which of these behaviors from other players bugs you the most?**

A. Talking out of character during intense role-playing moments.
B. Moving to a square that prevents your character from charging into a flanking position.
C. Putting you on the spot to make an important decision for the group.
D. Forgetting the name of the duke's chamberlain during a tense negotiation.

**6. It really makes your day when you:**
A. Discover a hidden sublevel in a dungeon that other characters passed by without noticing.
B. Hear the other players talking about a crazy situation you got them into months ago.
C. Use what you've learned about the enemy to manipulate them into fighting each other instead of you.
D. Roll back-to-back critical hits and drop an enemy before it takes a swing at you.

**7. When you level up, how do you prefer to choose your new power?**
A. Visit the character optimization forum at the Dungeons & Dragons website to read discussions about builds for your class.
B. Think about what best fits the things your character might have learned based on the last few sessions.
C. Get advice from the DM or another player.
D. Figure out the maximum damage that each one could do, and pick the biggest number.

**8. Why might you choose to seek out an artifact?**
A. The potential for conflict between its goals and yours offers great roleplaying opportunities.
B. It has a mind of its own, and following its impulses is sure to keep things interesting and unpredictable.
C. Finding it requires a long, exciting process of researching buried secrets and interpreting clues.
D. It is the last link to a forgotten world of the past, and it might know secrets of an ancient culture.

**9. A dispute has arisen among your fellow players. What would most make you want to resolve it?**
A. People are starting to take it personally, and you want everyone to get along.
B. The disagreement is taking time away from an exciting combat.
C. Success in D&D depends on teamwork, and an unresolved argument makes cooperation more difficult.
D. Your character has been through a lot with this party, and the dispute imperils those hard-won bonds of fellowship.

**10. The most important feature of a dungeon is:**
A. A complex, nonlinear layout, with branching paths, hidden areas, and alternate routes.
B. Puzzles, clever traps, and opportunities to gain a strategic advantage through good planning.
C. Rooms full of chests to search and doors to open—preferably during combat!
D. A rich history and intricate relationships among the dungeon's denizens.

### Scoring Key

**Actor:** 1B, 2C, 5A, 8A, 9D
**Explorer:** 1D, 4A, 6A, 8D, 10A
**Instigator:** 3D, 4C, 6B, 8B, 10C
**Power gamer:** 2A, 3A, 5B, 7A, 9C
**Slayer:** 1A, 3B, 6D, 7D, 9B
**Storyteller:** 1C, 3C, 5D, 7B, 10D
**Thinker:** 2B, 4B, 6C, 8C, 10B
**Watcher:** 2D, 4D, 5C, 7C, 9A

## Scoring Your Motivation

Add up the number of points you scored for each motivation.

**4–5: This is a primary motivation for you.** Share your motivation with your DM, so he or she knows the best ways to keep you engaged in the game.
**2–3: This is a secondary motivation for you.** You enjoy occasional events that satisfy this type of player, but you get bored without some variety in the DM's approach.
**0–1: This is not your motivation.** At best, you tolerate events designed for this type of player, but you're always itching to get back to what makes the game fun for you.

# Building a Foundation

Some players begin the character creation process by thinking about their character's race, and others gravitate toward class choice first. At the risk of oversimplification, the former player tends to favor story over mechanics, and the latter often reverses those priorities. Since we have to start somewhere, this book handles class selection first, but you can easily jump back and forth between the sections depending on your preferences.

Regardless of which way you lean, you shouldn't make the two decisions independently of one another. Even though any race can pair effectively with any class, certain combinations offer significant advantages for your character.

This section guides you through the initial decisions that shape your character, including class, race, ability scores, and background. These selections influence all the later choices you make about character creation and advancement.

## Choosing Your Class

Every player knows that a character's class has a larger effect than anything else on the other decisions made during character creation. Beyond mechanics and rules, though, your character's class also shapes a significant portion of his or her identity in the game. Your character's class influences where your character stands on the battlefield, which skills he or she brings to noncombat challenges, and how nonplayer characters think about and interact with your character.

With over two dozen classes to choose from, the combined scope and importance of this decision can be daunting. Opening up the D&D Character Builder for the first time when starting a new campaign can intimidate even experienced players. This section provides tips and guidance to help connect you with the ideal class.

Include the story of your class in your selection process. Treating a class as nothing more than features and a power list ignores valuable tools that can help you bring your character to life at the table. Anyone can tell the difference between a cleric and a warlord by the powers they use; strive to achieve that same individuality in your character's attitude, appearance, and actions by harnessing what makes your class unique from all others.

### Character Roles

Each class in Dungeons & Dragons falls into one of four basic character roles, described on page 16 of the *Player's Handbook*. This role describes, in broad terms, the class's basic function in battle. Your character's role helps you (and the other players) know what to expect from your character, at least in general terms.

Don't confuse class and role. Your character's class clearly defines how you interact with various rules of the game: how many hit points you gain per level, what features you gain, which powers you can select, and so forth. With very few exceptions, your role doesn't have anything to do with the rules of the game. Instead, your character's role serves as a tool for understanding how you fit into your group.

Roles group the many classes of D&D into similar categories for easy comparison. Two different classes that have the same role, such as a fighter and a warden, aren't identical, but they have more in common with one another than with classes of other roles. Both of these defender classes share high defenses (particularly AC), good durability, decent melee attacks, and a talent for drawing enemy attacks toward themselves (and away from their allies).

Many players begin their decision on which class to play by first selecting a role. Sometimes that's because the player prefers the talents common to a particular role, but more often it's to help fill a gap and create a strong, well-rounded party. (See Chapter 2 for more on this topic.) Either way, knowing the roles can help you choose the class that's right for you.

The *Player's Handbook* provides basic information on each of the four roles, and anyone who's played the game has likely seen all four roles in action. But if you've watched only one or two examples of a character role in play (or if you weren't paying attention when the players identified which roles their characters filled), these hints might help you figure out which role you'd prefer for your next character.

**Controller:** If you play this role, expect to stand at the back of the party a lot. You don't want to get mixed up in melee: That's for your allies to worry about.

You don't deal as much damage—at least per target—as the strikers do, so if you measure your success by the damage result you call out on a hit, look elsewhere.

By spreading your damage across multiple targets, you don't get to deliver the killing attack quite as often on the big, tough enemies. Instead, you contribute more tactically by applying the perfect penalty or limiting condition on the monsters, restricting their ability to hurt you and your friends.

Of all the player motivations (see the quiz on page 12), thinkers fit best with controller classes. Played right, a controller can often turn the tide of a battle before it even gets dangerous. In a game with lots of minions, the slayer has great fun playing a controller.

Controller classes include the druid, invoker, psion, seeker, and wizard.

# WHAT CLASS ARE YOU?

Have you ever wondered which of the D&D classes best fits your own preferences and talents? Take this quiz to find out which of the eight classes from the *Player's Handbook* matches you the best. The results might even suggest a class for your next adventurer.

## Instructions

For each question, choose the answer that best applies. Then, find your answers in the key below. Add up the number of answers you gave for each class to see which class best fits your attitude.

**1. What's your best quality?**
A. I'm the smartest one in the room.
B. I know how to get out of trouble.
C. I have a winning personality.
D. I don't know how to quit.

**2. Who would you trust to teach you?**
A. Only the greatest tactical minds of the kingdom.
B. I deserve training from a mighty archmage.
C. The elders of my temple can teach me all I need to know.
D. Nobody. My talents will be self-taught.
E. You don't want to know. Seriously.

**3. Where do you like to stand in battle?**
A. Right in front of the enemy.
B. Wherever I can keep an eye on my friends.
C. Someplace dark, where the enemy can't see me.
D. Surrounded by my protecting comrades.

**4. What does your wardrobe remind people of?**
A. A college graduation.
B. An appointment they have . . . somewhere else.
C. A taxidermy shop.
D. A scrapyard.

**5. How do you like to fight evil?**
A. With a weapon in one hand and my holy symbol emblazoned on my armor.
B. With the best weapon I can find.
C. With the talents of my fine comrades.
D. With fiery magic.

**6. Which of these is your favorite deity?**
A. Pelor, the enemy of all that is evil.
B. Kord, the lord of battle.
C. Avandra, because she brings me luck on my travels.
D. Corellon, patron of arcane magic.

**7. What's your favorite moment in battle?**
A. Feeling enemy attacks bounce harmlessly off my armor.
B. Dropping an enemy with a single strike.
C. Blowing up a room full of goblins.
D. Seeing an ally deliver the killing blow.

**8. How hard is it for enemies to take you down?**
A. Everyone knows I'm pretty fragile, so I stay in the back.
B. Why bother finding out?
C. I'm not afraid of taking a hit or two.
D. Not gonna happen.

**9. Do your allies trust you?**
A. As long as I'm between them and the monster.
B. Only when they can see me . . . which isn't all that often.
C. No, but that's just because I accidentally blew them up a couple times.
D. Trust me? I'm the one keeping them alive!

**10. Are you a people person?**
A. Are you kidding? The main table at the local tavern is my home away from home!
B. People look up to me, so it doesn't pay to build personal relationships.
C. I'm good with people, but I've never quite fit in.
D. I prefer solitude, whether in my study or walking in the woods.

### Scoring Key

**Cleric:** 1D, 2C, 3A, 4D, 5A, 5C, 6A, 7D, 8C, 9D, 10B
**Fighter:** 1D, 2A, 3A, 4D, 5A, 6A, 7A, 8D, 9A, 10C
**Paladin:** 1C, 1D, 2C, 3A, 4D, 5A, 6A, 7A, 8D, 9A, 10C
**Ranger:** 1B, 2D, 3D, 4C, 5B, 6C, 7B, 8B, 8C, 9B, 10D
**Rogue:** 1B, 1C, 2D, 3C, 4B, 5B, 6C, 7B, 8B, 9B, 10A
**Warlock:** 1B, 1C, 2D, 2E, 3C, 4B, 5D, 6D, 7B, 8B, 9B, 10C
**Warlord:** 1A, 1D, 2A, 3A, 4D, 5C, 6B, 7D, 8C, 9D, 10B
**Wizard:** 1A, 2B, 2D, 4A, 5D, 6D, 7C, 8A, 9C, 10D

## Scoring Your Class Affinity

Add up the number of points you scored for each class.

**8 or more:** You're a natural fit for this class. I bet you've been playing one for a while, right?
**5 to 7:** You have a definite knack for this class. Even if it's not your highest-scoring class, you'd probably enjoy it.
**2 to 4:** You don't enjoy what this class offers. You should probably steer clear of it unless you're interested in a distinct change of pace.
**0 or 1:** This class is a terrible fit for you. If the group tries to pressure you into playing one, find a new table!

**Defender:** You stand at the center of the action. When played right, your defender takes more attacks than any two other characters combined, but that's just the way you like it.

Yes, you kill things with your sword, but don't try to keep up with the damage output of the strikers. By the end of any fight, you should instead be bragging about how much total damage you took, while accepting the grateful thanks of all those other squishy characters.

Many players new to 4th Edition D&D mistakenly assume that defender classes require no tactical decision-making. The choice of how to use your marking ability, which monsters to ignore and which to engage, and even which square to occupy all offer great puzzles for the defender to solve on the battlefield.

Players who have the instigator motivation like playing defenders because they can survive the risks they provoke. Slayers also like defenders because of the visceral enjoyment gained by taking the monsters' best hits without flinching. Thinkers love the defender's ability to lock down monsters and win combats through patience and high defenses.

Defender classes include the battlemind, fighter, paladin, swordmage, and warden.

**Leader:** Whether the other players at the table realize it or not, you're in charge of every battle. You decide who gets healed and who gets buffed. You influence the party's tactics with situational bonuses and extra actions. Every player at the table counts on you to be at the top of your game. If you can't see opportunities when they occur or foresee challenges before they happen, you'll all be in trouble.

An optimal leader understands that group success outweighs individual achievements. With every decision made during character creation, the leader thinks about how it improves the party and helps win battles. The leader gladly trades a little of his or her own personal glory to let another character pull off something fantastic.

The tactical responsibilities of a leader appeal to thinkers who see every combat as a puzzle to be solved through the timely application of the right powers and positioning. The power gamer who understands that boosting the right ally is just like dealing damage him- or herself gravitates toward the leader role. Actors like playing leaders who also function as the party spokesperson (a common overlap, due to the large number of Charisma-focused leader classes).

Leader classes include the ardent, artificer, bard, cleric, runepriest, shaman, and warlord.

**Striker:** You kill monsters and slip away to fight elsewhere. You are the king of dealing damage to individual foes; nobody has a higher damage roll than you.

Some players describe strikers as self-centered. A more charitable description might be "focused on maximizing their personal achievement." Strikers don't concern themselves with helping other characters at the table, other than by dispatching all the monsters quickly. If you'd rather focus on tracking down and dropping that one annoying monster rather than worrying about what your allies are doing, the striker role is right for you.

Slayers and power gamers alike love making the DM's jaw drop by announcing how much damage their striker just dealt to the lead monster. Instigators appreciate the striker's ability to get out of trouble. Watchers like the simplicity of the striker: Go kill that monster, then move to the next one.

There are more striker classes than any other role, including the assassin, avenger, barbarian, monk, ranger, rogue, sorcerer, and warlock.

### Forgetting to Heal Your Allies

If you don't enjoy healing others, don't play a leader. If you worry that you might forget to dish out the healing, or if you become annoyed when another player asks you to spend actions for healing, don't play a leader. If you intend to spend all your healing on yourself, don't play a leader. If you hope to auction off your healing like Sotheby's or if you expect religious conversion, monetary payments, or player contributions for your healing service, don't play a leader.

If you need any of this advice, don't play a leader.

## Hidden Talents

Your character's role, however, only begins to describe his or her talents on and off the battlefield. Even though a fighter, a paladin, and a swordmage might all assume similar responsibilities as part of an adventuring team, they achieve the role in different ways. These varying approaches make each class unique, and they often form the basis for a player's choice of which class to play in the game.

Skim through the hidden talents of the various classes given below to see which ones make you want to learn more. The parenthetical letter indicates the class's role: controller (C), defender (D), leader (L), or striker (S). Although this book can't provide detailed analyses of every class, you can visit the Wizards Community D&D forums to learn more.

**Ardent (L):** Your Ardent Mantle class feature helps your entire party in social skill challenges.

**Artificer (L):** You manage your party's resources to maximize both survival and destructive power.

**Assassin (S):** You're the sneakiest of all characters; your patient stealth is rewarded with enemy death. Anything you hold becomes a deadly weapon.

**Avenger (S):** You hit more often than any character in the game. You can lock down a single enemy as well as a defender can.

**Barbarian (S):** You're the toughest striker in the game. Your rage powers let you adapt to the needs of a particular battle with frenzied energy.

**Bard (L):** You can shape your character to fit any party need.

**Battlemind (D):** You are the most versatile of defenders, with many at-will options that punish enemies for ignoring you, enhance your survivability, or control your immediate vicinity.

**Cleric (L):** You're the best healer in the game, but you also excel at reducing your enemies' ability to dish out damage.

**Druid (C):** You can shift easily between distant battlefield control and up-close-and-personal melee carnage.

**Fighter (D):** You can achieve great control over your immediate surroundings. Nobody is harder to run away from than you.

**Invoker (C):** Not only can you rain fiery destruction down on your enemies without endangering your nearby allies, such powers can aid your allies as well.

**Monk (S):** You're great at fighting mobs of minions. Like the assassin, you can turn any object into a weapon.

**Paladin (D**): You have the best healing in the game outside the leader classes. You're also the most self-sacrificing of the defender classes, putting your own safety on the line to rescue allies from danger.

**Psion (C):** You have more options at your fingertips every round than any other controller, and your psionic augmentation allows you to adjust power effects on the fly.

**Ranger (S):** Perhaps the simplest class to play effectively. You can quickly react to enemy actions, even when it isn't your turn.

**Rogue (S):** You're the most versatile striker, with answers for nearly any situation in or out of combat. You gain great benefits from strong tactical play.

**Runepriest (L):** Of all leaders, you're the best in melee combat, with good armor and frequent bonuses to damage rolls.

**Seeker (C):** Your powers have tremendous range, and you have great single-target powers for a controller.

**Shaman (L):** Your powers offer tremendous opportunities for tactical mastery.

**Sorcerer (S):** You combine the high damage of the striker with the multitarget attacks of the controller.

**Swordmage (D):** You're very mobile, and unlike other defenders you're good at fighting distant enemies. You can protect your allies even from across the battlefield.

**Warden (D):** You're incredibly tough and durable, and the best at shaking off harmful conditions. Your guardian form powers let you customize your defensive prowess for key battles.

**Warlock (S):** You frustrate your enemies with deception, teleportation, and nasty control powers.

**Warlord (L):** You make your allies look great by giving them extra movement and attacks. Your fighter hits enemies with his sword, but you hit enemies with your fighter.

**Wizard (C):** Your spellbook, ritual selection, and cantrips provide the widest range of problem-solving options of any character.

## TELL US ABOUT YOUR CHARACTER

I am a huge fan of playing characters that are fun to roleplay, even if they aren't optimized. As a result, I often base my characters on TV shows and movies (Doc Holliday from *Tombstone* for my sickly halfling rogue, or the Dude from *The Big Lebowski* for my gnome bard). One of my most memorable characters was Zwardheb the dragonborn paladin, whom I based on Ben Edwards's classic superhero, the Tick.

Zwardheb was an incredibly strong, virtually indestructible moron. I tanked his Wisdom (not the best stat for a paladin to tank) and Intelligence to bump up his Constitution, Strength, and Charisma. His Dexterity, and thus his Reflex, remained at base levels, but this wasn't a character that got out of the way of things. I made him an avenging paladin of Bahamut, the only build that allowed me to dodge his crippling Wisdom, and gave him feats to enhance his unstoppable juggernaut of justice persona.

I would never recommend this build for a paladin. His low Wisdom modifier made half the class's powers unusable. However, that let me focus on powers more appropriate for his character. *Divine challenge* gave me plenty of excuses to cry out Tick-inspired threats of justice at my enemies. I loved charging headlong into the fray, depending on lots of hit points to keep me alive, screaming "Never swim against the mighty tide of justice!" as I went. That my character's lack of Intelligence and Wisdom got us into the situation in the first place was beside the point.

In the end, mighty Zwardheb did indeed fall as he held a bridge against a rampaging horde of bugbears. Even his stratospheric hit points could not survive 15d10 falling damage. But he died holding the line against a tide of evil, which seems appropriate. Zwardheb would have met his end in no other way. As the oft-clueless paladin would say: "The insomnia of evil is no match for the mighty *sleep* spell of justice!"

*REID SCHMADEKA works in Organized Play at Wizards of the Coast as corporate programs manager. Luckily, the job is more exciting than it sounds. He is an avid D&D player, and he enjoys daggers, moonlit sneak attacks, and long tumbles on the beach.*

# CHOOSING YOUR RACE

Ask a player to describe his or her character: Odds are that he or she uses both race and class in the first sentence. Why? Compared to your selections of powers and feats, your race makes only a marginal contribution to your list of mechanical options. Instinctively, however, players recognize the importance that the choice of race has on a character's identity. Race influences a wide variety of aspects, such as a character's accent, speech patterns, clothing, backstory, and feat and paragon path prerequisites. Even a character's name often owes a debt to his or her race: Someone named Tordek Stonewalker isn't likely to be an elf.

Just as your class choice often operates as shorthand for the party role you plan to assume, your race can act as a signal to other players about the personality you intend to depict through your character. Sure, you could play an ale-swilling half-elf who has a plaited beard and a predilection for living in caves, but if it walks like a dwarf and quacks like a dwarf.…

Before committing to a particular race, learn about any restrictions or alterations your DM has applied to the races present in his or her campaign setting. Even if elves are mechanically identical to the race depicted in the *Player's Handbook*, the fact that they live as slaves to hobgoblin warlords might influence your decision to play an elf rogue.

Beyond the story you want to tell with your character, a race's mechanical traits affect your choice of

| Seeker | Wisdom | Deva, dwarf, elf, githzerai, human, kalashtar, longtooth shifter, minotaur, razorclaw shifter, shardmind, wilden |
| Shaman | Wisdom | Deva, dwarf, elf, githzerai, human, kalashtar, longtooth shifter, minotaur, razorclaw shifter, shardmind, wilden |
| Sorcerer | Charisma | Changeling, dragonborn, drow, gnome, half-elf, halfling, human, kalashtar, shardmind, tiefling |
| Warden | Strength | Dragonborn, genasi, goliath, half-orc, human, longtooth shifter, minotaur, warforged |
| Warlock | Charisma | Changeling, dragonborn, drow, gnome, half-elf, halfling, human, kalashtar, shardmind, tiefling |
| Warlock | Constitution | Dwarf, half-elf, gnoll, goliath, human, minotaur, revenant, warforged, wilden |
| Warlord | Strength | Dragonborn, genasi, goliath, half-orc, human, longtooth shifter, minotaur, warforged |
| Wizard | Intelligence | Changeling, deva, eladrin, genasi, githzerai, gnome, human, shadar-kai, shardmind, tiefling |

# WHAT RACE ARE YOU?

Many players have an affinity for particular aspects of the D&D races, whether it's the pluckiness of a halfling or the gruff temperament of a dwarf.

Take this quiz to learn which of the eight races in the *Player's Handbook* has the most in common with your own personality and style.

## Instructions

For each question, choose the answer that best applies. Then, find your answers in the key below. Add up the number of answers you gave for each race to see which one is the best match.

**1. What is your most distinguishing physical feature?**
A. My short stature.
B. My ears.
C. My teeth.
D. Actually, I look like lots of people.

**2. What do people remember about you?**
A. I know everything.
B. Everybody likes me.
C. I never get sick.
D. Fastest hands in the kingdom!
E. My big muscles.
F. You can't put one over on me.
G. I'm good at everything.

**3. Which trait is most important to you?**
A. Loyalty to friends.
B. Self-sufficiency.
C. Versatility.
D. Luck.

**4. What do you do when you're in a tight spot?**
A. I slip away to fight another day.
B. I talk my way out of trouble.
C. I stand my ground no matter what.
D. I make my enemies regret the day they were born.

**5. What is your favorite color?**
A. Gold, the color of wealth!
B. Red, the color of blood and fire!
C. Green, the color of nature!
D. Silver, the color of a fine blade!

**6. What does it take to become your friend?**
A. Hard-earned trust.
B. Anyone who stands beside me in battle is my friend.
C. A kind and joyous heart.
D. I can get along with anyone.

**7. How do you feel about the past?**
A. I miss the old days.
B. Remembering the past helps shape the present.
C. Nostalgia is overrated; I live for today.
D. The best is yet to come . . . and I'm going to help make it happen!

**8. What's the last letter of your name?**
A. A
B. R
C. S
D. N
E. Something else.

**9. How's your family life?**
A. I respect my ancestors above all.
B. I enjoy spending time with my great-great-grandparents.
C. I live on my own, taking care of myself.
D. Let me introduce you to all my cousins!

**10. Where do you feel most at home?**
A. A noisy tavern.
B. A dark alley.
C. A raucous battlefield.
D. The peaceful wilderness.

### Scoring Key

**Dragonborn:** 1C, 2B, 2E, 3A, 4D, 5B, 5D, 6B, 7A, 8A, 8B, 8D, 9A, 10C
**Dwarf:** 1A, 2C, 2F, 3B, 4C, 5A, 6B, 7B, 8B, 8D, 9A, 10A, 10C
**Eladrin:** 1B, 2A, 1D, 3A, 4A, 5C, 6A, 7B, 8A, 8D, 9B, 10D
**Elf:** 1B, 2D, 2F, 3D, 4D, 5C, 6C, 7C, 8A, 9B, 10D
**Half-elf:** 1B, 1D, 2B, 2C, 2G, 3C, 4B, 5C, 6D, 7D, 8D, 8E, 9C, 10A
**Halfling:** 1A, 2B, 2D, 3D, 4A, 5A, 5C, 6D, 7C, 8D, 8E, 9D, 10A, 10D
**Human:** 1D, 2G, 3C, 4C, 5A, 5D, 6D, 7D, 8E, 9C, 10A
**Tiefling:** 1C, 2A, 2B, 3B, 4B, 5B, 6A, 7A, 8A, 8C, 8E, 9C, 10B

## Scoring Your Race Affinity

Add up the number of points you scored for each race.

**8 or more:** I think we just learned about one of your past lives!
**5 to 7:** You have a lot in common with this race, even if you're not quite a paragon of its attributes.
**2 to 4:** You can probably get along with folks of this race, even if your tastes differ in many areas.
**0 or 1:** You would probably not be happy playing a character of this race.

## MATCHING PRIMARY AND SECONDARY ABILITY SCORES

| Class | Build | Ability Scores | Matching Races |
|---|---|---|---|
| Ardent | Enlightened | Cha, Wis | Kalashtar |
| Ardent | Euphoric | Cha, Con | Half-elf |
| Artificer | Battlesmith | Int, Con | None |
| Artificer | Tinkerer | Int, Wis | Deva, githzerai, shardmind |
| Artificer | Warrior Forge | Int, Wis | Deva, githzerai, shardmind |

*continued from page 18*

your character's race. Every race has a variety of traits that differentiate it from other races. However, these fall into a limited range of categories. When selecting your race, consider how each race's traits—ability score bonuses, racial powers, skill bonuses, and other miscellaneous racial traits—interact with your preferred class (or, if you're choosing race first, how they might guide your later class selection).

## Ability Score Bonuses

Every class has a primary ability score that it uses for its attack powers. To maximize the accuracy and damage dealt by your powers, consult the Matching Primary Ability Scores table and select a race that has an ability score bonus that matches your preferred class's primary ability score.

A few classes have two primary ability scores influencing their attack powers. These classes appear twice in the table, with a different list of matching races for each line.

In addition to a primary ability score, most classes have secondary ability scores that affect their powers and class features. Matching one of your race's ability score bonuses to a secondary ability score of your class makes you more effective.

The Matching Primary and Secondary Ability Scores table lists these combinations based on racial ability score bonuses. The first column lists the classes in alphabetical order. The second column lists the builds of each class (or in the case of warlocks, the pacts), and the third column lists the ability scores for that build (primary, then secondary). The fourth column lists the races that match each build (those that have bonuses in both the ability scores listed).

The table includes all races that have received full treatment as player character races. It does not include races not fully designed as player characters, such as goblins or githyanki, even if those races appear in the D&D Character Builder.

ADAM PHILLIPS

## Racial Powers

Although your ability score bonuses contribute significantly to optimally matching your race and class, your racial power helps make your character unique. An eladrin rogue who uses *fey step* to teleport into (or out of) battle feels very different from the changeling rogue who gets close to a target by posing as a trusted ally.

Think about how your character might use the racial powers of the various races you're considering. Some powers, such as *elven accuracy*, contribute equally well to just about any class, but others work best with a subset of classes. For example, both the halfling and the drow offer useful ability score bonuses for the trickster rogue build, making them seem equally optimal. However, the drow's ability to gain combat advantage through the use of racial powers meshes well with the rogue's Sneak Attack class feature.

## Skill Bonuses

To maximize the benefit of racial skill bonuses, match them up with a class that includes those skills on its class skill list, then select them as trained skills.

For example, the halfling's bonuses to Acrobatics and Thievery match up well to the rogue's skill list. A halfling chaos sorcerer doesn't get much benefit from those skill bonuses, since he's unlikely to use the skills very often.

## Other Traits

In addition to the basic categories shared by nearly every race, each race offers a variety of miscellaneous traits. Don't assume that these traits can't have an impact on your choice of class and build.

For example, the dwarf's speed of 5 squares makes the race a suboptimal choice for any class that relies on frequent movement (such as the avenger or the ranger), but it's not a drawback for a heavily armored character because of the dwarf's Encumbered Speed racial trait. When you also consider the benefits of Dwarven Resilience and Stand Your Ground, the dwarf starts looking like a solid choice for a melee-based defender class, even if the race's ability score bonuses don't quite match up.

## Playing Against Expectations

As a player, don't feel forced to choose a race because of its compatibility with classes or because of tradition. Regardless of the class you choose, few racial traits prove useless. In fact, playing against type often makes for the most interesting and memorable characters. Here are a few examples of how you can make unusual choices work, both mechanically and flavorfully.

**Baern Fireshaper, Dwarf Wizard:** Traditionally, most players don't associate dwarves with arcane magic. The stereotypical magic-hating dwarf often actively disdains the wielders of such powers. Furthermore, many dwarf racial traits—such as Dwarven Weapon Proficiency and Encumbered Speed—match up poorly with the needs of the typical arcanist.

On the other hand, dwarves value tradition, so why not prize the wizardly practices passed down through generations? Dwarves have a strong elemental heritage, which suggests potential links to fiery arcane spells. And Dwarven Resilience gives the normally fragile wizard a nice dose of survivability.

If you're ready to play an ale-guzzling, beard-scratching, curse-shouting spell-slinger, ignore those firm suggestions of "Eladrin!" from the other players and bring Baern Fireshaper to the table for the next campaign.

**Tryn Woodwalker, Halfling Barbarian:** Although brave and stout of heart, halflings are also cheerful and known for their love of luxury. They wander the edges of civilization, rarely far from the river, road, or inn. They don't commonly manifest the savage blood thirst and primal anger that drives the barbarian, and they lack the physical power associated with this class.

But not all halflings pick the pockets of the locals and enjoy creature comforts. Perhaps you belong to a tribe of savage, primal-spirit-worshiping halflings living deep in the wilderness. In the dense underbrush of the woods or jungle, speed and agility can be more important than size and strength. Your racial bonuses to Dexterity and Charisma lend themselves to either the thaneborn the or the whirling barbarian builds, and your *second chance* racial power is just as valuable as a pile of extra hit points.

So when one of your comrades snickers about your "cute little barbarian," kick him where it hurts, then laugh as you easily dodge his clumsy counterattack. Let's see a half-orc pull off that trick!

**Nadarr the Cruel, Dragonborn Rogue:** Proud and noble, the dragonborn value honor above all else. Their culture views acts of theft, lying, swaggering, shadowing, sniping, and manipulating as dishonorable, rather than simply as means to an end. They prefer to fight from a position of strength, not a place of secrecy.

A smart rogue can take advantage of that reputation to gain an edge. Maybe your dragonborn grew up apart from others of his or her people. You still appreciate history, but you like it for the gritty survival lessons it teaches, not for its glorious tales of battlefield renown. You use your physical and social prowess to bend others to your will—your bonus to Intimidate checks comes in handy in back-alley negotiations, and your Dragonborn Fury means you're toughest when backed into a corner. Make sure to give yourself at least a 12 Constitution to gain some benefit for Draconic Heritage and *dragon breath*.

Sure, you can expect some odd looks at your six-foot-six, 280-pound rogue slipping quietly through the shadows, but you'll get the last laugh. Let the halflings and drow rely on trickery—after all, who's going to expect someone as big as you to steal their coin purse?

# SETTING YOUR ABILITY SCORES

If any character-building decision has a longer history of in-depth dissection, optimization arguments, and outright dissension between storytellers and power gamers than assigning your character's ability scores, we'd be surprised. Since the earliest days of Dungeons & Dragons, the task of generating those six numbers might well have caused more crumpled character sheets than mind flayers and medusas put together.

The *Player's Handbook* describes three methods of generating your ability scores. This book focuses on Method 2 (customizing scores). Method 1 (standard array) is fundamentally the same as Method 2. The standard array represents a solid, middle-of-the-road set of ability score allotments, which you could easily generate using the customizing method.

Technically speaking, Method 3 (rolling scores) can also generate a similar array of ability scores, though you're just as likely to get a range of numbers above or below the standard array. We don't recommend rolling ability scores unless everyone in your group acknowledges that some characters will be better than others from Day 1. Most players prefer everyone to start on a level playing field. If you do use this method, you can use the guidance here to assign the scores effectively.

## Start at the Top

Start by assigning your highest score to your primary ability score. Assuming you have a racial bonus to your class's primary ability score, this should be a 16, 17, or 18 (before assigning the bonus). If you don't have a racial bonus to that ability score, think long and hard about shelling out the points for an 18. Sure, you can play a fighter with 14 Strength, as long as you enjoy missing on a lot of attacks.

Using Method 2 as a guide, this costs you 9, 12, or 16 points from the 22 you have to spend.

## Secondary Ability Scores

Every class has at least one other ability score that influences its features and powers. In most cases, you don't need this score to be as high as your primary ability score. A 12, a 13, or a 14 (before racial ability bonus, if any) is usually good enough.

If this secondary ability score contributes to a different defense than your primary ability score, lean toward a higher secondary score. Even if the class-based payoff is minimal, you'll appreciate the extra point or two of defense it grants you.

Some classes might tempt you into setting two secondary ability scores roughly equal to one another. Unless your racial bonuses line up particularly well—or if your primary and secondary scores are all in different defense pairs—this is usually a mistake.

Assigning this ability score likely costs you 2 to 5 of your remaining 9 to 13 points.

## Filling Out the Rest

At this point, you might have anywhere from 4 to 11 points left to assign to your remaining four ability scores. You could just split them up evenly, but D&D tends to reward specialization over generalization, so avoid doing this.

Instead, pick out an ability score into which you can afford to put 0 points. This is often the other half of a defense pair you've already assigned; for instance, rogues can usually afford an 8 Intelligence because their high Dexterity already helps their AC and Reflex.

Even though you probably haven't chosen skills yet, think about the key ability scores you might need later. Don't put that 8 in Wisdom if you expect to be the party's high-Perception scout.

Now you're left with three 10s and some points to spend. Assign a 12, a 13, or a 14 to a defense pair that doesn't already have a better score. If you need help in two defense pairs, you probably can't do better than a 12 or a 13 in one of them.

If you can afford it, put a 12 or a 13 into an ability score to help out one of your skills. For example, if you want to be an athletic rogue, a 12 or higher in Strength helps your climbing and jumping.

### ODD OR EVEN?

At first glance, setting an ability score as an odd number seems like a waste. A 12 and a 13 both result in a +1 ability modifier, so why bother spending the resources on the 13? Well, here's why.

**Prerequisites:** Many feats have ability score prerequisites, and these are always odd numbers. Thirteen is the most common ability score prerequisite used at the heroic tier, but some feats require a score of 15. These prerequisites increase at higher tiers; some epic feats require a score or 21 in a particular ability.

You probably don't know yet whether you need to meet a feat prerequisite. Be prepared to revisit one or two of your ability score assignments later on in character creation.

**Ability Increases:** Starting at 4th level, you get to improve your ability scores a point at a time. Setting your fighter's starting Strength to 17 rather than 16 doesn't make much difference during levels 1 to 3, but when you hit 4th level you'll notice that 18.

# Choosing Your Background

The *Forgotten Realms® Player's Guide* introduced the concept of backgrounds, a pairing of story information with small mechanical benefits that relate to a character's upbringing. These earliest backgrounds derived from the region in which the character was born, but later supplements (particularly *Player's Handbook 2*) expanded the concept to include a wide variety of other notable story elements of the character's history before becoming an adventurer, such as a remarkable event of the character's birth or the character's former nonheroic occupation.

Think of background elements as seeds for growing the story of your character's identity. Although a few elements can't hope to describe the entirety of your character's background, they can certainly spur your creativity by suggesting story hooks, and they can inspire your roleplaying by having you think about who your character is and where he or she is from.

For story purposes, you can select as many background elements as you want. If you want for your human character to have been born among elves in a forest during an ominous storm, grown up poor as a farmer before turning to crime, and only then taken up life as an adventurer, that's fine. But after a certain point, the proliferation of background elements becomes cumbersome and counterproductive to building a coherent story. We advise choosing three to five elements from which to build your character's background.

As you choose background elements, imagine how they work together to tell the story of your character's preadventuring life. Come up with at least one way that the background element contributed to your past, and how it might play a part in your future. Don't bother with choosing background elements just to fill blanks on a character sheet; this is an opportunity for storytelling, not a required chore. If one of your background elements doesn't suggest a significant life event, personality quirk, story hook, or other roleplaying opportunity, it might not be worth your time to choose it.

## Background Benefits

Regardless of how many background elements you choose, you only select one mechanical benefit. The most common background benefits offer a +2 bonus to checks with a particular skill, an extra class skill, or an extra language known, though some benefits—particularly the regional benefits found in the *Forgotten Realms Player's Guide*—offer some other unusual mechanical options.

For most players, the skill bonus is the simplest and best mechanical benefit to choose. If you select the skill bonus, you get the highest benefit by matching it to a class skill that you plan to select as a trained skill (just as with the skill bonuses granted by your race).

On the other hand, your background also offers the opportunity to pick up a skill outside your class's normal list of options. This can prove particularly useful if your party lacks access to certain skills. (Thievery is a common example of a useful skill that no character chooses as a trained skill, since it appears on so few class skill lists.) Just make sure you can afford to spend the skill training on this option; it doesn't do you any good otherwise. For an extra benefit, match up this newly gained skill with one of the skill bonuses from your race. (See why it helps to make these three decisions at the same time?)

If you play in a game in which languages come into play frequently—and if you followed "Know the Campaign" at the beginning of this chapter, you should know the Dungeon Master's opinion on this—consider selecting the extra language instead. The difference between rolling a 16 or an 18 on a skill check can pale in comparison with the difference between cogently explaining to the angry ogres why they shouldn't kill you and having them pick their teeth with your bones after the brawl.

## Reimagining Existing Backgrounds

What if you can't find a published background that matches your vision of the character you want to play? The regional backgrounds published in various campaign settings might seem like a poor fit for the homebrew campaign your DM has crafted, or maybe you just have an unusual combination of race, class, and other character elements that defies the puzzle-piece approach to existing background elements.

With your DM's permission, you can tweak existing backgrounds to better fit the campaign and your character concept. Backgrounds are intended to be about story first and mechanics second. The mechanical benefits are really just a small bribe for those players who would otherwise show up at the table without a character backstory. You know who we're talking about, right?

Here are two examples of published backgrounds that have been reimagined for characters whose backstories don't quite match the backgrounds' original intent. The first case presents a situation in which the player likes the mechanical benefit but doesn't want

the associated story material, and the second presents an appealing story hook that just needs a new flavor.

**Arcane Experimenter:** Reading the *Forgotten Realms Player's Guide*, you come across the description of the Akanûl region: "Akanûl is a land defined by extreme geography, eldritch beasts, and genasi. A new nation formed in the devastated and warped lands between Chessenta and Chondath, Akanûl has overcome great adversity and is now a name to be respected and feared." You don't care so much about that part—your DM has already told you that you're playing in Eberron, not the Forgotten Realms, and you don't plan to play a genasi—but the regional benefit excites you: "You gain resist 2 cold, resist 2 fire, and resist 2 thunder (or your existing resistance to these damage types increases by 2)." Not only do you like the idea of resisting some damage, you can already imagine a character known to all the locals as enjoying a strange, supernatural immunity to environmental hazards.

Instead of hailing from the unusual land of Akanûl, you decide that the regional benefit comes from magical research carried out during your wizard character's apprenticeship. Your wizard's bold creativity and dumb luck turned failed experiments into energy-resistant skin rather than burning your character alive.

Your DM recognizes that the regional benefit granted by this background is on the powerful side—particularly when compared to the more generic background elements published in other supplements—but he's willing to compromise. Since none of the other players are using the potent regional benefits, he suggests dropping one of the three resistances. You agree to relinquish the thunder resistance, and both of you end up happy with the character.

**Psionic Refugee:** While creating your battlemind, you stumble across the Arcane Refugee background from *Arcane Power*. You like playing lone wanderers, and the idea of playing a character permanently scarred by a mysterious conflagration that destroyed your home appeals to you. Though the background is aimed at a wielder of arcane magic, you see no reason why you couldn't reimagine the catastrophe—and the ensuing studies you began in secret—as psionic instead.

Since this background is pretty simple, your DM doesn't have any concern about the new flavor you've added. In fact, you've even given her an interesting story hook for a later adventure: figuring out what psionic cataclysm set you on your path.

## Creating a New Background

Some players take great pains to write elaborate, even labyrinthine backstories for their characters, describing a life so unusual that no writer could ever have foreseen it and written an appropriate background element. Alternatively, your DM might present his or her own completely original setting for a campaign, making existing regional or geographic backgrounds obsolete. Whatever the reason, the best answer might be to craft your own background elements, including the mechanical benefits they grant.

Before you go to the trouble of designing your own background elements, see if you can build the background you want by using or reimagining existing elements. Waterdeep and Greyhawk City certainly

MIKE FAILLE

aren't interchangeable, but as bustling, cosmopolitan gatherings of many races it's easy to imagine them sharing the same regional benefit: all you have to do is replace the Waterdeep flavor with appropriately Gygaxian descriptions and you're set.

But if that doesn't work, don't throw away your unique backstory just to fit into some author's prefabricated background structure: Build your own background element by combining a compelling story hook with a minor but useful mechanical benefit. (Because you get only one mechanical benefit from your character's background, you only have to design one benefit, no matter how many new background elements you write.)

For most players, starting with the story helps fuel the creative fires. Your story might be simple: "My human ranger grew up on a pig farm a few miles from Greyhawk." Or it might be bizarre: "My genasi wizard's parents lived in Sigil and belonged to the Society of Sensation, so I had all sorts of unusual experiences growing up. By the time I was 12, I had traveled to three different planes, I had died twice, and I had an extra arm for a whole year."

Don't forget to include your DM in these story concoctions. Chances are, he or she has put a lot more thought into the campaign setting than you have, so why not take advantage of that expertise? D&D is a shared story experience, but most DMs feel a certain level of stewardship over their campaign settings, and before you introduce an unexpected element, it's only fair to see that the DM is okay with your idea.

Some players see the background's mechanical benefit as the crucial character-building hook they need. Maybe you really want an excuse for your fighter to be trained in Thievery, or you think it'd be cool for your dwarf cleric to speak Primordial. Again, touch base with your DM, particularly if you come up with a mechanical benefit that doesn't resemble one that already exists in another background.

Here are two examples of new backgrounds that a player might propose to his or her Dungeon Master:

**Mercenary Negotiator:** You want your half-elf fighter to have expertise in languages, but none of the background elements you find grant more than one extra language.

In chatting with your DM, you describe your character as part of a family that served as guides and bodyguards along a trade route between somewhat unfriendly human, dwarf, and elf settlements. Merchants traveling along the route needed mediators to negotiate border passage and protect against brigands, and fluency in many languages was crucial.

Growing up surrounded by different languages, your character developed fluency in Dwarven and Goblin. As a mechanical benefit, it doesn't exactly threaten the game's balance, even though other background elements typically grant only one extra language. Still, it's weaker than the Linguist feat (which grants three new languages), so the second language feels right for a new background's mechanical benefit. Your DM agrees.

**Immortal Scion:** You want to create a tiefling character descended from immortals. You decide that your character is descended from a star-crossed love affair between an angel and a succubus. Your parents were exiled from the Astral Sea for their actions, and you were born in the City of Brass. Soon afterward, both parents were assassinated by unknown killers, and you were spirited out of the city. Humans ignorant of your past raised you to adulthood, but through your dreams you recall shreds of memory of your youth.

You want your mechanical benefit to represent the vitality granted by your immortal heritage. You devise the idea that each time your character reaches a milestone, he regains a healing surge.

Your Dungeon Master likes the story angle—she already has ideas about how your parents' murderers might reappear later in the campaign—but she balks at your mechanical benefit. "That seems awfully good," she says, "much better than the benefits the other characters are getting from their backgrounds." You counter by pointing out that it's not as good as the two extra healing surges granted by the Durable feat (unless you hit at least three milestones in a single day). She agrees to let you try it out, but requests the right to reevaluate it after a few sessions.

## Using Backgrounds from the Nentir Vale

Precariously situated on the borderland between civilization and chaos, the Nentir Vale region—introduced in the *Dungeon Master's Guide* and explored in several other supplements and adventures since then—teems with possibilities for action and intrigue. Since it's familiar to most readers, we'll use it as an example of how to insert your chosen background elements into an established campaign setting. Follow the efforts of Ben (dragonborn fighter), Paul (half-elf ranger), Louisa (half-elf druid), Jerry (human cleric), and Sarah (tiefling warlock) as they begin to integrate their backgrounds into the setting.

Notice how some players choose elements that don't quite fit the setting. Everybody likes to be unique, and selecting a background element that marks you as a bit of an outsider can provide that feeling without completely ignoring the DM's lovingly crafted world. In each case, however, the player has made an effort to tie some aspect of his or her unusual background to the Nentir Vale.

As you read this section, imagine both sides of the conversation between the players and the Dungeon

Master that resulted in the conclusions below. Where might the DM have balked at a player's background idea? What challenges might the players have experienced trying to understand the key themes of the setting? Thinking about these questions helps you understand how to talk to your DM about the backgrounds you choose.

Unless noted otherwise, all background elements mentioned here appear in *Player's Handbook 2*.

**Location, Location, Location:** The most straightforward way to connect the setting and your character's story is to select a geographical element reflecting your character's birthplace or native environment.

Ben's fighter, hailing from the Cairngorm Peaks (background: mountains), instinctively distrusts the lowlanders occupying the rest of the vale.

Paul decides that his ranger grew up in sun-seared badlands, far from the Nentir Vale (background: desert). He never stops complaining about the cold, not to mention the difficulty of guarding against ambush in the dense thickets common to the vale.

**Know Your Place:** The game assumes that most characters enjoy a modest but comfortable place in society, but why not buck that assumption by choosing a different economic standing?

Sarah describes her tiefling as a direct descendant of one of the ancient rulers of Bael Turath, still retaining a measure of aristocracy despite the long years (background: noble). She has come to the Nentir Vale following rumors of tiefling ruins in the Witchlight Fens, and looks to her comrades to help her reestablish her family's position.

**Your Last Job:** Most characters aren't born as adventurers. What did you do before you starting delving into dungeons, and how does your previous work influence your approach to adventuring?

Louisa decides that her druid helped raise livestock before hearing the call of the primal spirits (background: farmer). Until recently, she lived with her family on a farm across the Nentir River from the town of Fallcrest.

Jerry's character studied religious lore at the Temple of Erathis for years before becoming a full-fledged cleric (background: scholar). He still believes that the best way to solve any problem is to think it through before acting.

On the other hand, Paul declares that his ranger didn't just leave the desert to flee the heat: He was an escaped convict (background: criminal) running from local authorities. He claims that he's not wanted in Fallcrest, but he keeps looking over his shoulder, anyway.

**Accept Your Heritage:** Many races offer unique background elements that help set them apart from other people. Don't just write "dragonborn" on your character sheet when you can acknowledge your identity by selecting a dragonborn racial background element.

While living in the Cairngorm Peaks, Ben's fighter discovered an old cave bearing Draconic runes. He believes the cave dates back to the time of Arkhosia, and he wants to learn more about his people's past (background: brush with the past).

**Embrace a Theme:** It's one thing to pick up the name of a person or a place when crafting your background. Linking your story to one of the key themes of the campaign setting provides an even more valuable tool for players and DMs alike to build a compelling experience for everyone.

Sarah's warlock hasn't yet revealed her secret to her allies: She works as an agent for a mysterious group of arcanists claiming to work for the public good (background: arcane agent, from *Arcane Power*).

STAN! BROWN

## TELL US ABOUT YOUR CHARACTER

There's a disconnect in how we tell stories and how we play stories. Effective stories require a single strong viewpoint character. Most successful multiple-character stories actually split the narrative to accommodate these different viewpoint characters. For instance, in the gold standard of heroic fantasy mythology, *The Lord of the Rings*, Tolkien splits up the Fellowship for at least two-thirds of the story. In television—the media structure most similar to a roleplaying campaign—we actively call out these storylines as "A, B, and C stories" when breaking an episode. Many times in the story development process, when things seem muddled, we can track the problem back to the choice of a weak viewpoint character.

When we play stories, however, we each play our own viewpoint character. Good groups often align their characters' goals over time, and good DMs spend a fair bit of their time juggling those characters' motivations. But there are always conflicts, and though divergent goals can create fun moments, they only work when some overriding goal unites the party.

I take my character out of that part of the game. His job is to enable other characters. I'm the hired help, the ticked-off native guide, or the gunny sergeant. I get to deliver the most important line in all of storytelling: "So, let me get this straight. . . . "

I play the sidekick. You should give it a try.

Ironically, playing a sidekick requires as much if not more prep than usual. Because your character's motivations are largely independent of the campaign's ongoing storyline, you must engage in world-building just like the DM. What your sidekick character needs is a great, exciting Act Zero.

Act Zero is not backstory. Backstory is poorly named, because it's rarely story: It just rehashes where your character grew up or who he was before he started adventuring. In contrast, Act Zero is film slang for "the story that happened before." It requires all the trappings of a proper narrative, including intent, difficulties, resolutions, and complications. Your goal is to create a story starring your sidekick character that overlaps the story the other characters are playing in the campaign.

Let me lay out a character in the campaign I'm playing now: the human ranger, Jan Kormick. The setting is a magical Venetian society. The intricate relationships of the main city's families are a crucial part of the campaign Each of the other characters either comes from or works for one of these aristo families. Jan, however, comes from a miserably corrupt border city. He's just their guide, their sidekick.

In a series of short scenes, each just a few paragraphs long, I lay out the big moments in Jan's life up to the point of the campaign's opening session. I use other people's viewpoints in this section of the character development. Forcing myself to view my own character only through actions and dialogue—the way the other players will interact with him—helps sharpen his voice.

We begin our Act Zero with a scene featuring an assassination attempt on the would-be king of this border city, told through the target's eyes. The accidental death of a serving girl during that attempt is filtered through politics and characters the DM never needed to create (but can now draw upon for the campaign if he wants). Jan Kormick is that girl's younger brother, and his murderous response sets him on his path. He wants vengeance, but he cannot have it. Yet.

The second scene is from the viewpoint of a magical university's headmaster dealing with an amusingly troublesome student smuggling smokes and liquor into this private academy. The headmaster likes young Jan Kormick, even though he knows the boy is not long for this place.

In the third scene, a smuggler humors an inept agent of the king as the young man tries to unravel the crime ring working out of the man's caravan. Too late, the smuggler discovers Jan Kormick is a bit more than he appears, and it all ends in blood.

In the fourth scene, paladins have finally come to this backwater cesspool of corruption. The lead officer is not having a very good time of it, until a helpful man arrives to . . . well, cheat and game the system. Jan Kormick understands that getting to the influential people who killed his sister requires him to bring rule of law to his country, by any means necessary.

And in the last brief write-up in my Act Zero, we meet the king again, laying his plans for total political dominance of the peninsula. During the meeting he cuts one of his agents, Jan Kormick, loose to run an errand. That errand: acting as a guide for a group of influential nobles in a neighboring country. . . .

There we go. Jan's goal is to establish a just government in his home country to avenge his sister. That can never be accomplished within the span of the campaign; the campaign isn't even set in that country. But we know how he deals with institutions and rules. We know how he solves problems, his capacity for violence, what he finds funny or fair. We've heard him talk to people from different social classes. We know his attitudes, his voice, and his actions. Jan will evolve, but he comes to the campaign a fully developed character who'll contribute to the tale the group tells together.

*JOHN ROGERS is a film and television writer. He created the show Leverage, the story of a party of 10th-level rogues who take on corporate bad guys.*

Her secret reason for coming to Fallcrest? Infiltrating the Seven-Pillared Hall, underneath Thunderspire Mountain, to learn more about the rival organization known as the Mages of Saruun.

**Something Special:** Backgrounds are more than just a collection of places and occupations. Sure, even a farm boy can turn out to have an exciting backstory (just ask that kid who used to bulls-eye womp rats in his T-16), but that's because his player remembered to include "Secret Child of Dark Overlord" as one of his background elements.

As mentioned earlier, each of your background elements should add something important to your character's history. Adding something fantastic or supernatural to the mix can provide an extra jolt of creativity that moves your background from mundane to magnificent.

Louisa's half-elf druid was raised by human farmers, but she's not their child: They discovered her on the edge of a nearby forest (background: found in the wild, from *Primal Power*). Does that forest hide the secret that eventually manifested in her as primal power? (Of course it does!)

When Jerry's cleric was born, High Priest Dirina Mornbrow of the temple of Erathis proclaimed that his birth had been foretold by tales handed down many generations (background: prophecy). It was only natural that the character study religion under Dirina and become a cleric of Erathis himself.

## TELL US ABOUT YOUR CHARACTER

I enjoy D&D most when my character survives. More to the point, I have the most fun when my character ends the fight without a scratch. Yet when 4th Edition was ready, I thought I would broaden my horizons a bit, playing a really good defender. For once I'd take the wallops. I decided to play Bartho, a dumb human fighter of the mold of Groo the Wanderer or Brom Bones.

Of course, I still didn't like taking damage. So I hunted through the system for ways to ramp up my defenses and my hit points. Now Bartho routinely draws half a dozen foes to his side and stands unconcerned amid their rain of blows. He walks past lesser foes, heedless of their attacks. And once, he leapt for a chain and missed, missed the platform beneath it, and fell over a hundred feet to land face first on stone. Then Bartho used an action point to stand up and say to bystanders, "Whoa! Did you see that? I mean . . . whoosh, and then bang!"

I've been playing Bartho since before 4th Edition was released, and I'm still having a blast. With every level, I look for a new way to make Bartho more impenetrable or to give him a means of bouncing back from attacks. Bartho is surviving—sixteen levels and he hasn't died yet—and he's being a great defender. Bartho sucks up a ton of attacks and renders them worthless . . . unless it's an attack against Will. But hey, that keeps things interesting.

*MATT SERNETT is a writer and game designer for Wizards of the Coast who splits his time between Dungeons & Dragons and Magic: The Gathering. His recent credits include Player's Handbook Races: Tieflings, The Plane Above: Secrets of the Astral Sea, and Magic the Gathering: Zendikar. When he's not making monsters or building worlds, he's watching bad fantasy movies you don't realize exist and shouldn't bother to learn about.*

ADAM PHILLIPS

# WHAT ALIGNMENT ARE YOU?

Every D&D character has an alignment, from lawful good to chaotic evil, indicating his or her dedication to a set of moral principles. This quiz can help you decide which of the five alignments from the *Player's Handbook* best describes your character.

## Instructions

For each question, choose the answer that best applies. Then, find your answers in the key below. Add up the number of answers you gave for each alignment to see how closely your character matches it.

**1. Which of the following qualities do you value most in your allies?**

A. Loyalty
B. Kindness
C. Passivity
D. Ambition
E. Brutality

**2. When is lying acceptable?**

A. Never. Truth is always the best answer.
B. Small lies are okay if they help people feel better about themselves.
C. Each situation is different and warrants its own considerations.
D. It's fine if no one finds out about it.
E. Whenever it gets me what I want.

**3. Which of the following "sins" is the most despicable?**

A. Treason. The state puts its trust in its citizens and expects the same in return.
B. Murder. No one has the right to take the life of an innocent.
C. I don't believe in sins. They impose a structured worldview that I do not espouse.
D. Weakness. It is a symptom of the collapse of society.
E. Selflessness. If you can't look out for yourself, what good are you?

**4. Children are . . .**

A. Tomorrow's heroes and leaders. We must protect them above all else.
B. Our future and our responsibility. It brings joy to my heart to help them grow and flourish.
C. What keep humanity in balance. Without children, the process of life, death, and rebirth would be disrupted.
D. A necessary evil. They should be seen, but not heard.
E. Always getting in my way. They're useless, unless one of 'em carries candy that I'd like to have.

**5. Killing is . . .**

A. Something best left to the decisions of our leaders.
B. Only appropriate to protect those at risk.
C. Something I would do to protect myself.
D. Appropriate for me to get what I want.
E. Good fun.

**6. You see a dozen goblins harassing an innocent family in a carriage. What do you do?**

A. No matter how many goblins are there, I do whatever I must to protect the family.
B. I try to lure the goblins away so the family can escape.
C. That's a lot of goblins. I go find the city guard so that they can help the family.
D. I wait for the goblins to finish, and then search the carriage for leftover loot. Unless I think I can take the goblins afterward and get all the treasure for myself, of course.
E. I offer the goblins my torch to light the carriage on fire.

**7. Which of these statements would your fellow adventurers most likely say about you?**

A. "Vargach always does the right thing, even when it's dangerous."
B. "Boldrik stands up for the little guy."
C. "Adrin prefers to mind his own business."
D. "Tasker likes to swipe coin purses from drunken merchants."
E. "Brinjac is wanted for theft, murder, and treason in three kingdoms and seven city-states."

### Scoring Key

A: Lawful good
B: Good
C: Unaligned
D: Evil
E: Chaotic evil

## Scoring Your Alignment

Add up the number of points you scored for each alignment.

**6 -7:** You are a paragon of this alignment.
**4-6:** You have a strong affinity for this alignment, but you might occasionally waver in your moral principles.
**3 or less:** You don't have much affinity for any particular moral perspective. You're probably unaligned (in that you haven't committed yourself to any particular set of morals).

# CHOOSING POWERS

More than any other decisions you make, your selection of powers differentiates you from other characters of your class or role. Even two paladins of the same race can play very differently at the table, depending on their list of powers. This section gives you pointers—and warnings—to help you choose powers to create the best character you can.

"Best" doesn't mean only "mathematically strongest"; consider factors other than just the amount of damage dealt. You can choose the most devastating powers in the game, but if they don't contribute to a fun character, you'll quickly lose interest in playing your unstoppable engine of destruction.

Do you like making lots of attack rolls on your turn? Look for multitarget powers, particularly large blasts and bursts. These powers probably don't deal as much damage (per target) as your single-target powers, but they increase the chance that you'll at least hit something.

Do you like staying active when it isn't your turn? Pick up powers that use immediate or opportunity actions, or that have an effect on your enemies' turns (such as certain auras). For some players, nothing brings more joy than killing a monster on its own turn, and these powers give you that ability.

Do you enjoy running all over the battlefield? Select powers that offer extra movement, particularly teleportation, and watch your character pinball between enemies.

The powers you pick help tell the story of your character, not just in dungeon battles, but also in the climactic encounter that your campaign will build toward for months or years. Will it end with a brutal shove that sends the villain flying 20 feet and into a pit of lava? With a crushing blow that destroys an eldritch machine used to raise hordes of undead? Or with an icy wall summoned to enclose a horde of enemies inside their own nefarious death trap? Choosing the right powers can help write the stories that bards tell the common folk—and that you tell your friends—long after the campaign is over. How will your character be remembered?

Some players see the Character Advancement table on page 29 of the *Player's Handbook* and falsely assume that because all characters gain powers at the same rate, they are somehow identical to one another. This simple conclusion overlooks the vast range of power options possessed by each class. Just because a fighter and a wizard both choose a new encounter attack power at 3rd level doesn't make those choices interchangeable—it just means that players have a familiar structure upon which to compare the various classes' abilities.

## Builds and Power Selection

Each class includes two or more recommended paths of power selection, called builds. The build you choose to follow can help direct your power selections throughout your career.

Some classes, such as the paladin or the cleric, provide strong guidance through their builds. For example, a battle cleric who has a high Strength score should stick to attack powers based on Strength; otherwise, the character takes a big hit on accuracy.

Other classes fall at the opposite end of the spectrum. The two builds of fighters in the *Player's Handbook* don't have a lot of specific build-supporting powers, so following a build doesn't mean as much for that class.

Most classes fall somewhere in the middle of these two extremes. Look for these two clues to find powers that match your preferred build.

**Class Feature:** Many powers—particularly encounter attack powers—include a subheading listing a particular class feature. In most cases, this class feature is linked to a particular build, which means the power is ideal for that build. The 3rd-level rogue power *topple over* gives a character who has the Brutal Scoundrel class feature—a feature suggested for the brawny rogue build—a bonus to the attack roll.

Powers that list your build's class feature are almost always solid choices. Conversely, you can usually ignore powers that list a class feature you don't have; though the power functions even without the extra benefit, you should only voluntarily choose a low-potency option if it strongly fits your character's image.

**Secondary Ability Score:** Some powers include a secondary ability score as part of the damage roll or otherwise use this score to calculate the power's effect. *Trickster's blade* (another 3rd-level rogue power), for example, allows the rogue to temporarily add his or her Charisma modifier to AC, making it a good match for the trickster build. (Okay, the power name was probably a tip-off as well, but they're not always that easy.)

For best effect, select these powers only when your secondary ability score is 14 or higher (16 or higher is preferable).

In addition to these two obvious clues, be aware of powers that match your build's preferred tactics. The trickster rogue is good at darting in and out of combat, gaining a bonus to AC against opportunity attacks. Any power that grants free movement—say, *leaping dodge*—works well with this build, even if the power doesn't clearly mention your class feature or secondary ability score.

## At-Will Attack Powers

Of the many powers you choose during your character's career, none will come up more often than your at-will attack powers. You use these powers in nearly every fight, and they can guide the decisions you make when choosing every other power you get. Beyond that, your at-will powers help define your character, becoming an important part of your identity. Honestly, who would Jim Darkmagic be without *Jim's magic missile*? In other words, picking the right at-will powers is important. (No pressure!)

Most characters start play with two at-will attack powers. (At this point, the players of human characters are smiling happily.) To pick a good pair of powers, remember one key thought: variety. Since you'll always be able to use either power, make sure the choices feel different. It's much more important that one of your at-will attack powers is useful in any given round than that both of them are equally useful all the time.

One way to keep variety in mind is to categorize your choices as either offensive or defensive attacks. Most classes have at least one at-will attack power of each of these categories. The examples below, for instance, come from the fighter, rogue, and ranger classes.

Offensive attack powers typically have high accuracy, deal extra damage, grant an ally an attack bonus or a damage bonus, or reduce the enemy's defenses. They allow you to accelerate combat by killing the monsters faster. *Cleave*, *sly flourish*, and *twin strike* are all offensive attack powers.

Defensive attack powers, on the other hand, might apply a penalty to an enemy's attack roll or damage roll, allow you to control the enemy's movement or offensive options, let you escape a dangerous position, or grant you or your ally temporary hit points or a bonus to defenses. These powers draw out a combat by increasing the characters' survivability. *Tide of iron*, *riposte strike*, and *nimble strike* are examples of defensive attack powers. (*Riposte strike* looks like an offensive attack power because of the extra damage it can deal, but it's really about limiting the enemy's options by telling it to attack someone else.)

By choosing one power from each of the two categories, you can ensure that you're always capable of contributing in the way the party needs you to in this round, either by containing a stray monster for a few rounds or helping sweep up the trash after the fight is already in the bag.

You can take two powers of the same type as long as you remember the maxim of variety. A wizard with *magic missile* and *scorching burst* (both primarily offensive options) can decide which power to use based on the situation, since one is a long-range, single-target power and the other is a burst. Compare that to a fighter with both *reaping strike* and *sure strike*. Both attacks have single targets, and both improve your chances of dealing at least some damage. They serve the same purpose, and although each might be better than the other in some circumstances, that small difference isn't worth the commitment of your only two at-will powers.

Another difference between at-will attacks, albeit a difference mainly seen by leader classes, is whether they are self-sufficient or require another character for them to be really useful. At least one of your at-wills should function well by itself. You never know when you might end up isolated with a monster, and you want to have more than harsh words—or *commander's strike*—to fend it off.

KALMAN ANDRASOFSZKY

Beyond pure functionality, your at-will attacks also contribute to the long-term development of your character. The wizard with both *magic missile* and *scorching burst* clearly has a slant toward dealing extra damage. Because you use your at-will powers so often, they influence you to spend resources, such as feats and magic items, on strengthening that facet of your character. This, in turn, can make similar powers more effective. In only a few levels, this wizard becomes very different from one who wields *ray of frost* and *illusory ambush*. Make your selections carefully, and be sure that the at-will powers you pick lead your character in a direction you want to go.

## Encounter Attack Powers

If at-will powers are the skeleton of your character's combat capabilities, then encounter powers are the muscles. Not only are they more potent than your at-will attacks, but they also diversify the tactics at your disposal.

Don't overlook the importance of differentiating your encounter powers from your at-wills. If a given encounter power doesn't do something significantly different from your at-will powers, it probably isn't worth adding it to your repertoire. *Fearsome smite* deals a few more points of damage than *enfeebling strike*, but the powers are so similar that you're better off using one of your valuable encounter power choices to pick up something that has a wholly different effect, such as the high-accuracy *piercing smite* or the high-damage *radiant smite*.

But even though your encounter powers shouldn't step on the toes of your at-will powers, your encounter powers can follow a similar theme without significant drawbacks. You only get to use each of them once in a fight—and your at-will powers already cover a good range of options—so you can feel comfortable with encounter powers that cover a more limited variety of tricks. Picking encounter powers with strong similarities, such as area burst attacks that can be used as part of a charge, maximizes the benefit of other choices you make. The more powers you have that deal lightning or thunder damage, the more useful your Raging Storm feat becomes.

This doesn't mean that variety in encounter powers is useless. No matter how much you enjoy delivering bursts of fire or acid across the battlefield, some combats require different tactics. If your encounter powers are one-note, you might find yourself falling back on at-will powers—and giving up the extra punch of encounter powers—early in the fight. Controllers, in particular, often need to adapt their tactics based on the kind and number of foes they face. Enemies might start far away and in great numbers, but soon enough they stand amid your allies, and their numbers dwindle as the fight comes to a close. If you choose powers that direct and exploit that flow, you'll be more effective. An invoker might open with *chains of Carceri* while his party members get into formation, then drop *baleful eye of judgment* when the enemies engage, and finally use *compel attention* to help finish off the lead monster after its minions have been taken out. For characters like this, whether they're actual controllers or just filling in the role on the side, diversity is the name of the game.

Don't overspecialize in encounter powers. You should expect to use your encounter powers in every combat. There's no reward for finishing an encounter with unused encounter powers—they're all coming back after a short rest, anyway. If an occasional fight goes by without *frostburn* being useful, that's okay. But if you spend an entire session without using it, you should consider replacing it with a different power. Chances are that what looked good at first turns out to require a combination of circumstances that, for whatever reason, just isn't common enough.

Finally, when choosing encounter powers, don't be blinded by extra weapon damage dice. A 3[W] power might look three times as good as a 1[W] power, but all the other modifiers that add to damage make the variation in damage dice less significant, particularly at higher levels. This is even more true with low-damage weapons—the dagger-wielding rogue gets a mere 2.5 extra damage for each [W], which makes the secondary aspects of the power—accuracy, number of targets, and conditions applied—much more important.

## Daily Attack Powers

Your daily attack powers represent the pinnacle of your training and practice. These special techniques show your true power to friend and foe alike, and those who survive battle with you remember you for these attacks.

Obviously, your daily attack powers are your big guns, delivering the largest bang in combat. But treating them as upgunned encounter powers ignores three significant differences between daily attack powers and all other powers.

**Reliability:** With few exceptions, a daily power is guaranteed to have an effect. Some deal half damage to the target on a miss, which makes them good at finishing off hard-to-hit enemies. Still others include an Effect line, which applies even when you miss. If you're one of those players who always rolls 1s on key attack rolls, pick up some of these powers.

An odd subset of this category includes the powers that have the reliable keyword. In one way, this keyword is a misnomer, since you can't "rely" on the power to have any effect whatsoever. Sure, missing all the targets means you don't use up the power, allowing you to try again later, but you've still spent the action required to activate the power and gained

absolutely nothing. Saving your reliable power until the exact moment you desperately need it probably is not a good idea. Instead, use it at an early opportunity to ensure you'll have the time to land a hit . . . eventually. Also, don't load up on reliable powers—one or two is plenty.

**Duration:** Effects generated by at-will and encounter attack powers usually last no longer than a round. But daily attack powers apply conditions or effects that last multiple rounds, sometimes even until the end of the encounter. Daily powers with long durations beg to be used earlier in the combat. Why save the enemy attack penalty from *splintering shot* until the end of the fight? In practice, however, you might find it challenging to decide whether a particular fight merits the early use of one of these daily powers. Our advice: Better to use the power now and possibly regret it later than to finish the day having never found exactly the right time for it (or worse yet, for your character to take his or her daily powers to an early grave).

Some long-duration daily attack powers have an action cost to sustain or reuse them. Pay attention to these costs and think about how they might limit your options later in combat. The "sustain minor" cost of *curse of the dark dream* might seem minuscule, but warlocks also use minor actions to curse new targets. In some rounds, you might have to forego cursing a target (and give up the extra damage you'd deal that round) to sustain the spell you cast earlier.

**Specialization:** You choose at-will powers with the idea that one or the other will come in handy in every round, and you select encounter powers expecting that few fights could go by without providing a good opportunity to use each of them. But your daily powers only need to be appropriate once in any given day of adventuring. In most situations, a ranged attack with a range of only 1 square isn't very useful. But when you just can't get away from an enemy, you'll be happy that you have *close quarters shot* in your back pocket.

## Utility Powers

Utility powers come in a wide range of flavors: temporary combat boosters, defensive enhancements, skill bonuses, and healing, among others. With such a variety of options, it's no wonder that some players become overwhelmed by them. Other players dismiss the entire category, reasoning that utilities can't be as important as attacks. But when chosen correctly, utility powers can dramatically increase your character's effectiveness both in and out of combat. Some characters—particularly leaders—can even become known better for their utility powers than for their attack powers.

In some ways, choosing utility powers relies on methods very similar to those you used when selecting your attack powers. An at-will utility power, for example, should prove useful over and over again. (There aren't very many at-will utility powers, so many characters won't face this decision.) If you choose an encounter utility power, you should be able to imagine using it in nearly every fight. You can afford to specialize when choosing a daily utility power—it only has to come in handy once per day—and such powers are typically very potent or very long-lasting.

MIKE FAILLE

However, since these categories of utility powers appear side by side—rather than separated by frequency of use—you can adjust your selection to best fit your style of play. Do you like having a wealth of options available every round? Focus on at-will and encounter utility powers. On the other hand, if you'd rather make a big splash with your utilities—or if you just don't want to keep track of all those power cards round after round, battle after battle—stick to the dailies.

Beyond a power's usage, its effect in play should also guide your selection. Despite the difficulty of categorizing such a broad range of powers, we've created a list of five basic groupings of utility powers to help you determine which powers best fit your style.

**Offense:** Although utility powers, by definition, lack the ability to deal damage or significantly influence enemies, plenty of them can still contribute to your character's (or your allies') offensive output. Many players find such utility powers the easiest to use and understand, since their effect is generally straightforward. *Dark one's own luck* allows you to reroll an attack roll (or a skill check, an ability check, or a saving throw, but I think we can be honest with each other about when you'll use it, don't you?). The ranger's *master of the hunt* grants you a bonus to damage rolls, and the paladin's *wrath of the gods* does the same for you and your allies alike. When in doubt, you can't go wrong by choosing a power like one of these.

**Defense:** Perhaps the most common category of utility powers includes those that provide defensive bonuses to the user or to his or her allies. For controllers and strikers, these powers provide self-protection. For example, the rogue's *slippery mind* and the wizard's *shield* both give self-preservation a high priority. Choose these powers if you often find your character off by himself or herself, or if your party's teamwork lacks some polish.

**Movement:** Tactically minded players gravitate toward utility powers that grant them or their allies extra movement. These players know that the combat advantage gained by smart positioning can make the difference between dropping a bloodied foe and giving it one more round of attacks. Not only that, but moving around the battlefield is fun: It creates cinematic action and keeps combat from becoming static.

**Healing:** It doesn't take a tactical genius to know that having hit points is good. Whether a utility power allows the target to spend healing surges, restores hit points, or grants damage mitigation such as temporary hit points or damage resistance, no party can ever have too many healing powers. Healing is like increasing your defenses, except you can use it after the fact and for only the attacks that hit you, so nothing gets wasted. Every character should strongly consider having at least one healing power. If you don't get healing powers from your class features, look to your utility powers.

**Out of Combat:** A small selection of utility powers, such as *beguiling tongue*, have little or no effect in a typical combat encounter. Choose these powers based on your expectations of the campaign, derived from your discussions with the Dungeon Master. Looking forward to long dungeon crawls? The light from *holy lantern* might be useful. Expecting tense negotiations with city nobility? The bonus to Diplomacy checks from *astral speech* might be more beneficial than the AC boost from *sacred circle*.

When evaluating utility powers that add to skill checks, go for options that improve skills you're already pretty good at, rather than trying to boost a low skill modifier. In most cases, the character making a skill check is the one who has the highest modifier, so increasing your Diplomacy check from +3 to +7 isn't worthwhile if another character already has +8 or higher.

JOHN TYLER CHRISTOPHER

## TELL US ABOUT YOUR CHARACTER

Tabitha Sparkles is a 29-year-old tiefling wizard who has a penchant for animal rights and blowing things up.

She's tall and lean and boasts a bitchin' pair of biceps, which she likes to show off by wearing sleeveless robes. She has purple-black hair and gold eyes that turn scarlet at the slightest raise in her blood pressure. She tends to look brooding and irritated, which might be due to the weight of her horns but more likely just reflects her truly brooding and irritated nature.

Most importantly, she is the antithesis of my first D&D character, Astrid Bellagio: a cheerful, beautiful sorceress with exquisite taste in shoes and wracked with guilt whenever she had to hit any creature resembling an animal. I played Astrid when I wrote *Confessions of a Part-Time Sorceress* and I made it my mission to keep her alive until I had finished the book. I owed her at least that, right? I'm happy to report Astrid safely retired from adventuring and now teaches sorcery at a charm school in Eberron. My quest to keep her alive resulted in the poor sorceress always stuck behind a pillar, in another room, with her hands over her ears shouting, "Is it over yet?" Good thing she had so many long-range powers.

I loved Astrid—maybe too much—but I knew the next character would be different. I actually wanted to play D&D!

When it came time to roll up Tabitha, I intentionally made her unlovable. (Maybe that's a bit harsh; how about "hard to love"?) No way was I getting attached to this one! That determination lasted all of six minutes.

What I love most about playing Tabitha is actually playing her. She instigates, gets targeted by enemies, and takes damage. She even gets knocked unconscious once in a while. It's exhilarating trying to figure out how to get her out of the latest mess. ("Can we get a cleric in aisle 2?")

Tabitha likes to tell people she was raised by dancing bears. The reality is she has two conniving, selfish, egotistical, maniacal gazillionaires for parents. They made their fortune in fur trading. Tabitha often awoke in the middle the night to the howls of innocent animals being slaughtered. Deer, dogs, cats, goats—it didn't matter. Her parents took the fur of anything with fur and turned it into a "stylish" accessory for human nobles. An animal lover, Tabitha fervidly opposed her father's line of work. She tried to rescue animals, sometimes right out of her father's slaughterhouse, so that she could treat them as beloved pets. But her efforts didn't matter. Her father always found out and made her return them.

Tabby was accepted at a renowned magic academy on a plane far away. Her parents refused to pay the tuition, believing instead that a female's place was "minding the home and not out in the wild, getting into bar brawls and blowing things up." Tabitha was unfazed, since she would never have taken a dime of her family's blood money. Instead, she put herself through Aldwyn's Academy for Wizardry by working in a sketchy—but lucrative—traveling burlesque show.

There, she met the good-hearted show bear Oso de la Fez. She knew this was her one chance to make up for all those animals she wasn't able to save. No more would Oso be subjected to an indentured life of performing on shaky rubber balls and minuscule bicycles while drunken patrons threw peanut shells and insults at him. Oso dreamed of a life of adventure as a wizard's familiar. And Tabitha was committed to giving it to him. She answered an ad from an exarch who agreed to grant Oso powers above and beyond their wildest dreams in exchange for a favor to be named later and a small piece of Tabitha's soul. Big deal, she thought. Souls are for wusses.

Currently, Tabitha and Oso belong to the adventuring group known as the Wyld Stallyns. Tabby still remembers Oso's first day in combat, when a shadar-kai bit the dust thanks to the extra damage Oso's powers dealt. Everything went swimmingly until one hot day in the desert, when Tabby summoned her beloved ex-show bear to mark a hag; Oso instead marked her, and redirected Tabby's *scorching burst* to hit the party! So the exarch had come a callin' after all. Tabby took Oso out with a *magic missile*.

Today, Oso's allowed to travel with the group as long as Tabitha promises to keep him in passive mode. But we all know what promises mean to a tiefling. Will Tabitha resign her beloved Oso to a passive life? Will Oso ever return as the badass familiar he longed to be? Will Tabitha risk her party's safety and successes to give Oso his dreams back? Yeah . . . probably. And that's why I love her.

*SHELLY MAZZANOBLE proclaimed herself D&D's Player-in-Chief in 2009, and strives to bring justice to players everywhere by reining in the monster-loving maniacs in R&D. The other 99 percent of the time, she diligently works on the D&D Brand Team helping to promote the products created by those monster-loving maniacs in R&D. In her spare time, she enjoys fashioning armor for D&D minis out of candy wrappers and being bullied by her bipolar cat, Zelda.*

# CHOOSING SKILLS

Most players think of skills as something to use outside a combat encounter. This observation has some basis in truth; most battles don't include a significant number of skill uses, and elaborate skill challenges typically occur at times when swords and spells aren't flashing.

An optimized character, however, knows the value of the right skill choices both inside and outside combat. Whether making an Arcana check to remember a monster's key vulnerability in the heat of a fight or rolling the Diplomacy check that will spell the difference between gaining the duke's favor and spending time in the city's prison, smart players don't ignore the importance of skill checks.

Skill checks fall into one of two categories. Either they allow the best character to attempt the check on behalf of the entire party, or they require multiple characters—sometimes even the whole party—to succeed. In general, the first type of check tends toward the higher end of the difficulty scale (using the moderate or hard DCs given in the *Dungeon Master's Guide*). Checks of the second kind are more often easy checks.

**SKILL CHECK MODIFIERS BY LEVEL**

| Character | — Skill Check Modifier — | | |
|---|---|---|---|
| Level | Low | Medium | High |
| 1-3 | +0 to +3 | +4 to +8 | +9 or higher |
| 4-6 | +2 to +5 | +6 to +10 | +11 or higher |
| 7-9 | +3 to +6 | +8 to +12 | +13 or higher |
| 10-12 | +5 to +8 | +10 to +14 | +15 or higher |
| 13-15 | +6 to +9 | +12 to +16 | +17 or higher |
| 16-18 | +8 to +11 | +14 to +18 | +19 or higher |
| 19-21 | +9 to +12 | +16 to +20 | +21 or higher |
| 22-24 | +11 to +14 | +18 to +22 | +23 or higher |
| 25-27 | +12 to +15 | +20 to +24 | +25 or higher |
| 28-30 | +14 to +17 | +22 to +26 | +27 or higher |

The sections below refer to character skill modifiers as low, medium, or high. These correspond to the easy, moderate, and hard skill check DCs described in the *Dungeon Master's Guide*. A character who has a low skill modifier can expect to succeed on an easy check more often than not. The same is true of a character who has a medium skill modifier and a moderate check, and a character who has a high skill modifier and a hard check. For example, a 1st-level eladrin wizard who has an Arcana check modifier of +11 has a high skill modifier, since he or she needs to roll only a natural 4 or higher to succeed on a hard (DC 15) Arcana check.

At 1st level, a low skill check modifier falls between +0 and +3. If your check modifier is between +4 and +8, it's a medium modifier. A skill check modifier of +9 or higher at 1st level is considered high. The Skill Check Modifiers by Level table details the target skill modifiers across all thirty levels.

## Skills of Avoidance

Acrobatics and Athletics are crucial skills for melee combatants, particularly those who rely on mobility. And before you chime in about how solid and immobile your dwarf fighter is, remember that he or she still has to get to the monsters.

One common aspect for Acrobatics and Athletics checks is that when an encounter calls for one, everyone in the party is generally expected to attempt it. Climbing or jumping down from a wall, leaping a chasm, or swimming a river are all tasks that can't just be overcome by a single character's successful check. Thus, it pays for every character to keep his or her modifiers in these two skills to at least a low level.

Everyone knows you can use Athletics to jump over a pit, but players often forget that this skill is just as useful when jumping over hazardous or difficult terrain. If you can reliably hit DC 10 on your Athletics checks, single squares of this kind of terrain no longer concern you.

These two skills also frequently form the basis of exciting stunts, such as swinging on a chandelier. Expect to need a high skill modifier to succeed reliably on such cinematic action moves, particularly if you expect to gain an edge in combat by pulling them off. On the other hand, if you explain to your DM that it's just part of your character's style and you don't expect a combat benefit, he or she might agree to reduce the DCs for these flamboyant moves to moderate.

It might seem odd to group Thievery with Acrobatics and Athletics, but, like those skills, it comes in most handy when used to bypass or neutralize a difficulty. In the case of Thievery, such difficulties typically include locked doors and deadly traps. Without a good Thievery check, the only recourse to such problems typically involves time and noise spent breaking down a door, or, worse yet, taking a lot of damage by walking into the trap. Make sure that someone in your party is trained in Thievery and carries a set of thieves' tools. It doesn't have to be the rogue. Artificers, assassins, and warlocks all have Thievery on their skill lists, and any eladrin can pick it up with the Eladrin Education racial trait.

Although Endurance doesn't typically lend itself to avoiding physical difficulties, its most common use in checks and challenges involves withstanding some nasty environmental effect without taking

damage or suffering a condition. That's a lot like successfully leaping across a crevasse or bypassing a trap, so we've grouped it here. Like Acrobatics and Athletics, Endurance checks are often required of everyone in an encounter featuring such an environmental effect, so it pays to keep everyone's modifier high to at least a medium level.

## Skills of Knowledge

Six of the seventeen skills are primarily concerned with gathering or remembering information. Five of these skills—Arcana, Dungeoneering, History, Nature, and Religion—fall into a category described in the *Player's Handbook* as knowledge skills. Characters use these skills most often to recollect a useful piece of information about their current situation, whether that involves a puzzle, a plot twist, or the monster charging across the battlefield.

As soon as your turn comes up in battle, ask the Dungeon Master if you can use any of your knowledge skills to learn about your enemies. Even knowing a monster's name, type, and keywords can provide clues useful in combat—the fire keyword, for example, is a good tip-off as to the type of damage a monster deals and the resistance it has—but an exceptional success can reveal its powers and even its vulnerabilities. If you plan to use this technique, alert your DM beforehand, so that he or she can have the pertinent information handy; a grumpy DM is less likely to reward you for your canny play.

Some players mistakenly believe that the knowledge skills should be loaded up into a single character. Not only is this mechanically challenging—three use Intelligence, and two use Wisdom—it risks putting all your fact-finding eggs into one basket. Sure, the brainy eladrin or human wizard can easily cover all five bases, but most classes have access to at least one of these skills, so why not spread out the knowledge? If you have the oppportunity—and if you know that your DM likes to reward knowledge checks—you can even consider doubling up on a couple of key knowledge skills, just to ensure you remember all the important facts.

Although not technically a knowledge skill, Streetwise comes in handy when facing a conundrum of any sort. It can even cover for weak spots in your knowledge skills, as long as you have time to ask around. Some Dungeon Masters also use Streetwise to handle a subset of social interactions, particularly long clue-gathering missions abstracted over many individual meetings.

If you go to the trouble of training in one or more of these skills, try to get your modifier high enough to handle hard DCs.

### Toughness or Durable?

Players looking to build resilient characters often ask whether Durable or Toughness is the right feat to choose. Though the right answer might be "both," which should you take when you can't afford both? To answer that question, figure out how many hit points each feat is worth over the course of a day.

Toughness grants 5 extra hit points to a heroic tier character. It also increases your healing surge value by an average of 1 point. A character who spends eight healing surges per day, then, effectively gains 13 extra hit points from Toughness. During the paragon tier, that number more than doubles (10 from the feat, +2 or +3 per surge, for a minimum of 26 to 34 extra hit points). By 21st level, you can expect for Toughness to provide you with roughly 50 extra hit points per day.

On the other hand, Durable grants no extra hit points, but the two extra healing surges are worth roughly 10-12 hit points at 1st level (assuming starting hit points of about 20 to 25). This value increases by slightly more than 2 points per level as your total hit points (and by extension your healing surge value) increase. By 11th level, each healing surge is worth 18-22 points, so Durable provides about another 40 hit points per day. At 21st level, the feat's worth over 60 hit points each day.

In the end, the right choice probably depends on your style of campaign. If your battles tend toward the long and brutal side, Toughness might help keep you alive. But if your group likes to last through lots of encounters, Durable can give you the staying power to take on one more fight.

## Skills of Observation

This category includes only two skills, but they're the ones that players hear DMs ask for most often. Rarely does an encounter go by without the request to "roll Perception checks," so you're forgiven for thinking it's the most important skill in the game.

Truthfully, though, the payoff for multiple characters rolling well on the same Perception check is rarely worth the expense of multiple characters training in the skill. Once the ranger or the rogue has aced the check, your second-highest result probably doesn't help. Besides, a cleric or another Wisdom-based character is almost as good at Perception without training as the trained rogue. That said, make sure somebody maximizes his or her Perception skill and can hit the hard DCs, or you can expect to learn about surprise rounds the hard way.

The other observation skill, Insight, presents a similar but less crucial challenge. Again, a successful check can provide a significant advantage (or avoid a significant drawback), though calls for Insight checks occur less often than those for Perception. Like Perception, having one character who can succeed on hard checks is probably enough—but it is also pretty necessary.

PATRICK THOMAS PARNELL

Ask your Dungeon Master what benefit, if any, successful Insight or Perception checks might have during a typical combat. Some DMs might let you use these skills to recognize useful information, such as which monster is in charge or when a creature needs to recharge a power before using it again.

## Skills of Persuasion

Three skills handle most social interactions in the game: Bluff, Diplomacy, and Intimidate. Unless your DM enjoys putting characters on the spot, you can probably afford a single specialist in each of these skills. As with the knowledge skills, consider spreading these out among multiple characters. If you decide to train in Bluff, ask another player to pick up Intimidate. These specialists should be able to reliably succeed on hard checks.

On the other hand, if you expect a campaign high in social interaction, each character should be able to succeed on medium checks with at least one of the interaction skills.

## Miscellaneous Skills

The last two skills don't fit neatly into any other category. That doesn't mean you can ignore them. When used properly, either of these two skills adds almost as much benefit as a utility power.

Characters who have a leader in the party often overlook the value of the Heal skill, believing it unnecessary for survival. However, skill training in Heal can grant extra saving throws, stabilize the dying, or even allow an ally to spend a healing surge outside his or her turn. Any one of these effects can turn the tide of a battle, and you get them all as effectively at-will powers.

Unlike most other skills, the important DCs for the Heal skill are fixed at 10 or 15. That means that at higher levels, you can afford to retrain your Heal skill into another skill while still reliably hitting the target DC.

The other valuable but underutilized skill, Stealth, received a crucial update in *Player's Handbook 2* that more clearly defined how to use it to hide from enemies. Put simply, if an enemy can't see you at the end of your move action, you can attempt a Stealth check to hide from that enemy. Once you're hidden, you stay hidden with any kind of cover or concealment (other than another creature) until you attack. (Okay, it's a little more complicated than that, but if that's all you remember, you're in good shape.) Move around a corner, hide, and then move back up to the corner on your next turn and snipe your enemy.

A rogue gains the greatest benefit from being hidden (by dealing Sneak Attack damage), but every character appreciates combat advantage. Rangers, warlocks, wizards, and any other character who can afford to stay away from the fray should seriously consider training in and using Stealth whenever possible. Against many kinds of monsters, you need only hit moderate DCs to hide, but a specialist in sneaking should aim for the hard DCs.

# CHOOSING FEATS

A careful selection of feats can strengthen your character's theme as well as heighten his or her efficiency in battle. Unfortunately, many players become overwhelmed by the broad range of feats available, particularly when using the D&D Compendium or the D&D Character Builder.

The secret is to have a plan and stick to it. Decide what you want to do with your feats and find the options that best fit that plan. Want to become the master of the craghammer? Don't half-commit to specialization—go all-out. Plan on multiclassing? Go for those feats as early as you can, and come back for the other ones later. Do you want to use feats to boost your offensive firepower? Don't waste time looking at defensive boosts.

Knowing that you need a plan only gets you halfway there. This section presents guidance on how to come up with that feat-selection plan for your character.

### Establish Your Identity

Your first few feats often represent integral and iconic aspects of your character. They help define you in the eyes of the other players and the Dungeon Master, so choose feats that have a notable, significant effect on your character's look and feel.

For example, if you expect to wield an unusual weapon, such as a fullblade or a drow long knife, take that Weapon Proficiency feat right away. Some races have iconic weapons available or that can be improved through feats, such as Eladrin Soldier or Dwarven Weapon Training. Even simple and martial weapons have feat options that define your style, from Reaping Blade for your longsword user to Crippling Crush for hammer-wielding wardens. This type of feat selection establishes your character's identity, and it also helps the Dungeon Master know what kind of loot to include for your character.

Other good early feat choices are those that fit your class, build, or preferred tactics. Does your brawny rogue like leaping into the fray at the start of an encounter? Aggressive Assault rewards that behavior and ensures that the other players won't forget your style. A tiefling sorcerer who enjoys burning her enemies can't go wrong with Hellfire Blood.

## Controller Feats

Feats that add to damage give you more punch than most other characters, because you often deal damage to more than one target at a time. Astral Fire, Burning Blizzard, Dark Fury, and Raging Storm are good options if at least half your powers' damage types match the feat, although taking more than one of these feats risks diluting your feat effectiveness. Destructive Wizardry makes your burst and blast spells particularly deadly. When you can afford a second implement, Dual Implement Spellcaster becomes a great choice.

Extending the duration of a control effect is almost as good as an extra attack against the target. Choose feats that apply penalties to the saving throws made against the conditions that your powers apply, such as Dominating Mind, Armor of Burning Wrath, Trickster's Fortune, or the paragon tier feat Spell Focus.

Finally, look for feats that let you target more opponents. Enlarge Spell is a great first choice, turning your wizard's humble scorching burst into a 5-by-5 square of fiery, minion-killing destruction. Resounding Thunder is reasonable if you focus on thunder powers, and Invoked Devastation provides something for all invokers to look forward to selecting when they hit epic tier.

## Defender Feats

As the defender, your job is simple: Take as much punishment as possible without dropping. To stay in the fight longer, look for feats that add to your hit points (such as Toughness) or your defenses (such as Armor Proficiency, Armor Specialization, or Improved Swordmage Warding).

If you select feats that improve your AC, creatures you've marked become more likely to ignore you in preference for your easier-to-hit allies. That makes the efficiency of your retaliation—from the accuracy of your fighter's Combat Challenge attack to the damage dealt by your paladin's Divine Challenge—even more crucial. Mighty Challenge helps your paladin keep the enemies focused on you.

Mark of Warding is an excellent feat for defenders, because it can increase your defenses while encouraging enemies to attack you by improving your mark. If you take Mark of Warding, consider reevaluating your powers to maximize their compatibility with this feat.

Avoid the temptation to overspend on feats that improve your offense. Unless the party has another durable melee combatant, you should focus on defense and survivability rather than damage-dealing.

## Leader Feats

As a leader, your character likely serves as the party's primary source of healing, extra saving throws, and offensive and defensive boosts. Embrace that role by selecting feats that pass out even more of these benefits.

If you can afford to forego offensive output against bloodied foes, grab Pacifist Healer to supercharge your cleric's healing powers. By 6th level or so, Healer's Implement becomes a worthwhile choice for your cleric, adding your implement's enhancement bonus to your healing powers. Warlords looking to improve their healing ability should select Improved Inspiring Word immediately (as long as your Charisma is 14 or higher). Supreme Inspiration doesn't show up until epic tier, but it's nice to look forward to doubling the effectiveness of *inspiring word*. Improved Majestic Word (bard) and Strengthening Spirit (shaman) each grant temporary hit points rather than true healing, but in the thick of a fight, temporary hit points are just as good as the real thing.

An extra saving throw can turn the tide of a losing fight by bringing a character who is dazed or immobilized back into the fray. The best feat for granting extra saving throws is Mark of Healing, which grants a saving throw to the target of each healing power you use. For warlords, Saving Inspiration is the next-best option (and Inspired Recovery is another solid choice). Shamans have Rejuvenating Spirit, which fills a similar niche, and bards have Majestic Rescue (though it doesn't appear until the paragon tier). Shared Perseverance improves the saving throws granted by your powers. Paladins and wardens, although not true leaders, also have plenty of feat options that allow them to pass out extra saving throws, such as Touch of Salvation and Lifespirit Vigor.

Once you've covered healing and saving throws, look for feats that give your powers better defensive protection for allies. Defensive Healing Word and Shielding Word both grant a bonus to the target's defenses, and the bonuses stack with each other. Prescient Fortification improves the already useful defensive benefit of your bard's Virtue of Prescience feature. Shielding Spirit protects allies adjacent to your shaman's spirit companion.

## Striker Feats

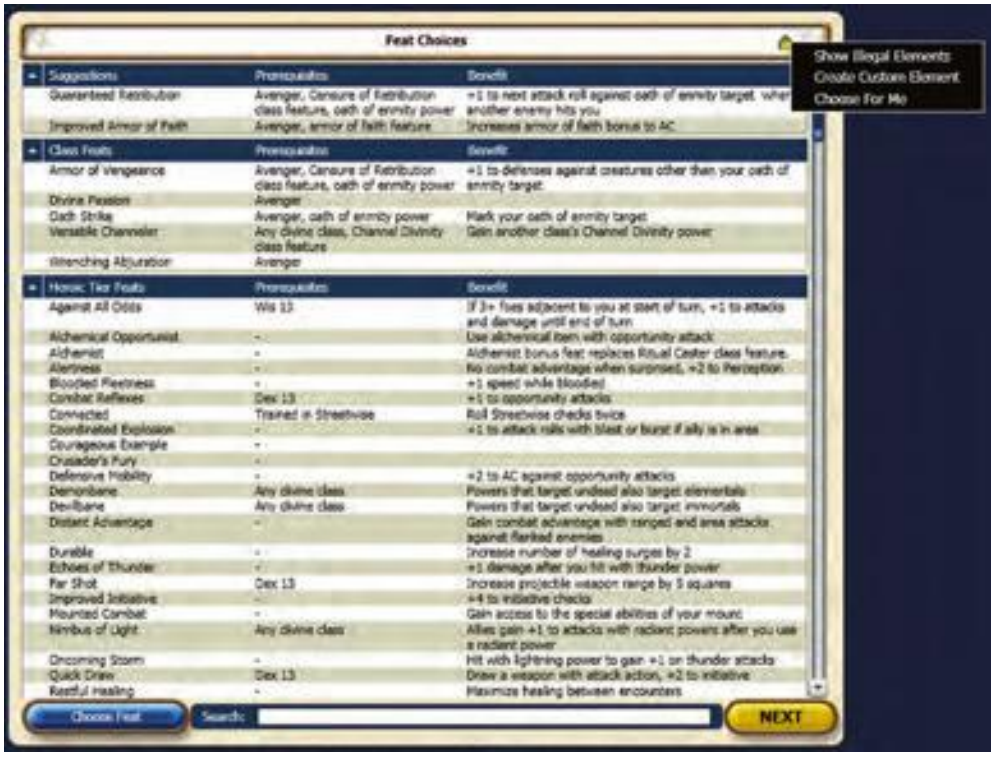
As a striker, you depend on accuracy to help you pull your weight. With a preponderance of high-damage, single-target attacks, just one bad roll can spell the difference between dropping a bloodied enemy and feeling useless.

Grab Weapon Expertise, Implement Expertise, or Versatile Expertise right away. If you're human, consider Action Surge and save those daily powers for when you spend an action point. Nimble Blade is a must for a rogue, but it's also a good choice for a dagger-wielding sorcerer who picks up Distant Advantage. Arcane Spellfury, Primal Fury, and Reckless Curse all offer attack bonuses, as well.

Rerolling an attack roll is another form of improved accuracy. Arcane strikers should consider Spellseer Familiar. The Darren Gambler feat—perhaps reflavored to fit an appropriate region in your DM's campaign—gives you an edge on rerolls.

DREW POCZA

Once you're satisfied with your accuracy, pick up a couple of feats that let you get out of trouble. Ghostwalker Style works for rangers and rogues. Reckless Scramble turns your rogue's short power-granted shift into a longer move. Improved Misty Step extends your warlock's pact-based teleportation.



## Racial Feats

Don't forget to peruse the race-specific feats available to your character. In many cases, racial feats offer options superior to nonracial feats. For example, in the heroic tier, Dwarven Weapon Training grants a higher bonus to damage rolls than Weapon Focus.

Other racial feats enhance your racial power, which, as a useful encounter power, is likely to come up in every fight. Elven Precision makes it more likely that a rerolled attack will hit, making it popular with those low-roll-prone players. (You know who we're talking about.) With a broad selection of racial feats available, you can quickly stack up extra benefits to and effects on your racial power. A quick perusal of the D&D Compendium shows almost two dozen feats that add a benefit to the use of *fey step* or allow you to use *fey step* in a different manner than normal. It's unlikely that you'd be able to pick up more than a half-dozen of these feats, but even a few can make the moment when you teleport in every encounter a memorable event.

## Multiclass Feats

The various multiclass feats let you branch out from your character's normal range of choices. Not only do they add mechanical options, they also open up new story angles to explore.

See "Advanced Options," page 56, for more guidance on multiclassing.

## Consider Your Party

As with any optimization decision, consider the party as a whole when making feat choices. For example, a party with two leaders has more healing to go around, so specializing in leader feats is less necessary. Instead, you might choose feats that emphasize a secondary role (such as defender), depending on the gaps your party might have.

See Chapter 2 for tips on party building.

## Simple Is Good

If you can't decide on another plan, choose feats with simple, useful benefits that you can apply to your character and then forget about. This frees up your mind to worry about more important options in battle, such as where to move and what power to use.

Great but simple feats include any of the Armor Proficiency feats (in D&D, you can never be too rich or too well armored), Toughness (which not only increases your starting hit points by 20 to 25 percent, but also indirectly bumps up your healing surge value), Improved Initiative (great for defenders, to help them establish the battle lines, and for controllers, to deliver a key burst before the enemy has time to scatter), Weapon Focus (who doesn't like dealing extra damage?), and Weapon Expertise and its cousins, Versatile Expertise and Implement Expertise (who doesn't like hitting?).

## TELL US ABOUT YOUR CHARACTER

I swear, I wasn't always the bad guy. But sometimes you just gotta step up and fill a hole.

I put a lot of effort into Gerhart Draken, my human wizard in my first "full-on" 4th Edition campaign. Not just by pouring over the *Player's Handbook* to divine my character's ultimate "career path," but also by creating an interesting, engaging background that would provide my DM with plenty of grist for his story mill. Cool stuff like "he was training to become a cleric, then his sister mysteriously disappeared, and after searching for her in vain, decided to take his sister's place at the arcane academy to retrace her footsteps and carry on in her memory." He never gave up searching for her, and maybe that made him a little crazy, but I never could've anticipated how that would play itself out over the course of the next year or so.

My role in the group started out pretty normally. I was a team player, dropping *scorching bursts* on (mostly) enemies, rolling *flaming spheres* into the paths of (usually) our foes, and generally making things go boom in the name of party cohesion and the advancement of our goals. Then something happened. I became the "instigator," and it all went downhill from there.

On one visit to an important town in the region, I got my paladin buddy Valenae and myself locked up by saying something stupid to an important priestess of a very influential temple. I was infuriated that they'd lock us away just for a little regressive behavior on my part, and of course I wanted out. When the guards took my impetuous wizard and his honor-bound elf paladin adventuring companion away to await judgment, they put us in separate cells, locking our equipment away in a nearby storage area, but leaving us with most of our other gear, including my ritual book. While Valenae steamed over her predicament, not sure why she'd bothered to stick up for such a brash young fool, Gerhart started plotting his escape. Of course, there would be no negotiating with the high priestess who had locked us up: I'd show her that a real wizard is not to be trifled with! I had a *dimension door* spell, and I meant to use it.

Since I needed to take an extended rest to get it back, I prepared myself for a nice little nap, confident that the arcane formula would once again be within my grasp when I awoke. As I bedded down in my cozy cell, a faint scratching sound made it difficult for me to get settled in for my slumber. It came from down the hall, inside a room sealed by a thick iron door with no windows and a giant lock barring entry by mundane means. I sensed opportunity here, and I knew right then that my DM, Greg Bilsland, would regret my next question.

"Okay, I still have my ritual book with me, right?" I asked Greg.

"Ah, sure," Greg said. "Are you going to cast something from it right now?"

"Oh, no. I'll just bed down for the night. I want to get my *dimension door* back."

I had a Knock ritual in the book, a gnawing curiosity, and a plan.

When I awoke from my rest, flush with the knowledge of the *dimension door* spell to teleport me out of my cell, I began a new round of questioning for Greg, determined to "enhance the story" of his meticulously crafted campaign.

"That big iron door with the scratching coming from the other side, it's got a good solid lock on it?"

Greg responded, "Yeah. It would be very tough to pick it open."

"Well, I have a Knock ritual. I'd like to give it a shot."

"You . . . want to open the door?"

"Yup. How hard do I think it'll be?"

"Pretty tough. Probably something like a DC 30 Arcana check."

"That is tough. But I'll give it a go."

As I began the ritual, Valenae watched on in abject horror. She wanted no part of this, but she was honor-bound to protect her fellow adventurers. It must be tough to have such scruples.

I threw a d20, and rolled a whopping 34 on my check. Greg informed us that the lock popped off as though picked by a master thief, and from behind the open cell door, the source of the scratching emerged. A wicked bat-winged humanoid creature strode forth into the room, gave me a hissing acknowledgement for freeing it from its prison, and proceeded down the hall, intent on punishing its captors. I had freed a berbalang.

"All right Valenae, while the temple guards are distracted, let's get out of here," I said, preparing to cast my *dimension door* to teleport out of the room.

"But it's killing them! We have to help put down the evil you've released!" She seemed a bit angry. But I was being so clever!

That was the beginning of some interesting times for Gerhart. Angels attacked us for my transgressions, old foes surfaced demanding recompense for my meddling, and ultimately, during the campaign finale, I left my entire party to be thrown into oblivion while I escaped to complete our last mission (which involved rescuing my sister). Ah, the memories!

What did I learn from all the chaos I spread over the course of many months? I found out that Gerhart was a hell of a lot of fun to play, and that sometimes it's great to play the DM's foil or take unwise risks to help tell the story of your game. Don't put it all on the DM's shoulders. Get out there and mess things up once in a while. Just do it in the name of fun.

*CHRIS TULACH works for Wizards of the Coast as the DUNGEONS & DRAGONS organized play guy, developing D&D play programs responsible for the demise of characters worldwide. Chris lives in the orthodox geek way, constantly attempting to find gaming inspiration for his life experiences.*

# LEVEL UP!

Attaining a new level is exciting because it opens up many choices, and having a wealth of meaningful decisions makes D&D—or any game—fun. Since one of an expert player's skills is making good choices, it's only natural that the *Player's Strategy Guide* has tips for this momentous occasion in your adventuring career.

You have two kinds of decisions to make when you go up a level. First, you can select new options depending on the level you've just attained, including powers, feats, ability score bonuses, or even such important choices as your paragon path or epic destiny (which are covered under separate sections later in this chapter).

Second, you can discard a previously chosen power or feat and replace it with something else (this is called retraining). Sometimes this helps correct a bad choice you made earlier in your adventurer's career. (It's okay, even expert players do this.) In other cases, the game uses forced obsolescence to inspire retraining: New encounter and daily powers, for instance, eventually force out lower-level powers, and some paragon- and epic tier feats provide all the benefit of a lower-level feat and more. But as an expert player, you'll learn when to retrain into better options, even when it hurts a bit to turn your back on an old favorite.

## Decisions, Decisions

Whether you're picking up a new option or replacing an old one, the advice below helps guide you to good decisions.

### Reflect and Review

Like a birthday or New Year's Eve, leveling up is a great time to reflect on the adventures you've had since the last time this occasion rolled around. First, consider the moments you enjoyed most, especially when your character really shone. What could you choose now that would help those golden moments occur again? If your paladin extolled the virtues of sacrifice while taking a hit that was meant for an ally, keep an eye out for more immediate interrupt powers that have the martyrdom theme—both at your new level and as replacements for older selections.

Next, think about missed opportunities, when you were frustrated by being unable to rise to a situation. Such occurrences are not once-in-a-lifetime events, so use your newly gained choices to better prepare you for the next time. Do you still gripe about when the outcome of that battle hinged on your elf ranger's bow shot—when, as you picked up the dice to reroll, you declared that missing was not an option—and even the reroll from *elven accuracy* let you down? That thought can help guide you toward the Elven Precision feat.

### Out with the Old

As you look back, reconstruct your thoughts about the decisions you made at past levels. Are your selections working out as well as you'd hoped? Predicting the future is difficult, but now you have data about the challenges you've confronted. Reconsider your previous decisions in the light of recent information. Retraining is the obvious, but not the only, choice when things haven't turned out as you thought. If you were excited to choose *sweeping blow* for your fighter

PATRICK THOMAS PARNELL

but you didn't use it much, you might not have to give up that precious power. Instead, look for options that help you get into the middle of the battle, and don't forget to talk to your party's controller about using his or her new level choices to funnel enemies into your close-burst attack.

### Think Ahead

Once you have a short list of possible selections, consider how you might use them over the course of the next level. If a feat or a power is useful only in a specific situation, will that situation come up often enough to make the choice worthwhile? A selection too similar to one you already have might be redundant. Having one encounter power that spreads a little damage across a wide area is awesome, but a second one will be less useful because you will have already wiped out the minions that presented such a fine target for your first attack.

### We're in It Together

Your character doesn't fight alone, and you shouldn't make all of your decisions about your character's abilities alone, either. Discuss leveling up with the Dungeon Master and the other players. Reminiscing about the campaign's progress is a great opportunity to retell favorite gaming stories. Creating more fun and friendship around the table should be one of your goals as an expert player, and this group rehearsal also serves a practical function. Other players will remember moments you might have forgotten, or see events from a perspective that might suggest other ways you could develop your character's abilities.

This is also a good time for your group to reevaluate party tactics. Just as you collaborated to optimize your party at character creation, discuss how the players' new choices will work together. Do your selections enable a new plan of attack for your group, or plug a hole in one of your existing tactics? Review your marching order and contingency plans in the light of your new abilities. Even if nothing much has changed, rehearsing your group strategies once per level ensures that when the pressure is on, each member of the party knows how to react quickly, efficiently, and in coordination.

## Guidelines for Level Choices

When analyzing all the options facing you each time you level up, it's easy to become paralyzed by the fear that you won't make the right choice. Fortunately, it's almost impossible to make a choice that's completely wrong. No matter what your class or build, you have a lot of good choices every time you level up. Your personal preferences for weapons, combat tactics, and

play style, plus the specific campaign environment and group dynamics in your game, can make choices that don't appeal to another player who has a similar character the perfect ones for you.

But even though different players are drawn to different selections at each level, a few universal guidelines can help your decision-making. See which of these categories best describe your character's needs, and explore the options described.

### Combat Performance

If you're having trouble breaking the skulls you aim at, try picking up Weapon Expertise, Versatile Expertise, or Implement Expertise. Particularly in the paragon and epic tiers (or if your DM doesn't give out many magic weapons and implements), monster defenses can start outpacing your bonus to attack rolls, making these feats very useful. Check your attack bonuses against the guidelines in Chapter 3 to see how you stack up against the game's expectations. If you're falling behind by more than a point or two, you can look forward to some frustrating combats unless you act to close the gap.

If these feats doesn't solve your accuracy problem, investigate options that improve accuracy in particular situations, such as Nimble Blade, or take Weapon Proficiency with a superior weapon with a higher proficiency bonus. Also, some powers are innately more accurate, either because they allow multiple attack rolls, allow you to use your weapon against a defense other than AC, or include a bonus to the attack roll. And adding a better weapon or implement wouldn't hurt, either.

### Glass Jaw

If you find yourself serving as a punching bag for monsters—and if you're a defender, that's your job—improve your ability to suck it up by taking Toughness or Improved Second Wind, or by asking your leader to grab another healing power.

Chapter 3 also describes the defense scores expected of characters. Your defenses are likely to

vary from these values by a few points, but check to be sure that one of your defense scores isn't leaving you vulnerable to certain kinds of attacks. You should be bolstering that weak Will, for example, if you're tired of mind blasts ripping through your skull.

Increase your AC with the appropriate Armor Proficiency or Armor Specialization feats, or your other defenses with Great Fortitude, Iron Will, and Lightning Reflexes (and, later, with their epic tier versions appearing in *Player's Handbook 2* and the D&D Compendium).

If all else fails, Durable gives you the extra healing surges to last a bit longer in the day.

## Versatility

Strike a balance between being a one-trick pony and a jack of all trades but master of none. Specializing your build so that your character becomes a blaster extraordinaire is one thing, but being the sorcerer with nothing but single-target fire spells, or completely foregoing any defensive precautions in favor of more destruction, sets you and your group up for disappointment.

Everyone expects your fighter to own the melee, so why not surprise your enemies by grabbing a feat, a power, or an item that gives you a viable ranged attack? Even if you can only use it occasionally, you'll be happy to have it when the only foe left on the battlefield is flying just out of your reach. Similarly, characters focusing on ranged attacks, such as warlocks, wizards, and archer rangers, don't give up much potency by choosing an encounter or even a daily power that gives them something they can use up close and personal.

## Noncombat Options

Think about expanding the range of your character's options beyond the combat encounter. Choose Ritual Caster to gain a magic toolkit for solving problems, or Linguist to better communicate with monsters and nonplayer characters. Tired of sitting on the sidelines during skill challenges? Jack of All Trades can help you do everything a little better, and Skill Training—or better yet, an appropriate multiclass feat—instantly boosts your competence in a specific area. The right utility power can also give you a trick useful outside the battlefield.

Before investing heavily in this type of versatility, talk to the other players. If you identify a noncombat talent that your character lacks, find out if someone else already has that covered, or if the group agrees that it's worth you adding it to your repertoire. No player likes being overshadowed, particularly at something he or she has decided is an important facet of his or her character.

### NO BAD CHOICES

Hopefully, this chapter hasn't made you too nervous about picking the best feats and powers for your character. The game's power selection structure offers plenty of protection against making bad choices, so don't worry too much about accidentally making a suboptimal decision. Even a few subpar feats or powers can't reduce your character's effectiveness too much. When in doubt, pick the option that seems like it offers the most fun. After all, even if you decide later that you've made the wrong decision, you're only a level away from fixing it.

## Not Enough Damage

When you consider selecting or retraining attack powers, consider whether you're contributing your share to the party's damage output. If combat looks like a waltz that never ends, or if everyone locks enemies down with conditions but no one delivers the killing blow, choose a heavy-hitting power over one with fancy effects.

## Not Enough Control

If you find your enemies are moving around the battlefield too easily—think about how often the wizard complains of taking damage and you'll know if this is true—pick up a power that slows, immobilizes, or even dazes the target.

## Too Many or Too Few Targets

Sometimes you face the horde, and sometimes you square off against a lone monster. To handle either situation, your character should have a mix of single-target and multiple-target attacks. If you commonly have unspent encounter powers because you never see enough enemies within the blast or burst to make using an area power worthwhile, it's time to choose another single-target power. Similarly, if your DM really likes to throw an army of minions at you, even a low-damage multitarget power can be extremely effective.

## Contingency Planning

Some powers deliver tremendous effects but function only in very specific situations. Choosing a couple of these powers—particularly as daily powers—gives you interesting tactical objectives to work toward. But if you have too many of these specialized contingency powers, you probably won't be able to set up the conditions to use all of them. If one of your impressive contingency powers hasn't been used since you last leveled up, it's time to trade it for something more versatile.

Another kind of contingency power is an immediate or free-action power triggered during your enemies' turns. If you can walk away from the table after your turn ends and not worry about missing the chance to do anything until your initiative count comes up again, consider taking a power that lets you strike in response to an enemy action. Being able to act throughout the round keeps your attention focused on the combat, which makes the time between your turns go by faster and makes the game more exciting. Just don't overdo it: If too many of your powers depend on a trigger from the Dungeon Master, you might find that your offensive output becomes unpredictable.

### Class- and Race-Specific Options

Because these are available only to specific characters, the only one-size-fits-all recommendation here is always to consider these options when you level up. The best feats build upon your character's existing talents and party role, so those designed for your class and race are often tailor-made to fit your needs.

### Who Are You?

Your character is defined by choices you make both during play and while away from the table. Your selections when you level up have a major effect on your character's image. You might be a barbarian, but will your comrades describe you as a ferocious savage who fights hardest after taking a beating, or as an imposing warrior who leads every charge into battle no matter the odds? The best guidance as you level up comes from understanding how you and your fellow players see your character, and how your choices enhance or lend contrast to that image. A feat or a power that you never use is like an elaborate ten-page background: It's written down, but because other players never see it, it has no effect on the experience at the table. As you level up, make selections that will have a vivid effect on the game, helping your friends see your character as you imagine him or her.

## Retraining

No matter how careful you are in selecting character options, you inevitably end up with a power or a feat that doesn't pull its weight. Maybe it's too hard to use correctly, or it doesn't do quite what you thought it would, or a later choice makes it obsolete. Regardless of the reason, the answer is to retrain.

Each time you gain a new level, the retraining rules allow you to change one feat, power, or skill selection you made earlier in your character's adventuring career. The retraining rules aren't complicated. *Player's Handbook* page 28 has the details, but as long as you remember to keep all your choices legal (both the new option gained through retraining and all your existing powers, feats, and skills), you're pretty much there.

By thinking about recent combats, you can recognize a power or a feat that isn't living up to what you want. Do you end up using one of your encounter powers only at the end of combat, or do you have a daily power that keeps going unspent? Similarly, has the situational attack or defense bonus from that

### Tell Us About Your Character

When Chris Tulach mentioned that he'd referenced my elf paladin Valenae in his sidebar for this book, I had to laugh . . . because in retrospect I had realized how very *un*optimized she was. Wrong ability score allocation, wrong powers, wrong feats, a mess of conflicting abilities that definitely kept her from being her paladin-y best. After the campaign ended, as an experiment I used the D&D Character Builder to recreate her using what I'd learned from playing the game. The revamped version turned out to be stronger, faster, and much, much more competent. The difference was astonishing.

And yet? While I played Valenae 1.0, this didn't make any difference to me. She felt plenty effective, holding her own against the ridiculously overpowered monsters Greg threw at us. That berbalang, for one, and most notably the angel of valor we were supposed to run from. Valenae held that thing off for round after round, soaking up massive amounts of damage and keeping its attention on her and away from her (capricious) fellow adventurers. Just like a capable defender should.

No question, it's a fun intellectual exercise to wring every last bit of possible efficiency out of your characters. But that should never get in the way of playing the character the way you want. As Valenae proved, D&D is robust enough that a character can survive with an inadvertently substandard build . . . and you might find that those hypothetical shortcomings matter far less than the drive for optimization suggests.

*MICHELE CARTER joined TSR in 1992 as a roleplaying games editor and happily moved out to Seattle in 1997 to continue working with Wizards of the Coast. In that time, she has worked on nearly every game line produced for D&D (with some Star Wars and d20 Modern on the side). She maintains a special fondness for the Planescape campaign setting and was extremely pleased to see Sigil selected as the paragon-tier city for the 4th Edition Dungeon Master's Guide 2. You can recognize her desk by the army of comic book action figures, avatars of their owner's long-standing affection for the residents of Gotham City and the 30th century.*

## TELL US ABOUT YOUR CHARACTER

Offgood Martigan is a gnome sorcerer/dragon disciple. He's a ginger cherub dressed in plain robes, which at certain unfortunate angles can leave little to the imagination. He hails from a gnome town called Nittynan (which sounds particularly annoying when spoken in Offgood's nasal accent—and yes, I often speak in his voice at the game table). He visits Nittynan frequently to share stories and treasures with his wife and family.

He enjoys reminding his party mates (ad nauseum) that his great-, great-, great-, great-grandfather descended from a line of gold dragons. He one day hopes to unlock the secrets of his ancestry and tap into their draconic roots, but so far all he has to show for his efforts are a few deformed freckles that the local dermatologist has diagnosed as either pre-pubescent dragonscale or a searing case of dire acne.

While Offgood often serves as the comic relief of his adventuring party, he has an arsenal of powerful magic at his chubby fingertips and is loyal to the characters who treat him well. In short (no pun intended . . . well, maybe slightly intended), he has been a truly fun character to play. But even when I create characters with a bent for humor, I could not be more serious about my passion for playing them.

My player group is comprised mostly of men my age with Peter Pan syndrome (only without the tights, as far as I know) who welcome the chance to blow off steam once a week by engaging in interactive theatre and rolling some dice. Many of us grew up with some peripheral knowledge of D&D, but the majority of us discovered it for the first time as adults. We try to take the rule mechanics very seriously while keeping the experience loose and friendly. But sometimes even good friends can get into a debate about rules and the "right" way to play.

I once played a bard (Yorick) and put everything I had into his Charisma. This guy could charm a cyclops into wearing an eye patch. And although the party was happy when he negotiated with merchants to come down in price or intimidated prisoners for tasty morsels of intelligence, they did *not* enjoy his use of "diplomacy" to sway arguments about party leadership or loot.

The best thing about D&D is the human interaction. But being human sometimes means having passions run high. We become deeply invested in our characters and can get prideful, defensive, and fearful about how we use (or lose) them.

I often hear about rules strategies, but rarely about social ones. How do you handle frustration with your role in the party, falling out of love with your character, or feeling like you're in competition with the other players or (worse yet) the DM? Ironically, the solutions to these problems often depend on your real-life Charisma and Diplomacy modifiers. When egos get bruised at your game table, it doesn't matter who's right: The fun gets spoiled for everyone.

Communication with the DM and your fellow players is just as important as communication between characters during a battle. I find it best never to disrupt gameplay at the table, even when I'm seething about something. Calm down, take a deep breath, and wait for the right moment to vent your frustration. Arguing during a play session only undermines the DM's authority and threatens to put egos on the defensive.

Instead, calm down and find a quiet place to settle disputes between game sessions. When we have grievances, my friends and I usually have a relaxed talk on the way home from a game, or type up an email the next day.

Remember that even the most serious and committed game is still just a game. You're all there to have fun with friends, roll dice, and tell stories. So when all else fails, ask yourself what's more fun: getting your way, or getting along. Because even though a good die roll might let my bard talk another character out of his loot, it's still a selfish, petty thing to do.

In the end, if the people at your table really just don't seem to prioritize each other's enjoyment of the game, then hit your friendly local game shop and check the forums . . .

. . . it's time to find a new crew to roll with.

*DAN MILANO is a film and television writer. He co-created and starred in the shows Greg the Bunny and Warren the Ape, and he is a contributing writer/performer on Robot Chicken. His alignment is lawful awesome.*

cool-sounding feat only come up once or twice since you chose it?

Do you find yourself using one of your at-will powers far more frequently than the other? It might be true that your best at-will is superior, but it could also be true that your other option just isn't the right choice for your character.

Does your new power outshine an existing power, doing the same thing only better? Many classes offer slight variations on iconic power themes as you level up. *Searing light*, for instance, does the nearly as much damage as the lower-level power *daunting light*, plus it blinds the target.

If you find that you are consistently passing over one of your powers, feats, or skills in favor of something that works better for your character, you should retrain the choice that isn't working for you. Here are a few details to remember when retraining:

### One Per Level

Unless your DM informs you otherwise, you can change only one choice each time you gain a level. This usually isn't a problem, but it means that major course corrections can take a few levels to pull off.

Plenty of DMs ignore this rule, preferring that their players enjoy their characters rather than follow strict retraining rules. Even if that's the case, don't abuse your DM's generosity by changing your whole character at every level. Unless your group really doesn't care about story continuity, this sort of activity can wreak havoc with the verisimilitude of the shared game environment.

### Know Your Limits

You can't swap out Artful Dodger for Brutal Scoundrel, no matter how mean your rogue has gotten lately. Nor can you replace a power that's a class feature, which seems obvious until you remember that both of a warlock's at-will powers come from class features (which makes your pact choice all the more important). Perhaps it should go without saying, but you can't swap out your race, your class, your paragon path, your epic destiny, or any of the many other choices you make when building or advancing your character.

Again, some DMs allow slack on this restriction, so if you find one of your class features underwhelming, or if a new choice sounds more intriguing, see if you can work something out. Offer to make it part of the ongoing storyline, even if you have to wait a level or two.

### Watch Your Tier

During the paragon tier, you can use retraining to replace a heroic tier feat with one that has a prerequisite of 11th level. This means that, by the time you hit 16th level, all of your feats could be paragon tier feats.

The same rule applies when you hit 21st level. A 30th-level character who retrains a feat at every level could have sixteen epic tier feats.

## Replacing Powers

In addition to the option of retraining at each level, during the paragon tier you can replace lower-level powers with newly chosen powers. This doesn't count as your once-per-level retraining. The replacement levels are easy to find on the Character Advancement table on page 29 of the *Player's Handbook*: They're the ones that start with "replace" rather than "gain." For example, at 13th level you might replace any of your lower-level encounter attack powers with a 13th-level encounter power.

You don't have to do a replacement, although the advantages of replacing a low-level encounter power (probably your 1st-level power) with a more potent encounter power should be pretty obvious.

You also don't have to replace your lowest-level power of that category. Maybe your battle cleric selected a Wisdom-based encounter power at 3rd level because the Strength-based powers didn't interest you. In that case, you might be better off replacing that less accurate 3rd-level power than your tried-and-true 1st-level favorite.

The power you replace also depends on the power you gain. If you like the way your character operates, you might want to avoid mixing things up too much, so look for a power at your new level that functions as a direct upgrade to one you already have. A warlock who reaches 13th level and replaces *diabolic grasp* with *harrowstorm* is still the same character, but with more kick. When your 17th-level warlord swaps *steel monsoon* for *warlord's rush*, you still have the same basic experience, with mechanical differences. And if that experience is what you want, then your character is the best that he or she can be.

# PARAGON PATHS

When you reach 11th level, you hit a significant decision point in your character's career. Your class describes your character's job in the adventuring party; your paragon path defines the ideal your character strives toward. You've worked hard to get this far, and as a reward for reaching the new tier, you gain a nice suite of new talents, including paragon path features, a new encounter attack power, a feat, and a +1 bonus to all six ability scores.

Good thing, too, because your second reward will be deadlier monsters, life-threatening challenges, and even more world-spanning quests. Life is hard out there for the movers and shakers of the world, and guess what? That's you now.

You don't need to wait until 11th level to consider your paragon path choice. You can even pick out a likely option during character creation. Having a path in mind before choosing the rest of your character's options is perfectly reasonable. Most paragon paths require only a class or a race and perhaps one or two other prerequisites, but why wait until the last minute to qualify? An early choice can also help the DM weave your character's career arc into the campaign story.

On the other hand, waiting until 8th or 9th level to start seriously thinking about your paragon path choice allows you to adapt better to the events of the campaign. It can take many months of play to reach paragon tier, and who knows where the story (and your changing opinions of your character) might lead? Sure, you'd always expected that your eladrin would end up as a wizard of the Spiral Tower, but then your character got mixed up in Feywild politics, and now the shiere knight path in *Player's Handbook 2* seems to be the right choice. As mentioned above, most paragon paths have only minimal prerequisites. Even if you aren't on the right track when you first choose a paragon path, a level or two of retraining should get you where you want to be.

## Narrowing the List

You might be one of those fortunate players who knows your paragon path from the moment you see it. Maybe you see your character in the accompanying illustration. Maybe you hear your character's voice in the prose, or instantly recognize your character's style in the combinations offered by the powers and features. Congratulations! You're one of the lucky ones.

For the rest of us, choosing the right paragon path doesn't come easily. We pore over supplements, click every link in the D&D Compendium, and read the Wizards Community D&D forums to learn about other players' experiences. This is a significant decision—the biggest one since character creation—and we dread making the wrong call. You can't retrain away a poor paragon path choice the way you can a disliked feat or power. Who wants to be burdened with the disappointment of a bad call for the next 20 levels of play?

Worried yet? Don't fret; as with most choices in D&D, it's tough to make one that won't allow you to have fun at the table. Once you have an idea what you want to accomplish with your character, you can narrow down the options to a select few for deeper analysis.

To get started in your search, ask yourself which aspects of your character merit the most development during the next ten levels. Deciding that you want your paladin to focus more on healing and leader-style party support leads to a different set of paragon path choices than opting to become the ultimate, unkillable tank.

Although your paragon path doesn't define your character nearly as much as your class, it does have a significant effect both on story and on game play. You paragon path adds significance to your party role, your race, your faith, your preferred combat tactic, and your place in the campaign setting.

Each section below describes a category of options to consider when making your short list of potential paragon paths. At this point, don't worry too much about the details of each path—as long as you like the flavor, and as long as the powers and features seem interesting, add it to your short list for later evaluation.

### Class Paths: Designed for You

A paragon path that lists your class as a prerequisite is designed with your class in mind, so it's likely to mesh reasonably well with your character. Refer to the original source of your character class for a selection of paragon paths aimed at you, and check the D&D Character Builder for more.

That said, not every rogue paragon path is equally good for your rogue character. If a path you find interesting lists a class feature in the prerequisite line that you don't have, even retraining won't make that paragon path right for your character. File that one away for your next character and move along.

If you like how your character works and you want more of the same flavor of powers and features, look for paragon paths that list your class as a prerequisite. Unless you're playing a very unorthodox character, at least half of your short list choices should come from this category.

## Specialty Paths: Showcasing a Side of You

*Player's Handbook 2* includes a series of paragon paths based on the character's race. The *Eberron Player's Guide* has paragon paths for heroes who have manifested dragonmarks. In the *Forgotten Realms Player's Guide*, your choice of deity or background allows you more options. These facets of your character might not affect game play as much as your class, but they still represent a significant part of your identity. Paragon paths built around these aspects allow you to highlight that part of your character, expanding your talents in interesting and meaningful ways that might go beyond the expectations of a class-based path. For example, do you want to be the ultimate dwarf in the campaign? The firstborn of Moradin paragon path allows you to forge a powerful connection with the earth and your revered ancestors.

Many of these specialty paths offer multiple choices for the ability score used for their attacks. This makes it easier for a variety of character types to choose these paragon paths and remain optimal—whether you're a Dexterity-based rogue or a Charisma-dependent bard, you don't give up any accuracy by taking the halfling scoundrel paragon path.

Even if only to provide a contrast to the various class-based paths, try to include one or two specialty paths on your short list.

## Multiclass Paths: Balancing Your Variety

You can qualify for class-based paragon paths using multiclass feats or the hybrid character rules (see "Advanced Options," page 56). A burly half-orc fighter who has the Sneak of Shadows feat meets the rogue prerequisite of the death dealer paragon path just as easily as the sneaky halfling rogue.

Picking up a paragon path aimed at your secondary class offers a way to extend your multiclassing without expending more feats, since the features and powers you gain are designed for that secondary class. If you like the taste of your secondary class and want more, peruse the paragon paths offered to that class.

Even if you haven't multiclassed, it's not too late to consider it. A single feat—potentially gained through retraining at 11th level—opens up a wealth of paragon path options. If you've previously considered multiclassing but felt the pace of gaining secondary class options was too slow, you could change your mind at 11th level and take a multiclass feat and a paragon path tailored to your new class.

## Paragon Multiclassing: Build Your Own Path

Some players just can't find the paragon path that fits their vision of their character. Others get all the variety they want through multiclassing and don't care to add a third flavor. The paragon multiclassing option appearing on page 209 of the *Player's Handbook* provides another direction for such players. These rules allow you to gain additional powers from your secondary class instead of the normal benefit of a paragon path. Functionally, it's similar to selecting a paragon path designed for your secondary class, with a few significant differences.

Instead of gaining path features at 11th and 16th level, you can replace one of your at-will attack powers with an at-will attack power of the secondary class. This can dramatically change the variety of your always-available attack options, though it comes at the cost of the path features that come with each paragon path. This loss of path features dissuades many players from selecting this option. The feat cost—Novice Power, Acolyte Power, and Adept Power—is also significant.

If you choose paragon multiclassing for your character, you don't take gain the flavor or story provided by a paragon path. You might not notice this right away, but over time you might become jealous of your comrades playing the scion of Arkhosia, the keeper of the hidden flame, and the holy conqueror. If you choose the paragon multiclassing option, come up with your own story angle that describes how you've achieved these new powers. Did you train with a similarly talented master? Are you inventing your own unique path?

On the plus side, paragon multiclassing offers you a much wider range of powers to choose from than any paragon path offers. A careful choice of feats can make up for the paragon multiclass character's lack of path features. Search for "paragon multiclassing" in the D&D Compendium for examples. These feats give class features or other benefits from the second class.

For more details on multiclassing, see "Advanced Options," page 56.

## Paragon Hybrids

Perhaps the most complex option available for paragon tier characters, the paragon hybrid rules (appearing in *Player's Handbook 3*) offer yet another way your character can branch out into new areas. As the name suggests, this is only for characters using the hybrid rules from *Player's Handbook 3*. If that doesn't describe your hero, skip to the next section.

Like paragon multiclassing, this choice grants you more class powers in place of the powers normally

offered by a paragon path. Unlike paragon multiclassing, the powers can come from either of your two hybrid classes, giving you twice the flexibility of the multiclass option. You also gain the Hybrid Talent feat, granting you another feature from one of your classes.

If your character uses the hybrid rules, you should include the paragon hybrid option on your short list.

For more details on hybrid characters, see "Advanced Options," page 56.

## Evaluating the Choices

Hopefully, the preceding advice helped you to pare your list of options down to perhaps half a dozen potential paragon paths. This list might derive entirely from a single category—all fighter paths, for instance—but it's more likely that your list includes a few paths from your class, one multiclass path (even if you haven't multiclassed yet), and even a specialty path or two.

Thankfully, most paragon paths follow a very similar structure: three (or sometimes more) path features appearing at levels 11 and 16, an 11th-level encounter attack power, a 12th-level utility power, and a 20th-level daily attack power. This makes them pretty simple to compare side by side. You can easily line up the attack powers to see which deals more damage, applies a nastier condition, or fits your tactics best. Use the guidance on selecting powers earlier in this chapter to help you evaluate the choices.

But comparing the potency of powers can miss subtle but important distinctions that crop up in paragon path selection. Here are a few issues to consider during your evaluation.

**Ability Score Mismatch:** Look at the primary ability score used by the path's attack powers. Does it match yours? Even meeting the path's class prerequisite doesn't guarantee a match. Like many class powers, some paragon paths are designed for specific builds of a class, and some class builds use different primary ability scores. This commonly occurs when choosing a path matching your secondary class, or with specialty paths.

Matching secondary ability scores also helps you get maximum effect from your path. Even though your tiefling wizard can use his or her Intelligence score for the attack powers of the Turathi highborn paragon path, one of the path features benefits from a high Charisma score, and the 20th-level attack power uses Constitution to determine its damage.

Giving up a little accuracy or other secondary benefits to gain a useful variety of powers and features can be worthwhile. Your high-Dexterity half-orc fighter who pursues the death dealer paragon path probably misses only one or two attacks over the course of an entire session compared to a full-fledged rogue, and you might not even notice the difference. That said, avoid saddling yourself with powers that rely on an ability score lower than 19 at 11th level. Making an attack with an ability score 4 points lower than your primary ability score is like taking a –2 penalty to your attack roll.

Some multiclass path options allow you to sidestep this problem. The divine oracle path in the *Player's Handbook*, for example, has only a single power (and no features) that rely on an ability score. Any character who meets the cleric class prerequisite gets almost all of the benefits of the path, even if he or she has a low Wisdom score.

**Action Point!:** Each paragon path includes a feature that modifies the effect of your action points. (Paragon multiclassing and paragon hybrids don't offer this feature.) Some paths add effects to the action points you spend—a bonus to damage or to defenses is common—and others give you an entirely new way to spend action points. Since you spend action points in roughly half your encounters, and probably when you most need a boost, don't ignore the significance of this feature.

When comparing action point features between paths, think about how your character typically uses action points. Make sure the benefit won't go to waste. If you often use your extra action to take your second wind or to use a healing power on someone else, a path feature that grants you a bonus to attack rolls made as part of the extra action gained doesn't help much.

**Feat or Feature:** The features a paragon path grants at 11th and 16th levels are probably the hardest aspects to gauge when comparing paragon paths, because these features vary a great deal in their effects. It helps to compare them to your feats, since by now you have plenty of experience choosing good feats.

A paragon path feature should feel slightly weaker than the feats you already have. If you'd take both features together as a single feat, that's not bad. If you would strongly consider taking an individual path feature as a feat, that's great! You've found a near-perfect feature for your character. Most path features don't quite measure up to this standard, however, so don't expect that fit too often.

**Feature Mismatch:** Usually, a paragon path that relies on or bolsters a particular class feature includes that feature as a prerequisite . . . but not always. Check the path features and even the powers for any mention of a class feature you don't have. Even if you find one, you can still take the path, but you don't get as much benefit from it.

Even if you have a class feature that is the prerequisite for a paragon path, if you gained that class feature through multiclassing or the hybrid rules, you

might not have a fully functional version of the feature. Increasing the output of Sneak Attack doesn't do much for a wizard who can only use that feature once per encounter thanks to the Sneak of Shadows feat.

**Role Mismatch:** Just as when you swap out powers by multiclassing, taking a paragon path that doesn't match your primary class means you risk losing some of your ability to fulfill your party role. Gaining more healing options for your paladin by picking up a cleric-focused paragon path seems like a great idea, but if everyone in the party looks to you as the lone tower of strength in melee, maybe you can't afford the trade-off. On the other hand, if you also have a fighter or a warden in the group, this sacrifice might not matter.

That said, you don't have to take a paragon path listing your primary class as a prerequisite to continue filling your role. A paladin who picks up a fighter-based path, or who picks up a specialty path that enhances survivability in melee, stays within his or her role but adds a unique flavor to his or her fighting style.

**What's Your Story?:** With all that talk about powers and features, you might think we've forgotten about all those words that come right after the paragon path's name. You know, the flowery sentences about great heroes and mysterious secrets known only to a chosen few. After reading too many entries, paragon path story text can run together. Don't try to keep every detail in your head. Instead, jot down a word or phrase next to each paragon path on your short list that captures its essence. Then, when evaluating your choices, see which phrases best describe your mental image of your character.

Just like when you chose your backgrounds, consider what story tweaks you might need to fit your character into the story of each paragon path on your list—and also what's required to bring the path into the campaign. Talk to your DM to gain his or her insights, and to allow opportunities to blend the addition to your character's identity with the game's ongoing storyline.

## Walking Your Path

Because each paragon path comes as an entire unit, your short list almost certainly includes one path whose features appeal to you much more than its powers, or vice versa. Finding a path with six perfect entries (plus a compelling story) happens rarely. Don't dismiss a path just because one aspect doesn't exactly fit, and don't let yourself become enamored of a single power if the rest of the path doesn't help your character.

Before you make your final choice, think about the way that choice will affect the campaign. How will

STANI BROWN

your paragon path change the way your character acts in combat? How will it alter his or her outlook on the world, or his or her interactions with prominent nonplayer characters? Does the path magnify an aspect of your character that is already present, or does it represent a major overhaul? Throughout the paragon tier, your choice of paragon path will influence your actions, your party's success, and the overall story as you move toward level 21 and your next big decision—your character's epic destiny.

Although implemented in similar ways, paragon paths and epic destinies are very different. Epic destinies are far broader in scope than paragon paths and represent your character in a totally new light. A paragon path represents your character striving toward an ideal. An epic destiny manifests that ideal in immortal legend, setting the scene for timeless myths of your greatness. That might sound overly poetic, but it is supposed to. As an epic-level character, you walk just beneath the gods, and that power comes with a responsibility to the ages yet to come.

Some players have an epic destiny in mind for their characters from level 1, but that kind of planning isn't necessary. Mechanically, the barrier to entry for a typical epic destiny is even lower than for most paragon paths. Some destinies list a class prerequisite, but even those rarely care about specific builds or features. Epic destinies don't grant attack powers, so primary ability scores don't matter much. As long as you meet the meager prerequisites (if you consider "21st level" as meager), you can likely make good use of everything offered by an epic destiny. So rather than worrying about eliminating mismatches, look for the destiny that best fits the immortal legend you want your character to leave behind.

Also, use what you've learned about the campaign so far. After 20 levels, you should have a good idea about the kinds of stories, foes, and encounters you can expect to see in later sessions. Choose a destiny that allows you to face those challenges and prove your mythic consequence.

## Breaking All The Rules

The features and powers granted by your epic destiny are unlike any you've seen so far. For many players, the first look at an epic destiny results in a "You've got to be kidding me!" moment. Put simply, although epic-level powers often stretch the limits of reality, epic destinies shatter them. Here are just a few examples of the ways that epic destinies break the rules you've come to know and love over the previous 20 levels.

Every single-target martial encounter power used by your Martial Archetype becomes reliable. Given enough time, you're guaranteed to hit with every one of those powers.

Your Harbinger of Doom rerolls any natural 1 result on an attack roll. Say goodbye to the automatic miss.

The Avatar of War never grants combat advantage. Dazed, flanked, and prone . . . who cares?

Your Deadly Trickster gets to tell the DM that the roll the DM just made was actually a natural 1. I'm sorry, was that a crit?

If the epic destiny you're considering isn't going to give you an "I can't believe you just did that!" moment, think about finding one that will.

## Recharging Powers

Another significant group of epic destiny features allows you to recharge or otherwise reuse expended powers. For example, the Demigod and Chosen destinies each allow you to regain one encounter power of your choice after you've expended your last encounter power. In a long fight, this can either turn one of your encounter powers into an at-will power—quite a step up in potency—or it can let you cycle through encounter powers, selecting the right one for each new round of battle. The Deadly Trickster's 26th-level utility power allows you to recover all your expended encounter or daily powers (except itself), which quite earns its name of *epic trick*.

## The End Is Near

Before you salivate too much over that 30th-level destiny feature waiting on the horizon, remember that the game doesn't go to level 31 (at least not yet). You might get to use that shiny new toy for only a couple of sessions before putting your character up on the shelf and starting a new hero.

Give more weight to powers and features that you gain sooner. Sometimes, a weaker, lower-level ability can contribute even more to your overall enjoyment at the table than a "You did what?" feature.

On the other hand, if you prefer to go out with a bang—if a long, slow buildup is worth it for an unforgettable finish—forget everything you just read. Go read the Avatar of Hope, and save that automatic natural 20 for when you use your 29th-level daily power against Orcus in the depths of the Abyss. It'll be worth it.

## Making Your Mark

As with every other choice you've made during your character's career, mechanics are only one factor in choosing your epic destiny. Not only does every destiny come with its own story, it also involves your character writing (or rewriting) that story for later generations to tell.

More than any other part of your character, your epic destiny comes with the opportunity, even the

obligation, to influence the direction of the campaign. Over the next 10 levels, you will become an immortal part of history. Your character's legacy will alter aspects of culture, politics, religion, and perhaps even geography itself. How does this knowledge influence your decision of which epic destiny to pursue, and how does it affect your character's actions in upcoming sessions?

Players using a published campaign setting such as Eberron or the Forgotten Realms might be reluctant to upset existing, familiar structures to make room for their characters. Don't be! It's your world, not anyone else's, and no one can tell you that your demigod can't take the place of Torm or Dol Arrah.

But as always, with great power comes great responsibility. In this case, you're responsible for discussing your epic destiny choice—and your thoughts on how it might fit into the campaign—with your DM. Hopefully, after many similar conversations you're already on the same page regarding your character's place in the world. But know that the epic destiny discussion takes on a greater level of importance than almost any other chat since you first imagined your character. Your DM likely has an idea of where his or her plot lines are headed, and too much player input can overwhelm even the most accommodating Dungeon Master.

So start the discussion early. Although the benefit of deciding on an epic destiny during character creation is limited—who knows how many times you'll change your mind before you hit 21st level?—by the middle of paragon tier you should starting thinking hard about your destiny. A few casual talks with the DM—and the other players—can get the creative juices flowing. Story hooks can manifest earlier, key quests and plot lines can change to fit your epic plans, and the whole campaign can flow more naturally to accommodate your new identity.

Include the topic of Destiny Quests in your discussions. This concept appears on page 172 of the *Player's Handbook*; basically, it's about crafting an epic adventure tied specifically to the epic destinies of your group. Taking on the tarrasque might be a great final encounter, but wouldn't your Chosen of Bahamut rather storm the palace of Tiamat? The right Destiny Quest can provide a fantastic and fulfilling conclusion to your campaign, giving everyone at the table something to remember fondly for years to come.

Whether or not your group uses the Destiny Quest concept, the most important thing—as in all of D&D—is communicating and cooperating with your Dungeon Master. Learning enough about a setting to run a game requires a considerable amount of work, and creating a world from scratch takes even more. Your Dungeon Master has already put a great deal of time and preparation into the campaign, and embracing your character's epic destiny is your last chance to repay that hard work. Helping write this final chapter of your character's saga not only lightens the load on your Dungeon Master, it lets you determine how and why your character is remembered. Working together, you and your allies can establish the soaring temple, secret haven, or demiplane that will be your character's new home—and possibly a quest location for a new group of heroes just starting their rise to glory.

KALMAN ANDRASOFSZKY

Many players go through an entire campaign playing a traditional character, who has a normal race, a single class, and powers chosen entirely from that class's list.

But you need more options, don't you? Playing the best dragonborn fighter isn't enough when you could be playing a dragonborn revenant hybrid fighter/paladin specializing in the spiked chain. Yeah, we get it. We've been there, too.

The following sections describe some advanced character-creation options available in the game. Some, such as skill powers, are relatively simple. Others—hybrid character rules, we're looking at you—reward a mastery of rules and character optimization that can't be taught in a few pages . . . but that doesn't mean we can't give you some tips to evaluate these advanced options to determine if they're right for your character.

## Multiclassing and Hybrids

For some players, one class isn't enough. Perhaps you can't settle on a single character concept to play. Maybe your party needs a defender and a leader, and you want to fill both roles. Maybe the best way you can imagine to manifest your character's upbringing as a feral child taken in by mystics is by drawing on both the barbarian and the monk classes. Whatever the reason, you have two apparently similar yet very different options for blending elements from two classes into a single character: multiclassing and creating a hybrid character.

### Multiclassing

A multiclass character uses one or more feats to get a taste of a second class. Each class offers one (or sometimes more than one) introductory multiclass feat. This feat typically offers training in a class skill and a lesser version of one of the class's features, which allows you to feel like a member of the class for a round or two in each encounter.

This entry feat also serves as a prerequisite for additional multiclass feats for that class, most notably the power-swap feats Novice Power, Acolyte Power, and Adept Power. Each of these feats allows you to replace a power from your primary class—encounter attack power, utility power, and daily attack power, respectively—with one of the same category chosen from your multiclass powers. If you take all four of these feats, you can even forego selecting a paragon path at 11th level in favor of more fully investing in your secondary class (see "Paragon Multiclassing," page 51).

Choosing to multiclass puts a burden on your feat selection. Fully embracing a secondary class in this manner can take up to four feats, which means you give up some of your ability to specialize your character's build or to enhance racial powers with feats.

That said, multiclassing doesn't significantly limit your ability to carry out the role of your primary class. A fighter with four rogue multiclass feats still feels more like a defender than a striker. If you prefer your primary class, but just want to borrow a couple of tricks from another class, multiclassing is a good option for you. The party that is always in need of one more healing power or that is missing a key trained skill appreciates a multiclass character.

### Hybrid Characters

Unlike a multiclass character, a hybrid character doesn't have a primary class and a secondary class. Instead, a hybrid character acts more like two half-classes melded together into a unique whole.

When you create a hybrid character using the rules that first appear in *Player's Handbook 3*, you choose two different classes during character building. (Every hybrid character begins play as a hybrid; you can't later choose to become a hybrid character, unlike multiclassing.) Each choice grants you a subset (or lesser versions) of that class's features. When combined together, your two hybrid halves effectively form a brand-new class.

As a hybrid character, you choose powers from either of your two classes. This gives much greater flexibility than multiclassing, which at most grants three powers from your secondary class. You must always have at least one power in each category—at-will, encounter, daily, and utility—from each of your two classes to ensure a true blend.

Typically, a hybrid character can function as either of his or her two classes (and roles, if they are different) at any given time, but can't necessarily act as both classes simultaneously or for the entire encounter. For example, many role-defining class features come in hybrid forms that limit which powers they apply to. A hybrid fighter/rogue can't use Combat Challenge with rogue powers, nor can he or she apply Sneak Attack damage when using fighter powers. This limitation prevents hybrid characters from too easily overshadowing other characters at the table. If your hybrid fighter/rogue filled both the defender and striker roles simultaneously, the paladin and ranger in your party might rightfully feel irrelevant.

The hybrid option represents a more thorough blend of two classes than the multiclassing option. Hybrids are ideal when your character needs the flexibility to fulfill two roles, or when one or both of

your hybrid classes' roles are already represented in your party. The undersized adventuring party welcomes a hybrid character, and in a large party it can help you stand apart from the other members.

## Constructing Good Combos

Choosing the right two classes to blend using the multiclass or hybrid rules can be challenging. The game wasn't built to cater to such characters, so even the most compelling concept can encounter problems when it hits the table. This section describes some of the issues arising from class combination and explains how to solve them.

**Ability Scores:** Selecting two classes that have the same primary ability score maximizes your effectiveness (that is to say, your accuracy) in battle. A fighter who picks up barbarian powers will be more successful than one who adds rogue or wizard powers.

However, this guideline excludes a lot of fun, compelling class combinations. If you can match your second class's primary ability score with your second-best ability score—particularly if your secondary ability score is near or equal to your primary ability score—you'll do fine. See the advice in "Setting Your Ability Scores," page 23, for more on this topic.

**Bards:** The bard is the unquestioned master of multiclassing, thanks to the Multiclass Versatility feature that allows him or her to select class-specific multiclass feats from more than one class. If your character concept involves more than two classes, consider starting play as a bard.

**Complementary Stories:** As mentioned earlier in this chapter, every class has a story. When building a character who has multiple classes, consider how those stories might blend together. Here are a few questions to get you started.

- Does your character favor one class over the other?
- Did you learn both classes from the same mentor?
- Does one of your two classes represent a part of your training or background that you'd rather forget or a talent you don't like to talk about with others?
- Does your character belong to a tradition of this class-blending, or are you a pioneer?
- If your character combines two classes at the start of play, which class did he or she learn first?

When building a multiclass or a hybrid character, many players instinctively feel most comfortable with combinations that offer obvious explanations, such as cleric/paladin or fighter/warlord. Don't fear unorthodox combinations. Instead, see them as an opportunity to tell a unique story. Maybe the other players at the table can't imagine how you could combine the barbarian and paladin classes, but I'll bet you're already coming up with a compelling explanation.

**Mixing and Matching Roles:** Combining two classes with different roles can seem like a solution for the player in a party that doesn't cover all the roles, or for the player who wants to create a one-of-a-kind character. But blending different roles poses the risk of role dilution. Sometimes, a character who has two roles ends up fulfilling neither. This doesn't necessarily mean you don't contribute, but in a small party it can result in key talent gaps.

### Multiclass and Hybrid FAQ

The multiclassing and hybrid character rules are more complex than the rules for ordinary character creation. Understandably, users have questions about how these rules work. Here are a few of the more commonly asked questions.

**Q: If a character already is trained in the skill granted by a multiclass feat, can the player choose one of the other skills from that class instead?**
A: No.

**Q: When my character takes a multiclass feat for a class of a different role than my primary class, do I qualify as a character of that secondary role for the purpose of meeting prerequisites?**
A: Yes. A githzerai cleric who takes a swordmage multiclass feat could, for example, select the Marked With Iron feat (which requires the defender role).

**Q: When a multiclass feat states "you can use (class name) implements," does that mean I can use those implements with powers of my primary class?**
A: Yes. If you are proficient with an implement, you may use it with implement powers of any class, even if that class doesn't normally use that implement.

**Q: Initiate of the Faith states that my character can use *healing word* once per day. Does that mean I can use it twice during a single encounter (since the power states it can be used twice per encounter)?**
A: No. The feat only allows you one daily use of the power, regardless of what the power's Special line says. (The same is true of similar multiclass feats, such as Student of Battle, Bardic Dilettante, and Student of Artifice.)

**Q: Can my character take the Hybrid Talent feat multiple times?**
A: No. Like any other feat, you are limited to one Hybrid Talent feat unless some other rule provides a specific exception. (The Paragon Hybrid option, for example, allows you to take the feat a second time.)

Blending two classes of the same role can create a unique and compelling character: an entirely new, perhaps even more effective representative of the role. A rogue who has the Warrior of the Wild feat can double-up on striker damage output every now and then, and a hybrid cleric/warlord has an unparalleled range of healing and team-boosting effects to choose from.

**Weapons Versus Implements:** Picking two classes that both use complementary weapons or implements with their powers avoids the need to spend your hard-earned gold on an extra item. Some characters grapple with this issue even without multiclassing or playing a hybrid. Rangers have melee weapon powers and ranged weapon powers, and bards, clerics, and paladins each have both weapon and implement powers. The advice in this section applies equally well to such characters.

Many players of multiclass or hybrid characters get tripped up when they forget this advice. At a glance, your paladin who multiclasses as a warlock seems fine; both classes have plenty of Charisma-based powers. And for the first couple of levels, you probably won't notice a problem. However, most paladin powers work through weapons, and warlock powers use an implement. That means that the exciting new magic sword you find in the treasure chest doesn't contribute to the accuracy or damage output of your warlock powers. To keep up, you must find, craft, or purchase a second weapon or implement, which could represent a significant expense.

Thankfully, this only applies to a limited number of class combinations. Most class-specific multiclass feats grant you the ability to use the secondary class's implements with all your implement powers, and hybrid characters can use both classes' implements interchangeably, so your invoker/sorcerer shouldn't have a problem.

But even combining two weapon-using classes doesn't guarantee a match. The rogue's powers, for instance, rely on the use of a crossbow, a light blade, or a sling, which makes them suboptimal for a greataxe-wielding barbarian looking to multiclass. Look for a Requirement line in each class's powers to find such pitfalls before you stumble into them the hard way.

Thankfully, many workarounds exist that solve this problem. For instance, a number of magic weapons also function as holy symbols (including *crusader's weapon*, *disrupting weapon*, and *holy avenger*). The popular *pact blade* functions as a warlock implement, and the various *songbow* weapons function both as ranged weapons and as bard implements. Both the swordmage and the sorcerer wield weapons that simultaneously function as implements. Even if you don't belong to one of these classes, the Arcane Implement Proficiency feat grants you the ability to use one of these weapons as an implement.

If you avoid attack powers from your secondary class, you can ignore this drawback. For example, a fighter who multiclasses into cleric to get a *healing word* once per day and uses the Acolyte Power feat to swap in the *bastion of health* encounter utility power can get by without needing a holy symbol.

**Secondary Class Options:** By taking a second class, you open up a new range of options, such as feats and paragon paths, designed for that class (see the "Meeting Prerequisites" sidebar). Even so, you should be careful not to invest too heavily in options not designed for your primary class. Your primary ability scores might not match these options, or they might not fit your ideal tactics. Always think twice about grabbing an out-of-class option just because it has a cool name or makes your character feel more diverse; sometimes diversity has hidden costs.

That said, a number of hidden combinations arise only when you blend two classes in this way. For example, a sorcerer who has the Arcane Initiate feat gains great benefits from the Destructive Wizardry and Enlarge Spell feats, which are otherwise available only to wizards. Check out the Wizards Community D&D forums for more discussions and dissections of these odd combos.

## Adding Defender

Multiclassing as a defender initially grants you a minor marking ability, available once per encounter. If you want to expand your ability as a defender, take powers that let you mark more frequently, such as the fighter's *close the gap* or the divine sanction powers of the paladin.

Hybrid defenders gain resilience through more hit points per level, and they gain the ability to mark when using defender-class powers. If you plan to serve as the primary defender of your party, consider taking the hybrid option that improves your AC, whether that's armor proficiency or something like the Warden's Armored Might hybrid option.

### Meeting Prerequisites

One benefit shared by multiclass and hybrid characters is that they qualify for feats, paragon paths, and other options as if they were members of both of their classes. For example, a fighter with Sneak of Shadows can take a paragon path that lists rogue as a prerequisite just as if he or she were a rogue. Many hybrid character features count as the normal versions of the features for meeting prerequisites, which opens up even more options.

## Adding Leader

The most popular reason to multiclass into a leader class is to gain more healing for your party. Having a second healer in the party is always nice, even if that second healer fills in only when the primary healer is down. Leaders also have great party-synergy powers, using partywide buffs or target designation powers to improve the performance of everyone around them.

Your first multiclass feat usually gives you a once-per-day healing power, but access to other such powers—a key benefit for leader multiclassing—requires more investment. Since many healing powers for leader classes are utility powers, multiclassing to gain one of these powers doesn't detract from your combat effectiveness.

## Adding Striker

Strikers focus on damage, so this option is for any character who wants to deal more damage. Even if you don't plan on further multiclassing, the entry striker multiclass feats provide a nice one- or two-round boost to damage. If you prefer dealing damage in occasional surges rather than reliably across multiple rounds, Sneak of Shadows (+2d6 damage once per encounter) is better than Weapon Focus (+1 damage per hit).

Hybrid strikers can use their striker-damage mechanic whenever they use powers from their striker class, following the hybrid model of letting them be a striker half the time. Use your nonstriker powers to help set up your striker feature. For example, warlock powers that daze or blind give your rogue combat advantage for Sneak Attack. An avenger benefits from using invoker powers that slide or push, which can properly isolate a target for *oath of enmity*.

## Adding Controller

More than other classes, the controller's role is defined by his or her powers. Controller powers lean toward multitarget powers and effects that limit enemy options, reduce enemy damage output, or force enemy movement.

As a multiclass controller, you can use an at-will power from that class as an encounter power. Choose a power that complements your normal class powers: Take a burst power if you have only single-target powers, or gain a power that targets a defense that your normal powers don't.

Hybrid controllers start out with fewer hit points than other characters but gain access to the controller power lists, where most of a controller's class identity comes from. Since a controller hybrid prefers combat from a distance, consider pairing your multiclass controller with a similar class to keep all your options equally useful . . . or combine your controller with a melee-oriented class to have the right answer in any situation.

## Unusual Races

Two racial options offer the ability to add exotic details to your character. Coincidentally, both involve aspects of undeath, and both were first published in the online pages of *Dragon*™ magazine.

### Revenants: Souls Returned for a Purpose

The revenant is the soul of a dead person returned to the semblance of life by the Raven Queen. Revenants typically resemble gaunt, pale humans, with sunken facial features and eerie eyes. They walk the world for a reason, even if they don't fully understand it, and their dreams haunt them with fragmentary memories of a previous life.

Mechanically, the revenant is a race choice like any other. By choosing to play a revenant, you are choosing not to play a dwarf or a human or a tiefling . . . sort of. In fact, you also choose a second race that represents what you were before you died and the Raven Queen reincarnated your soul in this new form. You are treated as a member of that race for the purpose of meeting all prerequisites, so a dragonborn revenant could select dragonborn feats or choose a dragonborn paragon path or epic destiny. Certain feats even allow you to replicate your original race's racial power.

Choosing to play a revenant not only offers obvious story potential, but also allows you to blend two races together in unique ways.

### Dhampyrs: Half-Blood Vampires

From time to time, a mortal is born with vampiric powers. No matter the reason for this strange occurrence, the resulting individual acquires certain physical characteristics, including pronounced canine teeth, pale skin, a tendency toward immortality, and an unfortunate thirst for blood.

Unlike the revenant, the dhampyr isn't a race you can choose. Instead, you choose a race as normal, and your accursed bloodline manifests when you select the Vampiric Heritage feat. You retain all the traits of your base race and add abilities from the feat. This feat then serves as a prerequisite for many other options that expand your vampiric nature, including

### New Paragon Tier Options

Both the multiclass and the hybrid character have an extra option available when selecting their paragon paths at 11th level. Paragon multiclassing allows you to take additional powers from your secondary class, and the paragon hybrid option grants a class feature and powers from either class.

See "Paragon Paths," page 50, for more details and advice on these two options.

feats and paragon paths. You can select as many or as few of these options as you choose, depending on how fully you want your character to embrace your half-breed identity.

## Power-Swap Feats

Many feats allow you to give away a power you already have in exchange for a new power. These feats are commonly known as power-swap feats. Novice Power, Acolyte Power, and Adept Power are the most commonly known power-swap feats, but the game has expanded to include many more. Each power-swap feat uses terminology and rules similar to multiclass feats (and, in fact, they are called multiclass feats to simplify their use and limit character sprawl). However, they're different enough that they merit a separate discussion.

Most power-swap feats are designated as multiclass feats, even when they aren't linked to an actual class. However, instead of offering access to an entire class's list of powers, these power-swap feats swap in a single, specific, highly thematic power.

These feats offer a nice way to add some unorthodox flavor to your character, just like regular multiclassing. However, they don't provide the same depth of options, nor do they function as useful prerequisites for later feat or paragon path selection, so if that's what you want, don't bother with them. Since they're technically multiclass feats, you can't take more than one of them, nor can you take one of these feats and another multiclass feat (unless you're a bard).

### Mini-Multiclassing

Bravo, Cutthroat, Poisoner . . . these could be D&D classes, but they aren't. Instead, they're special multiclass feats that exist without the need for a base class. The advantage they offer when compared to normal multiclass power-swap feats is that they don't care about your ability scores, weapons, or implements. Each attack power gained represents an effect that piggybacks on an existing power, using that power's information as a basis. For instance, the bravo power *death's messenger* adds extra damage and the rattling keyword to any at-will melee or ranged attack once per encounter.

### Deity Focus

Still another subset of power-swap feats includes those that focus on the worship of a particular deity, such as Noble Indoctrination and Platinum Revelation. These feats offer any worshiper the option of swapping out powers for divine powers themed for his or her chosen deity. They provide a nice option for characters who want to play up their religious devotion, regardless of their base class's power source.

### Weapon Training

*Dragon* magazine has published a number of power-swap feats for various unusual weapon choices, such as the blowgun and the whip. These feats represent extensive training with the weapons in question, weapons which otherwise pale in comparison to the reliable longsword or deadly battleaxe. If you want to build a concept around one of these odd weapons, the weapon training feats are a must.

### Familiar Feats

Any character who has an arcane class can take the Arcane Familiar feat. Although Arcane Familiar is not a power-swap feat, it grants access to power-swap feats such as Shielding Familiar. Because your arcane

MIKE FAILLE

familiar's defenses depend in part on the number of familiar feats you have, once you invest in the basic feat, you should consider selecting additional feats from the category.

## Skill Powers

*Player's Handbook 3* introduced this new category of utility powers that simultaneously belong to no class and every class. Unlike the various power-swap feats, which can only be accessed by selecting the appropriate feat, skill powers are automatically available to all characters who have training in the relevant skill. If you're trained in Endurance, you can select any Endurance power any time you'd normally choose a utility power from your class.

The low barrier to entry means that every player should become familiar with the skill power options available to his or her character. In most cases, the powers offer useful but not game-altering abilities (such as nimble movement, minor healing, and tricks of social interaction).

Typically, a skill power isn't as potent as a similar class utility power of the same level. The rogue's mobility powers, for example, might look a notch better than the Acrobatics powers, and the cleric probably wouldn't choose a Heal power. But every character should be able to find at least a few skill powers that offer options unlike those granted by his or her class.

Skill powers make your skill choices feel more meaningful, and they help you solidify your standing as a master of that skill. Plenty of characters have a high Arcana check modifier, but a true guru of such knowledge can use *arcane mutterings* to impress listeners.

### Tell Us About Your Character

Fareth Indoril is a 16th-level eladrin fighter who has the kensai paragon path.

A departure from the more traditional eladrin longsword-and-board swordsman fighter, the greatspear-wielding Fareth represents a little-known but incredibly vocal eladrin family of fighters and adventurers. Founded by Fareth's great-grandfather, the notorious Naidel "The Needle" Indoril, House Indoril's war college is known for training effective but unorthodox eladrin warriors: the Fey Lancers.

Naidel's wisdom is contained within a book only rarely spoken of within the eladrin noble houses. Called the *Tome of Infinite Battle*, the book is relatively new: only 700 years old. In every generation, one Fey Lancer is chosen to carry the book and update it with new discoveries, exploits, and philosophies of battle. In this generation, that person is Fareth.

Fareth's battle philosophies stem directly from his great-grandfather's teachings. The central theme of his fighting style revolves around two ideas:

1) Surprise is the key to victory.

2) The best way to win is to kill your enemies as soon as they show their faces.

Surprise comes not always through raw speed, but also from tactical and strategic action as well as battlefield control. For instance, if an enemy exhibits a strong offense but middling defenses, orthodox tactics prescribe a measured response: a strong defense to counter the enemy's offense, and a careful attack to gradually whittle the enemy down. A sword-and-board fighter would hold a chokepoint against strong offensive characters in the front line and allow the long-range strikers and controllers in the party to whittle down the opposition.

Fareth, on the other hand, immediately uses his *fey step* (possibly paired with the Fey Charge feat, against a lone ranged opponent) to blast past the front rank and strike at the heart of the damaging artillery and controller enemies with a powerful exploit.

Another of Fareth's favorite tactics is to use *fey step* to teleport into a knot of artillery enemies, then use *come and get it* to bring them within range of his powerful *bloodthirsty greatspear* attacks. Then, after finishing his initial attacks (usually boosted by Power Attack for maximum effect), he spends an action point to attack the knot of enemies with *thicket of blades*. This deadly combination deals a hefty amount of damage to a good number of opponents, all in the first round of combat. Not only that, every character within the knot is marked, fulfilling Fareth's duties as a defender.

Despite (or perhaps because of) his extensive use of teleportation in combat, Fareth also carries a *feyslaughter longbow* to prevent enemy controllers and such from escaping his reach through use of their own teleportation magic.

Ultimately, Fareth seeks to teach the other races the worth of the eladrin lancer, and to remind his own people that reliance on magic in battle is not always the solution, while also proving the value of his ancestor's fighting theories.

In game terms, he is very much a striker-flavored fighter and is best suited to a secondary defender role. He is designed to solo against artillery, controller, and lurker roles while the rest of the party deals with more immediate threats.

In addition to the powers noted above, Fareth's favorites include *shadowstep*, *advance lunge*, *rock steady*, *flanking assault*, and *bedeviling assault*.

*DANIEL HELMICK plays Dungeons & Dragons as much as possible. Once in a while, he shows up and works in Wizards of the Coast's Digital Studio, but mostly just to harass, intimidate, and cajole coworkers into letting him into their games.*

# How to ...

The following pages describe various sample characters who specialize in a particular area of the game, such as healing or accuracy. This is not a list of optimization opportunities; it's a range of examples that demonstrate how far you can go beyond the obvious choices of class and build. If this kind of character concept appeals to you, you can apply the techniques described in this section to build your own specialized character.

## . . . Make the Best Healer

***"Nobody dies on my watch."***

You know that being a leader requires more than using a couple of powers with "*word*" in the title. You take the role of healer extremely seriously. You have studied medicine, herbs, poultices, and first aid, and you know the tricks and techniques to keep your allies alive and kicking.

Being the best healer goes beyond just repairing damage in combat, although every healer must have that basic talent set. Your secondary focuses include granting and boosting saving throws and using rituals that eliminate negative conditions (such as Remove Affliction).

Follow these guidelines to maximize your healing potential. Your allies will thank you.

### Class

Start by choosing your class, since this element contributes to the healing optimization build more than any other. Leaders are the only characters who have the potential to become top-notch healers. They have access to attack powers that feature secondary healing effects and to utility powers that have primary healing effects.

Of the leader classes, the cleric begins with the best healing, offers the most efficient healing powers, and gains the Ritual Caster feat for free. When building a healing master, choose the cleric and take *healer's mercy* in place of *turn undead*.

Bards, however, have an even greater potential as healers thanks to the Multiclass Versatility feature. Each time the bard selects a multiclass feat for a new leader class, he or she gains another daily healing power. The bard can also use multiclass feats to pick up the best healing powers from each class.

### Race

Your character's race has minimal impact on your healing powers, but it can give you a small edge.

If you want to be a cleric healer, choose dwarf. The racial bonus to Wisdom improves your Healer's Lore class feature, and the bonus to Constitution and the Dwarven Resilience trait mean you don't have to spend as much effort healing yourself.

If you're building a bard healer, choose human or half-elf. The extra feat you get for being human lets you accelerate your acquisition of multiclass feats. As a half-elf bard, you could use your Dilettante trait to choose an at-will power that includes secondary healing, such as *invigorating assault* or *sacred flame*.

### Ability Scores

Make sure your Wisdom score is high, so that you have a decent ability modifier for Heal checks. You need to be able to help others overcome disease and afflictions, and those restoration rituals require Heal checks. A high Charisma score helps you as a bard healer.

### Feats

This section focuses on feats that fit the cleric or bard healers described above, but any class with healing powers can find feats that improve those powers.

The heroic tier is loaded with feats that enhance healing. Mark of Healing allows the target of your healing powers to roll a saving throw. Restful Healing maximizes the value of the healing powers you use outside combat. If you don't take Mark of Healing, the Mark of Hospitality feat offers a similar benefit to you and to your nearby allies. Bard healers should select multiclass feats as often as they can. By 8th level (or 6th level as a human), you could have five extra daily healing powers from multiclass feats.

In the paragon tier, look for ways to specialize your character's particular mix of healing options. By now, Healer's Implement—which adds the enhancement bonus of your holy symbol to cleric healing powers—becomes a worthwhile investment for cleric healers. Bard healers should take Improved Majestic Word to grant the target of that power temporary hit points. Majestic Rescue functions like Mark of Healing, but only augments *majestic word*. More leader multiclass feats can be useful, even if you aren't playing a bard.

The epic tier offers few very feats that boost healing. Supreme Healer and Supreme Majesty double the efficiency of *healing word* and *majestic word*, respectively, by allowing you to target two allies instead of one. Reactive Healing allows your epic-level healer to prevent an ally from dropping to 0 hit points.

## Magic Items

Look for magic items that improve your healing powers, allow the use of healing surges by allies, or increase you allies' healing surge values.

- *Gloves of the healer* and *healing brooch* add to every healing power you use. Grab both of these items early on.
- A *holy healer's weapon* improves your *healing word* and also lets an ally spend a healing surge once each day.
- *Armor of sacrifice* lets you spend a surge to heal another character, and a *healer's sash* allows you effectively to move a healing surge from one ally to another. (The latter item received a substantial update in November 2009, so be sure to check www.wizards.com/dnd to confirm you're using the correct description.) The surge-trading power of a *belt of sacrifice* isn't as efficient as the other two items mentioned here, but it also adds to your allies' healing surge values.
- Use a *battle standard of healing* after each fight for a few extra points of healing.
- Avoid consumable items that provide healing; usually, your powers are more efficient than potions. The exception is *silver sand*, which increases the potency of your healing powers. By paragon or epic levels, you should use this reagent every time you use your basic class-granted healing power.

## Other Choices

Take skill training in Heal. Even though you won't use this skill much at higher levels (because you have so many healing powers), it's a key skill for many of your preferred rituals.

Acquire any ritual that can help prolong or restore the life or health of your allies, such as Delay Affliction, Cure Disease, Raise Dead, Remove Affliction, Fantastic Recuperation, Soulguard, and Ease Spirit. These rituals won't keep your allies alive in the heat of battle, but they can revive allies later on and can cure afflictions and disease.

DREW POCZA

# . . . Make the Fastest Character

***"Wanna race me?"***

Speed thrills you more than anything else. You can run circles around everyone on the battlefield. Even at a walk, you leave enemies as if they were standing still. When you have room to move, stopping you is almost impossible.

You focus your options on increasing your speed, but gaining extra move actions and improving your ability to shift also demonstrates your talent for haste.

Since flight and teleportation are the cheater's way to win a race, this sample character intentionally ignores those options.

## Race

The race you choose for your character provides a head start on achieving the highest speed.

Elf is the only race that has a starting speed of 7 squares, giving it an edge over all other choices. An elf character also has the added benefit being able to ignore difficult terrain when shifting.

Razorclaw shifters also make good candidates for fastest character because of their *razorclaw shifting* racial power, which increases their speed by 2 when bloodied.

## Class

A druid who selects Primal Predator as his or her aspect gains a +1 bonus to speed, and the class offers many other powers that increase speed.

The monk specializes in movement powers. You can easily increase your speed by 2 for most of the moves you make.

Most other melee-based striker classes have powers that temporarily improve their speed, grant extra movement, or include shifting as part of an attack. The avenger, barbarian, ranger, and rogue classes all provide good options for building a fast character.

## Ability Scores

Beyond the primary ability score required by your class, keep your Dexterity score high. Speedy heroes should have good Reflex. If for no other reason, think of it as a nod to realism—who's going to believe a fast but clumsy character?

## Powers

Look for powers that increase your speed for more than a single action or that can be used over and over. *Fleet pursuit* lasts for an entire encounter. The monk's *dancing cobra* movement technique is an at-will power that allows the character to move his or her speed +2.

Load up on attack powers that grant extra movement, such as *deft strike* or *evasive strike*. The square or two of free movement provided by a power works like a running start for your impressive cross-field sprint.

## Feats

Feats that directly increase your speed are rare, but some creativity and tactical thinking can allow the situational benefits from some feats to stack up nicely.

In the heroic tier, Bloodied Fleetness gives you a +1 bonus to speed while you're bloodied. Into the Fray increases your rogue's speed by 1 during the surprise round and the first round of an encounter. Fast Runner increases your speed by 2 when you run or charge.

A few feats do offer a direct bonus to speed. One heroic tier example is Vampiric Alacrity; if you're willing to spend the feat slot for the Vampiric Heritage prerequisite (and to become a dhampyr, described on page 59), you can pick up a +1 feat bonus to speed as early as 2nd level. Drow characters that have a primal class—such as druid—can take Spider's Swiftness to gain a +1 feat bonus to speed.

Paragon-level characters should take Fleet-Footed right away; for most heroes, it represents the earliest point at which they can gain a +1 feat bonus to speed. Fast druids could instead pick up Hunting Wolf Form for its +1 feat bonus to speed and its additional bonus to Perception checks.

At the epic tier, your speedy druid can replace Hunting Wolf Form with Swift Predator to keep the speed bonus and increase the distance of his or her shifts by 1 square.

Don't forget to look for feats that improve your ability to shift, such as Mark of Passage, Reckless Scramble, and Swift Slayer. The druid has many feats that allow him or her to shift when using particular powers, such as Pouncing Form.

Feats that grant extra move actions don't show up very often, so take them when you can. Avenging Opportunist gives your avenger another move action every encounter. Surprise Action lets your ranger take a full round's actions during a surprise round, effectively granting an extra move action whenever a surprise round occurs.

## Magic Items

Almost all speed-boosting items occupy the feet slot. Since you can only wear one set of boots or shoes at a time, you have some tough choices to make. Here are some of the best options to consider.

- *Wildrunners* (level 4) add 2 squares to the distance moved when you run.
- *Boots of rapid motion* (level 5) help prevent you from being slowed and can increase your speed by 1 for an encounter.
- *Boots of striding* (level 9) grant you a +1 item bonus to speed. Alternatively, you can pick up *boots of furious speed* at the same level, which give you a +2 item bonus to speed while bloodied.
- *Skalvani's anklets* (level 10) increase your speed by 2 for two turns every encounter.
- *Quickstride boots* (level 12) let you move your speed as a minor action.
- *Fleetrunner boots* (level 15) increase your run speed by 4 squares (and reduce the attack penalty for running by -2, making it a potentially viable option for every move action).
- *Sandals of the temporal step* (level 16) are like *boots of striding* that also give you a free move action once each day.
- *Boots of speed* (level 22) not only give you a +2 item bonus to speed, they let you spend a minor action to take a move action once per day.
- At the top of the list of speed-boosting magic items are *sandals of Avandra* (level 25), which grant you a +2 item bonus to speed, allow you to shift half your speed as a move action as often as you want, and once each encounter allow you to ignore opportunity attacks from movement for the next two turns.
- Outside the feet slot, look for *elven battle armor* (level 13 and up), which increases your speed by 2 for two turns, and *cloak of the cautious* (level 9 and up), which increases your speed by 5 for two turns but prevents you from attacking. Carry a few *elixirs of speed* for their +2 power bonus to speed, which lasts an hour.

## Other Choices

All the speed in the world does no good if you can't move. A simple *ray of frost* spell can turn a speed of 20 into a speed of 2, creating a glaring weakness for your character. Make sure you have answers for when you become slowed, immobilized, or restrained.

Also, being fast doesn't actually defeat monsters. Although a fast character rarely gets killed—after all, you don't have to outrun the dragon, you just have to outrun everyone else in your party—this speed can't kill anything. Don't spend so many resources on speed that you forget about dealing damage.

VICTORIA MADERNA

# . . . Get the Best Initiative

***"Look at that—I get to go first again!"***

Getting the jump on your foe can provide a big tactical advantage. If you go first, you can outmaneuver your foes and get into position to pull off the perfect strategy.

Instigators love rolling a high initiative. Even if they don't optimize their characters to take advantage of it, they gain great pleasure from opening fire or charging enemies before anyone has a chance to tell them otherwise.

## Race

Any race that offers a bonus to Dexterity is a reasonable choice for this character concept, because Dexterity contributes directly to your initiative check.

Of all these races, the githzerai makes the best option, pairing a racial bonus to Dexterity with a +2 racial bonus to initiative checks.

## Class

Your choice of class depends not so much on which option provides the best initiative-boosting options—because such options are rare—but rather on what benefits the class derives from rolling a high initiative. After all, if you just delay for something else to happen, what's the point of going first?

This question is covered in detail under "Winning Initiative," page 108, which points out the benefits for defenders, controllers, and ranged strikers. This section focuses on the ranger and the rogue. These two classes have the high Dexterity to boost their initiative, and (as long as they favor ranged attacks) they can use a high initiative score to pile damage onto an enemy before that foe can find cover.

The rogue's First Strike class feature gives that class an edge in this situation, allowing him or her to add Sneak Attack damage when hitting a target that hasn't yet acted. For a rogue, having the best initiative matters.

When considering paragon paths, the best choice is the githzerai rrathmal path, which allows you to roll initiative twice, keeping the better of the two results. If you multiclass as a cleric, you can receive a similar benefit from the divine oracle paragon path.

## Ability Scores

Dexterity is the only ability score that makes a difference here. Make it as high as possible.

## Feats

Several feats benefit your initiative, but make sure you don't accidentally take feats that have bonuses that don't stack with one another.

JOHN TYLER CHRISTOPHER

Start with Improved Initiative for a +4 feat bonus to initiative checks. If you can convince your allies to join your quest for a high initiative score, the Swift Jaguar feat's +2 feat bonus can easily become as high as +5.

Your first paragon tier feat should be Danger Sense, which allows you to roll twice and take the better result each time you make an initiative check. Unless you're a rogue, take Seize the Moment next; it effectively replicates the First Strike class feature.

If you're willing to invest in the Vistani Heritage feat as a prerequisite, the Vistani Foresight feat at 21st level offers an untyped +2 bonus to initiative checks.

## Magic Items

Several lower-level items add to your initiative bonus, but this section focuses on those best for rangers or rogues.

*Battle harness* (level 4 and up) grants a power bonus to your initiative checks equal to the armor's enhancement bonus. *Feytouched armor* (level 12 and up) functions similarly, but provides an item bonus instead, which makes it combine less well with the items given below.

*Helm of battle* (level 9) grants you and nearby allies a +1 item bonus to initiative checks, but you might prefer to have either a *quicksilver blade* (level 2 and up) or a *timeless locket* (level 14 and up), either of which grants you an item bonus equal to its enhancement bonus. If you don't want to spend one of those slots on an initiative bonus, go for the *eye of awareness* (level 23) and its +5 item bonus to initiative checks.

## Powers

Only a few powers improve your initiative or grant you a benefit for rolling a high initiative result. Here are some examples.

- *Hunter's privilege* (level 2) increases the damage dealt by the high-initiative ranger to his or her quarry by 3 for an entire encounter.
- *Avenger's readiness* (level 10) gives the avenger a +5 power bonus to an initiative check and a free 3-square shift when the first creature acts in that combat.
- *Seize the moment* provides a whopping +20 bonus to one initiative check each day, but as a 22nd-level rogue utility power it doesn't come up very often.

## Other Choices

To take advantage of your high initiative score, choose powers that deal a lot of damage, injure or hinder many foes, or both. If going first gives you a particular benefit (such as from First Strike), find ways to maximize the number of attack rolls you can make on your first turn.

It doesn't hurt to try to talk someone in your group into playing a warlord so that you can benefit from the +2 power bonus to initiative granted by his or her Combat Leader feature.

### Tell Us About Your Character

Building a character with the express intention of beating the monsters and the rest of your party in initiative can be fun, but it has its risks. Consider my elf rogue, Adrin.

Adrin's initiative isn't even crazy-high: at 11th level, he's sporting a +12 initiative bonus (thanks to his *quicksilver blade*). But that's faster than just about everyone else in the party, and faster than most (but not all) of a random sampling of 11th-level monsters I found in the D&D Compendium. And that means it's just fast enough to get Adrin into trouble.

There was the fight where I used *handspring assault* in the surprise round to run up to a bunch of gnolls and stab one really hard, then won initiative and got in another good hit . . . and then got mobbed by gnolls. That didn't end well.

Considering that I'm a D&D professional, it has taken me a surprisingly long time to figure out that I should be using all these mobility powers I have to get *back behind the fighter*, not to put myself out in harm's way.

So this is my word of warning to those who pursue the highest possible initiative: Don't use your speed to get yourself into trouble you can't get out of.

*JAMES WYATT is the D&D Design Manager for Wizards of the Coast Roleplaying R&D. He was one of the lead designers for 4th Edition D&D and the primary author of the 4th Edition Dungeon Master's Guide. He was one of the designers of the Eberron campaign setting, and is the author of several Eberron novels. He plays strikers and defenders, but things go badly when he gets them confused.*

# . . . MAKE THE BEST TALKER

***"Can we talk about this?"***

A wily character can talk his or her way out of almost any problem, from a bar fight to a deadly dungeon encounter. You prefer to overcome challenges through wit and guile than by fire and steel. Others might call you "face man," "diplomancer," or just "the talky one," but you take it all as a compliment.

Not only does this approach appeal to actors and storytellers, it can also preserve valuable resources for more important battles. Talking your way past the guards saves healing surges, action points, and daily powers for later encounters.

This character works only if your Dungeon Master is amenable to the use of social skills. Some Dungeon Masters do not appreciate characters using Intimidate to force enemies to surrender. Other Dungeon Masters don't build encounters or adventures that encourage the use of social skills. Keep your Dungeon Master and his or her game style in mind before designing a character like this. These skills could shut a game down if the Dungeon Master is not prepared for them.

## Class

The bard offers the best mix of primary ability score (Charisma), class skills, powers, and class features to build a good talker. Other classes—such as rogue or warlock—provide only some of these options, so choose them only if you desperately need to fill a different role (and even then, the bard might do the trick).

### TELL US ABOUT YOUR CHARACTER

Oleander Fellswallow is a halfling who has a silver tongue. His philosophy is, "Why shed blood when words flow more easily and get more done?"

Since he has impressive bonuses in Bluff and Diplomacy, I've made a considerable effort to ensure that he can wield these bloodless weapons in as many situations as possible. The Linguist feat and the Mark of the Scribe feat (from the *Eberron Player's Guide*) give him seven additional languages, and a *gem of colloquy* adds what he needs to speak every known language in the game. He can argue with and lie to any creature anywhere and listen in on conversations people think are private.

This pays off; the time when he convinced half of a Far Realm cult that he was the true prophet of the stars and got them to fight each other is a notable example.

*PETER SCHAEFER works in Wizards of the Coast R&D as a developer of such books as Player's Handbook 3, Plane Below: Secrets of the Elemental Chaos, and Psionic Power. This is a significant departure from his previous position as major-domo to an interdimensional emperor, and much less stressful.*

## Race

You want a race that offers a bonus to Charisma to best pull off this character concept. Of all the choices, three races provide the best options.

The half-elf's racial bonuses to Diplomacy and Insight improve two key skills for a talker. The Group Diplomacy trait helps allies pitch in on important social interactions.

Changelings have a particular edge in this specialty because of their ability to change shape, which gives them an unparalleled ability to deceive others. With this ability, a changeling can expand his or her capability as the party's face.

The kalashtar offers an unusual but effective choice for this character archetype. Not only do the kalashtar"s ability score bonuses line up perfectly with the skills you need (skills you can also boost with the kalashtar's racial bonuses), but the race's telepathy allows a kalashtar character to plan with allies while carrying on a perfectly normal conversation with enemies.

## Ability Scores

As mentioned already, Charisma is vital for your social skills and bard powers, so max it out. A good Wisdom score boosts your Insight skill, which helps in skill challenges and negotiations.

## Skills

Training in the following three skills is crucial: Bluff, Diplomacy, and Insight. Both Intimidate and Streetwise can be useful, but few characters can afford to train in all five skills without expending extra resources. If you're a bard, your Skill Versatility feature gives you a +1 bonus to untrained skill checks, so don't worry too much about missing one of these secondary skills.

## Feats

You can find useful feats in the D&D Compendium by searching for feats using your crucial skills as keywords.

- If you're serious about being the best talker, put your feat slots where your mouth is and boost your Bluff score and Diplomacy score with Skill Focus.
- You can't talk someone out of a fight if they can't understand you. Pick up the Linguist feat to broaden your language selection.

- Fill in a missing skill with Skill Training (or better yet, a multiclass feat). Alternatively, Jack of All Trades stacks with Skill Versatility, and together they almost make up for a lack of skill training in all of your untrained skills.
- Friendly Deception allows a bard to apply the Words of Friendship feature to a Bluff check instead of to a Diplomacy check.
- Mark of Scribing, an Eberron dragonmarked feat, grants a +2 untyped bonus to Diplomacy checks. The other benefits of this feat are also good.
- If you multiclass into a divine class and learn Supernal, Holy Speech can give you an extra success in any social skill challenge.

## Powers

Beyond *words of friendship*, the game doesn't include very many powers that enhance or benefit from your skill set. If you can afford to multiclass, though, the list of options grows.

- *Veil* (level 10) lets the bard disguise the entire party, making it easier to convince the guards that you all belong here. The same level offers *illuminating stars*, which grants the entire party a +5 power bonus to Insight checks and Perception checks for an encounter.
- The rogue has a few useful powers that require Bluff or Intimidate training, which you can pick up through multiclassing.
- *Beguiling tongue* (level 2) might be worth two warlock multiclass feats for a devoted talker.
- Look through the skill powers for Bluff, Diplomacy, Insight, Intimidate, and Streetwise for good alternatives to your class's existing utility powers. Most of these powers allow you to use your prodigious social skills to gain advantages in combat, but *fast talk* (level 6) lets you replace a poor social skill check with a new Bluff check in every encounter, making it incredibly useful.

## Magic Items

Items that improve your social skills should form the backbone of your wish list.

- *Skald's armor* (level 3 and up) grants a +2 item bonus to Bluff checks and Diplomacy checks. At higher levels, though, a *choker of eloquence* (level 8 and up) provides a better bonus. If you're willing to take a smaller item bonus, choose a *gem of colloquy* (level 2 and up) for the extra languages. The top choice, though, is an *ioun stone of perfect language* (level 22), which grants a +5 bonus to Bluff checks, Diplomacy checks, Intimidate checks, and Streetwise checks and lets you communicate in any language.
- *Circlet of the urbane* (level 23) allows you to reroll Diplomacy checks, Insight checks, and Streetwise checks and keep the second result.
- *Fragrance of authority* (level 12) grants a +2 power bonus to Bluff, Diplomacy, or Intimidate for 1 hour each day.

## Other Choices

The right background can give you another bonus to a crucial skill, or it can add to your list of languages.

A few rituals can come in handy for a talker, such as Speech Without Words, Call of Friendship, Anthem of Unity, and Tune of Merriment.

VICTORIA MADERNA

# . . . GET THE BEST ARMOR CLASS

***"Go ahead . . . just try to hit me."***

You laugh in the face of danger, inviting enemies to give you their best shot. You're not worried: You are the bastion of defense.

Nothing keeps you alive better than a high AC. Brutes become nearly meaningless threats, and even the most accurate monsters rarely hit you. At the same time, nothing frustrates a DM more than not being able to hit a character. Expect your DM to find ways around your ultimate defense.

## Class

Defender classes typically have the best AC. The paladin starts at the top, with proficiency with plate armor and heavy shields providing AC 20 at 1st level. However, fighters and battleminds can close this gap with a single feat, so don't count them out. Other heavy-armor wearing classes need at least two feats to catch up, so we'll rule them out for now, but if you have plenty of feats to spend, anyone wearing plate armor and carrying a heavy shield stacks up well.

You don't have to wear heavy armor to have a good AC. A 1st-level swordmage could also begin with AC 20 (+2 from leather armor, +5 from Intelligence 20, and +3 from the Swordmage Warding feature).

## Race

If you wear heavy armor, your choice of race doesn't matter very much (since you can't add an ability modifier to your AC). Instead, choose a race that fits well with the class you're playing. (See "Choosing Your Race," page 18, for suggestions.)

If you don't want heavy armor, racial bonuses to Dexterity or Intelligence, such as those of eladrin and humans, are critical for characters wearing light armor. A deva gains a +1 bonus to defenses against bloodied creatures, which gives a deva character an edge as a high-AC swordmage.

## Ability Scores

Many armor feats require good Strength and Constitution scores, so make sure you start with at least a 13 in each, and increase them to 15 by 11th level.

To get an equivalent AC wearing light armor, you must assign your highest ability score to Dexterity or Intelligence and improve it at every opportunity.

## Feats

Feats provide a great way of ramping up your AC.

- Assuming you wear heavy armor, start by taking whatever Armor Proficiency feats you need to get up to plate armor. Take Shield Proficiency if you don't already have it.
- Swordmages should take Improved Swordmage Warding, as well as Armor Proficiency (Hide).
- At 11th level, heavy armor wearers should select Armor Specialization (Plate) unless they have the Dexterity 15 required for Shield Specialization (since this feat also improves Reflex).
- Paragon tier swordmages can take Armor Specialization (Hide) or Greater Swordmage Warding.
- A host of feats, such as Defensive Mobility and Shield Defense, improve AC in specific situations. To find them, search for "bonus to AC" in the D&D Compendium.

## Magic Items

Make sure you wear armor that has the highest enhancement bonus you can find. After filling that need, other magic items can boost your AC in particular circumstances. If you pick up enough of these items, you're almost always covered, but pay attention to bonus types so you don't waste anything.

- If you wear plate armor, consider *salubrious armor* (level 4 and up), which adds +1 to AC for one round when you regain hit points; *agile armor* (level 5 and up), which adds the lower of your Dexterity modifier or the armor's enhancement bonus to AC while you aren't bloodied; or *bloodiron armor* (level 8 and up), which adds +2 to your AC against the attacks of an enemy you hit until the end of your next turn.
- Wearers of light armor should look at *darkleaf armor* (level 4 and up). This armor adds +2 to AC against the first attack made against you in each encounter.
- *Shield of the barrier sentinels* (level 9) adds to your AC and Reflex when you are flanked, but *force shield* (level 11) is even better, because its bonus lasts until you get hit (which shouldn't happen very often to your high-AC character). A *cloak of displacement* has a similar function, and its bonus stacks with that of a *force shield*.

- *Pavise charm* (level 8 and up) boosts your AC and Reflex as long as you stay in one place. Conversely, a *cloak of translocation* (level 9 and up) improves AC and Reflex when you teleport, which comes in handy for swordmages.
- The AC boost from *shielding girdle* it lasts until the end of your next turn.

## Powers

A search of the D&D Compendium turns up a number of defender powers that provide a bonus to AC.

- Fighters should pick up *defensive stance* or *shielded sides* at 2nd level, *iron bulwark* at 7th, and *defensive resurgence* at 10th (as long as your Dexterity is 12 or higher).
- Paladins should take *sacred circle* at 2nd level, but their next good option (*fortifying smite*) doesn't show up until 17th level.
- The swordmage can select *ward of brilliance* or *host of shields* at 2nd level, *silversteel veil* at 6th level, and *shield of besieged tower* at 16th level.
- Wardens have many AC-boosting powers, particularly in the category of guardian form powers.

## Other Choices

A –1 penalty to an enemy's attack is as good as your receiving a +1 bonus to all defenses, so picking up some enemy debuffs can further enhance your unhittable nature.

If enemies can't hit you, find ways to share your unneeded healing surges with your allies, such as with a *belt of sacrifice* or a *healer's sash*. This comes in even more handy when the monsters start ignoring you altogether.

Don't forget that you have four defenses to support. Although AC covers about half the attacks you're likely to see, ignoring any of your other three defenses leaves a deadly gap for enemies to exploit.

No matter how high your defenses get, you can't kill monsters just by making them miss you. If you sacrifice offense for defense, make sure your allies can pick up the slack.

KALMAN ANDRASOFSZKY

# . . . NEVER MISS

***"How about I close my eyes, just to make it a challenge?"***

You never miss. At least, that's your goal. You might not hit as hard as the raging barbarian who wields a greataxe, but you hit more frequently.

For the purpose of this section, we're assuming that making a weapon attack against AC is just as accurate as making an implement attack against Fortitude, Reflex, or Will. Obviously, this is not true of every monster. Expert optimizers can point out ways to take advantage of the four-defense system to increase accuracy even more.

## Class

Some classes, such as the fighter and the rogue, offer accuracy through bonuses to attack rolls. Other classes, such as the ranger, provide multiattack powers that help ensure they hit at least once each round.

These are reasonable choices, but the avenger's *oath of enmity* power—which lets that character roll twice for every melee attack he or she makes against a chosen foe—leaves all these other classes behind.

Find a paragon path that further enhances your accuracy. Battlefield archer lets your ranger reroll a ranged attack roll by spending an action point, and beast stalker gives your ranger a +4 bonus to attack rolls against your quarry for a round. The shadow assassin paragon path provides a similar attack bonus for rogues. The avenger doesn't have many good options here, so if you decide on an avenger, multiclassing might be your best choice.

## Race

You must choose a race that has a bonus to your class's primary ability score, but that doesn't cut down the choices very much. Instead, look for racial powers and traits that increase accuracy. You won't find many traits that say "gain a +1 bonus to attack rolls," so think carefully when examining your options.

The elf's *elven accuracy* power lets you reroll one attack each encounter, which can turn a miss into a hit. The deva's *memory of a thousand lifetimes* racial power adds 1d6 to one attack roll each encounter; although this power is not as swingy as a reroll, its predictability of this power makes it more likely to have an effect when you use it. The changeling, the drow, the shardmind, and the wilden each have a racial power that grants members of those races combat advantage (though the racial bonuses of first two don't match up with the avenger's primary ability score).

## Weapon

Select a weapon that has a +3 proficiency bonus, such as a greatsword or a longsword. The improved accuracy of these weapons compared to a greataxe or a battleaxe more than makes up for the small sacrifice in weapon damage die size.

## Powers

To find powers that maximize your accuracy, keep your eye out for options that include one or more of the following benefits.

- *Inherent accuracy bonuses.* A few powers include a built-in bonus to the attack roll, such as the fighter's *sure strike*. Others grant you a temporary bonus to attack rolls, such as *dawn fire sigil* or *villain's menace*.
- *Target non-AC defenses.* Any time you can use a weapon to attack Fortitude, Reflex, or Will, it's like getting a +2 bonus to the attack roll (since those defenses are typically about 2 points behind AC).
- *Multitarget powers.* A power that lets you attack more than one target, such as *sweeping blow*, increases your chance of hitting somebody, although it doesn't improve your odds of hitting a particular enemy.
- *Attacks that don't use standard actions.* Just like using multitarget powers, making more attacks means you hit more often. The rogue's *low slash* provides an example of such powers, which are admittedly rare.
- *Effects that reduce enemy defenses.* A penalty to your target's defense is just as good as a bonus to your attack roll. *Menacing presence* is a great choice for an avenger.
- *Avoid attack powers with Miss or Effect lines or that have the reliable keyword.* Although these might seem to fit well with your specialty, such powers are often balanced by delivering less punch on a hit. Since you expect to hit every time, why bother worrying about what happens when you miss?

## Ability Scores

Put your highest ability score in your class's primary ability. Everything else is less important.

## Feats

Few feats improve accuracy on all attacks, so take Weapon Expertise as your first choice. Once you have that, search the D&D Compendium for "bonus to attack" for options that best fit your character's class, powers, and preferred tactics.

## Items

Keep your weapon's enhancement bonus as high as possible. Once that's covered, search out items that provide conditional or situational bonuses to attack rolls, particularly if the bonus is untyped.

- *Master's blade* (level 4 and up) provides a +1 bonus to attack rolls with basic and at-will attacks while you're in a stance. A *berserker weapon* (level 10 and up) leaves you wide open to attacks, but its daily power bonus to attack rolls lasts the entire encounter. A *bloodthirsty weapon* (level 13 and up) adds +1 to your attack rolls against bloodied targets.
- *Barrage bracers* (level 10) give you a +1 bonus to attack rolls against a target when you hit it. Since the bonus lasts until the end of your next turn, multiple hits on the same target can build up a nice attack boost.
- *Hero's gauntlets* (level 17) add +1 to your attack rolls when you spend an action point.
- Planting a *battle standard of the vanguard* (level 20) provides a +1 power bonus to your attacks until the end of the encounter.

## Other Choices

Don't forget to use your allies for additional accuracy bonuses. Flanking grants a +2 bonus to attack rolls, and most classes have powers that either grant bonuses to your attack rolls or penalties to enemy defenses.

This section only covers characters who improve their attack rolls to astronomical levels, but you could also build a "never miss" character by selecting powers with guaranteed effects on a miss and by taking other options to improve those powers.

STAN! BROWN

# . . . NEVER FAIL SAVING THROWS

***"Don't worry—I'll be fine."***

You feel better knowing that no matter what an enemy throws at you, you can shake it off. Even if you fall unconscious, you won't bleed to death. You just don't share the same worries as other mortals. And why should you? You've maxed out your saving throws.

This character concept appeals to risk-averse players, as well as to those players who just can't succeed on a saving throw to save their lives (sometimes literally). Saving throws are a great mechanic to max out because when all else fails, at least you'll make your death saving throws.

## TELL US ABOUT YOUR CHARACTER

My name is Devon Avery, and I tell people that I am a paladin of Moradin. Many find it odd that a human would worship a dwarven god, but that is not what I am here to confess today. I came to the depths of the dwarven cities to hide from something so evil I have trouble speaking of it. This journey has proven to be in vain, however, because whatever this evil is, I have brought it with me.

When my wife lay dying from childbirth and my gods ignored my pleas to spare her life, I made a dark pact. At first it was only words, and I thought nothing more of the things I said that night. After all, my son and wife survived and I had nothing to worry about. But I am haunted now, and I have left my home in search of a way to rid myself of this thing that grows inside of me.

I went to the dwarven kingdom, where no one would recognize my face, and I studied their religious ways in hopes on concealing the demon in me . . . and the demons around me. One of them I see frequently. I call him Gorahk, and he is no bigger than a pint of ale. The creature seems invisible to all others, so my babbling appears madness-induced. I try to keep my talking to a minimum. Even as we speak now, Gorahk sits upon my shoulder whispering things to me, unpleasant things and always whispering.

Now I must find another way out; I must venture forth and be rid of this once and for all. I want to return to my family, but not like this. Moradin shall grant me the courage I need and shall lead me to the right path.

I hope.

*CRAIG KROHN works as a lead software test engineer for Dungeons & Dragons Digital Tools. When he is not at the office or playing D&D, he spends most of his time at his dojo teaching karate and aikido.*

## Class

Increasing the number of chances you get to succeed on a saving throw is the best way to shake off lasting effects. Most defender classes offer a variety of powers that do this, but no class does it better than the warden, whose Font of Life class feature grants one extra saving throw every round.

## Race

Many races grant bonuses to particular subsets of saving throws. For example, eladrin and dwarves have large bonuses against charm effects and poison effects, respectively, and other races have bonuses against different effects. If you fear death saving throws more than any other, the Warforged Resilience trait means your warforged character will never die from failed death saving throws.

However, none of these races hold a candle to the saving-throw potential of humans, who have access to key saving-throw boosting feats. If you really want to max out your saving throw success rate, play a human.

## Feats

You want feats that grant you a bonus to saving throws or that provide extra saving throws. This section focuses on feats appealing primarily to human characters or to wardens, since those options offer the best opportunity for optimization.

Your human character should start with Human Perseverance, which grants a +1 bonus to all saving throws. Stubborn Survivor grants an additional +2 bonus to saving throws when you have no action points, so go ahead and spend those action points as soon as you get them. Action Recovery lets your paragon tier human make extra saving throws each time you spend an action point. If you play a paladin, Divine Approval grants your human an extra saving throw each time he or she uses a Channel Divinity power.

As a warden, take Revitalizing Font of Life at 1st level; it grants a +2 bonus to the saving throws you make following a successful saving throw from Font of Life. At 11th level, pick up Enhanced Font of Life for the +1 bonus it gives to the saving throws granted by that class feature. When you hit the epic tier, grab Enduring Font to get another extra saving throw every round.

Timely Respite gives any character an extra saving throw when he or she uses second wind or total defense, giving you the opportunity to roll an extra saving throw every turn if you want to.

## Magic Items

The armor slot contains many choices for enhancing your saving throws.

- *Delver's armor* (level 2 and up) retroactively adds 2 to a saving throw you just rolled.
- *Armor of cleansing* (level 3 and up) grants a +2 item bonus to saving throws against ongoing damage, which is one of the most common effects that a save can end.
- *Verve armor* (level 4 and up) adds 2 to your death saving throws, and turns one saving throw each day into a natural 20.
- Wardens should pick up *lifefont armor* (level 4 and up) for the +1 item bonus to the saving throws granted by Font of Life.

Another common slot for save-boosting items is the neck slot.

- *Amulet of resolution* (level 2 and up) lets you reroll one saving throw each day.
- *Resilience amulet* (level 8 and up) lets you react to an attack that deals ongoing damage by rolling a saving throw to negate that damage before it occurs. A *steadfast amulet* (level 8 and up) works similarly against the dazed or stunned conditions.
- *Amulet of bodily sanctity* (level 14 and up) grants a +2 bonus to saving throws against ongoing damage and lets you (and your nearby allies) roll an extra saving throw against ongoing damage once each day.

Many other items enhance particular types of saving throw, such as a *survivor's belt* (level 11), which lets you roll twice when making death saving throws.

Finally, consumable items offer many effects that boost saving throws, such as *antivenom*'s bonus to saving throws against poison and the extra saving throw offered by a *potion of vitality*. These options can prove cheap alternatives to permanent magic items.

## Powers

Your power choices don't help your saving throws as much as your feat and magic item choices, but that doesn't mean you should ignore them.

- The paladin gains extra saving throws from *trial of strength*, *fear not*, *comeback smite*, *guiding verse*, *cleansing spirit*, and other powers.
- The swordmage gets extra saving throws from *mythal recovery*, *unicorn's touch*, *borrowed confidence*, and *bravado strike*.
- The warden doesn't need many save-improvement powers, but *cleansing earth*, *vine poultice*, and *panacea* all come in handy.

EMPTY ROOM STUDIO - PETER LAZARSKI

## Other Choices

Consider options that grant you extra benefits when you succeed on a saving throw (since you'll be doing that frequently). For example, *erupting font* lets your warden mark multiple enemies when you succeed on a saving throw granted by Font of Life. *Torc of fortune* (level 24) lets you shift 2 squares whenever you succeed on a saving throw during your turn.

Don't forget to figure out how you defeat the enemy. Many of your feat and item choices don't directly contribute to winning a fight, and if you can't deal damage, your successful saving throws just prolong an inevitable defeat.

# . . . HAVE THE MOST HIT POINTS

***"I'm not sure I can be killed."***

Let the rogue or sorcerer brag about how much damage they deal. You know that the true mark of success is how much damage you can take before falling down.

At the end of each session, show the other players the piece of paper (or the entire note pad) that holds your chicken-scratched hit point updates. Then blow them away by totaling up the damage you survived.

## Class

Defenders offer the most hit points, both at 1st level and beyond. The barbarian keeps up well, particularly for a striker. Of all the classes, though, the warden has an edge of about 1 hit point each level.

Take the dreadnought paragon path, even if you have to multiclass to do so. It gains 10 extra hit points at 11th level and has plenty of other features and powers that make your fighter's hit points last longer.

## Race

Choose a race that has a bonus to Constitution to pick up a couple of extra hit points.

Goliath is a good choice because of the racial power that negates incoming damage (which is a lot like having more hit points), and because a goliath's

### TELL US ABOUT YOUR CHARACTER

You know what I hate? When my character dies . . . or, to be more precise, when my character is close to death. Do I risk triggering that opportunity attack? Oh, crap! That dragon's gonna breathe on me again. I'd better get away from that aura or it'll kill me.

The threat of death led to way too much tension in-session, and it caused too many post-session questions of "Why didn't I have more fun?" After years of living with my mortality issues by playing characters who didn't want to be anywhere close to the front line, it was time for me to confront this problem. It was time to warforge up.

Hammoth Stoutarm, Dreadnought of Brindol, is there to negate the best shots the bad guys can offer. In basketball terms, he's the defensive stopper. Put Hammoth on that brute one-on-one and he will shut it down. That ogre's no longer wreaking havoc on the squishy rogue Adrin, or threatening our cleric and lifeline Boldrik. Hammoth's got its attention, and like the tide, he will wear it down from boulder to pebble if given the time.

A high AC and a font of hit points make all this possible. The quality of Hammoth's armor will always be a higher priority than his weapon. Along with a ton of hit points, he has a few easy ways to stock up on temporary hit points. By taking warlord multiclass feats, Hammoth can pass around a few healing surges in each fight, but he always saves at least one healing power for himself. After all, if he falls in battle, he has failed his comrades.

Hammoth's ideal turn? After absorbing a wave of punishment that would have floored anyone else in the party, a bloodied Hammoth looks like he's on his last legs. The foes start circling, ready to put him down for good. And then the comeback starts . . . *warforged resolve* gives him a little healing and some temporary hit points. An action point spent for a *comeback strike* gets him farther away from death's embrace, marks the biggest, baddest foe out there ("Hey buddy, I'm not done with you yet!"), and gives Hammoth resist 10 for a turn thanks to his paragon path. Bloodiron plate armor boosts his AC against that target for a turn. A *rousing word* or second wind has Hammoth back up to nearly full hit points. If it looks like the fight's going to last a while, he throws in *boundless endurance* for the safety net of near-constant regeneration.

You thought you had me whipped? Think again, chump. I'm better at this than you, and it's gonna be a looooooong fight.

*GREG COLLINS is a web producer for magicthegathering.com at Wizards of the Coast. A D&D player for almost 30 years, he's recently taken up the mantle of DM and finds the experience of screwing with his players' heads highly enjoyable. What's in the box?*

racial bonuses to ability scores match up well with the warden.

Similarly, the mix of ability bonuses and the racial power possessed by the warforged marks that race as another excellent option.

Revenants cheat at this contest, because they can stay conscious after dropping to 0 hit points. Since that kind of survivability isn't due to a spectacular number of hit points, we won't include revenants in this discussion.

## Ability Scores

Put your highest score in Constitution to maximize your hit points.

## Feats

If you want to be a hit point machine, start with Toughness.

- Consider multiclassing into fighter to gain access to powers and feats that grant temporary hit points (such as Grit, a solid paragon tier feat choice).
- Warforged characters should pick up Improved Warforged Resolve to gain an extra 5 temporary hit points from *warforged resolve*.
- Similarly, goliaths should take Unyielding Stone to gain temporary hit points when they use *stone's endurance*.

## Powers

Powers don't generally grant extra hit points, but many provide temporary hit points.

- Many fighter powers, such as *boundless endurance*, *bolstering stride*, and the various powers that have the invigorating keyword, grant temporary hit points. (If you select invigorating powers, be sure to train in the Endurance skill.)
- The warden has only a few powers that grant temporary hit points, but those include the at-will attack power *strength of stone*, which gives you the option of gaining temporary hit points every round.

## Magic Items

As with feats, most of the hit points you get from magic items are temporary. Don't get too many of these items, since temporary hit points from multiple sources don't stack.

- Most armors that grant temporary hit points are heavy, making them suboptimal for wardens. *Heartening armor* (level 3 and up) grants a few temporary hit points when you use second wind. *Stoneborn armor* (level 3 and up) gives you a decent chunk of temporary hit points once each day. *Champion's armor* (level 9 and up) gives you temporary hit points equal to the damage you just took from an attack.
- When you reduce an enemy to 0 hit points with a *lifedrinker weapon* (level 5 and up), you gain 5 temporary hit points.
- *Amulet of false life* (level 9 and up) grants you temporary hit points equal to half your surge value once each day.
- *Hero's gauntlets* (level 17) give you temporary hit points when you deal damage with an attack made by spending an action point.
- A *cord of foresight* (level 18) lets you start the day with temporary hit points equal to your healing surge value. Even better is an *eager hero's tattoo* (level 10), which gives you temporary hit points every time you take a short rest.

## Other Choices

Increasing your healing surge value doesn't feel like increasing your hit point total, but it makes your hit point supply last longer.

Similarly, relying on leaders for your healing can nearly double the efficiency of your hit points by making each surge worth much more than normal.

# . . . DEAL DAMAGE FOREVER

***"Still hurts, doesn't it?"***

After your allies perform an attack, the story is over, but your powers are gifts that keep on giving. Enemies that face you suffer prolonged agony from poison in their veins, fire burning their bodies, and acid searing their flesh—occasionally, all at the same time. When you strike an enemy, a clock starts ticking slowly down to the enemy's inevitable death.

Attack powers that deal ongoing damage might not seem as powerful as more traditional options, but when used properly, they can be much more devastating. These attacks represent a type of gamble, betting that failed saving throws by the target will result in much more damage than a typical power would have dealt.

Building a character who focuses on dealing ongoing damage can be a long, difficult road. For the first few levels, you are limited to a single power that grants the effect. Your patience, however, will be rewarded.

### TELL US ABOUT YOUR CHARACTER

Mar'lik is a 2nd-level shadar-kai hybrid rogue/swordmage. I envision this character as one part Huron-haired, pierced-and-tattooed goth, one part musketeer with a flair for stylish attire and weaponry. He wears fencer's attire, a short, dark cape, and a rapier hanging from his broad leather belt. He also sports a short, neatly trimmed, pointy beard below his roached hair.

At only 2nd level, Mar'lik already displays tremendous talent at Stealth (with sylvan leather armor and a Luskan background, his Stealth skill modifier is +14). With his trusted *farbond spellblade rapier* stowed elsewhere for quick retrieval, he can confidently bluff his way into fancy receptions completely unarmed, all the better to disappear and investigate mysteries using Acrobatics and Thievery.

His powers include *piercing strike, dazing strike, lightning lure,* and *frost backlash*. He spent his first feat to gain proficiency with the rapier, and the second to take Hybrid Swordmage Warding to help his AC. He relies on his *shadow jaunt* racial power to escape when he is surrounded.

*DIDIER MONIN started playing AD&D in 1980 at the History Games Club of St. Sever in Rouen, France. At the University of Jussieu, Didier helped start both an RPG gaming club at the university and an RPG fanzine. He worked for Wizards of the Coast for nearly 14 years, first in the French office then in the U.S. office, where he managed the data system for Organized Play and later produced the D&D Insider client applications.*

## Class

Almost every class has a few powers that deal ongoing damage, but only a few classes use them extensively. Invoker and wizard offer a decent range of options, but the two best choices are sorcerer and warlock.

The primordial channeler is a great paragon path choice for sorcerers, since it can add ongoing fire damage to all your attacks. The life-stealer paragon path for infernal warlocks adds ongoing fire damage to any attack made with an action point.

## Race

Since you need accuracy to deal ongoing damage, start by narrowing your race choices down to those that offer a bonus to your class's primary ability score. Of those options, focus on races that increase your accuracy. (See "Never Miss," page 72, for tips on finding these races.)

## Ability Scores

If you plan to create a warlock or a sorcerer, Charisma is by far your most important ability score. Most powers that deal ongoing damage rely on Charisma, and many of them gain a damage bonus equal to the character's Charisma modifier.

## Powers

Finding appropriate powers is easy: Just search the D&D Compendium for powers that have the word "ongoing" in their descriptions. (Searching for "ongoing damage" misses all the powers that include a damage type between those two words.)

Most of your options will be daily attack powers, since that's where ongoing damage generally resides. Try to vary the ongoing damage type so that you can stack their effects onto an individual enemy.

A few encounter attack powers deal ongoing damage, including *fire shroud* (wizard 3), *word of fiery condemnation* (invoker 7), *unholy glee* (warlock 17), and *hideous tether* (spellscarred 23). Pick one of these up if you have the chance, since you'll use it much more often than any of your daily attack powers.

At 10th level, you should select *storm of energy*, even if you must use multiclass feats to do so. The 10-point increase in each target's ongoing damage value makes this power essential for this character specialty.

Look for powers that give a target vulnerability to one of your ongoing damage types (*ruinous resistance* is a great choice for warlocks). This combination can drastically increase your damage output.

ADAM PHILLIPS

## Feats

Until you have a good selection of ongoing-damage powers, don't invest too heavily in feats that enhance them. You can always retrain to take such feats later on in your career.

As with powers, feats that give a target vulnerability to damage (such as Arcane Fire) can help increase the efficiency of your ongoing damage.

Sorcerers should pick up Arcane Spellfury. The attack bonuses it provides can help you hit with your crucial daily ongoing-damage powers.

If your campaign includes dragonmark feats, the Aberrant Mark of Contagion applies a penalty to saving throws against ongoing damage.

If you plan to use alchemical items to augment your collection of ongoing-damage effects (see "Magic Items," below), snag the Alchemist and Alchemical Opportunist feats.

## Magic Items

Magic items can significantly increase the variety of ongoing damage that you deal.

- A *robe of quills* (level 3 and up) gives you another source of ongoing damage, although it's probably not worthwhile to get one until you reach paragon tier. A simpler choice is *counterstrike armor* (level 10 and up), which deals ongoing 5 damage to the first enemy that hits you in each encounter.
- *Skin of agonies* (level 13 and up) lets you turn an enemy's ongoing-damage attack away from you and onto another foe.
- Look for items that add ongoing damage to other attacks, such as *burning gauntlets* (level 6), *orb of fiery condemnation* (level 15 and up), *rod of the churning inferno* (level 12 and up), and *rod of silver rain* (level 15 and up).
- A *lifesapper rod* (level 9 and up) lets you deal ongoing damage to a target just by subjecting the target to your Warlock's Curse.

Plenty of alchemical consumables create ongoing damage, such as *alchemist's acid*, *dragonfire tar*, *bloodstinger poison*, and *acidic fire*. Just make sure you buy new consumables periodically to keep their attack bonuses relevant.

## Other Choices

All classes are limited in the number of ongoing damage powers they can use in one combat. Typically, only daily powers deal ongoing damage, so be prepared to round your character out with more standard attack abilities, as well.

Search for options that reduce your enemies' saving throws to make your ongoing damage effects last longer.

# . . . TELEPORT INSTEAD OF WALK

***"There you go, using your feet to move around again. What a waste of energy!"***

Why exert yourself–not to mention risk all those opportunity attacks–by walking around, when you could just teleport wherever you need to go?

As a master of teleportation, you can escape the nastiest deathtrap and close the distance to engage the foe of your choice. Although you might face jealousy from the other players at your carefree method of movement, try to be humble: Remember what it was like to be a slave to traditional measurements of time and space.

## Class

Several classes offer a range of teleportation powers. Most of them are strikers, but you can have teleportation fun in many roles.

The avenger uses teleportation to pursue his or her chosen enemy. Despite a vast selection of teleportation powers, many of the avenger's powers are limited in their flexibility.

The assassin can choose from many teleportation options, including an at-will class feature. Again, however, several of these powers restrict the assassin's options of where to teleport.

The swordmage and warlock have the most versatile groups of teleportation powers; however, the fey pact warlock is clearly ahead of all other classes.

## Race

Three races have a racial teleportation power. The eladrin's *fey step* has the longest distance (5 squares), and the shadar-kai and wilden gain extra benefits when they teleport.

## TELL US ABOUT YOUR CHARACTER

How do I know if I've created a character I'll enjoy playing? It has nothing to do with statistics, race, or class. It's all in the behavior and mannerisms. When other players in my D&D group start quoting my character and speculating on what he will do, then I know I've created a character worth keeping.

Take the wizard I created for Rodney Thompson's Forgotten Realms campaign, for example. Harold Glimmerswick was an 70-year-old spellcaster who had spent most of his life cloistered in Blackstaff Tower studying magic. What's more, he was obsessed with reviving Mystra.

Most of Harold's personality came out of this single character concept: If a person spent his entire adult life in a tower with little social contact and only books to inform him about the outside world, then he would have a very distorted view of reality. With a strong background and a powerful motivation (reviving Mystra), Harold had the makings of a fun, comedic character.

The best hijinks were the ongoing jokes poking fun at Harold's naivete and headstrong nature. For example, even in the Frozen North, Harold wore nothing underneath his robes, believing this to be a perfectly natural thing, since he never bothered back in the warm quarters of Blackstaff Tower. Whenever meeting people, he brazenly announced himself: "I am Harold Glimmerswick, wizard of Blackstaff Tower, and I am going to revive Mystra." The other characters inevitably groaned at Harold's missteps, but I made sure not to get so wrapped up in my character that I derailed the game.

Harold adventured with several morally questionable characters, such as an escaped convict and a drow with a penchant for torture. Creating a character who is something of a fish out of water, who has a background and an outlook that are much different from those of the rest of the party, can lead to great roleplaying opportunities. For instance, as the drow threatened grievous injury to one of our wererat foes, Harold quizzically wondered why his books about adventurers never recounted such things.

So, coming back to my point: I know I've made a character I'll enjoy when the other players can vividly imagine my character and describe what that character might do. If the DM tells us there's a big red button and before I can do or say anything, the other characters turn to me and say, "Harold, NO!" then I feel like I've achieved the infamy I want. If my wizard flies overhead and the other characters all announce, "Don't look up!" then I count it as a success. For me, having a character I enjoy is more than filling out a character sheet, it's about making someone who feels distinct and alive.

*GREG BILSLAND is an editor and a designer at Wizards of the Coast. His recent credits include Monster Manual 2, the Eberron Player's Guide, Martial Power 2, and Monster Manual 3. You can learn more about Greg's characters and campaigns at twitter.com/gregbilsland.*

Of these races, the eladrin has the most other teleportation-affecting options available, but any of these races makes a good choice.

## Ability Scores

Your ability scores have little effect on your ability to teleport, except in specific circumstances. Instead, the powers and feats you choose determine which ability scores benefit you most.

## Powers

Searching the D&D Compendium for "teleportation" brings up a list of appropriate powers. You can choose the powers that fit your style.

Pick up some teleportation powers that are activated with a move action or a minor action, such as *ethereal stride* (warlock 2) or *dimensional warp* (swordmage 2), so you can teleport without having to make an attack first.

*Ethereal sidestep* (warlock 10) is the ultimate "lazy" teleportation power, allowing you to teleport 1 square instead of shifting. Your allies will stop teasing you about it, though, once they watch you teleport out of a grab, or atop a low wall, or through a hole too tight for squeezing.

## Feats

Shorten your search term to "teleport" when looking for appropriate feats.

- Mark of Passage increases your the distance you can teleport with all powers by 1 square. Other similar feats include Devious Jaunt (for shadar-kai), Improved Misty Step (for fey pact warlocks), and Feyborn Pursuer (for eladrin avengers).
- Eladrin swordmages should grab Eladrin Swordmage Advance to get a free melee basic attack every encounter.

## Magic Items

With the right magic item selections, you can drastically increase your teleportation options.

- A *robe of contingency* (level 4 and up) is a favorite of many lightly armored characters because of its immediate-reaction teleportation power.
- *Translocating armor* (level 14 and up) lets you teleport after being missed.
- *Bracers of escape* (level 7 and up) allow you to teleport when attacked, effectively negating the attack.
- *Feystep lacings* (level 12) provide great teleportation flexibility, giving you 5 squares of teleportation each day that you can divide as you choose.

## Other Choices

Even though rituals don't offer much help in combat, if you want to be known as a master teleporter, you'd better pick up Linked Portal and similar rituals.

EMPTY ROOM STUDIO - PETER LAZARSKI

CHAPTER 2

# Building Your Party

**You've followed** the advice in Chapter 1, and now you have a well-designed character who has a fascinating personality and an intriguing background. All you need is for the other players at the table to have the same, and then fun and success inevitably follow, right?

Unfortunately, even with an entire party of compelling, optimized characters, your game might still end up a miserable failure. If every player makes a bad-boy, long-ranged striker who doesn't work well with others, you might find that you can't get much done, and you won't survive many encounters. Failure to collaborate with the other players to make a party that works well together can ruin your gaming experience before you even roll initiative in your first encounter.

D&D is a social game. Most players feel the game is most rewarding when it provides the same feeling of camaraderie that we get from working well with others in any other environment. By spending a little time early on discussing the details of your adventuring party, you can avoid hours of dull roleplaying, aimless wandering, failed encounters, and stalled adventuring later on.

Before anyone starts building a character, you should talk with the other players about character roles, party optimization, group and individual strategy, and teamwork. This chapter explains how to plan your party for both efficiency and enjoyment. It includes the following sections.

- **Character Roles:** How the four roles work together to build a successful party, and how to deal with a nonstandard party size or role array.
- **Group Characterization:** How to optimize the social side of your party, including advice on creating complementary personalities and crafting interlocking backgrounds.
- **Party Optimization:** A discussion of advanced tactics for party-building, including group character design and power choice.
- **Sample Parties:** Each sample party shows a different way of thinking about building a unified group and includes explanations of how and why it was created.

EMPTY ROOM STUDIO - PETER LAZARSKI

The ideal party of D&D characters includes one character from each of the four roles described in the *Player's Handbook*: a defender to soak up damage, a controller to manipulate the battlefield and quell the mobs, a striker to take down key monsters, and a leader to keep the party on their feet while they do their jobs. If you have at least four characters in your party, aim for at least one player to assume each of these four roles. (See page 14 for more details on character roles.)

Of course, most parties don't have exactly four characters, and even those that do might find themselves down a character occasionally (or even welcome a guest). So how do you decide which roles to double up in a large party, or which ones to live without in a smaller group?

## Building a Large Party

In our experience, tables of five players are quite common. In fact, the game's advice for the DM on building encounters and assigning treasure assumes a party of five characters. But we also know that some of you out there routinely play with six, seven, or even more players all vying for the Dungeon Master's attention. So let's talk about how to choose the best roles for a big group.

### Doubling a Role

Many players have strong opinions about the right role for a fifth (or sixth, or seventh) character, and they back up their opinions with all kinds of claims about critical redundancies or the like. In truth, the right extra character for your group depends on many factors, including the style of game the DM plans to run, the enemies you expect to face, and your group's tactical skills and preferences.

**Controller:** No character can affect a greater area of the battlefield than the controller. Wielding a variety of long-range, multitarget powers, the controller devastates mobs and reshapes the battle with a wave of his or her hand. If one controller is good, two must be better, right? Not always. Unless you commonly face particularly big mobs or wide battlefields, one controller is usually sufficient to get the job done.

That said, if your DM loves throwing endless waves of minions at your party, or if you spend more time fighting in the great outdoors than in narrow dungeon corridors, multiple controllers make a huge difference. Two controllers working together can easily block off entire swaths of the battlefield with deadly zones or can coordinate their efforts to eradicate swarms of enemies.

Controllers are at their most effective when facing large groups of enemies. If your DM prefers solo monsters or small groups of monsters, doubling up on controller can leave both characters feeling like low-damage strikers.

Also, since few controllers can survive extended contact with the enemy, make sure your controllers have good defensive or escape powers. The defender probably can't guard more than one controller simultaneously, so each controller needs to be self-sufficient enough to get out of trouble on his or her own.

Add a second controller if you anticipate many large-scale combats, and if both controllers can reliably survive occasional melee encounters.

**Defender:** Adding a second defender gives your party a lot of control over who gets attacked. If the two defenders divide their attention among different enemies, the party has locked down twice as many foes as before. Two defenders near each other can set up a virtual wall to protect their squishy allies. In a typical dungeon crawl, this tactic can easily render the monsters incapable of posing a serious threat.

A second defender also comes in handy when your party is facing a two-front battle. If your DM likes bringing enemies at you from all directions, strongly consider adding a second defender to the party.

In a battle with few enemies, a second defender can feel redundant. Multiple defenders facing a solo monster occasionally squabble over who should mark the foe; this can result in one character feeling left out. (See "Defenders: Tank-Teaming," page 90, for tips on managing multiple defender marks.)

Add a second defender to your group to gain durability and reliability. You might not kill the enemies quickly, but it takes a catastrophe to lose the fight.

**Leader:** Adding a second leader allows your party to bounce back quickly from any development. No matter what the DM throws at you, your group has the healing and party buffs to survive and thrive.

In some groups, the leader serves as the character who gets others out of trouble, whether with healing, extra saving throws, or other benefits. Having two leaders makes it tough to screw up badly enough to ruin your chances for victory. Even when the cleric goes down to the ogre's crit, the warlord's there to save the day.

The same goes for groups with unpredictable attendance. If you can't reliably forecast which players (and thus which characters) will show up for any given session, adding that extra leader ensures you have the problem-solving skills you need even if one player is missing.

A second leader can result in slow and undramatic encounters. With twice the healing of a normal party, monsters have difficulty piling damage on quickly enough to endanger any character. But since leaders lack the damage-dealing capability of strikers and controllers, the characters also win slowly.

Two leaders can also overlap, resulting in wasted effects and bored healers. Two daily powers that both

grant power bonuses to AC, for instance, have little benefit when used in the same encounter. And unless the monsters get lucky with attack rolls, your second leader might find his or her healing unused in many encounters.

Add a second leader to your party to cover for tactical mistakes or absent players.

**Striker:** It's tough to have too many strikers in a party. After all, dealing damage tends to win fights, so dealing more damage wins more fights, right? Unlike defenders, multiple strikers rarely have overlap problems (with the exception of two warlocks, since you can't place your Warlock's Curse on a creature already cursed by another warlock unless you have the Accursed Coordination feat). Your rogue can use Sneak Attack against an enemy already chosen as the ranger's quarry; in fact, that's often the best tactic to end fights quickly and efficiently.

If you have multiple strikers in your party, make sure at least one of them is melee-friendly. Otherwise, you risk having too many characters who want to stand at the back of the party and not enough on your front line. Barbarians and two-blade rangers work well as melee combatants, and rogues and Constitution-based warlocks don't mind getting into the thick of battle now and again. Avengers prefer melee, but they also prefer fighting a lone opponent.

A striker-heavy party performs best against small groups of enemies. Most strikers can't deal well with large groups, and their damage-dealing talents are wasted against mobs of minions.

When in doubt about which character to add to your large party, go for a striker. Even if it's not always the best choice, it's rarely a bad choice.

### TOO MANY STRIKERS

Even with a normally sized group, you might end up with an unbalanced party. The most common manifestation is the striker-heavy team. Striker classes are the sexiest in the game, not just for power gamers and slayers but also for many actors because of the strong flavor associated with some of these classes.

With a party full of strikers, you desperately need a leader or at least a defender to keep an eye out for problems. While the warlock, rogue, ranger, and avenger run around the battlefield, poking holes in the enemies and cracking jokes about the decor, your "fixer" patiently cleans up the problems these strikers inevitably create.

STAN! BROWN

## Covering a Tactical Gap

Even if you have all the roles filled, your party might still be unbalanced. Sketch out where each character in your party prefers to stand during battle. Now, imagine a half-dozen monsters charging across the room. Where do they go, and what's the result? If you're the lone defender protecting three or four ranged attack specialists, how can you guard everyone, and who steps up when you inevitably fall?

The ideal adventuring party should have two characters devoted to melee combat, two focusing on ranged and area attacks, and one character who can switch between melee and ranged attacks as needed. Use the following descriptions to help plan your tactical group.

**Melee Focused:** ardent, avenger, barbarian, battlemind, fighter, monk, paladin, runepriest, swordmage, warden, warlord. These characters need to get up close to do their best work.

The warlord is a special case. *Martial Power 2* introduced the skirmishing warlord build, which focuses on making and enhancing ranged attacks. This character can easily fit into the highly versatile category.

**Ranged Focused:** invoker, psion, sorcerer, wizard. These classes rarely bring any melee prowess to the table. They need other characters to stand in the way of the monsters.

**Highly Versatile:** artificer, assassin, druid, rogue, skirmishing warlord. These classes can switch between melee and ranged attacks without giving up power or accuracy.

**Potentially Versatile:** cleric, ranger, seeker, warlock. These classes can be built to include both melee and ranged attacks. However, such builds typically need multiple primary ability scores or have other drawbacks, making achieving versatility with these classes more challenging. When bringing such a character to the group, make sure everyone knows whether you've built a focused or a versatile member of the party.

## Building a Small Party

If you drool at the thought of having too many characters at the table, you're probably one of those poor souls who can't assemble a full adventuring party. We empathize: Everyone's been there, whether as a new arrival in town or just cursed to live in a game-scarce region. So how do you deal with the party of three or fewer players?

Well, get rid of the idea of having a well-balanced party. No matter the workaround, you're bound to come up against situations that expose your team's gaps. But with a little discipline in class selection—and some cooperation from your DM—you can still have plenty of fun and success with a small group.

### Foregoing a Role

Many of the arguments about which roles to double up on also apply to small-group situations, but in reverse. If having two leaders means it's tough to lose a fight, having no leaders makes every battle tougher to win. Since you know you're missing a role, which one do you choose to forego and how can you compensate?

These descriptions are ordered from most expendable to least expendable.

**Striker:** The striker is the most expendable, because this role specializes in dealing damage. Sure, the other roles can't deal damage as quickly as a striker, but that just means the fight lasts longer. The striker lacks the leader's ability to heal, has only a limited ability to affect multiple enemies like a controller, and has no marking ability and weaker defenses than the defender. So if necessary, your party can manage without a striker.

Compensate for your lack of a striker by choosing classes with higher damage output or with plenty of accuracy and damage boosts. The right wizard or invoker can make up some of the damage gap. A warlord can pass out extra attacks and offensive buffs. A bard can easily load up on powers that increase his or her party's offensive output. A predator druid in beast form makes a decent striker replacement.

**Controller:** A controller is slightly more important to a party than a striker because of the multitarget aspect of the controller's abilities. With no controller in your party, you can't quickly destroy large groups of minions and you can't easily manipulate the battle

### Playing in a Large Group

If by choice or by chance you find yourself in a group with six or more players, you might think the extra players ensure success in combat and a fun game for everyone. It's true, pitting more characters against the same group of monsters likely results in an easier win. But in reality, the situation presents a number of challenges.

Big groups are slower than small groups. You might find that a seven-player team takes longer to finish a combat than the five-player group, even against the same group of monsters. The more players you have, the harder it is to know what you're going to do before your turn. And let's face it, some players just make decisions more slowly than a dwarf wades through a gelatinous cube. Encourage players to focus on simple, straightforward character options: powers without secondary attacks, feats without complicated situational benefits, and so forth. Even if each player sacrifices only a little of the complexity that slows the game down, it adds up to a big time savings.

Big groups mean less roleplaying time for each player at the table. Dividing the same number of playing hours between more people means less face time for each player. Don't hog the spotlight. Respect the other players' turns. Know when to sit back and let other people talk.

Big groups can lead to spotty attendance. Ironically, having more characters in the party can sometimes result in fewer players showing up. If you don't feel that your attendance is crucial for the group's success, you might find it easier to skip a game. Unpredictable attendance introduces all kinds of problems, both for the group's success and the DM's sanity in crafting encounters and intricate storylines. Let the DM rely on your presence; work hard to attend at least 75 percent of the sessions. If you can be one of these reliable players, offer to take charge of tracking treasure or quests, or offer to keep the party's journal. (see "The Campaign Journal," page 148). Have a backup for this task; if you're going to miss a session, send that player any notes he or she needs to step in for you.

Talk with the DM and the other players to agree on a standing rule for how many players will have to attend to keep a gaming session on the calendar. As much as it hurts to tell a player that the group isn't rescheduling a game to account for his or her absence, putting your game at the mercy of seven or eight competing schedules is a recipe for madness. Pick a night and stick with it—the player who misses a session can always catch up with the story next time.

through conditions, zones, and walls. Although you can get by without a controller, having one definitely makes your party stronger.

Compensate for your missing controller by having each player pick up multitarget powers, if possible. Every dragonborn can take out a couple of minions in each fight with *dragon breath*. Most classes have at least a couple of close burst or close blast attack powers; the fighter's *come and get it* is a good example.

Also, look for powers that restrict enemy options or reduce an enemy's effectiveness in combat. Both the sorcerer and the warlock can stand in for a controller in a pinch, with the variety of controlling or debuffing powers available to these characters.

**Defender:** Without a defender, strikers and controllers have difficulty doing their jobs. Strikers start taking more hits, forcing them to flee melee. Controllers lose their safety buffer, making them vulnerable to enemy brutes and soldiers. Even if the monsters cooperate by attacking your melee-focused leader, he or she doesn't have the defenses or hit points to stand up for long. And when your leader falls, the party's in big trouble.

Compensate for the lack of a defender by ensuring that everyone has either the durability to survive melee or the mobility to escape it. For strikers, use barbarians or two-blade rangers rather than sorcerers or warlocks.

Pick up some powers that mark foes—the bard has a few—to pull the monster off your bloodied wizard before it's too late.

**Leader:** It's tough to survive without a leader for very long; second wind only goes so far. Without a leader, every combat becomes a nail-biting race to defeat the monsters before you run out of hit points. The margin for error becomes razor-thin, mandating smarter play and stronger tactics from everyone at the table.

Compensate for your missing leader by picking up as many healing powers as you can. The paladin is your best choice, but several classes (such as the fighter and the warden) have the ability to restore their own health. Check out the Heal skill powers for options for any class. Although multiclassing is a good solution for any missing role, it's almost mandatory when your group goes without a leader.

## POWER TRIOS

If you need help assembling that three-character adventuring party, here are some combinations that might work for you.

**No Striker:** fighter, invoker, warlord. The fighter-warlord team-up can deal massive damage in a hurry while the invoker keeps the rest of the battlefield locked down.

**No Controller:** bard, swordmage, warlock. This all-arcane team brings plenty of battlefield control to the table. With the right powers, any of them can stand up against a mob for a round or two until help arrives.

**No Defender:** barbarian, druid, shaman. The first two characters can handle themselves in melee combat, and the shaman can lock down foes with his or her spirit companion.

**No Leader:** druid, paladin, warlock. The druid and the paladin can provide much-needed healing and defensive buffs. The warlock can easily get out of trouble before getting too injured.

PATRICK THOMAS PARNELL

Just as when lacking a defender, make sure you have the melee chops to handle the incoming monsters. Alternatively, you could try making everyone slippery; if the monsters can't keep up with you, maybe they can't hurt you.

One subtle effect of playing in a leaderless party is that it costs more healing surges to bounce back from a battle (since you don't have all those extra dice of healing normally gained from leader powers). Expect to play only half to two-thirds of the number of encounters between extended rests that you would play if you had a leader.

## General-Purpose Characters

The best solution for a small party comes from abandoning the game's preference for specialization in favor of more generalized characters. The multiclassing and hybrid character rules provide two methods for building a team member who can potentially cover two of your four bases.

A multiclass character spends feats to pick up some features and powers from another class. However, a single multiclass character doesn't fully compensate for a missing role. Multiclassing in leader or controller provides a bit of support for a party lacking that role, since so much of those roles lie in their power selection. On the other hand, multiclassing as a defender or a striker supplies only minimal role support and probably won't accomplish what you need.

Adding a hybrid character is another story. Built properly, with a good mix of two roles and the appropriate ability scores to support both classes, a hybrid character is a godsend to the small party. Although your hybrid fighter/cleric can't necessarily act as both a defender and a leader every round—or as either role for the full encounter—he or she certainly brings more of each role to the table than a multiclass character.

If everyone at the table can handle the complexity, consider encouraging each player in a small party to build a hybrid or at least a multiclass character.

## Work with the DM

Make sure your Dungeon Master knows about your party's role gaps. If you're worried about not being able to handle a particular type of challenge, ask your DM for advice on how to deal with it. Maybe he or she will agree to avoid placing your party in those situations very often, or maybe your plight earns you a "get-out-of-TPK-free" card.

The companion character system presented in *Dungeon Master's Guide 2* provides a potential solution for exactly this problem. Rather than crafting an entire extra character, the system allows you to build a simple character to fill in on either a temporary or a long-term basis. Running the character doesn't require much brainpower, due to its limited options, but the extra body can make the difference between success and failure.

A good DM knows that his or her job is to make the game fun for everyone. Any DM can build an encounter that kills off the entire party; the challenge comes in building encounters that come close without quite getting there.

## Tell Us About Your Character

Kael, the Hand of Io, is a 16th-level dragonborn deva cleric/invoker who has the angelic aspect paragon path in Chris Perkins's Wednesday night Iomandra campaign. (See the Iomandra page on the Wizards Community D&D forums for more details on this island-based campaign inspired by the D&D core world.)

Jumping into a Chris Perkins campaign is no easy feat. I polled the crew to see what the group needed, and a leader/controller topped the list. As I pondered jumping directly into a paragon-level campaign rich in detail and story, with a solid cast of characters who have already had crazy adventures together, I wanted to make something a bit unique. Using the deva's racial description, the angelic aspect paragon path, and the write-up for Bahamut-worshiping invokers in *Divine Power*, I created a twist on the deva story. Kael is an angel who descended to be the Hand of Io in the world, acknowledging both Tiamat and Bahamut in his code of action. This allowed me to retain a direct tie to the powerful draconic influences in Chris's game, yet still leave the "dragonborn spotlight" on the unique storyline of the paladin of Bahamut already in the party. I was a draconic deva. Go figure.

So I had a cool, unique race and character, and an easy-to-integrate background. Starting as a cleric, I swapped out some powers using the multiclass feats to give him some invoker/controller flavor while retaining the core healing this group of bleeders needed.

Also, reading the blog posts of the campaign, these guys fall all the time, so sprouting angel wings in a clutch seemed like a really, really good idea. Especially when diving out the window is the typical "Hail Mary" maneuver intended to save the party members from something deadlier inside the room. Seriously, they get sucked into vortexes, blown out windows, and dropped from heights on a regular basis. Read the blogs to find out how things turn out.

We should be okay, right?

*CHRIS CHAMPAGNE is the studio director of the team that makes great D&D applications like the Character Builder, Monster Builder, and D&D Compendium. An avid D&D player and DM since the summer of 1978, Chris uses the phrase "Just livin' the dream" when asked what it's like working for Wizards of the Coast.*

# GROUP CHARACTERIZATION

Crafting a mechanically balanced group represents only half the task of building a strong party. In addition to functioning well together on the battlefield, your characters must get along well enough to stand adventuring as a team. Work together to create complementary personalities and interlocking background stories for your characters, and you'll be rewarded with a much more entertaining game.

## Linking Stories

Share your character concept and background elements with your fellow players and encourage them to do the same. Look for places where your stories might link together, and take advantage of those opportunities to build connections before the campaign even begins.

Your links might have been forged in the past. Perhaps two characters hail from the same village, or studied under the same mentor, or were orphaned by the same war.

If such coincidences seem too strained, find another way to connect yourself to a person, a place, or an event significant to another character. Maybe your character knows another character's home town because you used to make delivery runs there as part of a merchant caravan. The paladin in the party knows your mentor because the paladin's father served with him in the war . . . the same war that orphaned the wizard.

On the other hand, the connections you build might involve plans for the future. You know that one of the characters likes to play practical jokes, so you decide that your dwarf will become the unwitting straight man for your friend's tricks. Two dragonborn characters in the same party might share a desire to see the glory of Arkhosia reborn in the world.

These links don't just provide common points of reference for small talk between your characters, they begin to build a framework upon which the DM can later place adventure hooks, significant nonplayer characters, and storylines. A person known to two or three characters provides a more compelling contact than one who's a stranger to everyone but you. A goal shared by two characters is twice as likely to become significant in the campaign setting.

You don't have to decide that every character knows everyone else before the first adventure starts. Instead, craft an interesting link between your character and two others in the party. Each of those characters, in turn, builds a link between two others, and so on, until you have a web of connections that bring you all together.

## Compatibility Test

Make sure that your various character personalities don't clash too badly. Friendly rivalries and occasional differences of opinion can make for exciting role-playing, but heated arguments and obstinate refusals to work together lead to broken groups and ruined friendships.

In some cases, you might have to tone down an aspect of your character concept to fit in. D&D isn't just about showing off your creativity or theatrical talents—it's about everyone at the table having fun. If your fun comes at the expense of the fun of other players, throttle back a bit and let others share the enjoyment.

Include the DM in these conversations, as well. Some Dungeon Masters can roll with any character personalities, but most have at least one behavioral quirk that rubs them the wrong way. Maybe your DM doesn't want a punster in his or her spooky game about undead. Be reasonable, and find a way that both of you can play the game you want.

## Why Are We Here?

Some gaming groups are satisfied just playing a team of treasure hunters without a greater purpose. Often, however, groups create a story that gives the party a reason for their adventures. Do your characters all work for the same mysterious benefactor? Have you come together for vengeance against the dragon who laid waste to your home region? Are you all escaped slaves, bored children of nobles, or graduates of the same military academy? Agreeing on the central purpose of your gathering can suggest adventures and quests to the DM while simultaneously reminding everyone why your characters risk life and limb to go on these crazy escapades.

Some groups go one step further, building their characters around a shared mechanical theme. It's never been easier to craft an entire party that shares a power source, but you could also share a race, use tribal feats, or find some other element of the rules to brand your group as a unified team.

Without exploiting the rules, a party can benefit from choosing classes, powers, and other options that work well together. This section aims to ensure that your party becomes a well-oiled machine.

## Defenders: Tank-Teaming

When you have two or more defenders in a party, it takes discipline and planning to avoid unnecessary canceling of each other's marks. Sometimes, trading marks is a great strategy, but many multiple defender groups unintentionally spend half the battle with only one marked enemy. Before you get to the table, figure out how to pair the right two defender classes to avoid this problem.

Place extra value on defenders who can easily select the target of their mark. The battlemind and the swordmage have the greatest flexibility in this regard, since they can mark a specific target other than the creature they're fighting right now. The fighter must mark the target he or she attacks, and the warden marks all adjacent enemies without any ability to pick and choose. The paladin falls in the middle of the continuum—he or she can select a particular enemy within 5 squares, but the paladin must then engage the marked foe.

Don't overrate multiple marking powers. With two or more defenders, you already have multiple marks on the battlefield, and multiple marking powers increase the chance that you'll override (and thus waste) an ally's mark.

Remember the value of durability. Although all defenders rely on high defenses and hit points, having two defenders means each one must be patient when it comes to getting healing. Also, it's unlikely that your two defenders can evenly split the incoming attacks; one or the other probably ends up taking the brunt of the assault. Paladins, fighters, and wardens are the toughest and most self-reliant defenders. Choose one of these characters as your primary defender, relying on him or her to take point in your defensive wall.

The swordmage makes the strongest secondary defender. Since your swordmage character can trigger your mark's punishing effect from range, you can effectively keep your attention on two places at once: the enemy in front of you, and the marked enemy across the room. Even if your aegis doesn't include teleportation, your own class powers offer many options for blinking across the battlefield at a moment's notice. Also, *arcane deflection* allows your swordmage to protect any adjacent ally, even another defender, from attacks.

The battlemind is another solid choice for a secondary defender; the class's precise yet flexible marking powers provide great options on the battlefield.

## Strikers: Focusing Firepower

When you divide damage between multiple foes, you draw out the battle and allow the enemy more opportunities to hurt you. Having a striker or two on your team avoids this problem by piling lots of damage on individual targets. Usually, having multiple strikers doesn't cause problems, since dealing more damage is almost always a good call. However, some parties that have multiple strikers encounter difficulty with competing striker priorities.

The most common problem with multiple striker parties comes from an overreliance on ranged attacks. The sorcerer, the warlock, and the archer ranger are popular striker choices, but none of these characters necessarily wants to face monsters in melee. Assuming that they don't stand together in the fight, all those fragile strikers are going to need multiple defenders to protect them. Pair a ranged-focused striker with a melee-friendly striker, such as the barbarian or the monk, to avoid this problem. Alternatively, make sure your strikers all have strong mobility, self-healing, or escape options so they can get themselves out of trouble.

Two striker classes, the ranger and the warlock, each have the Prime Shot class feature. If these two characters try to maximize accuracy against the same target, it's tough for both characters to gain the Prime Shot bonus. Either avoid pairing these two classes in the same party, or accept the inefficiency that comes with splitting attacks or foregoing Prime Shot.

Sometimes, two strikers' preferred tactics don't work well together. For example, the avenger prefers to fight a lone opponent. That usually means the character doesn't want any allies nearby—multiple characters usually draw multiple monsters. On the other hand, most rogues require a teammate fighting the same enemy to perform at full effectiveness. Having both an avenger and a rogue in the same party makes it tough for the strikers to focus their damage on a single foe.

Coincidentally, many strikers have similar skill lists. Keep in mind the party's desired distribution of trained skills (see "Skill Training," page 92) when choosing which strikers best fit your group's needs. The class skills lists of barbarians and rangers, for instance, overlap more heavily than the lists of sorcerers and rangers.

## Choosing the Right Leader

The *Player's Handbook* suggests that leaders are essentially interchangeable, but don't mistake this to mean that all leaders are identical. Although any leader fills the party's basic needs for healing and buffs, each leader class brings a different flavor of party assistance to the table. Matching the right leader to your party can make a significant contribution to your success.

Ardents have many powers that boost allies' accuracy and damage. Characters specializing in multitarget attacks (such as controllers, sorcerers, and rangers) can easily double the effectiveness of their attacks because of these boosts.

The artificer's conjuration powers often function as minicontrol effects, helping to keep a battle from getting out of hand. Like the ardent, the artificer also has many offensive buffs.

Bards are masters of minor repositioning, both of allies and enemies. Your bard should view the combatants as his or her toys to move around at will. The bard also provides great benefits outside combat, and has a long skill list, access to rituals, and *words of friendship*. Rogues and avengers appreciate the help in getting enemies into unpleasant positions, controllers love being slid out of melee, and the bard helps fighters lock down the battle as well. The Multiclass Versatility feature means your bard can easily slide into other roles when needed; small parties love having a bard.

No class brings more efficient healing to the party than the cleric. You could easily choose nothing but powers that heal damage or provide temporary hit points. Clerics also have a plethora of both melee and ranged attacks, which means that you can add the class either to a melee-focused group (to stand in the back rank) or to a ranged-focused team (to hold the front line). A group with plenty of other forms of healing might not need those powers as much.

The shaman can spread healing out to great effect but can't heal individual allies quite as quickly as other leaders. The shaman's spirit companion functions as a minidefender (if near allies) or as a zone of battlefield control (if elsewhere). You can safely bring low-defense characters to a party including a shaman, thanks to the many defensive buffs the class provides.

Warlords function best in a melee-focused party. Many warlord powers grant extra melee attacks to nearby allies or provide bonuses to melee attacks. Surround your warlord with fighters, barbarians, and rogues to maximize your party's damage output. The skirmishing warlord build in *Martial Power 2* favors ranged allies, so make sure you have an archer ranger, a seeker, or a warlock at hand.

Of the leaders, only shamans lack at least one social interaction skill; ardents and bards have all three. Most leaders have Diplomacy as a class skill, so if you have two or more leaders, take care to avoid unintentional skill overlap.

## Character Redundancy

The basic advice on building parties earlier in this chapter handled balancing melee and ranged attackers (see "Covering a Tactical Gap," page 85). Try to have at least two of each kind of attacker in your party, to avoid putting too many of your eggs into either basket. The members of a melee-heavy group might find themselves tripping over each other to get into combat, and an all-ranged party lacks the ability to effectively deal with brutes and soldiers.

Sometimes, though, you just can't avoid this imbalance. If you need to fill out a group that leans in one direction or the other, try these suggestions.

**All-Ranged Group:** This party needs a defender or a leader who can provide melee support for the rest of the team. For a defender, you can't beat the swordmage, who can keep one enemy marked while engaging a second enemy on the other side of the room. This class also has great mobility, allowing the swordmage to move between different threats with ease. For a leader, try a skirmishing warlord to enhance your party's ranged attacks. Make sure the warlord has a few melee powers, as well. The druid is a good choice for controller, since he or she can step into melee without difficulty.

**All-Melee Group:** An excess of melee characters offers fewer problems than an all-ranged group, but these characters still encounter difficulty handling flying enemies or cramped battlefields. Choose a leader who has ranged attack powers, such as an artificer, a devoted cleric, or a cunning bard. Make sure your strikers, even if they are melee-focused, have ranged attack options. The rogue and the hunter ranger are good choices for strikers with ranged attack abilities.

**Equipment:** Diversify your characters' choices of weapons, implements, and armor. Even if your DM is diligent about using character wish lists, when multiple characters want the same type of items, treasure distribution can get a bit testy.

**Rituals:** Every party should include a character capable of learning and using rituals. Several classes gain ritual use as a class feature; if you don't have one of these characters in your party, have someone select the Ritual Caster feat no later than 8th level. (That's when the really important rituals start appearing.)

**MATCHING CLASSES TO SKILLS**

| Skill | Best Choices | Other Choices |
|---|---|---|
| Acrobatics (Dex) | assassin, avenger, monk, ranger, rogue, seeker | bard, barbarian |
| Arcana (Int) | *artificer*, *bard*, invoker, psion, shaman, *swordmage*, warlock, *wizard* | assassin, ardent, battlemind, cleric, druid, runepriest, *sorcerer* |
| Athletics (Str) | barbarian, fighter, monk, ranger, runepriest, seeker, sorcerer, swordmage, warden, warlord | ardent, assassin, avenger, bard, battlemind, druid, rogue, shaman |
| Bluff (Cha) | ardent, assassin, bard, psion, rogue, sorcerer, warlock | — |
| Diplomacy (Cha) | ardent, bard, battlemind, cleric, paladin, psion, sorcerer, warlord | artificer, druid, invoker, monk, swordmage, wizard |
| Dungeoneering (Wis) | artificer, psion, *ranger**, warden | bard, rogue, sorcerer, wizard |
| Endurance (Con) | ardent, barbarian, battlemind, druid, fighter, invoker, runepriest, seeker, shaman, swordmage, warden | assassin, avenger, monk, paladin, ranger, sorcerer, warlord |
| Heal (Wis) | ardent, artificer, avenger, battlemind, cleric, druid, monk, paladin, ranger, runepriest, seeker, shaman, warden | barbarian, bard, fighter, warlord |
| History (Int) | artificer, bard, invoker, psion, shaman, swordmage, warlock, warlord, wizard | cleric, druid, paladin, runepriest, sorcerer |
| Insight (Wis) | ardent, battlemind, cleric, druid, invoker, monk, paladin, psion, runepriest, seeker, shaman | assassin, bard, rogue, sorcerer, swordmage, warlock, wizard |
| Intimidate (Cha) | ardent, barbarian, bard, battlemind, paladin, psion, rogue, sorcerer, warlock, warlord | avenger, fighter, invoker, seeker, swordmage, warden |
| Nature (Wis) | *druid*, *ranger**, *seeker*, *shaman*, *warden* | barbarian, bard, sorcerer, wizard |
| Perception (Wis) | artificer, avenger, druid, monk, psion, ranger, seeker, shaman, warden | assassin, barbarian, bard, rogue |
| Religion (Int) | *avenger*, bard, *invoker*, shaman, warlock, wizard | *cleric*, monk, *paladin*, *runepriest* |
| Stealth (Dex) | *assassin*, avenger, monk, ranger, *rogue*, seeker | — |
| Streetwise (Cha) | ardent, assassin, bard, rogue, warlock | avenger, fighter |
| Thievery (Dex) | assassin, monk, *rogue* | artificer, runepriest, warlock |

***The ranger automatically receives training in either Dungeoneering or Nature at 1st level.***

A party can benefit from having more than one character who has the ability to use rituals, but only if each of those characters focuses on different kinds of rituals. Having multiple characters learn the same rituals serves little purpose, and the characters end up feeling less interesting and special. The party also wastes money, because learning rituals costs gold. So have your leader learn healing and restoration rituals while your controller learns scrying, exploration, or deception rituals.

**Languages:** Speaking a wide variety of languages is nice, but if the characters share a second language, they can speak to each other without others outside the party understanding. You might have difficulty convincing your Dungeon Master that all the characters speak Supernal, so learning a more common language, such as Elven or Goblin, might be better.

## Skill Training

An optimized party is ready for any skill challenge the DM might craft. Aim to have at least one character trained in each skill, saving redundant skill training for only the most important skills. A five-character party can easily cover all seventeen skills as long as you take a little care.

Smaller parties have more difficulty covering all skills and might have to rely on characters who combine high ability modifiers with bonuses from race or background. Having a human or an eladrin character in your party can help cover all the bases, since those races gain extra trained skills.

Use the Matching Classes to Skills table to figure out which character will train in each skill. If possible, assign every skill to a character who has a score of 16 or higher in the skill's key ability. Classes appearing in the "Best Choices" column offer the

skill's key ability score as either a primary or a secondary ability option; characters from these classes are likely your best options for that skill assignment. Other classes that include the skill in their class lists, but which are unlikely to have a high score in the skill's ability, appear in "Other Choices."

After you have chosen your classes, assign automatic skill training. Class names that are italicized in the table automatically receive training in the skill. In some cases, these classes might not be in the "Best Choices" column.

Assign the rarest skills first. Dungeoneering, Nature, Streetwise, and Thievery have the fewest "best matches" among the skills, so make sure you handle those before moving on to the more common skills.

Next, cover the skills most likely to prove mission-critical. The other knowledge skills—Arcana, History, and Religion—and the observation skills (Insight and Perception) should never go untrained in a party. You should also have at least one character trained in each of the social skills: Bluff, Diplomacy, and Intimidate. It's good to have a character trained in Stealth, but it's often more important to have no character who has a negative skill modifier in Stealth (since the group that sneaks together stays together).

The last few skills—Acrobatics, Athletics, Endurance, and Heal—aren't as likely to require a high level of expertise, so you can fill them out last.

After covering the list, your party should still have a few more skills left to train. Use these to gain a second expert in the most commonly used skills (Arcana, Diplomacy, and Perception) or to help cover weak points in skills that often require the whole group to succeed (Acrobatics, Athletics, and Stealth).

## Tactical Combinations

Talk with the other players about your character's preferred tactics to ensure the party isn't working at cross-purposes. Few game experiences prove more frustrating than the realization that your character's careful build is negated by another character's power selections.

Here are a few examples: Although many leader powers boost adjacent allies, these powers rarely help the avenger, since that character prefers to fight alone. And if you chose powers that allow you to slide enemies around the battlefield, remember that the fighter needs to stay adjacent to foes to maximize his or her ability to lock them down. The battlerager fighter rarely needs more temporary hit points, so the cleric's *sacred flame* becomes less useful to the fighter.

Look for ways your powers can benefit your allies, even if you aren't playing a leader, and tell them about it. Any character who can daze, restrain, or knock enemies prone makes it easy for the rogue to gain much-needed combat advantage. Your warlock's *dread star* helps your allies hit the enemy's Will just as much as it helps you. Remind the bard that your rogue appreciates being slid into a flanking position before your turn starts.

## Have Patience

Not everyone has the skill, experience, time, resources, and motivation to ensure that a character is optimized with the latest updates from *Dragon* magazine, the newest supplement, and the most recent campaign setting. Not everyone wants to crunch the numbers, read the optimization boards, plan out interparty dynamics, or create nifty spreadsheets displaying damage output per level. Understand each player's talents and preferences and respect them.

Avoid building characters that marginalize the efforts of other players at the table. As you carefully optimize your fighter, make sure to leave some room for your friend playing the paladin to shine. Let the paladin have higher defenses than you, or more hit points, or a couple of trained skills that you don't have. When building your perfect rogue, try not to eclipse the defender's AC—it makes that player feel like he or she doesn't need to be there.

Even though being awesome certainly is awesome, D&D is not about being the best—it's about everyone at the table having fun. If you are better in every way than another party member (particularly one playing the same role), the other player probably isn't having much fun. If you are the only defender, then go right ahead and be mega-amazing at defending your allies, but if your party has another defender, consider making other choices. Otherwise, you risk diminishing your friend's enjoyment of the game. And what's the point of that?

# SAMPLE PARTY: THE SPELLBLADES

*We come from different races, different lands, different backgrounds. And yet our knowledge and appreciation of the arcane mysteries bring us together in a shared quest for the secrets held by the many worlds.*

The Spellblades bonded over a common interest in arcane magic. Some characters dabble in magic, using it to enhance their martial attacks. Others are full-fledged magic users who revel in the thrill of spell and ritual.

Even with this shared power source, subtle differences and rivalries exist within the Spellblades. The feyborn eladrin, Taellaen, sometimes wonders if the shadowy Delaia keeps secrets from the rest of the group. The characters compete for the highest Arcana check result, seeing it as a point of pride.

## Ruel, Shielding Swordmage

**Role: Defender**

The heart of the party, Ruel blends magic and martial art into a seamless fusion. The human's calming presence provides a balm to the passionate energy that can spark in such a magical group. As the party's defender, Ruel stands in the front line, soaking up attacks and damage. Ruel focuses more on defense than on offense; he uses a longsword to maximize the AC boost of his Swordmage Warding class feature. Ruel uses his high Constitution score to deflect away from his allies the damage dealt by marked enemies.

**Powers:** Ruel prefers a variety of powers that can strike both adjacent and distant enemies—such as *frostwind blade*, *lightning lure*, *lightning clash*, and *whirling blade*—so that he can keep pace with the party when ranged combat is a better option.

**Feats:** Ruel starts with Toughness and Improved Swordmage Warding, knowing that staying alive and active keeps his party safe. He expects to continue to focus on defensive feat options, looking forward to Human Perseverance at 2nd level.

**Skills:** Arcana, Endurance, History, Insight.

## Taellaen, Tactical Warlord

**Role: Leader**

Taellaen, the party's primary leader, focuses on getting his allies to optimal positions on the battlefield.

**Powers:** Taellaen leads off with *inevitable wave*, encouraging Ruel to follow him into battle. *Opening shove* helps get enemies into the right position, and *warlord's favor* makes his allies' attacks more potent. *Lead by example* combines both aspects of this eladrin's leader role.

**Feats:** Because of his high Intelligence score, Taellaen has become a multiclass wizard with Arcane Initiate, taking *scorching burst* to add an attack useful against distant foes or groups of minions.

**Skills:** Arcana, Athletics, Heal, History, Intimidate, Perception.

## Zulot, Dragon Sorcerer

**Role: Striker**

Zulot, a dragonborn, is the party's firepower, both literally and figuratively. She is the striker of the party, and she can deal a great deal of damage.

**Powers:** *Acid orb* is a solid long-range attack (and functions as a ranged basic attack, for times when Taellaen uses powers that grant free basic attacks). *Dragon breath* and *burning spray* allow Zulot to routinely damage multiple enemies, making her almost as much a controller as a striker. *Tearing claws* helps her defend herself when enemies slip past the front line.

**Feats:** Zulot wants to deal as much damage as she can, so she likes the accuracy boost of Implement Focus. Later, she looks forward to Arcane Spellfury.

**Skills:** Arcana, Athletics, Diplomacy, Intimidate.

## Delaia, Control Wizard

**Role: Controller**

The least impulsive Spellblade, Delaia prefers to know what she faces before acting. If the shadar-kai can't figure it out, she keeps it away from her.

**Powers:** As a control wizard, Delaia specializes in powers that affect enemy movement, such as forced-movement powers (*thunderwave* and *spectral ram*), powers that immobilize (*web*), and powers that create barriers and difficult terrain (*icy terrain* and *wall of ice*). Dealing damage is a secondary concern to her; she leaves that to Zulot.

**Feats:** Enlarge Spell increases the size of three of Delaia's starting powers, dramatically widening her area of effect on the battlefield.

**Skills:** Arcana, Dungeoneering, Nature, Religion.

## Raskel, Valorous Bard

**Role: Leader**

Raskel is an archetypal half-elf wandering minstrel. He picks up a bit of knowledge, story, and song everywhere he goes and from everyone he meets.

**Powers:** *Vicious mockery* and *war song strike* offer Raskel a nice variety of at-will power choices. *Fast friends* can help an ally in need, and *slayer's song* helps speed the battle to a victorious conclusion. *Eyebite*, which Raskel gained by multiclassing, comes in handy when he needs to maneuver past enemies to aid a friend.

VICTORIA MADERNA

**Feats:** Raskel starts by multiclassing into warlock with Pact Initiate (selecting Thievery and the fey pact). He intends to continue selecting various multiclass feats; he has his eye on sorcerer and paladin.

**Skills:** Arcana, Bluff, Diplomacy, Perception, Streetwise, Thievery.

## Party Optimization

**Working the Front Line:** Two of the party's five members, Ruel and Taellaen, are pure frontline fighters. Ruel tends to absorb blows for Taellaen so that the warlord can heal him and keep the other party members alive. Raskel is a decent third melee fighter. The three of them make sure that their striker and controller can avoid melee.

**Long-Range Combat:** All five members of the party have some ranged combat ability, although Zulot, the sorcerer, and Delaia, the wizard, are the primary ranged combatants. But even the warlord and the swordmage—classes that don't traditionally favor ranged combat—have a few ranged attack options. Because of the party's versatility, it can handle both melee and ranged combat with ease.

**Arcane Link:** Because they share a power source, these characters have developed an uncommon unity. The Spellblades' shared interests lead to adventure hooks that speak to the entire party rather than to a single member. Such unity might not seem like a form of optimization, but in a sense it is, because it leads to enhanced cooperation.

**Skill Challenges:** Raskel and Zulot take the lead on social skill challenges. Ruel and Delaia handle most of the knowledge skills, but anyone in the party can ace an Arcana check. The party lacks a Dexterity- or Wisdom-focused character, so it's weak on those skills.

## Party Tactics

**Synergistic Front Line:** Ruel and Taellaen bring an important synergy to the front line. Ruel uses his mark to deflect blows away from Taellaen or reduce damage to the warlord when attacks do land. Taellaen keeps Ruel alive with healing and buffs. These two maintain a wall in the front to give the others room to maneuver.

**Keep 'em Guessing:** With their mix of attacks, the members of the Spellblades make guessing what they might do difficult for enemies and the Dungeon Master. The defender is capable of speed and of both ranged and area attacks. The dragonborn sorcerer uses more area attacks than most strikers. The warlord leader specializes in combat leadership, which keeps the party alive and kicking hard. And the bard keeps the enemy guessing with his never-ending array of tricks, finding something with which to baffle enemies at every turn. He thinks of unique ways to avoid combat when possible and rolls with the punches when the situation gets dirty.

## Adjusting the Party

Of the five characters, either Raskel or Delaia is the most expendable if there are only four players at the table. True, keeping Raskel means having two leaders, but he has enough other talents that losing him would be hard on the group.

If we expanded this party, we'd consider adding either a second defender or a second striker. Assuming we wanted to keep the arcane theme, we might choose an assault swordmage, a warlock, or even a paladin/warlock hybrid.

We could also trade out the warlord for an artificer. This strengthens the arcane flavor of the team while keeping a mix of melee and ranged powers in each character.

# SAMPLE PARTY: THE GUARDIANS OF EASTFALL

*Originally hired by a militia captain to take care of bandits, the Guardians of Eastfall quickly proved their worth. After eliminating the bandit problem, the heroes remained to protect the area. The next mission will be something even greater, and it's just around the corner.*

Instead of using a fixed tactical plan, synergy between various characters enables the party to operate equally well either as a group or in small teams. The Guardians focus on adaptation to solve whatever challenges they encounter.

## Krizz, Battle Cleric

**Role: Leader**
By any measure, Krizz is a frontline leader. Although he is the party's only healer, Krizz still likes to fight a little recklessly to get the benefit of his Dragonborn Fury racial trait as often as possible.

**Powers:** Krizz focuses on Strength-based powers that make the most of his racial ability bonus. He uses *righteous brand* to set up enemies for powerful attacks by Brugar. Rather than choose powers that grant redundant attack bonuses, Krizz prefers options that grant healing, such as *healing strike*, or that apply harmful conditions to enemies, such as *rune of peace*.

**Feats:** To compensate for his rash fighting style, Krizz has the Toughness feat, and he plans to take Battle Healer next.

**Skills:** Diplomacy, Heal, History, Religion.

## Kaliria, Ensnaring Swordmage

**Role: Defender**
Kaliria, a tiefling, anchors the party's frontline defense, keeping monsters from getting too close to Sherran or Hobor, the ranged attackers in the party.

**Powers:** *Aegis of ensnarement* and *lightning lure* enable Kaliria to pull a stray enemy to the front line, and *booming blade* keeps those enemies close. When choosing her other attack powers, Kaliria opted for those that had interrupts, such as *frost backlash* and *dimensional vortex*.

**Feats:** Kaliria's regular use of at-will attacks triggers her White Lotus Enervation feat, which in turn softens up enemies for Brugar or Sherran. Kaliria already wants to multiclass into bard, believing it her destiny to tell the tales of the Guardians for many years.

**Skills:** Arcana, Athletics, Diplomacy, History.

## Brugar, Thaneborn Barbarian

**Role: Striker**
Brugar is a quintessential half-orc barbarian: big mouth, big weapon. Bonuses from Krizz help Brugar bring his powerful attacks to bear. When he drops a foe, the barbarian uses *roar of triumph* and his Thaneborn Triumph class feature as lead-ins for Krizz or Hobor to drop an area attack on enemies.

**Powers:** *Whirling rend* lets Brugar deal damage to two foes at once. Even though Constitution is only his third-best ability score, Brugar took *recuperating strike* for the constant stream of temporary hit points. *Escalating violence* boosts the damage his allies deal, and *rage drake's frenzy* maximizes the value of his weapon.

**Feats:** Brugar likes big weapons, so he took Weapon Proficiency and selected the mordenkrad. He also likes hit points, so Toughness might be next.

**Skills:** Athletics, Endurance, Intimidate, Perception.

## Sherran, Archer Ranger

**Role: Striker**
Sherran stands at a distance, peppering foes with arrows and insults in equal measure. The elf prefers to target the victim of Kaliria's aegis (the one enemy that definitely can't get to Sherran).

**Powers:** Sherran uses *twin strike* to thin enemies out after Hobor softens them up. *Rapid volley* and *hunter's bear trap* backs up her allies in the front, filling a minor crowd-control role. *Nimble strike* allows Sherran to escape when she is pinned down.

**Feats:** Elven Accuracy helps Sherran land key attacks. She's considering Hunter's Aim to ensure that she always has a clear shot, even when enemies stand between her and her quarry.

**Skills:** Acrobatics, Dungeoneering, Nature, Perception, Stealth.

## Hobor, Wrathful Invoker

**Role: Controller**
Hobor is a typically gruff dwarf who has a penchant for area attacks. Although he prefers to stand in back, Hobor occasionally welcomes bold enemies who think they can drop him.

**Powers:** Hobor opens with *grasping shards* or *thunder of judgment* to keep distant foes at bay. *Armor of wrath* and *angelic echelon* take care of nearby enemies. Krizz's tendency to fight while bloodied brings the extra damage from *avenging light* into play frequently.

**Feats:** Scouring Wrath turns the target of *armor of wrath* into a pincushion for ally attacks.

**Skills:** Arcana, Endurance, Insight, Religion.

EMPTY ROOM STUDIO - PETER LAZARSKI

## Party Optimization

**Working the Front Line:** The party uses a two-line battle formation that puts the three melee-ready characters—Krizz, Kaliria, and Brugar—between the monsters and the ranged combatants. These front-line fighters focus on blocking positions to frustrate enemies trying to get behind them.

**Long-Range Combat:** If enemies with ranged attacks get bothersome, Brugar can chase them down, and Sherran and Hobor are more than capable of beating them at their own game. Kaliria also has a few ranged powers to use after other enemies are under control, but if an enemy is protected by terrain, she prefers to approach close enough to use *aegis of ensnarement* to bring the enemy out where everyone else can get at it.

**Skill Challenges:** The party has decent skill coverage. Sherran's advice comes in handy when an ally needs to succeed on a Stealth check or a Perception check. The Guardians have a notable lack of talent in Bluff or Thievery; Sherran might consider multiclassing into rogue with her next feat to address this gap.

## Party Tactics

**Line 'em up, Take 'em Down:** Hobor is in charge of clearing out minions, and Krizz uses *dragon breath* to help out when necessary. The two strikers take injured enemies down quickly, but tougher foes require more time and usually get a few hits in before finally taking their turn in the meat grinder. Krizz's healing keeps the front line intact; Kaliria acts as a failsafe if Krizz starts acting a little too recklessly.

**Big Enemies, Big Penalties:** The Guardians of Eastfall particularly excel against elite and solo monsters. The swordmage marks the foe, and Krizz's *righteous brand* and Kaliria's White Lotus Enervation feat help everyone pour on the damage. Although these big enemies have loads of hit points, the two strikers don't allow them to stick around too long, and the party avoids having to deal with monster powers recharging time after time.

**Have a Backup Plan:** The Guardians pride themselves on adaptability. If an encounter involves two fronts, Krizz and Brugar keep together, as do Sherran and Kaliria. Hobor joins either pair as fits the situation. With his defensive powers and minor-action second wind, Hobor can take care of himself for a round or two. Splitting into two teams gives the Guardians a solid fallback plan for encounters that don't go as hoped.

## Adjusting the Party

A smaller group could drop either Brugar or Sherran. The loss of Sherran costs the team valuable skills that might require more precise background choices or even multiclassing for the other characters to cover. Brugar's departure leaves the team with only two melee characters, making the "pair-off" tactic more difficult. Without the barbarian, Krizz would have less use for *righteous brand*, so he might switch to a different at-will attack power.

A larger group should add another leader. With three hard-fighting characters and a current leader who doesn't exactly play it safe, more healing and protection would be welcome. A shaman would be a fine choice, especially since a spirit companion could act as another barrier along the front line.

Trading Sherran for a warlock would retain the group's ranged prowess and give the party the Bluff and Thievery skills it lacks, but at the cost of its Nature skill and its best scout. A bravura warlord might better fit Krizz's style while still providing strong leadership in battle.

# Sample Party: The Moonlit Watchers

*The Moonlit Watchers originally met at an inn, although nobody believes them when they tell the story. The members caught the eye of the local baron, and the party's star rose quickly in the region. Before long, the Watchers found themselves hunting an ancient conspiracy. The leaders were successfully brought to justice, but the organization concealed secrets deeper than anyone suspected.*

These four characters were created to gain maximum benefit from positioning during battle. Their mobility and their powers granting slides make sure they can always flank.

## Shade, Trickster Rogue

**Role: Striker**
Shade deals damage quickly and in large batches. The revenant stays mobile and keeps her enemies from standing where they want.

**Powers:** For her at-will attack powers, Shade took two options useful either as melee or as ranged attacks. *Disheartening strike* debuffs enemies, and *deft strike* maximizes her mobility (Artful Dodger keeps her from worrying about opportunity attacks). *Positioning strike* slides a foe into a flank. *Trick strike* keeps an enemy off balance until the end of the encounter.

**Feats:** Eladrin Soul grants Shade *fey step*, just as she had in life. She looks forward to Distant Advantage to allow her to deal Sneak Attack damage with her thrown daggers.

**Skills:** Acrobatics, Intimidate, Perception, Stealth, Thievery.

## Hurin, Protecting Paladin

**Role: Defender**
Hurin focuses on keeping enemies marked with *divine challenge* and most of his starting powers. However, on a marked enemy's turn, Hurin is usually nowhere around, thanks either to Gan-turil helping him shift away or Shade sliding the creature. So the enemy must choose between attacking another foe or chasing down the paladin.

**Powers:** *Ardent strike*, *valorous smite*, and *majestic halo* all deliver divine sanction to Hurin's enemies. *Enfeebling strike* hinders those marked enemies, and *bolstering strike* (the extra at-will power Hurin gains from being human) keeps him alive in tough situations.

**Feats:** Durable gives Hurin the extra healing surges he needs to fuel *lay on hands*. He's waiting until 2nd level to see whether he needs Toughness or can go with Weapon Expertise to boost accuracy.

**Skills:** Diplomacy, Insight, Religion, Streetwise (through Poor background).

## Dusk, Predator Druid

**Role: Controller**
Dusk's build and power selection moves the razorclaw shifter toward a secondary role as a striker.

**Powers:** Dusk's *savage rend* and *cull the herd* fit the group's penchant for moving foes around. *Swarming locusts* encourages enemies to move to avoid granting combat advantage. *Chill wind* also provides useful battlefield control. *Summon giant toad* adds a valuable ally to the combat.

**Feats:** Dusk uses Ferocious Tiger Form to maximize the benefit of any combat advantage granted by the team's positioning. At 2nd level, Agile Form will increase her mobility.

**Skills:** Dungeoneering (through the Mountains background), Heal, Nature, Perception.

## Gan-turil, Tactical Warlord

**Role: Leader**
Gan-turil, a genasi, serves as the party's leader, both by class and by the player's nature. A diehard thinker, Gan-turil's player knows how everyone else's character can move people around the battlefield and stays aware of any potential flanking situations that arise.

**Powers:** *Earthshock*, *wolf pack tactics*, *opening shove*, and *lead by example* keep everyone positioned exactly as Gan-turil wants them. *Diabolic stratagem* provides a useful marking option.

**Feats:** To aid the party's lone defender, Gan-turil took Student of the Sword.

**Skills:** Arcana (through the Chaos Born background), Athletics, Endurance (through Student of the Sword), History.

## Party Optimization

**Working the Front Line:** All four Watchers are built for melee combat. The characters' numerous movement and forced-movement powers ensure that they can rearrange the line easily to hold enemies at bay.

**Long-Range Combat:** Against ranged attacks, Dusk and Shade can respond in kind with their

ADAM PHILLIPS

own powers. Hurin and Gan-turil each carry a few javelins, but they prefer to close the gap with attackers.

**Skill Challenges:** For a small group, the Moonlit Watchers exhibit excellent diversity, with each party member using a different primary ability score. They lack only Bluff, but make up for it with strong Diplomacy and Intimidate skill modifiers.

## Party Tactics

**Positional Advantage:** The party members use their powers to slide enemies into flanks or to move themselves into advantageous positions. Either way, the damage dealt by Shade and Dusk climbs. These powers also enable the group to control choke points, high ground, and any other terrain features.

**A Deadly Double Team:** If the battlefield is wide open with no real features to exploit, Gan-turil and Shade can instead work together to set up Sneak Attacks. This pairing has great synergy that lets them quickly mow through weaker enemies.

**Beat the New Boss, Same as the Old Boss:** Against an elite or a solo monster, Shade stacks *disheartening strike* with Hurin's *enfeebling strike* and marking penalty to suppress an enemy's ability to deal damage until it is finally brought down. Against an enemy that has burst or push attacks, Shade and Dusk move back to use ranged attacks from a safe distance. Otherwise, the party members move into a four-corners formation so that even if the enemy shifts, it remains flanked by two characters. If the enemy moves farther, it takes opportunity attacks.

**Stay on Your Toes:** Monsters bring their own abilities to the table. When something nasty mucks up the plan, the Moonlit Watchers' flexibility enables them to adapt to whatever the bad guys throw at them. Shade and Dusk can transition between ranged and melee attacks if necessary. Hurin has some healing and Gan-turil has some defending abilities, so they can also trade off or step in for each other if required. When handled well, these overlaps don't make anyone feel obsolete or overshadowed, but they do ensure that whoever's turn it is, the necessary job gets done.

## Adjusting the Party

The Moonlit Watchers are built as a tightly knit four-character party; reducing the group size would require serious reconcepting.

If a fifth character is added, a wizard would be a good choice to bring more battlefield control and ranged attacks to the group. Alternatively, a cunning bard would be an excellent fit, using powers such as *majestic word* for added healing and *blunder* to move enemies into position for the others to hit. Another bard would free up Dusk to use powers such as *flame seed* to create dangerous zones for the rest of the party to play off.

# SAMPLE PARTY: THE MARKED ONES

*They tell us our destiny is already written, and that these runes we bear mark us for future legends. We say our only destiny is the one we make in battle!*

The adventurers who would later become known as the Marked Ones met for the first time in the port city-state of Bahar, at the edge of a tropical jungle. Each one came to the city with his or her own secret past, but together they have vanquished many enemies . . . while making still more. Recently, strange, twisting runes have manifested on each character, marking them as the bearers of mythic destinies. But whether these destiny marks portend the heroes' weal or woe remains to be seen.

Unlike the other sample parties, this entry shows the characters at 11th level. Each character has developed in response to the DM's campaign (which features a mix of city intrigue and jungle adventure). When one player had to bow out halfway through the heroic tier, his warlord became a simplified DM-controlled NPC version of the character, and the group added a paladin to have another player character at the table.

## Bahamus, Battlerager Fighter

**Role: Defender**
Bahamus fearlessly wades into battle against any number of foes, relying on his comrades and his own abilities to see him through. He's still learning how best to coordinate marks with the new defender on the team, since many of his powers mark multiple enemies.

**Powers:** Bahamus is a one-dragonborn brute squad who can handle crowds of enemies with ease thanks to *dragon breath*, *come and get it*, *rain of steel*, *sweeping blow*, and *passing attack*.

**Feats:** Armor Specialization (Scale) helps Bahamus feel more comfortable when surrounded by deadly foes. Draconic Arrogance significantly increases the effect of *tide of iron*.

**Skills:** Athletics, Endurance, Intimidate.

## Midgard, Avenging Paladin

**Role: Defender**
This dragonborn paladin of the Raven Queen spends most of his time on the front line, standing near Bahamus, Tyrellius, or both. However, as the party's second defender, Midgard can afford to follow trouble wherever it leads.

**Powers:** *Holy strike* and *valiant strike* offer Midgard a high-damage and a high-accuracy option in melee. *Knightly intercession* allows him to guard an ally from a distance, and *dragon's wrath*—just gained from the scion of Arkhosia paragon path—gives him a useful area burst power.

**Feats:** Healing Hands and Devoted Paladin boost the potency of Midgard's *lay on hands*, allowing him occasionally to stand in as the party's main leader.

**Skills:** Athletics, Diplomacy, Endurance, Heal, Religion.

## Indulgence, Deceptive Warlock

**Role: Striker**
Indulgence carries herself with confidence and mystery. Equally at home with royal company and in cursed tombs, the tiefling never shows any sign of anxiety or discomfort. Tyrellius might see himself as the party's leader, but everyone knows that Indulgence is the true brains behind the operation.

**Powers:** Indulgence relies on *eldritch blast* as her primary ranged attack. She once used *eyebite* to help her move safely around the battlefield, but now teleportation effects such as *ethereal stride*, *otherwind stride*, and her Misty Step pact boon provide all the movement she needs. Slashing Wake (from her feytouched paragon path) turns every teleportation power into a damaging effect, drastically increasing her destructive output.

**Feats:** Jack of All Trades helps Indulgence cover the party's skill needs, or to back up the resident expert. Bardic Dilettante has opened up a new suite of power options for Indulgence as she explores her evolution into the party's secondary leader.

**Skills:** Arcana, Bluff, Diplomacy, Intimidate, Streetwise (from bard multiclassing).

## Cyrik, War Wizard

**Role: Controller**
This headstrong eladrin loves to rain down fire and ice upon the battlefield, destroying as many foes as possible (even at the risk of his own teammates).

**Powers:** Cyrik brings a variety of attack types to any combat, to ensure that he always has the right answer. *Ray of frost* and *scorching burst* provide a versatile pair of at-will options, with *icy terrain*, *fireball*, *flaming sphere*, and *winter's wrath* contributing to his battlefield control talent. He also packs

plenty of defensive powers, including *fey step*, *shield*, and *wizard's escape*, to help stay out of danger when a defender isn't nearby.

**Feats:** Arcane Fire allows the wizard to mix his fire and cold powers to great effectiveness. Improved Initiative helps Cyrik use control effects before enemies have time to react and spread out.

**Skills:** Arcana, History, Insight, Religion, Perception (from Eladrin Education). Cyrik provides most of the group's knowledge expertise.

## Vahara, Archer Ranger

**Role: Striker**

Vahara stays well out of melee, sending arrow after deadly arrow into enemies. With her slayer motivation, Vahara's player is perfectly satisfied dealing piles of damage and not worrying too much about the other characters.

**Powers:** *Twin strike* remains this elf's favorite power, since it all but ensures that she deals her extra Hunter's Quarry damage. Her other ranged attack powers provide control (*hunter's bear trap*) or situational options (*evasive strike*).

**Feats:** Lethal Hunter boosts Vahara's damage output, and Elven Precision helps make up for the occasional low roll.

**Skills:** Acrobatics, Athletics, Nature, Perception, Stealth.

## Tyrellius Vex, Inspiring Warlord

**Role: Leader**

Tyrellius leads with his chin, daring enemies to take shots at him (and thereby provoke the wrath of one of his defender allies). He heals comrades before looking to his own needs, due to his belief in his own immortality. (It's a long story.)

**Powers:** Tyrellius is strong, but not as strong as either defender, so he often lets them do the heavy lifting with powers such as *brash assault*, *furious smash*, and *hammer and anvil*. He saves *war of attrition* for late in the battle, when his encounter powers are exhausted.

**Feats:** This warlord focuses on simple feats to ease the DM's burden of running an extra character. Improved Inspiring Word help the group's survivability, and Toughness and two Armor Proficiency feats keep Tyrellius alive despite his bold tactics.

**Skills:** Athletics, Diplomacy, Intimidate, Streetwise (from background).

## Party Optimization

**Defense and Healing:** To avoid having all its healing eggs in a single basket, the party has wisely spread its healing and defensive resources among many characters—Midgard and Indulgence each have healing powers, Bahamus can pick up temporary hit points whenever needed, and Cyrik can escape from danger easily.

**Balanced Attack:** The group's mix of melee and ranged specialists allows it to handle any threat. Even the specialists have access to nontraditional attacks, from Bahamus's throwing shield to Indulgence's *all the sand, all the stars*.

**Skill Challenges:** Due to frequent social skill challenges that call upon multiple characters' efforts (such as the gala party held by House Nacato last month), the Marked Ones find it valuable to overlap with skills useful in those situations.

## Party Tactics

**The Wall of Steel:** The two defenders set up the front line, with Tyrellius moving between them as needed. Vahara and Cyrik stand safely behind the armored warriors, launching ranged and area attacks without fear of harm.

**Teleportation Tease:** Indulgence relies on her teleportation powers to go wherever she wants, leaving damage behind with Slashing Wake. Cyrik also uses teleportation to get out of danger. This mobility helps the characters reorient the battlefield at a moment's notice.

## Adjusting the Party

Even when one player doesn't show up, the party's balance means it can get along fine without one character. If you were building a similar but smaller party, you could drop one of the defenders or one of the strikers without losing that balance.

The players in this group expect that one day their DM will decide that running the party's leader is too much work. When that time comes, they will need to expand their healing options, either with heavier multiclassing or skill powers, or by working with the DM to turn one character into a hybrid.

CHAPTER 3

# Strategy and Tactics

**Sometimes,** a single +1 bonus to AC or to an attack roll for a character can mean the difference between living or dying. This makes it vital for characters to work together to keep each other alive.

Not every character needs to be a tank. It's more important for each player to know his or her character's role in battle and to understand how to keep the other characters alive and move combat forward.

To achieve this goal, players must possess a combination of combat strategy, rules knowledge, table organization, resource management, and tactical positioning.

This chapter includes the following sections.

- **Tactics 101:** Your primer for playing effectively in combat, including understanding your role, focusing fire, and the importance of positioning and timing.
- **Healing:** How to manage healing surges as a resource.
- **Know Your Enemies:** How to learn the strengths and weaknesses of your enemies without wasting time or resources.
- **Using Your Powers:** How to manage your power selection efficiently.
- **Tracking Effects:** How to keep track of conditions, battlefield alterations, and other crucial in-game effects.
- **Troubleshooting:** What to do when nothing else is working.
- **Tactics in Action—Irontooth:** How to approach an encounter that seems impossible to win.
- **Tactics in Action—Storm Tower:** How to beat the denizens of the Storm Tower.

ADAM PHILLIPS

carry you off toward
t sickly sweet smell
of BOILING OIL...
Rogue! Now might be a good time for that sneak attack!?
I'm waiting for the right moment!

This section provides tactical advice to help you and your party succeed in combat encounters. In some cases, the text also suggests places to deviate from these basic tactics.

Unless things go horribly wrong, you rarely fight on your own. Each of your allies brings his or her own sets of skills and powers to the fight, and many of those powers might influence you directly. To understand how your character should behave in combat, always consider how your actions can assist your allies, and how your allies can help you. When in doubt about what you should do, ask the other players.

## Role-Based Tactics

Each character class is associated with a primary role. This role defines your basic tactics in combat. If you've built a balanced party, you can be reasonably confident that as long as each character plays his or her role appropriately, you'll cover the key tactics you need to win the battle.

**Defender:** Your primary job is to get the monsters to attack you. By marking a target, the defender not only gives a -2 penalty to attacks, but also threatens the marked enemy with a negative effect—such as the radiant damage dealt by the paladin's *divine challenge*—that triggers when the enemy ignores the defender to attack someone else.

Defenders usually have more hit points and healing surges than other party members, and they often have slightly higher defense scores. More hit points also means a higher healing surge value, which makes healing a defender more efficient.

As a defender, you should stand on the front line of combat, adjacent to as many enemies as possible. Use your marking ability to mark as many targets as you can, and make sure those marked foes stay within the range of the negative effect you impart. For fighters, this means staying adjacent to the marked target, but each defender class can affect marked enemies at a different range.

**Striker:** You deal damage without taking hits. If you must meet special criteria to deal extra damage—such as having combat advantage, for a rogue—work hard to meet that requirement every round.

But moving to the right place to deal damage isn't the only way that positioning helps you. Since you probably don't have the durability of your defender comrade, avoid placing yourself in harm's way too often. Use your powers and your allies' positions to dissuade monsters from attacking you. Engaging a target marked by your defender is a great way of keeping the enemy focused on someone other than you.

**Controller:** You spread damage over multiple foes while preventing enemies from bringing the full weight of their offensive firepower to bear. If that explanation sounds a bit complicated, look at it this way: Your defender influences the actions of the foes he or she has marked, which usually means one or two enemies standing near the defender. You get to influence the rest of the monsters on the battlefield.

Use your multitarget powers to wipe out minions. They might not deal much damage individually, but three or four can exceed the output of a single monster of their level.

Use your control effects to prevent enemies from attacking, or at least to reduce their options or potency. A slowed brute standing 5 or more squares away from your party can't hurt you. A dazed artillery monster standing next to your fighter can't shift back and use a ranged attack in the same turn. The fewer attacks your enemies make, the less damage your allies take.

Due to your relative fragility, keep away from melee combat. Standing close to your defender can

### More Like Guidelines

These tactics aren't a strict set of rules that you must follow to play correctly. Being aware of the tactical ramifications of your actions helps you make successful decisions, but you should also consider how your character thinks and acts.

Is your character a brilliant strategist, a commanding battlefield presence, or just lucky enough to end up in the right position at the right time? Alternatively, what common tactical errors does your character make? Your character might choose these tactics—whether positive or negative—deliberately, or because of some sort of code or behavior that he or she follows. It's up to you to decide, but you can make tactical thinking a part of your character, in as subtle or overt a way as you want.

One way to internalize your character's preferred tactics is to adopt a particular stratagem and use it as often as possible. For example, you might decide that your character prefers not to fight fair and goes to great lengths to attack with combat advantage. This, in turn, means that you often need to move around or ready actions to set up your attacks, perhaps even provoking opportunity attacks. Alternatively, your bloodthirsty character might attack only monsters that have already been hit, which helps focus fire but also might lead to pursuing a foe that no longer poses a threat.

help, but sometimes he or she draws more enemies than he or she can handle, and then those monsters turn to you, so find a place that limits enemy approaches altogether. Avoid placing your blasts and bursts where they will hurt your allies. Remember, they're keeping you safe.

**Leader:** You provide your allies the healing they need to stay alive in battle, as well as crucial bonuses and benefits that speed victory in combat.

More than the other roles, you must think about the rest of your group when you start each turn. Recognize who needs healing or a defensive boost. Determine which character can benefit most from a bonus to attack rolls or damage rolls, or which enemy should become the next target of your allies' attacks. Don't think you need to figure all this out on your own—the other players will happily tell you what you need to know if you ask them.

Once you identify the current needs of the group, communicate your intentions and the benefits you grant. Until the other players get used to your powers, you might have to remind each player on his or her turn of the bonuses in effect.

Most leaders can (and should) safely join the defender on the front line. These leaders wear heavy armor and boast good melee attacks. Other leaders, however, favor ranged attacks and should stand a few squares away from the main battle.

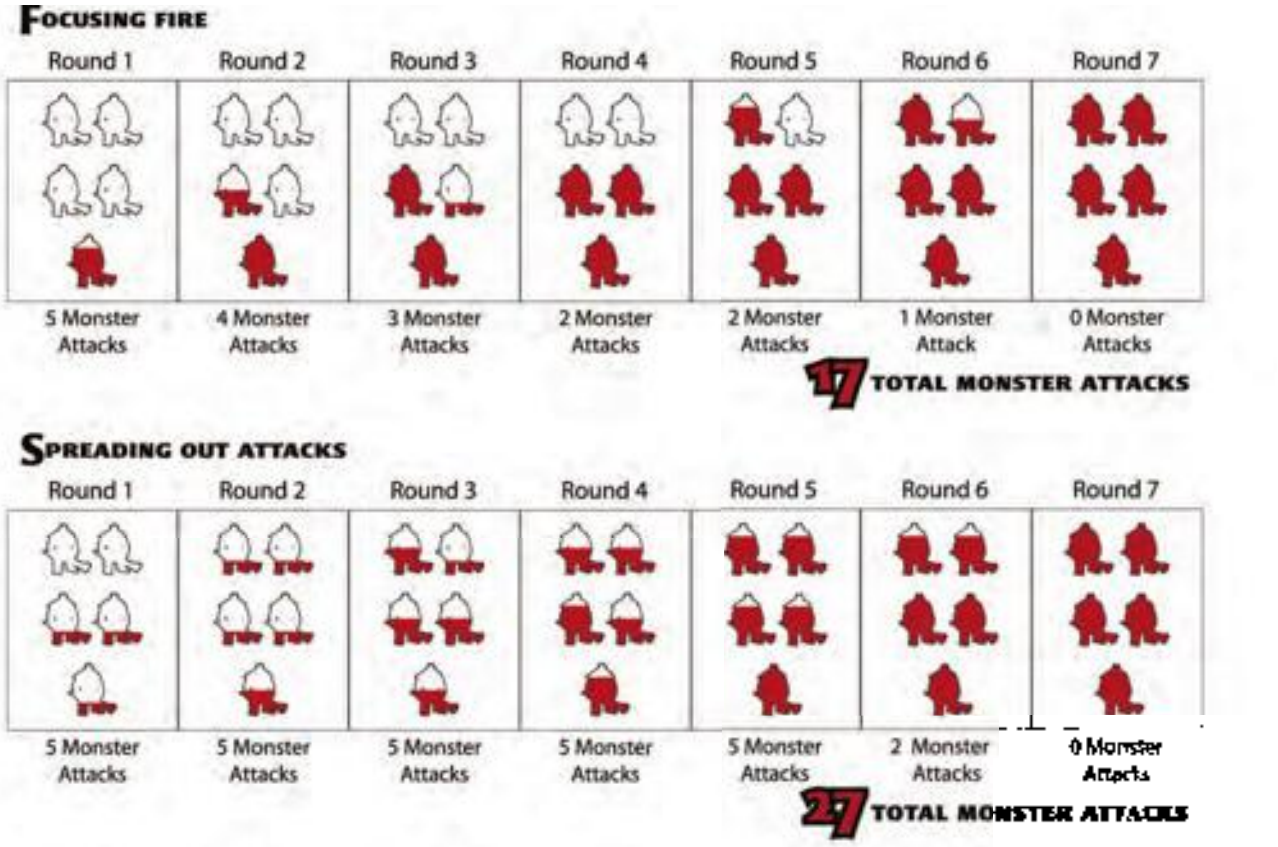
No matter where you stand, make sure you can heal the characters who need it. Many healing powers require you to stand adjacent to the target, or at least within 5 squares. Thankfully, most of these powers require only a minor action to use, so that you can move into range before using them and still retain your standard action to make an attack.

## Focusing Fire

In simple terms, your characters defeat the monsters by dealing damage. When the damage you deal equals or exceeds your enemies' hit points, you win. But this simplistic approach overlooks a number of key facts about the attrition-based combat of D&D.

**Damage can be wasted.** When your 1st-level rogue blows a daily power to deal 23 damage, you feel pretty good. But when the DM tells you that monster only had 4 hit points left—or worse yet, that it was a minion—you realize that all that extra damage doesn't make the monster any more dead. In a perfect world, you'd reduce every enemy to exactly 0 hit points. Since that's impossible, settle instead for identifying the right foes for your high-damage and low-damage attacks.

**Not every point of damage is created equal.** Because most monsters fight at full potency until they reach 0 hit points, only the last point of damage you deal—the one that reduces a monster to 0 hit



points—makes any significant contribution to winning the fight. Avoid spreading your damage out too much. Dealing 9 damage to five different targets isn't the same as dealing 45 damage to a single enemy (unless those targets are minions).

Some characters—particularly controllers—can't help but spread their damage out. That's okay—usually, their powers also include useful control effects, and the more enemies you control, the better.

**Eliminate enemies.** Each round that an enemy remains standing, it attacks one or more characters. When an enemy falls, the number of attacks the characters must endure on subsequent rounds drops. The fewer enemies remaining, the less dangerous the combat becomes for the characters.

By focusing your attacks on as few enemies as possible, you accelerate the point at which those enemies leave combat. It can be hard for some players to leave an annoying enemy alone to attack someone else, but barring some compelling reason to split your attacks, you'll win more battles with focused fire than not.

Assume that your heroes can kill a typical monster with four successful attacks. That means you need twenty hits to win an encounter against five monsters. If each character attacks on his or her turn, your party is likely to score three hits each round (because the average character hits about 60 percent of the time). That means you need about seven rounds to score the twenty hits needed defeat those five monsters.

Imagine the worst-case scenario, in which each character fights individually against a different monster. If each character scores a hit on 60 percent of his or her attacks, assuming one attack each round, each monster will last for nearly seven rounds. This means that each character gets attacked six or seven times in this encounter, for a total of thirty to thirty-five monster attacks against the party.

On the other hand, what if the characters work together? After one round, four of the monsters remain undamaged, but the fifth has only 25 percent of its hit points remaining. By the end of the next round, that monster is down and another one is bloodied. Now the characters are taking only four attacks each round from the monsters, rather than five—they're already ahead of the worst-case scenario. In round three, another monster drops and damage starts accruing on a third. Now the monsters have only three attacks left. By the end of round six, only one monster remains (compared to the five still standing in the worst-case scenario). Overall, the characters face significantly fewer incoming attacks in the focused-fire combat than in the worst-case scenario.

Of course, D&D combat doesn't always match this abstract example: critical hits, control effects, and other battlefield conditions change the course of individual fights. But the basic principle is sound: If the party focuses fire on one target at a time, it can significantly reduce the number of attacks the monsters make during the fight. This tactic leads to less damage taken and fewer healing surges used by the party, which means that the characters are more capable of continuing through more encounters.

PATRICK THOMAS PARNELL

# Movement and Positioning

Once the battle starts, many players ignore their move actions, leaving their characters in the same place for round after round. But being in the right square can significantly increase your chances of success in battle. Positioning is about placing your character where he or she can hit the enemy. But good tactical positioning is also about providing advantages to your allies through your character's position. It can also involve controlling or limiting your enemies' movement.

Try to use your character's move action every turn. Even if walking or running isn't the right option, you can often shift 1 square into a more tactically optimal position. (And if you truly can't or don't want to move, consider whether a second minor action might prove useful.)

## Flanking

Most players quickly learn the value of flanking. Combat advantage is a great way of gaining a big edge on your attacks, and moving to a square where you flank the enemy is the easiest way to get it.

Even if you can't flank a foe on your turn, try to move into position for another ally to gain a flank on his or her turn. If you do this, be sure to tell the other player about it.

Use your forced-movement powers to maneuver enemies into positions where your allies can flank them. Drawing an enemy away from its allies is a great way of breaking up their defensive line and rendering the foe more vulnerable to your assault.

Normally, flanking helps only two characters (the ones standing opposite one another). But if you use timely shifts, three characters can all use flanking against the same enemy. Here's how: Imagine two characters flanking an orc. After the second character attacks, he shifts clockwise around the orc into a different square, still adjacent to the same orc. This allows a third character to move to the square just vacated, thus flanking with the first character. On the first character's next turn, he or she shifts clockwise before attacking, which means she's now flanking the orc with the second character again. Repeat until the orc drops, adjusting your positions to respond to enemy movement as needed.

Flanking can also keep an enemy from easily escaping combat. Imagine that you want to prevent an evil mage from safely using his ranged attacks (or worse yet, from fleeing the battle to warn his masters). By taking up the right flanking positions, you can set it up so that even by shifting, the mage can't avoid being adjacent either to you or your ally. Imagine overlaying a phone keypad on the battlefield, with the 5 hovering over the enemy. By flanking orthogonally—that is, occupying the 2 and 8 squares, or the 4 and 6 squares—you cut off any opportunity for the mage to shift into a safe square. Every square adjacent to 5 is also adjacent to one of you.

Don't forget that monsters can also flank your character. When you are adjacent to an enemy, look at the square that would provide flanking against you. What's keeping another monster from moving into that square? If the answer is "nothing," consider shifting to a different position.

Similarly, if you can use a power to get an ally out of a flanked position before the enemy can take advantage of it, that's like giving your ally a +2 bonus to defenses.

## Pinning the Enemy

Use your allies and the terrain to restrict enemy movement options. If an enemy moves adjacent to a wall, moving to a square that places the enemy between your character and the wall prevents the enemy from escaping, because even a shift leaves the enemy adjacent to you. (Think of this as flanking with the wall, as described under Flanking, above.)

Use your immobilizing powers wisely to negate attacks. Immobilize an artillery monster while it stands next to your fighter to make its ranged attacks provoke opportunity attacks. Immobilize a brute or a soldier that stands across the room and watch it fume as its turn goes by and it is unable to attack.

Used in the right situation or combination, other conditions can replicate immobilization. Knocking a ranged-focused monster prone while it is adjacent to you or an ally means it can't shift away before attacking. Knocking a melee-focused monster prone when it isn't standing adjacent to one of your allies likely means its only attack option is a charge (which usually means it can't use its best powers). And if that prone enemy lies exactly 2 squares away from an ally, it can't even charge. Knocking a dazed enemy prone (or dazing a prone foe) is almost as good as stunning it, since it likely uses its lone action to stand up.

## Make Room, Make Room!

Give your controller room to put down the blasts and bursts that maximize his or her damage output. Learn the sizes of the area attacks commonly used by your allies and keep them in mind when moving around the battlefield. Sometimes a single shift can clear enough space to allow a safe burst.

Bunching around a monster to gain bonuses from flanking helps, but it can also make it tough for your controller to use an area power without harming an ally. Flanking along a diagonal, however, allows your

wizard to catch the enemy in the corner of his or her *scorching burst* without risking either flanker.

Also, use those forced-movement powers to herd enemies together into the burst or blast zones. Your controller will thank you.

### Cover and Concealment

Just as standing in the right square can grant you a +2 bonus to your attack roll from combat advantage, standing in the right place can also grant enemies a –2 penalty to attack rolls if it gives you cover or concealment. Particularly if you're a ranged attacker, taking up a defensive position like this can increase your survivability.

Look for corners, pillars, or furniture to stand behind. In most cases this provides the equivalent of a +2 bonus to your defenses against area, close, and ranged attacks without hindering your powers at all.

Your allies also provide cover against the ranged attacks of enemies. Keep the fighter or cleric between you and the enemy artillery whenever possible.

Most battlefields don't offer many opportunities to gain concealment, but that doesn't mean you can't look for them. If you can find a shadowy corner, a thick fog, or underbrush, you can make it harder for enemies to hit you.

Savvy monsters use these same tactics. When going after a monster that has cover, figure out where you'd have to stand to negate that cover. Assuming it's not too dangerous to do so, move around until you occupy that spot.

Fiddling around with cover and concealment can slow the game down dramatically. Review the appropriate rules (see "Cover and Concealment" in Chapter 9 of the *Player's Handbook*) to help you make quick judgments in battle.

### Using Terrain

Cover and concealment aren't the only benefits you can derive from smart use of battlefield terrain. When combat begins, figure out where the advantageous and disadvantageous positions are. Where would you most like to stand, whether to gain offensive or defensive bonuses, to limit enemy options, or both? Where would the enemy prefer to stand? And what squares do you (or your enemies) want to avoid?

**Difficult Terrain:** Standing in an area of difficult terrain makes combat positioning harder, since most characters and monsters can't shift through difficult terrain. If you're an elf, use your Wild Step racial trait to frustrate less nimble opponents. Or use the difficult terrain as a buffer to slow the approach of oncoming monsters. A single square of difficult terrain can sometimes mean the difference between a monster reaching you in one turn or two.

**Choke Points:** The narrower the front line, the easier it is for one or two characters to hold it. When possible, take up battle positions that prevent monsters from easily bypassing your wall of defense. Look for halls, doorways, corners, pillars, and difficult terrain—anything that obstructs or limits movement can work.

**Beneficial Terrain:** Keep your eyes open for terrain elements that might provide bonuses or offer extra options in combat. Use your character's skills and your own creativity to assess the situation. Ask the DM if a skill check might allow you to recognize a potential advantage, or if your character could manipulate an object to gain a benefit. Even if the encounter designer didn't take your creativity into account, your DM should be amenable to interesting, creative solutions. *Dungeon Master's Guide 2* includes a discussion on creating ad hoc attack powers from the landscape, such pulling down a tapestry or pushing over an unstable wall. Don't abuse this option; if you win every fight by hitting the monsters with furniture, your DM might wonder why you bothered to choose all those powers.

## Timing

Adventurers have a saying: "He who strikes first strikes last." Winning initiative is a lot like getting an extra turn in the battle. In addition to the benefits of going first, managing the order of your party's actions during combat can also drastically improve your chances of success.

### Winning Initiative

Nobody likes to roll a low initiative result. Waiting around for everyone else to act is boring. But before you spend your precious resources on increasing your initiative check modifier, take a moment to figure out whether that's worthwhile.

As a general rule, it's more valuable for defenders and controllers to go first. Defenders use a high initiative result to move to the position they want to defend. Letting enemies go first allows them to define the battlefield instead. The controller's high initiative result lets him or her make an area attack before the monsters have a chance to scatter (and before allies have a chance to get in the way). In both cases, a high initiative score allows these control-focused characters to preempt the enemy.

The strikers out there are already hollering. "We have to go first," they're saying, "because if we get lucky we can drop the enemy before it even acts!" This claim has some truth, particularly if your striker is highly optimized for first-round damage output (sometimes called an "alpha strike"). But in most cases, a striker acting first doesn't reduce the number

of enemies, nor does it substantially alter the tenor of the battlefield. And if you're a melee-focused striker, going first can leave you exposed to enemy attacks before your defender comes to your aid.

One important exception to this rule is the rogue, whose First Strike feature grants him or her combat advantage during the first round against enemies that haven't acted yet. Every rogue should have a ranged option that he or she can use during the first round. Even a ranged basic attack (with Sneak Attack added in) beats getting mobbed by monsters.

Leaders gain the least benefit from going first in combat. Many of their powers are reactive, and they have little reason to charge out in front of their allies, so a leader who rolls a high initiative often ends up delaying anyway.

At the higher tiers of play, most characters need help to keep up with the ever-increasing initiative modifiers of the enemies. Unless Dexterity is your primary ability score, consider picking up Improved Initiative (or a similar feat) to help you stay competitive.

### Delaying and Readying

Once you establish the initiative order, combat often plays out in a "players' turn, then monsters' turn" fashion, sometimes staggered if multiple monster types are in the fight at wildly varying initiative scores. But just because it's your turn in the initiative order doesn't mean that you have to act immediately. Instead, time your attacks to gain the maximum benefit of the conditions or effects they apply.

For example, if you have a power that dazes a monster until it succeeds on a saving throw, delay your turn until after that monster acts, then daze it. Now your entire party can benefit from the monster's dazed condition before it gets any opportunity to shake it off.

If you want another ally to move into a flanking position before you attack, ready your attack for when the ally takes up a flanking position. That way you both get the benefit of flanking.

Don't outsmart yourself. Unless your DM keeps the initiative order public (or you have a flawless memory), it's easy to forget the exact order of combat. If you try to get too tricky, you risk wasting turns on fancy readied actions or badly timed delays.

## Managing Your Resources

Many gamers have a tendency to hoard their resources, reluctant to use them for fear of needing them more on a later occasion. In fact, for people who routinely engage our minds in exciting power fantasies, we're a remarkably risk-averse bunch. We'd often rather win a long, drawn-out battle with powers left unused than mount an all-out blitz that might leave our characters gasping for air by the end.

Other players—particularly some newbies—use the shiniest options first. These players forget that sometimes you need to save a big gun for when the battle gets unexpectedly tougher.

Learning how to identify the right time to expend a key resource—such as a power, an action point, or a potion—is perhaps the most demanding skill required at the table. That said, don't feel that the game requires mastery in this area. Unlike a chess match, D&D has too many variables and uncertainties to ever know absolutely that one choice is superior to another. Instead, focus on making tactically sound decisions that carry an appropriate payoff. Making a good decision quickly is much better than spending a lot of time trying to make the perfect decision. Learn a few basic tenets of good resource management, and keep the game moving along; fun and success will be your rewards.

Due to the prominent role occupied by healing, managing the resources related to character hit points and healing surges merits its own section (see "Healing," page 113).

### Encounter Resources

Once you've gained a few levels, your encounter powers form the core of your resources. Many of your tactics revolve around these powers, and your successful use of these powers influences ensuing tactics.

Some players blow through their encounter powers in the opening few rounds of combat, regardless of the threat. These players see these powers only as carriers of damage: An encounter power that deals 2d10 + 9 damage is better than an at-will power that deals 1d10 + 9 damage, so why not use the good one first?

Most encounter powers, however, reward smart tactical use. Even if that encounter attack power deals more damage than your at-will attack powers, does it also apply a condition to the enemy or grant a boon to an ally? If so, ask yourself if now is the right time for that effect. Immobilizing a brute standing next to your fighter has little impact on the battle, since that monster was likely to keep standing there anyway. Saving that power to use against the enemy archer standing in the same place, however, might prevent it from attacking.

Several encounter powers grant temporary hit points, an area in which players display wasteful behavior. Since two sources of temporary hit points don't stack, don't waste the effect of a power that grants temporary hit points on a character who

already has some. Instead, use a different power, or wait until your preferred recipient has exhausted his or her current pool of temporary hit points.

You never know when a battle might get tougher than it looks. Maybe that monster turns out to be elite, or perhaps reinforcements arrive. Worse yet, the monster could score a lucky hit and drop your bloodied ally, changing the odds considerably. However it happens, if you waste an encounter power to deal only a few extra points of damage, you might regret not having it when a fight heats up.

All that said, you don't want to end the fight with multiple encounter powers left unused. If you find this happening routinely, examine your tactics and your power choices. Are you being too conservative, letting battles run longer than necessary for fear of spending encounter powers too quickly? Or have you selected encounter powers that rely too heavily on situations that don't occur?

If you've chosen your at-will and encounter powers carefully (see "Choosing Powers," page 31), you should rarely find yourself in a situation in which using an encounter power represents a "same effect but more of it" situation. This makes saving those powers a simpler decision, since you can more easily identify the situation that calls for your specialized encounter power.

## Action Points

Using action points can be an even tougher decision than using encounter powers, since they renew only every other encounter. It seems reasonable to save your milestone resources for a fight against a really difficult enemy, but they can easily pile up. It doesn't help to have two action points when the climactic battle starts, since you only get to spend one in each encounter.

Opinions vary, but many experienced players advise spending your action point the first time you think it can have a significant effect on combat. If you think you can drop an enemy by taking an extra action—particularly if that enemy's turn is coming up soon—it's probably worth it. If you can keep a bloodied ally from falling, or revive a dying comrade, by all means spend the resource.

This advice doesn't mean "use your action point as soon as possible." Dealing another 10 damage to an enemy that isn't even bloodied is a waste of an action point. Using your action point to move up to an enemy without having an action left to attack it opens you up to unnecessary damage.

Use your action point to double up on bonuses that would otherwise benefit only one of your attacks. When the warlord uses *war of attrition*, which gives allies a one-round bonus to attack rolls and damage rolls, consider using your action point to make a second at-will attack on your turn.

If you accrue additional benefits from spending an action point, then using your action point becomes more like using an encounter power. If your inspiring warlord lets you heal 9 damage whenever you spend an action point, wait until you've taken a hit before you spend it. If your paragon path lets you deal damage to each enemy affected by your Warlock's Curse when you spend an action point, make sure you have a couple of cursed foes when you spend it. Consider keeping an action point power card in your hand that lists the various benefits you gain from its use, particularly if some of these benefits come from other characters.

You can use your action point at any time during your turn. Spending an action point to take an extra minor or move action doesn't sound exciting, but if it helps set up a devastating standard-action attack a round earlier, it might be the perfect way to use it.

Many paragon path features, such as Battle Mage Action, grant you a bonus to attack rolls or damage rolls when you spend an action point. If this bonus lasts for more than a single attack, spending the action point during that turn means you can apply the bonus twice: during the extra action and again during your normal standard action.

## Daily Resources

No decision causes some players more anxiety than the choice of when to use their daily powers. Some of these players labor under the misconception that a) there exists such a thing as the perfect moment for using every power, and b) they'll be able to recognize and take advantage of that moment when it arrives. Other procrastinators falsely imagine that such resources must be saved for the last encounter of the day, since that fight will inevitably prove more difficult than any other battle.

Don't fall victim to either of these two worries. Combat is unpredictable. If you wait for the moment when five enemies gather closely enough for your *fireball*, or for the mists of uncertainty to part and present you with the unmistakably correct time to cast that *wall of ice*, you might end the day with your most spectacular powers unused. Or worse, you might lose a battle because you didn't unleash havoc when things started to get hairy.

Instead of obsessing about perfect situations, think about the circumstances that make each of your daily powers a good choice. The number of squares covered by *blast of cold* means that you want to include many enemies in it. But the power also automatically damages and slows targets (or immobilizes them on a hit). Slowing even a single enemy might be more valuable

than damaging two or three, and maybe that guaranteed damage is enough to drop the target. Sure, you'd love to save *evade the blow* for when a brute crits you with a big attack, but if you use it early in the day, you probably go into the last fight with one more healing surge than you otherwise would.

Some players hoard daily powers, fearing that once they're out, their characters will have to drag the rest of the party back to camp for an extended rest. Don't assume that a character without daily powers can't keep up with his or her allies. Unless you suspect a truly grand combat lies ahead, only a lack of hit points and healing surges should keep you from going on.

Daily powers provide your character with a chance to turn the dial up to 11. Sometimes, you need this option because a fight's gotten tough. Other times, though, using a daily power lets you step into the spotlight for a few moments and say, "Look what I can do." Take advantage of those opportunities to shine.

## Magic Items

Like action points, magic item daily power uses come at each milestone. Unlike action points, you can safely accrue them over the course of a day, using them all in the final encounter.

That said, think of magic item daily powers much like your other daily powers: Use them when a good opportunity comes up, rather than waiting for the perfect opportunity. If your item grants a reroll on an attack or a saving throw, use it as soon as a successful roll would be meaningful rather than waiting for the most important daily attack power or the dreaded third failed death saving throw.

Make sure that your choice of magic items with daily powers matches up well with the number of uses you expect to accrue. Carrying ten different items with daily powers gives you flexibility, but even at the epic tier you're unlikely to get the chance to use more than half of these items. Conversely, don't carry so few items that your daily uses go to waste. On average, a heroic character should carry one or two items with daily uses, a paragon character two to four, and an epic character three to five.

## Consumable Resources

This last category includes resources that don't renew each encounter, each milestone, or even each day. Consumable resources, such as potions and whetstones, function only once and then they're gone forever (or until you buy another one). For the risk-averse player, deciding when to use these resources can prove paralyzing. When can you be certain it's the right time to add ongoing acid damage to your weapon's attacks with a *caustic whetstone*, or which encounter merits drinking that *fire beetle potion*? From reading this section, you know that such certainty rarely if ever presents itself.

Just like a daily power, figure out ahead of time what circumstances would lead you to use a consumable item. As soon as you know that you face a high-AC opponent, chug that *elixir of accuracy*. When minions appear on the board, pull out the *elixir of dragon breath*.

Many consumables use up other resources, such as healing surges or magic item daily power uses. Don't accidentally create a drain on those resources by carrying around too many of the same kind of consumable.

Be wary of spending too much gold on consumable resources. Using the ones the DM places in treasure parcels is fine—in fact, you should usually consume these within a few levels, or you risk them becoming obsolete. But if you routinely spend money on potions, reagents, or the like, you undermine your ability to buy permanent magic items later on. Spending 100 gp per session on *elixirs of dragon breath* might not seem like much, but the gold for ten of those potions could have bought you a 5th-level magic item that lasts the rest of your career.

### Defining Success

Standard combat encounters set the players up to win the fights. In fact, the game's math places a significant edge on the side of the characters. Unless your DM runs a particularly difficult campaign, even a single character death in combat—much less the complete defeat of a total party kill—comes up very rarely. When the game system provides an advantage like this to the heroes, what truly constitutes success?

In most situations, the characters measure success by weighing how many daily or consumable resources they expended in the battle: healing surges, daily powers, potions, and so forth. Action points and daily magic item powers used provide another measure, although these regenerate during a day's adventuring, so most players don't worry too much about conserving them.

The faster you go through resources that can't be regained without an extended rest (or by spending gold, in the case of consumables), the sooner your characters must consider ending the day's activities. Sometimes this doesn't matter, but if your characters face a deadline (or if you expect vanquished enemies to be reinforced while you sleep), every extended rest makes the next day tougher.

A successful encounter, then, is one that expends as few of your most valuable resources as possible. No matter the strategies that you pursue, this should always be your ultimate goal.

## Common Mistakes

In addition to using the basic tactics described above, be aware of these common tactical errors.

**Overextending:** When you stray from your teammates, you not only make yourself a target for enemy attacks, you also make it difficult for your allies to support you.

This mistake occurs most often when a melee striker—often a rogue—rolls a high initiative and rushes into battle on his or her first turn before the defender can establish a front line. Even after their characters are dropped time after time, some players attribute the result to a killer DM or lack of backup rather than to their own poor tactics. Players who have the instigator motivation (see page 11) also fall into this trap, regardless of the characters they play.

If you must move away from the front line, try to stay near the edge of battle. Minimize enemy flanking opportunities, and keep an escape route in mind.

**Disorganized Retreat:** D&D players hate to back down from a fight. Even when the battle starts looking grim, they dawdle and vacillate, unable to fully commit either to staying or fleeing. This inability to settle on a plan of retreat has led to more total party kills than any other lapse of judgment.

Put someone in charge of calling for a retreat. Choosing the player of a leader or a defender character is a strong option, since this player likely has the best idea of how much longer the group can expect to survive. More important than role, however, is the player's ability to assess the gravity of the situation and know when it's time to run. Although anyone can call for a retreat, this is the person you all trust to make the final call.

Once you agree on this duty, respect that character's decision without question. When the warlord says, "Delvers, we are leaving!" you'd better get moving. Don't argue that you only need one lucky round to drop that dragon: Head for the exit and live to fight another day.

When retreating from battle, make judicious use of readying and delaying tactics to ensure that the right characters leave last. Sometimes this means sending the fragile characters out first while the defenders hold the line. In other cases, though, speed matters more than durability; give the heavily armored characters a head start and let the quick ones catch up.

**Taking Unnecessary Damage:** Any time your character takes damage he or she didn't have to, you give away valuable hit points. Make sure you spend these hit points to gain a useful advantage.

This situation comes up most often when you provoke opportunity attacks. Against high-defense monsters, provoking an opportunity attack to move into a flanking position might be the right answer. But provoking two opportunity attacks to chase down a runaway minion is dumb.

### Know the Numbers

The D&D combat system rests upon a framework of expected attack bonuses, defenses, damage, and hit points, both for characters and for monsters. Knowing these baseline numbers and how your characters measure up to them helps you understand what the game expects you to accomplish.

The attack bonuses and defenses of monsters are based on a monster's level, modified slightly based on the creature's role and the designer or Dungeon Master's whim. See "Creating Monsters" in Chapter 10 of the *Dungeon Master's Guide* for a more detailed description.

Characters are much more varied than monsters, since their accuracy and defenses depend greatly on their choice of class, race, feats, and equipment. That said, the game expects character accuracy and defenses to average slightly above that of monsters, as shown in the table here. An average character facing an average monster can expect to hit on roughly 60 to 65 percent of his or her attacks, but that monster should hit only about half the time.

Don't worry if your character doesn't measure up to this expectation. Accuracy and defenses rarely increase along a perfect line; more often you see intermittent jumps and plateaus in your accuracy and defenses, as your ability scores and equipment improve. In fact, unless you carefully track all the attack rolls made in the game, you probably can't even notice a difference of 1 or 2 points from the baseline. That said, if your typical attack bonus or defense score falls more than 3 points behind these expectations, you should consider options to make up that shortfall.

Your DM isn't obligated to use only monsters of your own level. Many encounters feature monsters of a higher level (and thus higher accuracy and defenses). A monster's numbers also vary by creature role. Brutes have lower defenses, but deal more damage and have more hit points. Soldiers have higher ACs. Controllers are a little better at attacking non-AC defenses, and use those attacks more often.

| Attack and Defense | Character | Monster |
|---|---|---|
| Attack vs. AC | 6 + level | 5 + level |
| Attack vs. other defenses | 4 + level | 3 + level |
| AC | 15 + level | 14 + level |
| Other defenses | 13 + level | 12 + level |

# HEALING

Dungeons & Dragons combat encounters are designed to use up the party's resources. The more encounters your heroes have, the more resources you must spend. Of all the resources you use to get through encounters, none is more precious than your supply of hit points. A character without daily attack powers can still provide monsters with a formidable opponent. A character without hit points only provides the monsters with food.

Each character manages hit points in two ways: during an encounter, and over the course of a day. Within an individual encounter, you usually only care about the number of hit points that stand between you and unconsciousness. Many players don't care how many healing surges they have to spend to stay above 0 hit points, because once their characters are unconscious, things get worse in a hurry.

On the other hand, your healing surges measure how many fights you can take before you run out of endurance. More than any other resource, healing surges determine whether your character—and by extension, the party—can afford to risk another battle.

The best groups understand that managing hit points and healing surges is a task for the entire group, not just for individual characters or the party's leader. This section explains how to use those resources for maximum effect.

### HEALING OUTSIDE COMBAT

If you have a leader in the party, use his or her encounter healing powers when taking a short rest. This might mean that a single short rest turns into two or three (or more) short rests, but in most cases the difference between 5 minutes of downtime and 20 minutes of downtime is minimal.

To speed play, ask your DM if you can forego rolling dice normally used for such healing powers in place of the average value of the die rolls, rounding fractions up. Most DMs recognize the value of getting back to the action quickly and would much rather say, "Each healing surge spent during this short rest is worth an extra 8 points" than require the player of the cleric to roll 1d6 for every surge spent. The Restful Healing feat is an even better answer, maximizing all such dice rolls.

## Hit Points and Healing Surges

Aside from your class, your Constitution score has the greatest effect on your hit points and healing surges. For that reason, many players see Constitution as a default third-best ability score (after their class's primary and secondary ability scores). Sometimes, 1 hit point or an extra healing surge makes the difference between life and death.

Most characters start with seven to ten healing surges per day. Defenders (and characters for whom Constitution is a primary or a secondary ability score) tend toward the high end of that range. But the sheer number of your healing surges doesn't tell the whole story; the lower your healing surge value, the higher the cost in healing surges to negate damage. Since a monster's attacks don't differentiate their effect between targets with high surge values and those with low surge values, an attack against a high-value character (such as a fighter) is easier to heal than one against a low-value character (such as a wizard). A big hit on a wizard might take two of his or her surges to heal, but the same attack on a fighter might barely exceed a single surge's value.

## Using Healing Surges

If you're lucky—or very good—you might have to spend healing surges only during a short or an extended rest. The rest of us, however, rely on healing surges to keep us alive during combat.

Some characters call for healing as soon as they take damage. (We sometimes call those characters "wizards.") In truth, however, you usually shouldn't worry about spending one of your precious healing surges until you're bloodied (or very close to it). Few monsters can reliably deal more than 20 to 25 percent of your full normal hit points with a single attack, so an unbloodied character can expect to survive a couple of hits before even nearing unconsciousness.

If you use tokens or battlefield markers for nothing else, use them to indicate which characters are currently bloodied. It's a great signal to everyone that you could use some help, and it saves a lot of time-wasting questions.

### When to Use Second Wind

Your second wind gives you the ability to take care of your own wounds. Maybe you wrap a hasty bandage over the gash left by the dragon's claw, or perhaps you get a sudden rush of adrenaline that lets you ignore the pain. Whatever your character's explanation, the effect is the same: heal some damage (and get a handy bonus to defenses).

In groups that include a leader, most characters view their second wind as a last resort. Unless you play a dwarf, using second wind means you give up a chance to attack the monster, and that's a hard trade-off even when it's a good idea. Rather than ignoring your second wind, though, keep an eye out for either of these two situations.

**Bloodied and Under Fire:** An unbloodied character rarely needs healing. But if you're bloodied on your turn and you can expect to take at least two attacks before another healing opportunity arises, consider using your second wind. The fewer encounter attack powers you have left, the less offensive output you give up by using your standard action for something other than attacking. The monsters will still be there on your next turn (and if they're not, you're winning).

**Surrounded:** Even if you aren't bloodied, when the monsters greatly outnumber you it can be a good idea to use your second wind. Not only can those monsters pile on damage quickly, but the number of incoming attacks makes second wind's bonus to defenses even more valuable than the hit points you gain.

### Leaders and Surges

Every leader class has its own version of a twice-per-encounter healing power that uses surges to restore health. These powers are drastically more efficient than most other forms of healing surge use, since they typically add extra healing on top of your surge value. Leaders who specialize in these powers can often double the value of each healing surge used. Not only does this let characters bounce back from injury quickly, it also increases the number of encounters you can face each day (because you spend fewer surges to regain the same number of hit points).

Save your leader's healing powers for situations when you need a lot of healing in a hurry or when you can't wait for another option. These powers also provide the best method of getting an unconscious character back in the fight.

## Leader Healing Tactics

Each leader's basic healing powers encourage and reward slightly different tactics in combat. Knowing how your leader's healing powers work should guide the party's decisions on positioning, teamwork, and the proper timing of those healing powers.

**Ardent:** This leader's ardent surge power provides the same healing you'd expect from a warlord, and slightly less than a cleric provides. However, depending on your ardent's build choice, the target also gains an additional bonus lasting for a round. Not only does the timing of your ardent surge depend on when the ally can best utilize the bonus you grant—whether to attack rolls or defenses—but using the ardent surge itself influences the target's actions on its next turn.

EMPTY ROOM STUDIO · PETER LAZARSKI

For example, a newly healed character who has a +1 bonus to attack rolls should turn to a high-impact power, perhaps even spending an action point to gain the bonus to two different attacks.

**Artificer:** Unlike other leader classes, the artificer actually has two distinctly different healing options. *Curative admixture* provides a good baseline choice, supplying almost as much healing as the cleric's *healing word*. *Resistive formula*, by comparison, puts the decision-making into the hands of the target, who can choose when to gain the temporary hit points granted by the power.

In both cases, the target of a Healing Infusion power need not be the one spending the surge. Instead, the artificer recharges his or her infusions during a short rest by taking healing surges from any willing donor.

During each short rest, use the character who has the highest remaining number of healing surges as the fuel tank for the artificer's Healing Infusion powers. As soon as the encounter begins (or just before, if you can get the timing right), your artificer character should use *resistive formula* on the character most likely to take attacks. The target should leave the power's AC bonus in place until he or she become bloodied, then trade it for a boost of temporary hit points. Avoid relying too heavily on *resistive formula*, since its temporary hit points last only until the end of the encounter.

**Bard:** If your group doesn't use good tactical positioning, the bard's *majestic word* looks weak compared to the cleric's *healing word*. But if you can take advantage of the timely slide it provides, sacrificing that extra 1d6 of healing doesn't feel too bad.

Use *majestic word* when your bard character can slide an injured ally either away from combat or into a flanking position right before he or she attacks.

**Cleric:** No class heals more efficiently than the cleric. Coupled with the Healer's Lore class feature, *healing word* restores more hit points per surge than any other class-based healing power. Other cleric healing powers follow a similar pattern, from *beacon of hope* and *life transference* to the ever-popular *cure light wounds* (which doesn't even cost a healing surge).

This efficiency makes the timing of your cleric character's healing powers even more important. For instance, don't waste healing by using *healing word* on a character who isn't bloodied.

**Shaman:** This primal leader shares the healing provided by his or her signature power between two targets. This reduces the potency normally expected of leader healing powers, but provides more flexibility. A shaman who has Protector Spirit also gets to add his or her Constitution modifier to the healing provided to each target of *healing spirit*, which means the total output of the power rivals or even exceeds that of *healing word*.

Like other healing powers, your shaman character should usually save *healing spirit* for use on a bloodied target. Make sure that another ally is adjacent to your spirit companion before using the power to avoid losing the secondary healing provided. You can't grant this secondary healing to yourself, since you're not an "ally."

**Runepriest:** *Rune of mending* offers slightly less healing than that provided by an average leader. In exchange, though, the runepriest grants a bonus to himself or herself as well as to all allies within the burst (5 squares). This bonus depends on the runepriest's current rune state (either a damage bonus or a defense bonus), effectively giving the runepriest two slightly different powers.

Your runepriest character should share the bonus to defenses when the party needs a breather. Use the bonus to damage rolls to turn the tables or finish off a tenacious foe. Since the damage bonus applies to all damage rolls, the party members should choose that round to spend their multiattack powers, perhaps adding extra attacks with action points.

**Warlord:** The warlord comes in right behind the cleric when it comes to basic healing potency (and nearly equals that class once you add the Improved Inspiring Word feat). Like the cleric, the warlord should save *inspiring word* for use on bloodied allies.

The warlord's hidden healing prowess, however, shows up in the Inspiring Presence class feature, which heals a small amount of damage each time an ally spends an action point. Over the course of several battles, these few points add up significantly, and they also give each ally a bit of control over his or her own healing.

## Healing from Other Classes

Sometimes you can't rely on a leader for healing. Maybe your leader has fallen in battle, and someone else must revive him or her. Perhaps your leader is too far away to provide healing, or maybe he or she is out of healing powers. Fortunately, many other characters have options that heal damage or allow the use of healing surges.

**Spending Healing Surges:** Nearly every class has at least one encounter power that allows the user or an ally to spend a healing surge. Use these powers whenever leader healing isn't handy, or when you don't need all the healing that a leader's power would grant.

Daily powers that grant healing surges are more valuable. Save them to use when the leader has run

out of better options, but don't hold on to such powers too long—if the target's out of surges, your power becomes useless.

**Trading Surges:** Everybody knows that the paladin can use *lay on hands* to heal an ally, but many players forget about the cost to the paladin: one healing surge. A paladin who has a high Charisma who also serves as the primary defender can quickly deplete his or her healing surges. A *belt of sacrifice* offers an even less efficient trade: The wielder loses two surges and the target gains one.

Trading healing surges between characters can balance an uneven distribution of damage. If your rogue unwisely charges into battle a couple of times, he or she might run out of surges well before the defenders. That said, weigh carefully the cost and benefit of a surge trade. Even if the rogue cries out for healing, the paladin with only one surge left might need to save it to avoid falling to the monster's attacks.

**Temporary Hit Points:** As long as the target is still conscious, temporary hit points are as good as real hit points. In fact, for an uninjured character they're even better, since they can allow that character to exceed his or her normal maximum hit point total.

Temporary hit points typically are granted by at-will or encounter powers. Since temporary hit points go away at the end of the encounter, use them early; ending with temporary hit points still in your tank means you lost more real hit points than you should have.

**True Healing:** Many players use this phrase to refer to healing that comes without the cost of healing surges. The cleric's *cure light wounds* is the most well-known example, but plenty of nonleader classes offer such powers, such as the paladin's *glorious charge* and the druid's *fires of life*.

Save such powers for real emergencies. Powers that provide true healing are almost always daily powers, which indicates how unusual and valuable they are.

**Regeneration:** The rarest of healing, regeneration works like ongoing damage in reverse: At the start of the target's turn, he or she regains a certain number of hit points.

Regeneration's advantages over other forms of healing include its ease of use (once activated, it automatically applies every round without need for additional actions) and its efficiency. Regeneration costs no healing surges, but it can easily add up to a huge amount of healing over the course of an encounter and the ensuing short rest.

Regeneration has drawbacks, as well. The healing it provides comes slowly, adding only a few points per round, compared to the burst of healing provided by a surge. Many regeneration effects function only while the target is bloodied and so provide more limited benefits.

Use regeneration effects when you believe the battle will last a while, and when you don't think the target needs a lot of healing right away. A defender who has regeneration can keep an enemy busy with defensive options while slowly regenerating back to health.

## Maximizing Your Healing Surges

To make the healing in your party as efficient as possible, your characters should work toward two goals.

**Increase healing surge values.** The higher your healing surge value, the more efficient your healing will be. After all, would you rather use second wind to regain 16 hit points or 22 hit points?

Anything that increases your hit points can boost your healing surge value, so the Toughness feat and items such as a *brooch of vitality* provide an immediate boost, as does a higher Constitution. Aim to get your hit points to a multiple of four, so that your surge value doesn't get rounded down.

You can also increase your healing surge value directly with items such as an *amulet of vigor*, a *belt of vigor*, and a *belt of blood*. Consuming a feybread biscuit or a flask of astral mead increases your surge value for 12 hours in addition to feeding you for an entire day. A *belt of sacrifice* adds a bonus to each ally's healing surge value. Enduring Mountain is a solid feat on its own, but it gets even better when your allies also take it.

**Manage healing surges as a party.** Ideally, everyone in the party should run out of healing surges at about the same time. Most groups stop adventuring as soon as one character runs out of surges. If one character routinely exhausts his or her supply of healing surges before everyone else—or alternatively, if one character always has a few left when everyone else is empty—your party is wasting healing surges that could have helped you fight another encounter.

Explore options to equalize healing surge use among the party's characters. Some classes include this versatility through features such as the paladin's *lay on hands* and the artificer's Healing Infusion powers. Look for magic items that let one character spend a healing surge to provide healing for an ally, such as *gloves of the healer* and *armor of sacrifice*. If all else fails, use the Durable feat to boost the supply of the character who runs out first.

Also, look at your tactics in combat. If you are the defender and you perform your job too well, you might take so many hits that you run out of healing surges early. Consider letting your mark lapse to allow the monster to spread its damage out to another target. Yes, your defender typically has the best healing surge value, so you lose a bit of healing efficiency this way. However, this lost efficiency is worth it if it means you can take on another encounter before you need an extended rest.

## Consumable Healing

Don't rely on consumable items for a significant portion of your healing. Not only does the cost add up quickly (see "Consumable Resources," page 111), but these items usually don't provide enough healing to keep you going for long. They also typically cost healing surges, and the healing provided rarely proves as efficient as a healing power.

That said, every character in the party—even the leader—should carry around at least one *potion of healing* or the level-appropriate equivalent (see below). These potions often function as literal life-savers, bringing an unconscious character back to the land of positive hit points and into the fight. Drinking a potion also doesn't cost you a standard action, unlike second wind.

By the time you reach the paragon tier, the 10 hit points restored by a *potion of healing* can't keep up with your own healing surge value (or the damage the monsters dish out). Start collecting *potions of vitality* instead; not only does each potion grant more hit points than a *potion of healing*, it also allows you to make a saving throw. As you enter the epic tier, upgrade your purchasing to *potions of recovery*. Having a couple of *potions of healing* isn't a bad idea at any level—having 10 hit points is better than having 0 hit points.

In addition to the ubiquitous healing potions, consider other consumable options that enhance your healing. A woundpatch boosts your surge value for the next surge spent during the encounter, and the herbal poultice works similarly during a rest. Feybread biscuits and astral mead increase your surge value for 12 hours. A *potion of regeneration* provides a cheap way of getting your badly injured character back to half his or her hit points—just drink one after a fight and wait.

VICTORIA MADERNA

## TELL US ABOUT YOUR CHARACTER

From about 1985 until 1999, I never played a character.

Don't get me wrong: I played plenty of D&D, but I vastly preferred acting as the Dungeon Master, and my groups all seemed happy to let me.

Then, a few months before the release of 3rd Edition D&D, I joined Monte Cook's new campaign as the elf sorcerer named Vexander. I didn't realize it at the time, but playing Vexander would open my eyes about many facets of the game. Most notably, he represented the first in a long line of characters who, when viewed in the right light, appear identical.

I'm not saying that I've been playing elf sorcerers for the last 10 years. In fact, I don't think I've played the same class twice since I started splitting my time between the two sides of the DM screen.

Instead, what I've come to realize is that all my characters reflect my primary player motivation: to make trouble. In D&D terms, I'm the instigator.

I don't know why this motivation comes so naturally to me. I was never the kid who poked anthills with a stick. (Okay, maybe once or twice.) I didn't show off with bike stunts or mouth off in class. (Much.) Perhaps after long years in charge of running the action, I now grow bored too quickly waiting my turn. Maybe I'm paying other DMs back for the years of defeats I've had at the hands of my group. Whatever the reason, every one of my characters shares a predilection for—and a talent set appropriate to—getting into trouble.

Here are some of the characters I've played:

**Vexander, the aforementioned sorcerer.** He relied on *fly* and *haste* to move around the battlefield and on *mage armor* and *cat's grace* to keep his AC high enough to avoid taking too much damage, and he blasted monsters with an endless supply of *magic missiles* and *lightning bolts*. His favorite tactic? Opening the next door before we finished off the last enemy, because what's the use of wasting a *lightning bolt* on only one target?

**Kalar, shifter ranger/psychic warrior.** Trying desperately to play against type, I built this character as a quiet, mysterious fellow who let others do the talking. Well, that didn't last long. Soon he was running all over the battlefield with various psionic powers, slicing up foes with his greatsword or filling them with arrows from his longbow. I didn't realize it at the time, but Kalar's failure to dramatically alter my play style clearly foreshadowed my one-track mind.

**Nat Mason, human drunken master.** He started as a barbarian, multiclassed as a rogue, and soon learned martial arts, but Nat's uniqueness didn't end with his class array. On a small island that represented the entire known world, Nat claimed that he "wasn't from around here." He never hesitated to punch someone in the face if he thought they deserved it, and despite the party's horror he was always right. Even that time he hit an old lady with a chair turned out okay. If you can't quite picture him yet, think about Jack Burton from *Big Trouble in Little China*. Yeah, now you're getting it.

**Antheric, half-elf crusader.** Once again, this character seemed to represent a new direction for me. As a heavily armored defender, I wasn't skipping around the battlefield willy-nilly. I was, however, the first guy into the fight pretty much every time. I had the AC and hit points to back up my boldness, and I relished how each hit made my character stronger. *"Come on, hit me! Is that the best you've got?"*

**Tyrellius Vex, half-elf warlord.** By the time I crafted my first character for 4th Edition, I'd read all about the instigator motivation in the *Dungeon Master's Guide*. These paragraphs made me recognize the thread of similarity that ran through all my characters: I like to leap before I look. In imagining Tyrellius, I embraced that tendency and built a bold leader who directed the party by charging headlong into battle. Once again, I turned to pop culture for inspiration. I needed a strong, charismatic character who believed in himself wholeheartedly, but didn't have a lot else going on in the brains department. A few days before the campaign started, it hit me: I would play a D&D version of everyone's favorite blue-suited superhero, the Tick! The party's fighter quickly became my sidekick—at least from Tyrellius's point of view—and I committed entirely to playing a character who just didn't believe in defeat. The fact that he died in the first session didn't sway him; upon his resurrection in a nearby magic pool, Tyrellius concluded that he'd been sent back to the world by Kord to serve that god as an immortal avenging angel. Tyrellius now believes he can't be killed . . . and so far, he's been right!

**Talerron, eladrin swordmage.** My latest creation is the D&D version of a hard-bitten gunfighter: the swordmage-with-a-past who's arrived in town to atone for past misdeeds by working on the side of justice. He dives into battle with as much frenzy as any of my previous characters, but uses his many teleportation powers to get out of the worst scrapes.

• • •

In role terms, this list features characters who functioned as strikers, defenders, or leaders. It includes five power sources and at least eight different classes. You probably couldn't put together a more disparate list of characters if you tried.

But to me, they're all the same guy poking the anthill.

*ANDY COLLINS taught himself to play D&D in 1981. He joined Wizards of the Coast in 1996, and later he helped write some of the Player's Handbooks sitting on your shelf. Today, he manages the Development and Editing teams for Wizards of the Coast Roleplaying R&D.*

To make an informed tactical decision, you first need information. This doesn't mean that you must memorize the *Monster Manual* or the entire D&D Compendium. On the contrary, you can glean much of the information you need using observation and in-game tools.

As soon as possible after seeing your enemy, make a Monster Knowledge check as described on page 180 of the *Player's Handbook*. Since this doesn't cost an action, there's no reason why every character shouldn't give it a try until you've rolled the best possible result (or everyone's had one chance).

A result of 15 or higher (20 at paragon tier, 25 at epic tier) gains you the monster's name, type, and keywords. This doesn't seem like much, but it can hint at potential good or bad tactics. Monsters that have the fire keyword, for instance, often have fire resistance and nearly always deal fire damage; avoid using fire attacks and break out the fire resistance. The *Player's Handbook* doesn't specifically list a monster's role among the elements learned from a Monster Knowledge check, but ask your DM if that's reasonable to add to this list (or if not, to the results of a check at a higher DC). See "Monster Roles" below for more on this important characteristic.

With a result of 20 or higher (25 at paragon tier, 30 at epic tier), you also learn information about a monster's powers. Most DMs won't recite the monster's powers verbatim, but you could reasonably expect to learn power names, defenses targeted by the powers, frequency of use (at-will, standard, or recharge), and special effects or conditions applied by the powers. Use this information to choose the right opponent for the monster; if a monster controller targets Will, your fighter might not be the best one to face it. Find out if any of the monster's powers involves a situational trigger or a recharge; if you can avoid that circumstance coming up, you drastically improve your odds of success.

A result of 25 or higher (30 at paragon tier, 35 at epic tier) gives you the most valuable information of all: resistances (including immunities) and vulnerabilities. This data tells you which of your powers to ignore and which to focus on. Picking the right damage type against a creature that has a resistance or a vulnerability can shave a hit (or more) from the number needed to drop it.

In addition to game knowledge, ask the DM about any particular lore your check result grants you. Most monster entries include information about a monster's habits, lairs, tactics, or allies. Even if this lore doesn't give you an edge in combat, it helps immerse you in the world and might hint at plot points. "I hear that kobolds often live near dragons' lairs, so maybe those rumors of a great winged beast seen around here have some truth to them."

Regardless of the result of your Monster Knowledge check, pay close attention during combat to learn each monster's preferred tactics and potential weaknesses. Pay attention to any hints dropped by the DM. Did your Dungeon Master suggest that the monster didn't seem fazed by your scorching burst? That might indicate fire resistance. Is it readying an attack for an ally to move into a flank? It might deal extra damage when it has combat advantage. Feel free to ask the DM when you think he or she has dropped a hint. Offer to make an Insight or a Perception check to notice a clue, but don't badger—this sort of query can get tedious fast.

Assign a player—a watcher or a thinker is a good choice—to track your party's attack rolls and results against each monster's defenses. Record the lowest attack result that hit each defense and the highest result that missed. Use this information to identify a monster's best and worst defense and choose your attacks accordingly. Even if you find this too tedious (or unhelpful) in battles against standard monsters, fights with elite or solo monsters often last long enough that such information can prove quite useful.

## Monster Roles

Just like player characters, each monster fills a role in combat, employing a specific set of tactics to cause as much trouble as possible. The roles appear on page 54 of the *Dungeon Master's Guide*, along with a quick look at how the DM should use monsters with those roles against the players. What follows in this section are guidelines about how those different roles can be countered by the players. (Although the *Dungeon Master's Guide* also includes information about minions, elites, and solos, those words say more about monsters' potency in combat than their tactics, and so those terms aren't discussed here.)

These roles aren't set in stone, though. Part of what makes D&D interesting is how enemies can combine in new and different ways to create more engaging encounters. Soldiers typically function primarily as meat shields to protect a more important monster, but an elite soldier such as a spirit devourer can easily serve as the focus of an encounter. This fantasy world holds a lot of variety, and what exactly you face fluctuates dramatically from one combat to the next. You

and your fellow party members must learn to read the situation and adapt accordingly.

Furthermore, your party should have battle plans of your own, and these plans might include direct contradictions of some of the advice here. If that's the case, your own tactics take precedence.

## Brutes and Soldiers

These melee-based enemies make up the rank and file of most encounters. Both categories of monsters want to get up in your character's face and hit you. But although they share this basic similarity, they have different focuses.

A brute looks for something to smash with its high-damage attacks. It prefers low-AC characters due to its lower than normal attack bonus, so keep it away from your controller. Whenever possible, pit your defender against an enemy brute; the combination of high character AC and low monster attack bonus means a lot of missed attacks for the brute. If your defender keeps it locked down well enough, you can even afford to ignore the brute for a few rounds while you take out more pressing threats (such as artillery or controllers). Once you decide to focus on the brute, pour on the damage from your strikers—favoring high-damage attacks, even at the cost of accuracy—if you want to drop it fast. The brute's high hit point total means a lone defender can take forever to reduce it to 0 hit points.

The soldier acts much like the defender in your party, aiming to lock down a character with a mark or a similar control effect. Soldiers often go after strikers and controllers to prevent those characters from benefiting from mobility or ranged attacks. Just as with brutes, matching a soldier with a defender keeps the monster from harassing the characters who need to stay on the move. Soldiers rely on higher-than-average defenses, especially Armor Class, so save your most accurate attacks for these enemies (or use combat advantage to even the odds). Pushing, pulling, or sliding a soldier away from a locked-down ally can allow your ally a timely retreat.

Whether you're fighting brutes or soldiers, consider evading their attacks with mobility and a barrage of ranged and area attacks while you take out other foes. These monsters usually have a poor selection of ranged attack options, so if you can keep these enemies at a distance, you can often negate them entirely. Alternatively, slow or immobilize them to keep them at bay. These monsters want to keep you busy while their allies pepper you with deadly ranged attacks from safety, so the more time you spend fighting brutes and soldiers, the more attacks you allow the enemy to make.

## Skirmishers and Lurkers

Monsters of these roles use movement, trickery, and stealth to gain advantageous position and deal devastating attacks. These creatures favor melee, but many have other combat options as well.

Skirmishers use superior mobility to bypass your front line and attack the most vulnerable characters they can reach. A well-designed skirmisher is the defender's nemesis, often ignoring marks and scoffing at your opportunity attacks. Sometimes a skirmisher goes for the fragile controller, but other times it wants to flank a leader or a striker. Don't let skirmishers gang up on a single character, particularly if they can

EMPTY ROOM STUDIO - PETER LAZARSKI

flank the character. Many skirmishers deal significantly more damage with combat advantage, so they can quickly reduce an otherwise healthy character to 0 hit points.

Lurkers don't penetrate your defense by being faster; rather, they like to remain undetected and spring into action from hiding. At lower levels, this often relies on the Stealth skill. More powerful lurkers add disguise, invisibility, or other trickery to their repertoire. This deception helps them elude party defenses and gain combat advantage, which often means extra damage dice. After a lurker attacks, it often spends its next turn hiding or otherwise making itself difficult to target (sometimes called "going into lurk mode"). If you don't attack it right away, the lurker becomes much harder to find . . . until it attacks again.

Do your best to pin down a skirmisher or a lurker with control effects. No creature is immune to every condition that would slow it down, so use your knowledge skills and combat experience to find the right answer. Dazing these creatures might not eliminate their ability to attack, but it prevents them from moving into the right position, which can drastically reduce their damage output. Once you get this edge, pour on the damage as quickly as possible before the enemy escapes. Skirmishers have average defenses and hit points, but lurkers can be very fragile once pinned down.

## Artillery and Controllers

Unlike most of the monsters already mentioned, artillery and controllers prefer to stand back from battle. These are among the most dangerous enemies because they can either deal massive damage or cause crippling conditions to your entire party through area or close attacks. Their attacks are more accurate than most monsters' attacks, meaning they pose a threat even to high-defense characters.

When you think artillery, think cannons—glass cannons. Although they bring powerful attacks to bear, artillery monsters are very vulnerable. Their defenses and hit points are both lower than average, so if you can bring a striker to bear, these monsters won't last long. However, artillery monsters typically use terrain or a line of brutes or soldiers to ward off attacks. Anybody who can get in an artillery monster's face—pay attention, teleporters—can make its life difficult, so send a mobile party member into the enemy's back ranks.

Controllers use their attacks to neutralize your frontline combatants with hindering conditions, allowing their allies to go after your back row. Characters who get or who can pass out extra saving throws (such as wardens or virtuous paladins) can dramatically improve your party's odds against controllers. Use those knowledge skills to figure out what you face and what tactics might work best. Unlike artillery, many controllers can operate equally well at range or up close. Despite this versatility, these enemies don't have the defenses of a soldier or the hit points of a brute, so concentrated attacks can take them down quickly.

More than any other kind of monster, controllers and artillery can make your combat miserable if left unchecked. Focus attacks on such enemies as early as you can. It's easier to heal the damage dealt by a brute or a lurker than to erase the conditions applied by a controller, and the artillery can easily focus its attacks on your most wounded character. If you can't address these threats directly, spread out and take cover. Ranged attacks need line of sight, and blasts and bursts need grouped characters to have maximum impact. Even if you can't get to the controllers and artillery, maybe you can make them come to you.

## Leaders

Leader is actually a subtype of monster role. A leader has one of the roles noted above, which dictates its tactics and statistics, but it also has one or more abilities that significantly augment, protect, or manipulate the other monsters in the encounter (much like the leader in your party). You can tell that you are facing a leader when it grants an ally an extra attack or move, or when it heals a big chunk of the damage you just dealt. A leader's abilities can be quite powerful, particularly when they apply to all its allies. Taking out an enemy leader should be a high priority.

Brute and soldier leaders fight from the front, often boosting the offense or defense of their nearby allies. These leaders simplify your tactics: Attack the leader with everything you have, then rout its suddenly less potent allies.

Skirmisher or lurker leaders are rare, but a few exist. Focusing fire on such creatures poses a greater challenge than when facing brutes or soldiers, which makes it all the more crucial to take advantage of any such opportunity. Spreading your party out can make it more difficult for such creatures to effectively pair attacks with leader benefits.

Leaders that have the artillery or controller role command their allies from the back ranks. As with any such monster, pressure it with a melee character when possible. Keep it isolated from its allies to reduce the efficacy of its leader abilities.

Fictional D&D characters have it easy.

When the floor gives way and dumps the heroes into a watery pit full of aboleths, they know instinctively how to respond. You, on the other hand, must carefully track your character's powers and other resources to know what he or she can do next. This can be quite a job, even when you're not the one covered in aboleth slime.

Fortunately, the *Player's Strategy Guide* is here to help. When you finish reading this section, you'll be ready to choose the method of keeping track of your powers that works for you. Your character can tread water that long, right?

There are three aspects to using your powers efficiently: knowledge, organization, and customization.

## Know Your Powers

Some players write down the names of their powers as they select them. When such a player's turn comes up, everyone waits while he or she flips through the books to figure out what power to use. This player does not make the game more fun. Don't be this kind of player.

Yes, your character sheet probably has a box to write down all the powers you've selected. This list can't adequately represent the range of options and details contained in the full power write-ups. Most power entries are brief enough that writing them onto cards (such as the ones that come with the Character Record Sheets products, but index cards work well, too) doesn't take much work.

Depending on your class, you can also pick up a pack of power cards designed specifically for you. Preprinted power cards are available for the powers published in the *Player's Handbook*, *Player's Handbook 2*, *Martial Power*, *Arcane Power*, *Divine Power*, and the *Forgotten Realms Player's Guide*. Each pack includes a few blank cards to record powers you've picked up from other sources.

The D&D Character Builder provides the best solution for knowing your power options. This program includes every power published for D&D and generates a color-coded card for each of your powers.

If you have a power that has an unusual usage—such as the cleric's *healing word*—consider making extra or different cards for it. For example, the player of a cleric should put two *healing word* power cards into his or her stack (or three at epic levels), rather than trying to remember how often he or she has used the power in each encounter.

Consider making cards for activated effects that aren't class or item powers. Some players like to have a basic attack power card to remind them of that option. If you often bull rush or grab, make a card that keeps the relevant information handy.

JOHN TYLER CHRISTOPHER

## Organize Your Powers

Even though power cards are a great time saver, it can take you a while to sort through a big stack of them to find the one you want to use on your turn. This is especially true at the higher levels of paragon tier and at epic tier, when in addition to three daily and three encounter powers, you've accumulated a lot of utility and item powers. To avoid this, keep your cards organized. Here are some methods that might help; you can use any or all of these organizational schemes.

**Effect:** Keep your attack powers separate from your utility powers. When you need to know what options you have for killing the monster, utility powers can distract you.

**Usage:** Group your at-will, encounter, and daily powers separately in the stack. Color coding also helps you easily identify which powers to use early and which to save until you really need them.

**Action:** Splitting up your power cards by the action required to use them—standard, move, immediate, etc.—can help you fill your turn more effectively. It's easy to forget about minor-action powers, and if you leave triggered powers in the middle of your stack you probably won't remember to use them.

If you have room to spread out, you can put each of these groupings into a different stack on the table. For portability and compactness, try using binder clips to attach each category of cards to the edge of something like your character folder or the container you bring to carry your pencils, minis, and dice.

## Customize Your Powers

Knowing which powers you have to choose from saves time, but taking another step can prove even more valuable. Make sure each card includes all the relevant numbers associated with your power: the total attack bonus, the damage it deals (including all modifiers for feats and other effects), and so forth. If you have to stop the game to remember every last bit of damage your power deals, not only do you add tedium to the game, but you also risk forgetting a key bonus. The power cards generated by the D&D Character Builder do most of this work for you, but even they benefit from a little extra attention before the game starts.

Don't forget situational bonuses. If an item you wear allows you to deal 1 extra damage when you have combat advantage, jot that down on each power card. If you have a feat that increases the forced movement of your push powers, record that on all the relevant cards. Situational benefits are the easiest to forget in play, and optimizing your tactics means remembering every last bonus.

Another calculation that speeds the game is noting the damage each of your powers deals on a critical hit. Why bring the room down after rolling that natural 20 with a laborious calculation of your maximum damage? Do the math ahead of time and write it down on each power card. Don't forget to note how many extra dice of damage your magic weapon or implement deals on a crit, as well as any extra effects created when you score a critical hit.

Consider using your own symbols or color choices to further customize your cards for easy identification. Use an orange highlighter to mark all your attack powers that have the fire keyword, and a blue pen to note your cold powers. Draw a sword on your melee power cards or a bow on your ranged power cards. Snip three corners off your cards, with the remaining corner indicating which defense it targets. Anything that helps you quickly pick out the right power for the situation (but not by overloading you with too much to remember) can speed the game and contribute to your success on the battlefield.

# TRACKING EFFECTS

Everyone knows how to keep track of damage—just subtract it from your current hit point total, note the new number, and move on. (Players who instead add up the damage dealt until that number equals or exceeds their characters' hit point total are weird, but we still love them.) But the game has so many more effects than simple damage that efficiently tracking these effects marks a key difference between the casual player and the expert player.

Tracking effects on your enemies provides essential information for making good tactical decisions. If the wizard blinds a cyclops, your rogue character should remember that the cyclops now grants combat advantage. You should also recognize that using a power that turns you invisible to the cyclops would be a waste. If your ally dazes the soldier locking down your wizard character's escape, you should realize that you can now safely move away without allowing the monster to make an opportunity attack.

Similarly, knowing which conditions are currently in place on your allies guides your decision-making. If your paladin character forgets that the wizard is taking ongoing poison damage, you won't use your power that grants the wizard an extra saving throw.

Inventive gamers have devised many different ways to track the various effects that come up in play. This section will help you find the one that works best for your group.

### WHY TOKENS?

The biggest advantage of using tokens to mark effects is that it puts the tracking information right onto the battlefield, where you are already looking when you make tactical decisions in a fight. The biggest problem is that it's not immediately obvious how to interpret each of the different tokens on the board, and this problem tends to increase at higher levels as lasting effects proliferate. One way to address this problem is for your group to decide beforehand what tokens will be used for what effects and to record that information, either on a whiteboard that the entire group can see, or individually on each player's character sheet.

Several companies sell tokens for use in gaming. Do a little online research to find the tokens that best fit your group's preferences: color options, magnetic or nonmagnetic, size and thickness, 2D or 3D, and so forth.

## WHAT TO TRACK, AND HOW TO DO IT

By now we hope that we've convinced you of the importance of tracking effects that occur during combat. But what exactly merits tracking?

The short answer is, track as many details as your group can handle without turning the game into a bookkeeping nightmare. The following section starts with basic options, then moves on to more advanced tracking options. In each case, suggestions are included for how you can keep track of the details given.

**Bloodied:** Every group should keep track of which characters and monsters are bloodied. Not only do some characters gain extra benefits against bloodied enemies, but knowing which monsters are bloodied also tells you where to focus your fire. Knowing which allies are bloodied helps your party know who needs healing and who could benefit from effects such as a repositioning slide. Even if you don't track anything else described here, find a way that everyone can remember who's bloodied.

We recommend placing tokens directly on or under the minis of bloodied characters or creatures. Use red markers for their intuitive connection with blood and gore. You can instead use a whiteboard to track which combatants are bloodied, but this doesn't provide as clear a view of the state of battle as a bunch of red markers mixed in among the miniatures.

**Conditions:** Most of the conditions that appear on page 277 of the *Player's Handbook* merit being tracked in a public and/or visual manner. A few conditions either don't merit remembering—such as deafened—or are obvious to everyone at the table. You don't need to track which creatures are surprised: They're the ones you just snuck up on.

Many players use the same kind of tokens for tracking conditions as they do for noting bloodied monsters and characters. Make sure to have a good variety of bright colors on hand—black or brown tokens often blend in too well when placed underneath miniatures. If you can, assign each color to a different common condition. Rare conditions, such as stunned or petrified, can share a color. Keep a list handy so that players can remember which color translates into each condition.

Other groups prefer to use a whiteboard and erasable markers to track conditions. This can prove easier than remembering that a light green token means weakened and a light blue token means dazed.

Even if you use tokens, some conditions merit alternative methods of tracking. Turn a mini on its side to indicate that the creature is prone. Use a token replace an unconscious or dying character to make it easier for other miniatures to occupy the same space. Conditions that last longer than one encounter don't merit visible tracking; you can just note them on your character record sheet.

**Target Designation:** Plenty of character powers (and some monster powers) incent others to attack a target by applying a defense penalty to the target or by offering a bonus to attack rolls against the target. (These powers are often described as "target designation" powers.) For example, *lead the attack* grants the warlord and his or her allies a power bonus to attack rolls against the target until the end of the encounter. You certainly don't want anyone forgetting that!

Because of the wide variety of effects falling into the category of target designation, most groups need help remembering what's going on. Write out a note card for each of your target designation powers that describes its game effect. (If you fold the note card in half to create a table tent, it's even easier for players to see it in the heat of battle.) When you use the power, place the note card on the table near the combat so everyone can see it. Jot the name of the target on the card each time you use the power so that everyone remembers which creature is affected.

Tokens on or under the designated target's miniature provide a good reminder that something special is affecting that target, but you still need some way of remembering the exact effect. If you have enough of these target designation powers in the game, you can't hope to assign specific colors to each. Instead, pick one or two colors for the entire category and then use note cards as described above to associate the token and the creature with a specific effect: "Yellow (Fire Giant) = Grants Combat Advantage" tells you all you need to know.

Instead of note cards, you could use the power card that created the effect, but this has a lot of text that the other players don't need to know (and you probably don't want to fold your power cards into table tents).

**Zones and Terrain:** Any area of the battlefield meaningfully altered by a power or another effect should be represented in some way so that the players and the DM remember its presence. This includes zone powers such as *swarming locusts* as well as battlefield alterations such as a pile of books dumped off a shelf to create difficult terrain.

Two-dimensional tokens make the best markers for zones, though if you use an erasable battlemat you could draw the effect right onto the battlefield. Movable zones make the drawing option more cumbersome, since they require a lot of erasing and redrawing. You don't need a token in every square of the zone. Just mark the corners of the effect, and record somewhere what effect corresponds to those tokens (just like you did with target designation effects).

Certain types of area, such as a blast 3 or burst 2, come up often enough that you might want to prepare a more easily reusable and removable solution. Make your own by bending some reasonably stiff wire or twisting together the ends of some pipe-cleaners. Less craft-minded players can cut out cardstock or plastic in the right shape, but using an outline rather than

DREW POCZA

a solid square makes it easier to lay the area down around minis.

**Ally Benefits:** Many powers grant one or more of your allies a temporary or a lasting benefit, such as the bonus to attack rolls and damage rolls from *war of attrition*. Keeping track of which benefits are in effect helps everyone maximize their value.

Tokens don't work very well for tracking these effects. Most benefits don't last long enough to merit token use, and there are enough of them that no one can remember from just a token what the effect is. Instead, use note cards as described under "Target Designation," above, handing the appropriate card to each player whose character is affected.

**Ongoing Damage:** Tracking ongoing damage on the battlefield doesn't help players or DMs remember to apply that damage at the start of the affected creature's turn. Instead, note this on your character sheet, near the monster's stat block.

**Saving Throws:** Players frequently forget to roll saving throws at the end of their turns. Whenever your character receives an effect that can be ended by a saving throw, use some physical reminder of the saving throw to place in front of you on the table. You can use table tents, oversized tokens, fluorescent note cards, or anything else that calls attention to its presence on the table. (If the object includes a reminder of the effect, so much the better.)

### USING A WHITEBOARD

If your gaming area has room for an easel, consider setting up a large whiteboard—or chalkboard, if you're feeling 19th-century—to track various conditions and effects. (Some groups are fortunate enough to play in rooms with permanently mounted whiteboards. If you have the means, we highly recommend it.)

A whiteboard has the advantage of immense flexibility. You can write anything at all, including which characters are bloodied and how much damage you've dealt to various monsters, without worrying about elaborate color-coding or memory tricks. In combat, it can be used to track conditions, hit points, initiative order, or other effects. Outside combat, it's great to list your current quests, adventure leads, NPC names, or any other information everyone needs to see. It's also visible to everyone at the table, even the guy sitting way down at the end who can't see the battlefield very well.

One disadvantage to a whiteboard is that it can make it tougher to know which effects correspond to particular figures on the battlefield. Looking at the miniatures, then to the whiteboard to figure out which conditions are affecting the ogre, then back to the battlemat takes time and loses some of the simplicity of tokens.

One DM we know uses coaster-sized discs with a small pad of sticky notes affixed to each disc. When a monster deals a save-ends effect to a character, the DM writes the effect on the top sticky note and hands the disc to the player. When the player saves, he or she discards the top sticky note and hands the disc back to the DM.

### Alternatives to Tokens

Some players don't like sliding 2D tokens underneath miniatures. Repeatedly picking up miniatures can easily mess up the battlefield, particularly any of the players suffer from fumble-fingers. Try one of these alternatives instead.

**Loops:** Any small, colorful loop—such as a rubber band, a twist-tie, or the ring left behind when you open a plastic bottle—can dangle off a miniature's arm or weapon, removing the need to pick the miniature up and put it down every time you place a token. Some players find these detract from the verisimilitude of the game; seeing an ogre with a half-dozen differently hued loops hanging around its neck can definitely break that suspension of disbelief.

**Clips:** Paper clips can usually be attached to minis, but binder clips or alligator clips are better. Use colorful clips that show up on the battlefield. Clips have all the same advantages and drawbacks as loops, however, they can damage painted minis.

**Stickers:** Particularly enterprising players craft specialized stickers to denote conditions and effects, placing these directly on the miniatures. Check out http://www.penny-arcade.com/2009/3/9/ to see an example. For painted miniatures, small sticky notes can do the trick as well and without damaging the paint.

## Who Does the Work?

Too many players assume that it's the DM's job to remember everything going on at the table. Not only is this assumption lazy, but it also encourages players to ignore the details of combat.

Don't rely entirely on your DM to keep track of the effects in place on characters and monsters. Even the best-organized DM won't remind every character on his or her turn which monsters are dazed, which are bloodied, and which are immobilized, and repeatedly stopping the game to ask such questions grinds combat to a halt.

Help the DM out by assigning a specific player to place condition tokens on the battlemat, or to keep the whiteboard up to date.

# TROUBLESHOOTING

Having problems in combat? Relax; it happens to all of us once in a while, even the experts.

This section provides advice on some of the most common issues encountered by even the most experienced D&D players.

## You Can't Hit

No party is immune to occasional bad luck, but if you're having miss-fests night after night, it's time for a tune-up.

First, check your party optimization. The problem might be that you aren't achieving the attack bonuses that the system expects from characters of your level, as outlined in "Tactics 101," page 104. If that's true, try to invest in more accurate weapons and in better magic weapons or implements right away. Check "Level Up!," page 44 for information on retraining feats and powers for a better batting average as soon as you can.

If your attack modifiers are in the right range, ask your DM if he or she has been using an unusually high number of soldiers, or monsters significantly above your level (all of which have higher than expected defenses). Even with the right attack modifier, a 5th-level character fighting 8th-level soldiers will miss more often than he or she hits.

Once you've ruled that out (or if your DM prefers not to share that information), consider tracking your natural attack rolls for a few encounters. Some players experience long strings of low attack rolls, and even whole parties can have off nights. Just because you've rolled three natural 1s in a row doesn't mean you're guaranteed to get a good result on the next roll.

Let's assume you've eliminated all these possibilities, and you still feel the need to improve your accuracy. Now you must turn to smarter tactical play to solve your problem. Start by maximizing the frequency of your attacks made with combat advantage. The +2 bonus to attack rolls it provides makes a big difference, so work with the other players to set up flanks, and collect powers that create combat advantage by dazing, restraining, and knocking down enemies. Find powers that grant temporary bonuses to attack rolls and penalties to enemy defenses. (Leaders have plenty of these, but every class has a few.) Grab feats, items, and other options that provide circumstantial bonuses to attack rolls. Stacking up these buffs and debuffs can quickly and dramatically improve your party's accuracy.

Even the most accuracy-optimized party can't guarantee high attack bonuses every round, so take advantage of these bonuses by using your best powers

## TELL US ABOUT YOUR CHARACTER

During the Armageddon Wars of the Orsus Empire, no greater builder of warforged existed than Thom Widdershins.

Model 33 was to be his crowning achievement, a tribute to the god he loved, Kord. The fates, and an assassin from the Bronzeshell clan, had other plans and Thom was killed before he could perform the activation ritual on Model 33.

The assassin took the warforged as a trophy and hid it away in a cave with the rest of his prizes. The wars soon ended, and several years later the assassin's cave was taken by a young black dragon named Arithemius. The assassin's treasure, including Model 33, became the start of the dragon's hoard.

Five thousand years passed. A great apocalypse destroyed seventy percent of the surface world, driving most of the surviving population into the Underdark. The knowledge of how to create warforged was lost; even their existence was forgotten.

Arithemius, now ancient, was found by a group of adventurers searching for a way out of the Underdark. The group parleyed with the dragon and received a single gift from his hoard. Following the dragon's instructions, the party activates the warforged. Etched into its breastplate is the cryptic code "(t.w.) 33-K" written in a dead language. The warforged does not know its name, only its purpose, and so the adventurers call it Tweek.

When Widdershins created Tweek, he implanted memories of a time and a kingdom that no longer exists, even in the oldest tales. Tweek the invoker lives to bring the word and glory of Kord to those around it. It tells the stories of the greatness of the Orsus Empire and the massive battles that took place during the Armageddon Wars.

Tweek stands a full three feet tall (Thom Widdershins was a gnome, after all). It wears blood-red raiments emblazoned with the fist, bolt, and sword of Kord. Calling upon its angelic powers, Tweek spreads a shining set of metal wings with which it can slash all those who surround it. All those who see it in battle marvel at the wonder and glory of such a perfect creation and can only cower in fear at the might of Kord.

*DON FRAZIER dreamed of one day becoming a prophet to the stars, an astronaut, and a game designer for TSR. Even though he started playing D&D thirty-two years ago and has enjoyed every edition of the game, he is NOT a grognard. He gleefully spends his days as a code monkey working in the Wizards of the Coast Digital Studio on D&D Insider.*

in those rounds. Save your at-will attack powers for rounds without bonuses; even if you miss, you don't lose as much as if you'd missed with an encounter power.

## Not Enough Healing Surges

If you routinely run out of healing surges after only a couple of encounters, finishing adventures in a timely manner can prove difficult.

Once again, your first step is to check the numbers. If your defenses lag behind the expected values described in "Tactics 101," you're probably taking more hits than you should. More hits means more damage, which means more surges spent per battle. To bridge any gap you find, add better armor to your wish list and retrain some feats to boost defenses. Consider using your next ability score increase to improve an odd-numbered score to an even-numbered score if that will increase a defense.

Maybe you've been facing particularly deadly monsters. Ask your DM if he or she has been favoring high-level foes, or if he or she feels that the brutes and lurkers—traditionally high-damage enemies—have been unusually effective lately.

Even with appropriate defense scores and enemies, however, inefficient use of healing surges can drastically increase the number you need to bounce back after a fight. Review "Maximizing Your Healing Surges," page 116, to see if you can make each surge worth more. Adding a leader to your party—either by replacing an existing character or through multiclassing or the hybrid rules—can kick up your healing surge efficiency. Temporary hit points, regeneration, and so-called "true healing" (page 116) can also lessen your reliance on healing surges.

Don't overlook the value of improving your group's tactics to reduce the number of attacks the enemies make each round. Look for ways to use tactical positioning and features of the battlefield such as walls and bottlenecks to restrict how many enemies can pile on you at once. Even if you can't entirely deny attacks, at least make the enemy work hard to hit you by adding penalties. See "Cover and Concealment" and "Using Terrain," page 108, for suggestions.

Last, remember the immortal advice: "The best defense is a good offense." Killing monsters faster reduces the number of attacks you take. Boosting your damage output and concentrating attacks on individual enemies (see "Focusing Fire," page 105) often provides the best way of conserving healing surges. A dead monster—with a few exceptions—can't hurt you.

## Combat Gets Boring

Sometimes a fight lasts so long that none of the combatants have anything but at-will powers left. The outcome might even be a foregone conclusion, and

### Discussing Problems with Your Group

Some basic advice applies to many problems you might encounter while playing the game.

**Say something.** Each player has a responsibility to help everyone at the table have fun, and that everyone includes you. If something makes you unhappy, you're not doing your fellow players, your DM, or yourself any favors by suffering in silence. If you speak up, you might find that others share your concern and are grateful you initiated an opportunity to fix it together.

**Use personal conversations.** Complaints through email or instant messenger often come off poorly, and even a phone call can't replace a face-to-face chat. Whenever possible, discuss problems in person.

**Include the right people.** Sometimes everyone needs to be present when you discuss a problem. But if you're concerned about a particular person at the table, bringing that up with the whole group puts that person on the defensive. When in doubt, always start with a one-on-one chat with your DM. That said, avoid making one person feel left out of the discussion. If four of the five players get together to talk about a campaign problem, that fifth player might feel frustrated and ostracized.

**Be polite and tactful.** Don't yell, don't be rude, and don't accuse other players of causing problems. Your discussion will go better if you take care to talk only about your own feelings and experiences and avoid making generalizations, assigning blame, or bringing in other unrelated issues from the past.

**Be open to opinions.** Maybe other players don't agree with your observations, or aren't concerned about the issue you raise. Recognize that some of the problem might be your fault. It is possible that your behavior, expectations, or approach is helping create the situation you dislike. If you're ready to own up to and address the ways in which you're not perfect, you'll find that others are a lot more likely to do the same.

**Be realistic.** Even if you take the most reasonable approach, you might discover that others aren't willing to listen to your feelings or to cooperate in finding a resolution that makes everyone happy. Don't give up right away, but don't be afraid to walk away and find a new group. If you've made a reasonable effort but aren't getting support in addressing the things that are making you unhappy, there's nothing wrong with finding other players who enjoy the same things you do. When you say good-bye, let everyone know it's nothing personal, and see if you can find nongaming opportunities to spend time with your friends from your old group.

yet you still slog on trading attacks. This problem can have many causes, each with its own solution. We'll examine a few of the most common reasons for long, drawn-out battles.

**Poor Accuracy:** As the number of hits scored each round drops, the length of battle increases. We've already covered accuracy problems above (see "You Can't Hit"), so look there for tips. Monsters with high defenses create the same problem, so ask your DM to compare the average enemy's defenses to the expected numbers on page 112.

**Not Enough Damage:** If you lack strikers, or if you've optimized your party for defense, fights can drag even when your accuracy is on target. Pick up some feats or items to boost your damage output, and ask your DM to go easy on the brutes, elites, and solo monsters.

**Foregone Conclusion:** A party that focuses its fire effectively can find that the last couple of rounds of combat—with five characters facing a single foe—lack tension. Everyone knows that the heroes will win, and nobody expects the monster to deal much more damage before it drops. Offer the monster the option of surrender, or suggest to your DM that you fast-forward to the inevitable end. If he or she balks, offer to measure the resources expended in those last couple of rounds and report back on their insignificance. Consider a compromise, in which one character gives up a healing surge to represent the damage you would have taken finishing the fight.

## Combat Lasts Too Long

The "Combat Gets Boring" section describes the boredom of combat with too many rounds, but just playing slowly can make a five-round battle feel like ten. If you routinely spend more than 10 minutes waiting between your character's turns, your group needs a timing tune-up. Figure out what takes players so long to finish their turns, and then find the right solution.

Does your wizard dither over her power cards, never able to find the right spell to cast? Check out "Know Your Powers," page 122, for organizational assistance.

Does the fighter take forever to roll and add up his damage? Try rolling your attack and damage simultaneously. "Customize Your Powers," page 123, also provides useful tips to speed damage calculation.

Do you argue over which monster got dazed last round? Go back and reread "Tracking Effects," page 124.

Maybe some of the players have selected powers or feats that offer too many options or complications. It's easy to accumulate a plethora of feats and items that offer situational benefits, complex attack powers, and other elements that overwhelm you with information. Politely suggest to such a player that he or she might consider retraining to simpler but no less effective choices.

## Your Teammates Don't Use Tactics

Some players can't help but see every missed opportunity to take a flanking position or use exactly the right power as a failure to play the game properly. But the game aims to entertain many different types of players. Remember that quiz on page 12 about player motivations? It's a good bet that not everyone scored the same way that you did.

Don't sacrifice your own ability to have fun so that other players can swap stories about the fascinating diplomat you just met. After the battle, ask the other players if they're willing to listen to a couple of small, helpful suggestions aimed at improving the group's tactics. Assuming they agree, keep your proposals to a minimum: At this point, one or two new tactics is plenty to offer. If these ideas take hold, point out sections of this book that they can review for more. (Better yet, buy them their own copies!)

As part of this discussion, ask for some tips from them on how you can improve your own performance in the areas they care about. D&D is about cooperation, so you shouldn't ask for others to change if you're not willing to accept similar feedback.

When offering tactical advice during a battle, use it as an opportunity to get into character. If you're frustrated by seeing poor tactics, think about how your character feels; after all, his or her life is at risk. Expressing your frustration in your character's voice can help the other players to not take it personally, and it also builds the image of your character as someone who's knowledgeable about tactics and driven to secure success in battle. Don't overdo it, though; a character who constantly complains about bad tactics tends to get left at the inn when the next adventure starts.

If none of this advice raises the party's tactical sophistication to the level you desire, approach your DM to see if you could run a few games. Playing the monsters is satisfying because you have sole control over the tactics for their entire side, and it's challenging to take a team of underdogs against an opponent who's the odds-on favorite to win. After you demonstrate the importance of sound teamwork by making the heroes sweat to defeat a clearly inferior but well-coordinated force, they might be inspired to step up their own game.

# TACTICS IN ACTION—IRONTOOTH

Originally released in May 2008 (and now available as a free download at www.wizards.com/dnd), *Keep on the Shadowfell*™ by Mike Mearls and Bruce R. Cordell not only demonstrates a classic dungeon-crawl-style adventure but also provides a great primer in the fundamentals of the game. One encounter in particular, the notoriously difficult fight against the goblin chieftain Irontooth, taught many unprepared parties the lesson, "Run away from a superior force," or for those who were slow to pick up on that one, "The game is still fun even when your character dies." The Irontooth encounter can also demonstrate how even a 1st-level party can win against seemingly impossible odds by using cooperative tactics.

If you've never enjoyed this archetypical modern gaming experience, why not ask your DM to run it for your group before reading this section? If you've already experienced it as a player, read pages 26–29 of the adventure to appreciate it from the DM's perspective. What follows is a guide to how you might approach the Irontooth encounter, using the sample party of the Spellblades (see page 94) as an example.

**Good tactics begin before you roll initiative.** To improve your chances against Irontooth, you need to catch him by surprise. That means making sure the kobolds outside his cave don't warn him of your presence. Sure, if you rush in and attack, you might get lucky and kill the kobold slinger before he can sound the alarm. But trusting to luck is never the best strategy.

The encounter setup signals that you're about to bump into some monsters by the waterfall. Most well-designed parties include a character who can succeed on the Perception check to get that warning, so why not use him or her to sneak up and observe the kobolds' comings and goings? It shouldn't take long to figure out that even more of the lair is a cave beyond the waterfall. That information defines your strategic goal of keeping the inner group from learning that you're wiping out their brethren, so that you can afford to take a short rest before crossing swords with the second group.

Unfortunately, none of the Spellblades are good at Stealth, so they choose a different approach that plays to their strengths. When they hear the kobolds ahead, they fade back into the woods to discuss options. Taellaen and Ruel argue over tales of kobold hunting practices (making History checks). After Raskel and Taellaen use Perception to find a frequently used kobold trail, Delaia uses Nature to set up an ambush site. Then the party lies in wait for a small group of kobolds to wander past. After springing the trap, it leaves one kobold alive and uses Intimidate to learn more about the kobold forces guarding the lair. Whether the captive cravenly tells all about Irontooth's gang or blusters about how he'll be avenged by all his friends in the caves, the Spellblades have learned what they need to know.

**Don't be afraid to go on the defensive.** Sometimes you need to rush in and take the fight to the foe hard and fast. Time might be critical because of a strategic goal, such as preventing a looming threat or preempting special enemy abilities that make them stronger the longer you delay. And if the battlefield offers a positional advantage such as cover, you voluntarily accept the short end of the stick each round that you put off taking it over for your own use.

The kobold caves, however, reward the opposite behavior. The faster you advance into Irontooth's lair, the more ways his forces can surround you. The kobold advantage comes from their numbers. You can't remove this advantage right away, so you must play a defensive game. Deny them the weight of

numbers by staying together and occupying choke points. Hold steady until enemy attrition evens the odds.

Also, because you are a 1st-level party, Irontooth and his friends are just plain tougher than you are. Be ready to make a clean exit if the dice turn against you. By advancing cautiously, you can maintain your line of retreat.

Once they enter the inner lair, the Spellblades decide the entry chamber south of the waterfall offers the most defensible position. Ruel stands in one entrance, while Taellaen occupies the other. They can even stand adjacent to one another, reducing enemy flanking opportunities.

Meanwhile, Delaia and Zulot can stand safely back and launch their spells at the enemies massing behind the warriors. Kobolds moving past the front line to get to these party members provoke opportunity attacks, and Raskel can clean up anything that causes too much trouble. If things get bad quickly, the heroes can fall back through the secondary exit behind them.

This chamber will get claustrophobic if kobolds circle around the outside and start coming in the exit, but by that point the Spellblades should have thinned out the initial mob enough to break through into the chambers to the north, where they can establish a new line of defense.

**Deny enemy strengths and capitalize on weaknesses.** No single strategy can prevail in every encounter. You must adapt your tactics to the specific capabilities of your enemy, and to do that you need to know what those capabilities are. Use monster knowledge checks and previous experiences to build your strategy.

Once the battle begins, keep your eyes and ears open. Notice how the enemies are armed, where they position themselves, and what they do. Whenever something unusual occurs, ask your DM if your character noticed any details about what just happened. Clues in the way the DM describes things can help you figure out what situation the monster needs to use that special ability and allows you to work to keep it from happening.

From previous encounters in *Keep on the Shadowfell*, the Spellblades have learned that kobolds are shifty. Delaia can shut this down briefly with *icy terrain*, and she might even consider including an ally in the burst if it can keep kobolds from shifting past the front line. The Spellblades know that minions are plentiful among kobolds, so blasts and bursts such as Zulot's *dragon breath* should prove useful.

Questions about the enemy's gear reveal that the denizens of the inner cave lack plentiful ranged attacks, so kobolds not engaged in melee offer little to no threat. The dragonshields must stay close to make their marking ability meaningful, and there's no easy way for the skirmishers to get combat advantage with ranged attacks. The party's defensive strategy takes advantage of this weakness. Knowing that the kobolds' powers work best up close reinforces the characters' decision to stand fast and force the enemy to bring the battle to them.

The inner caves include some foes new to the Spellblades—the wyrmpriest and Irontooth himself—so the players quickly call for monster knowledge checks as soon as they see these enemies. Once they bloody Irontooth, his change in tactics should be evident, and the players should adjust their own tactics to take advantage of this.

**Spread it around.** Victory comes when many jobs are performed well. Characters might specialize in a few different jobs, but in a party that works well together, everyone contributes whatever they can to getting each job done. This teamwork isn't as important in an easy encounter, but when powerful enemies such as Irontooth turn up the heat, they make survival so challenging that every job needs all the extra hands it can get.

Good tactics don't stop the Irontooth encounter from being an extremely difficult fight, and during the course of the long battle, every Spellblade relies on assistance from the rest of the party. For example, as the defender it falls to Ruel to soak up as many hits as possible. But if he performs this job too well, the party might lack the healing powers to keep him up and fighting. During the encounter, both Taellaen and Raskel make sure to take an attack that might otherwise have gone against Ruel, spreading the damage more evenly across the party. Even Zulot and Delaia can afford to get hit a couple of times, particularly by the minions.

# TACTICS IN ACTION—STORM TOWER

It was early 2008 when Mike Krahulik and Jerry Holkins of Penny Arcade fame joined Scott Kurtz, the creator of the Player Versus Player web comic, to play some D&D, founding the group that would come to be known as Acquisitions Incorporated. The podcasts of their adventures were so well received that a sequel series came out the following February, adding author and actor Wil Wheaton to the team. The adventure they played for this second session was *Storm Tower*, written by Dungeon-Master-for-the-Stars Chris Perkins just for this occasion. If you weren't lucky enough to listen the first time, don't fret. These podcasts are available for free on iTunes and from www.wizards.com, so check them out! The full adventure is also now part of the *D&D Insider* archives, so Insiders can download a copy and follow along.

In this section, the Guardians of Eastfall, the sample party described on page 96, take on Encounter 2: The Dungeon from *Storm Tower*. Although the encounter against Irontooth in *Keep on the Shadowfell* provides many harsh lessons, this one is more forgiving. Instead of just surviving, the party must end the encounter as quickly and efficiently as possible, attacking immediately instead of holing up against a superior force until the time comes to strike. If successful, the characters need expend only minimal resources, leaving everyone better equipped to continue for later encounters. If they fail, the Guardians will find themselves drained and have to head home early.

## WHEN AREAS ATTACK

Some of the most nefarious encounters combine both monsters and traps or hazards. It's hard enough defending yourself against swords and arrows, but when the trees or the building turn against you, things can get pretty difficult. But thankfully, these encounter add-ons can usually be avoided by a savvy adventuring party that knows how to avoid triggering them. For instance, although the snapjaw in this encounter is not technically a trap, it still relies on short-range tremorsense. Staying outside that range buys valuable rounds to deal with other problems.

When beginning an encounter in a new area, make note of the features of the area. Published adventures even devote a section to describing these, so your DM has the information if you ask for it. Good Perception and knowledge checks can help identify and avoid or mitigate these features, or even turn them to your advantage, which makes your encounter that much easier. Failing that, use common sense. If something looks dangerous, it probably is, so don't provoke it!

**Know what you're getting into.** Like many dungeon-style encounters, the single entrance to this encounter doesn't offer much chance to scout the competition. It is possible to use Perception to listen before descending into the hole, and Sherran's high modifier means the party can glean a few bits of information: Several more bandits wait below, and their leader is not with them. Knowing that other enemies, including the boss, are elsewhere, the Guardians determine that the best course of action is to end the encounter quickly before other foes might arrive to join the battle.

Upon descending into the room, a quick survey accounts for most of the enemies. Tregger, the bandit berserker, stands right in front waiting to face one of the heroes, and the bandits on the scaffolds prepare to take shots at anyone in the middle of the room. As the defenders, Kaliria and Brugar are the first party members down the ladder, and they happily engage Tregger while the ranger Sherran loops around to the southwest, heading for the southern scaffold. When Krizz finally gets down, he can help Brugar take down Tregger while Kaliria fends off Lurash, the bandit cutthroat, (if he's still in the fight) or the snapjaw (if it has found the party; see the sidebar "When Areas Attack").

Knowledge checks are in order when any fight begins, but what you've learned from previous fights can be invaluable. Context and firsthand experience tell you a lot more about your foes than a few lines out of the *Monster Manual*. In this encounter, Sherran definitely wants to take down the crossbowmen quickly; the party remembers their *dazing strike* power from the previous encounter, and being peppered with those is nobody's idea of a good time. Every hit costs the party actions and extra damage from combat advantage. The bandits must be taken out, and as a striker, Sherran is the elf for the job.

Sadly, even the perceptive Sherran isn't likely to notice Lurash beneath the northern scaffold. Unless Sherran thinks to use Dungeoneering, the specifics of "Chomper" must be figured out on the fly. Even without inside information, though, the Guardians should deduce that being far away from the scary iron jaws is vastly superior to being close, so Sherran chooses to go for the stairs *opposite* the snapjaw.

**Make yourself at home.** This area contains a few terrain features that the Guardians should use to their advantage. Other than the snapjaw, which is purely threatening, a savvy player can turn almost any object into a benefit; anyone who has listened to Acquisitions Incorporated make their way through this room can probably guess a few of them.

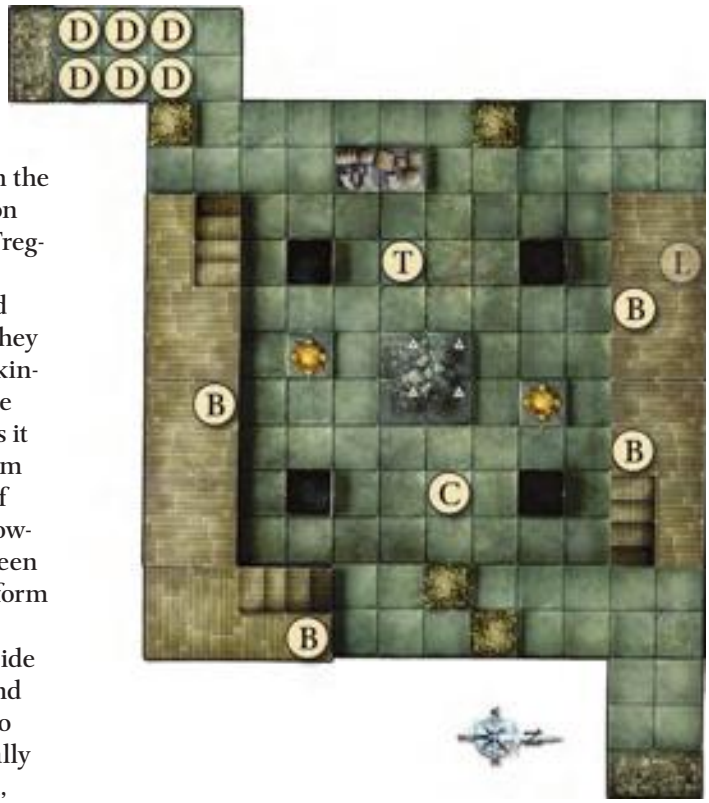
The first is the first thing you see: the rope ladder used to enter the room from above. As Jim Darkmagic discovered, when all you have to hold is a one-handed implement, there's not much reason to get down on the ground, and Hobor likes that way of thinking. From a perch on the ladder, the invoker can back up Sherran's attack on the crossbowmen without being in danger from Tregger, Lurash, or Chomper.

The scaffolds themselves offer an open-minded party both defensive and offensive possibilities. They can function as cover, as a tactical position, or as kindling. If Brugar and Krizz can pull the fight on the floor back beneath the southern scaffold, it makes it nearly impossible for the crossbowmen above them to get a clean shot, and the pillars in the middle of the room can even cause problems for the crossbowmen across the room. After its inhabitants have been cleared off, Sherran can use the scaffold as a platform for her own ranged attacks.

A well-placed shot at the brazier on the north side of the room can activate its fire attack property and make the other scaffold an uncomfortable place to stand. Although the fire spreads slowly, it eventually forces the other bandits to abandon their position, likely taking either fire or falling damage and making them easier to get to in the middle stages of the fight. Combining two terrain elements in this way is the mark of a party that's on the ball.

**Play to your strengths . . . even unusual ones.** Every character does certain things well, but sometimes your talents end up being useful in an unexpected way. In this encounter, the snapjaw is a major threat once provoked. With one hit, it can grab a target (which it immobilizes for the bandits to attack freely) and apply ongoing automatic damage. Even a character who has a good Athletics or Acrobatics skilsl takes 10 extra damage from a hit before he or she has the opportunity to escape. But the Guardians have an ace in the hole for a situation such as this: Kaliria.

Kaliria's aegis of ensnarement has an unusual interaction with the snapjaw. If the snapjaw attacks a party member and hits, it grabs its target just before being teleported away by the swordmage. This teleportation breaks the grab before the target can take any ongoing damage. This wasn't exactly what Kaliria had in mind when selecting this build, but it's quite effective nonetheless, and the Guardians will adapt to it. Because the aegis is such a potent counter to the snapjaw's attack, Kaliria is more valuable when she is not being attacked and when she has at least one unoccupied space adjacent to her, so she actually stays away from this enemy. This forces it to either trigger the teleport or to take opportunity attacks to get to her (an unlikely tactic for a mindless construct).



**Protect your weaknesses . . . even unusual ones.** The dazed condition isn't fun for anyone, but it can be especially painful for the Guardians. For one thing, having only one action makes it difficult for Krizz to use *healing word* efficiently. Every leader faces this problem, but Krizz likes to get in the thick of things, so it bothers him more than most. Dazing also takes away a character's immediate actions, which make Kaliria unable to use her *aegis* or other immediate attacks, making her a lot less effective.

A dazed Kaliria doesn't want to get hit by anyone, and a defender that doesn't want to get hit creates an awkward situation. Brugar can step up to take some extra hits, but it's also important for Kaliria to play defensively. Avoiding attacks altogether isn't practical or advisable, so she uses defensive powers, even second wind, to stay healthy and active on other creatures' turns. Daily attack and utility powers are there to be used, and using them proactively when the situation demands it means you get the most out of them, and it makes things easier in the long run.

CHAPTER 4

# Playing the Game

THERE'S MORE to playing D&D than combat tactics and rolling dice. Even if your group spends most of its time gathered around a layout of Dungeon Tiles, you inevitably encounter situations that can't be solved with *cleave* or *fireball*.

The final chapter of this book covers a range of those situations, from navigating skill challenges to sorting through treasure. Even when you have a perfectly optimized character, poor decisions made in these areas can wreck the game as fast as a total party kill.

This chapter includes the following sections.

- **Storytelling:** How to cooperate with the DM and the other players to create a compelling story.
- **Being Part of the Party:** How to build a stronger party through the group's story.
- **Rising to the (Skill) Challenge:** How to tackle this tricky part of the game.
- **Knowing When to Rest:** Learn when to say when.
- **The Campaign Journal:** How and why to track the important details of the campaign.
- **Treasure and Rewards:** Tips on acquiring loot, dividing it between the characters, and customizing your stuff.
- **Don't Be a Jerk:** Our closing words, and the most important message of the book.

VICTORIA MADERNA

FORGET THE SWORD, WE SHOULD BE ASKING ABOUT THE CREATURES THAT *GUARD* IT.
I'M SORRY, BUT HOW DOES FINDING A SWORD HELP US? I DON'T EVEN USE A SWORD...
HMMM... TELL US MORE ABOUT THIS *SWORD* WE'RE SUPPOSED TO FIND.

# STORYTELLING

After three chapters full of advice on character creation, party building, and game tactics, you might need to brace yourself before reading this: D&D is all about stories.

Sure, you can play D&D as a tabletop game of tactical combat, but that overlooks the singular opportunity that roleplaying games offer players, to collaborate in the creation of a story that stars you and your friends. In the long run, the impact of these shared stories outweighs any memories you might have of rules, tactics, or treasure.

Stories are weird. They manage to crop up everywhere, even when people try their best to prevent them from doing so. A story can sneak in under the radar, and you can't prevent it.

When you start playing D&D, storytelling might be the farthest thing from your mind. You play the game to kill monsters and save villages, not to create a story arc that follows a hero from humble beginnings to a position of power and importance.

Except, oddly enough, you're doing exactly that. You might not mean to, but you can't help it. It's impossible to play a game like D&D without a story creeping in somewhere. In fact, the very rules of the game subtly nudge you towards a loose version of the classic heroic story as early as character creation. Your character begins adventuring with a handful of abilities, but those talents don't compare with what the character will possess at the end of the campaign. The character might begin a campaign with a group of friends, but it isn't until the game moves forward that you will begin to understand the nature of those friendships. As the game progresses, the character gains strength and knowledge, gradually evolving. That evolution becomes the story arc, and not only do the choices you make and the actions you take drive the story forward, in fact, they *are* the story.

Fortunately, you don't have to construct this narrative alone. The DM, your fellow players, and even the random fall of the dice all contribute to the story as a whole. Each person who participates in the game brings new threads to the story, and like any other project, the more the group works together, the better the end result will be. When the group sets out to tell a story together, each member is like a gear in a complicated machine that, working together, can better complete a task.

## Driving the Story

"Storytelling is the DM's job!"

Although this is a commonly held belief, it could not be more wrong. Everyone at the table has a hand in storytelling, whether he or she is aware of it or not. As a player, you don't have the most obvious role in telling the story, but at the end of the day, the story is about *you*.

Unlike the classic form of storytelling, in which an individual author forges a tale from his or her own vision, D&D players create stories collaboratively, through the choices that you and your friends make. These stories can vary widely, from a twisted multistage plot to overthrow an evil lord, to something as simple as "Today we met some orcs, and then we killed them." Either way, you've worked together with the other folks at the table to tell a story.

As a player, you should recognize the power at your disposal. Everyone who plays D&D knows about the power of the DM. The DM is the arbitrator, the narrator, and your eyes and ears into the game world. In contrast, the power of the player is more subtle and often overlooked. The DM is in charge of what you see, but only you get to decide what you're looking at. Although this might not sound like much, it's a fantastic and somewhat tricky way of influencing the story.

Suppose your party finds itself in a village of a hundred people but interacts with only five of them. In the context of the story, only those five villagers matter. Even though you can see a hundred, you only look at five. By focusing on specific elements of the game world, you force the DM to give them significance. When you ask the blacksmith about his family, the DM's response—whether off the cuff or preplanned—has some effect on the campaign. If the family doesn't live in the village, why not? If the family died years ago, what killed them? Any of these answers might present adventure hooks, but even if they don't, they make the world feel more alive.

By showing the DM what parts of the world interest you, you also help direct him or her to flesh out the appropriate details. Don't ask about the blacksmith's family if you don't care; that wastes time and annoys the DM by continually forcing him or her to make up unwanted minutiae. Instead, use this technique to indicate your character's priorities within the ongoing story you're telling together. The more time you spend interacting with a part of the world, the more important that piece becomes to the story.

No matter what choices you make, you and your fellow party members are the protagonists of the story. Even if your characters are not most important people in the world, they are the most important

people in the story, around whom the rest of the world revolves. Without them, there is no story.

Question: If a tree falls in the forest and none of the party is there to roll Perception checks, does it make a sound?

Answer: It's a trick question: In the absence of the party, *there is no tree*.

## Taking the Bait

Whether the adventure hooks dangled by the DM come from your story interactions or out of the clear blue, find a reason to take the bait. Too many players make excuses for ignoring adventure opportunities offered by the DM. "My character wouldn't do that," they say, and then they wonder why no one appreciates their roleplaying talents. If you're that player, here's a hint: Nothing stops the fun faster than a player saying "no." Find a reason—any reason at all—to say "yes."

Adventure hooks lead to adventures, and adventures lead to action, experience points, treasure, and great stories to tell afterward. A DM dangling an adventure hook usually has an adventure attached to the other end, which means that he or she is ready for the game to proceed in that direction. Ignoring a hook and heading off in a different direction risks wasting the DM's hard work crafting that adventure, not to mention leaving you with an unpolished, off-the-cuff collection of thrown-together encounters in its place. Taking the bait leads to better adventures and more fun for everyone.

Usually, an adventure hook is obvious: A merchant offers gold for the safe return of his missing caravan, or a mysterious stranger warns of orcs massing on the border. But sometimes your DM can be too subtle with his or her hooks, or maybe he or she runs a game that relies on the characters to come up with their own adventure hooks. If you and the other players can't tell in which direction to head for adventure, make sure the DM knows. He or she might be used to groups that prefer digging a little harder to find their adventures, so a gentle push for clearer hooks could solve the problem.

## Creating Your Own Hooks

You don't have to wait for the DM to come up with your reason for going on an adventure. Many players fall into the trap of assuming that only the DM can point the characters toward the action. Yes, the DM tends to set the pace and direction of the campaign, but when the players get involved in this process, everything feels more important.

Some characters thrive in environments full of intrigue and politics. If that's your character, come up with a reason for the group to visit the duke's court. Maybe you've heard about a spy ring infiltrating the city, or perhaps you're the spies. Either way, sharing this hook with the DM is a more pointed method of focusing your attention on a particular part of the world. Let your DM know that not only do you want the court to become more important, you want to go there and have an adventure.

Your suggested adventure hook doesn't have to be complicated. In fact, it shouldn't be: The more details you insist on, the harder it becomes for your DM to inject it into the campaign. Don't tell the DM that your character wants to track down a missing half-orc fugitive suspected of stealing the fabled Amulet

STAN! BROWN

of Aundair from Duchess Elaine during her lightning rail trip from Sharn to Flamekeep last Tuesday and then escaping with the help of a pack of tamed black dragons under the command of a warforged archmage named Anvil. All that detail hinders the DM's creative impulses, making him or her less interested in adding your idea to the world. Start with, "I'd like to track down a criminal, and it'd be cool if the trail led into the Mournlands." If the DM bites, you can suggest additional details or let him or her figure out the rest.

Simple, character-driven adventure hooks are plentiful:

- Hunt an exotic or legendary monster. Haven't you always wanted to fight a dragon or a beholder?
- Find a particular magic item or artifact. It's hard for the DM to say no to your wish list request (see page 150) when you go through a whole adventure to get it.
- Join an organization. It stands to reason that powerful groups in the world of Dungeons & Dragons would ask prospective members to prove their worth in fantastic ways.
- Retrieve a rare component or ingredient. Maybe you need this for your own rituals or research, or perhaps you're just a courier.
- Locate someone who can train you in an unusual talent. This can be an in-world excuse for learning a new feat or ritual, multiclassing, or taking a paragon path, or it might be a way to get that grandmaster training you want—see "Other Rewards," page 157, for details about that option.
- Track down an old friend or rival. This provides a great opportunity to dust off your backgrounds and make them relevant again.

Whatever you decide is right for your character, make sure you give the DM some notice. That way, you have an effect on the game, and you show that characters can indeed change and influence things, but you also show respect to the DM by giving him or her time to prepare.

## Narrating Powers

*Player's Handbook 2* introduced the concept of narrating powers in the sidebar "Your Part in the Story," page 4. In brief, this involves describing your character's actions in combat, using the flavor text found in each power as a starting point. This method puts another aspect of storytelling into the hands of the players, letting them describe not just what their characters do, but how.

When you narrate a power, instead of naming the power and rolling a die, inject a bit of personality into the attack. A player can declare that his or her fighter is using *sure strike* against an enemy, or the player could describe how the character shifts her grip on the sword and deftly thrusts it toward the foe. Although the first gets the point across, the second is more compelling and is more likely to keep the attention of everyone at the table.

Although the descriptive text appearing in the power description provides a starting point, you can use as much or as little of it as you want and vary it

KALMAN ANDRASOFSZKY

however you choose. As long as the rules of the power stay the same, it doesn't matter how you describe it. Maybe your half-elf paladin learned *sure strike* by hearing it described, and thus uses a completely different grip and swing from what fighters use.

Until you learn the success or failure of your attack, don't include the outcome of a power's use in your narration. Saying "My ranger hammers off two arrows in quick succession" is a fine way of narrating *twin strike*, but describing how these missiles bury themselves into your target's throat should be left until you see the target drop to 0 hit points.

Narration is also helpful in keeping your character distinctive. In the case of two otherwise identical wizards, how each player chooses to narrate the use of *magic missile* can provide insight into their backgrounds and personalities. A wizard whose spell resembles a twisting spear of thorny darkness evokes a very different feel from one who strikes with a ray of golden energy. The first wizard probably isn't invited to a lot of royal balls, and the second might be comically out of place when dealing with the criminal underworld. Tailoring the descriptions of your various powers can help you create a visual theme for your character.

Don't be afraid to go even further with power narration. If you keep actual game effects the same, you can alter the flavor of a power as much as you like. Going further with the *magic missile* example, perhaps your wizard doesn't even cast a bolt of energy. You could depict it as an arc of power that leaps between the eyes of the wizard and the target, a cloud of ghostly birds that rip at the target with beak and claw, or a fountain of arcane energy that erupts from beneath the target's feet. As long as you don't ask your DM for different effects or keywords for a power as a result of how you choose to portray it, anything goes.

This kind of narration need not stop with powers. Everything your character does can be described in a way that conveys personality, including actions as mundane as drinking a potion. An aristocratic eladrin might sip delicately, and a barbarian could noisily gulp it and wipe his mouth with the back of his hand. How your character does something can be more evocative than the action itself.

Whether you're fighting, searching for traps, or hobnobbing in the court of a king, if you can perform an action, you can narrate it in a way that makes it interesting. If you can grab the attention of everyone at the table, then they'll look forward to your turns almost as much as their own.

As with all things, there is a danger of overdoing it. You should use narration to breathe life into a character, not to overinflate one. If you deliver a monologue every time your ranger shoots an arrow, odds are you're going too far. You want to engage your fellow players' interest, not encourage them to go grab a snack. A sentence or two should suffice for even the most detailed, elaborate actions.

Steer clear of repetition. The first time your barbarian "leaps into the fray, hacking with his axe" is interesting. After the 57th time he does it, the other players might have to stifle their yawns.

If you're not naturally inclined to spontaneous storytelling, jot down a few ideas for your powers and keep them at hand. Also, listen to how the other players use narration; sometimes a minor tweak to what they say can be all the inspiration you need.

## STORY TROUBLESHOOTING

It happens at some point in every player's life. An ordinarily good DM has a bad session, a series of dull adventures, or an uninspiring campaign overall. This difficulty can be painful to watch, especially if you're a good friend.

Rather than sit through it quietly, be a proactive player and figure out what's going on. If the games are listless, is it because no one knows where to go next? If the players commonly forget or ignore important world details, is it because the DM didn't draw attention to them, or because the DM doesn't even remember what he or she has said before? Maybe late starts, frequent absences, or canceled sessions have ruined your sense of story continuity.

After taking time to think about it, talk to the other players, and share your concerns with the Dungeon Master. Maybe the DM is having a rough time at home or at work and can't focus on giving you a high-quality game, but still feels obligated to show up every week nonetheless.

Sometimes, just talking about the issues suggests a solution. Maybe the players need to help the DM with some adventure hooks of their own (see "Creating Your Own Hooks," page 137). Perhaps one of the players should take responsibility for recording key people and events in the game (see "The Campaign Journal," page 148). You're smart folks, so put your heads together and find out how to get the game on track.

If no solutions present themselves, consider taking a break from the campaign for a month or two. Even if you love D&D, you can get burned out, particularly when outside stresses mount up. A little time away from the battlemat can leave everyone more excited and involved when you regather later.

You could also try shaking up the game a bit. Maybe someone else steps in as DM, or you play something else on your weekly D&D night. (Yes, there are other games besides Dungeons & Dragons.)

# BEING PART OF THE PARTY

What is the party, really?

At the simplest level, the party is a group of adventurers brought together through fate, fortune, or a common foe, who work together to achieve a mutual goal. This goal can be as straightforward as ridding a village of feral animals that threaten it, or as complicated as saving the world. No matter what it sets out to do, though, a party is what happens when a group of adventurers come together.

In the heat of battle, the concept of the party is easy to grasp. Each character fills a specific role that benefits the group. Defenders hold back a flood of enemies from attacking their vulnerable allies, leaders provide bonuses and assistance to those around them, controllers shift the tide of a battle in the party's favor, and strikers mete out horrible punishment. In battle, the party is a fistful of heroes bringing together the might of their unique abilities to overcome all difficulties set before them.

Membership in the party isn't hemmed in by the borders of the battlefield, however. After the fighting is over, the last enemy vanquished, and the last body looted, the *story* of the party begins. In the same way you wouldn't sit back in silence when your turn to act in battle comes around, you shouldn't fall into the background when there's nothing in front of you to kill. Whether the party is going toe-to-talon with a dragon or trying to figure out whose turn it is to pay for lunch, your character is an important part of the unfolding story.

Don't let your character's combat role dictate which element of the group's story the character will be a part of. Even if you play a solitary ranger who snipes at enemies from the back ranks of the battlefield, your character might be the most personable member of the party, passing around flagons of ale and sharing stories by campfire light. An imposing warlord who bellows orders in combat might be the most quiet, introspective member of the party, listening first and speaking last outside battle. The personality you've crafted for your character is a great place to start when you're trying to determine what part of the story you will fill when the party isn't in the middle of a fight.

No matter what you decide your character will be, always work to be a member of the group. Even if you're not in the spotlight of a roleplaying encounter, you can still provide a voice in the background. Just as when you're in a fight, everyone in the group can work together, bringing the depth of their characters' attitudes and personalities to enrich the story of your games.

Although you might be the starring character of the story from your own point of view, to everyone else, you're a member of the supporting cast. Try to become more involved with everyone else's concepts and stories. The more you entwine yourself in all the stories that unfurl during a game, the bigger a part of those stories you'll become.

As a player, you're also a member of a party made up of everyone else playing the game. In the same way that the different characters in the game bring their own talents and abilities to the challenges they fight to surmount, each person participating in the game brings a wealth of possibilities to the story. When a fellow player introduces a new idea to the table, think of ways you could help reinforce that idea. When another player mentions the small kingdom his character's family hails from, perhaps you decide your character has a distant relative who married a traveler from that kingdom, or remembers being entertained as a child by one of the kingdom's wandering bards.

When your fellow players reveal their characters' backstories, pay attention, because those stories are as important to your gaming experience as the monsters you will defeat, the dungeons you will crawl through, and the tyrants you will depose. You're playing one member of a group of heroes who all have their own unique histories, personalities, and goals. Although the difficulties your DM puts before you are temporary setbacks designed to be overcome, what the other players bring to the story are the friends and allies your character will suffer and strive with, who work together in both victory and defeat. Ignoring the stories the other players have to share closes off many chances to deepen and enrich the entire game. Whether your party is a fractious, bickering affair barely held together by a common enemy, or a group of lifelong friends who have set out together on an adventure, be involved with the other characters—and players—around you.

"Aeofel!" Binwin called. "GO GET HIM!"

Aeofel already knew he would stop at nothing until Leer—the target of his *oath of enmity*—was captured or dead, but his friend's pleading voice only strengthened his resolve. He left his comrades locked in combat with impossibly large metal beasts to pursue his chosen enemy.

"Your death will not be swift," Aeofel said, drawing a dagger from his boot and throwing it squarely at Leer's throat. The dagger flew through the air and . . . stopped! More magic?

No—Aeofel saw the shimmering outline of a gelatinous cube as it slowly engulfed the dagger. Leer grinned and fled from view. *"Rhachon Le!"* Aeofel cursed as he leapt around the cube and ran after his foe.

Now Leer stood near the front door of Ambershard Manor, a trail of blood behind him. He drew a dagger from his belt. Aeofel's eladrin senses sharpened in anticipation, but when the blade left Leer's hand, it flew not toward the avenger, but across the room to strike a large gong.

Leer shouted something at Aeofel and limped out the door, but the gong's echo was all the avenger could hear. *No matter,* Aeofel thought, *he is mine. I shall strike him down, for Binwin, for Clan Bronzebottom, and for Melora.* Aeofel flew after Leer with singular purpose, his hand gripping the hilt of his sword as he prepared for the death blow.

Suddenly, the ground gave way, and a sickening weightless sensation quickly turned to dread. Aeofel looked down and saw the bright green acid just before he fell in.

"BINWIN! *No diriel!* Help me!" Aeofel cried as he struggled in vain to find purchase on the smooth walls of the pit. Acid burned through his armor and began to eat away his flesh. Acrid smoke joined his agonized screams, filling the air around him to herald Death's arrival.

With his final breath, Aeofel prayed, *"Melora le suilon,"* as the world around him faded to blackness.

In the third series of the popular Penny Arcade D&D podcasts, my character, Aeofel Elhromnnë, met a decidedly nonheroic death, succumbing to a nasty trap in Ambershard Manor. Though I'd only played him a few times, I felt a sense of loss that lingered for days after the session was over. (And some people say that D&D is "just a game." I pity those foolish mortals.)

Aeofel isn't the first character to die because the players split the party, and he won't be the last, but his death was a very public example of character mortality. When that episode of the podcast aired, I received hundreds—maybe even thousands—of messages on Twitter, through e-mail, and on my blog. Many were consoling, and greatly appreciated, but a substantial number of them were some variation of "that's what you get for splitting the party, dumbass."

Part of me agreed, but when I really thought about it, I couldn't *disagree* more. Yes, Aeofel died in part because I split the party. But more than that, he died because I was committed to *roleplaying* the character I'd created, doing what he would have done in the story, rather than performing the optimal tactical move.

Aeofel was an avenger: in common language, a zealot. Whereas a paladin brings comfort to the afflicted, the avenger brings vengeance and fury to the afflicters. When I created Aeofel, I decided that, once he chose a target and swore his *oath of enmity*, he would stop at *nothing* until that target fell.

If I'd adhered to the second rule of RPGs (the first being "Never pick up a duck in a dungeon"), I wouldn't have split the party and Aeofel never would have chased after Leer. But Aeofel had sworn an *oath of enmity*. He had Leer on the run. Leer was bloodied *and* had offended Melora. And lastly, Binwin had implored Aeofel to "get him." Binwin was the only dwarf in the world whom Aeofel could call his friend, and Aeofel was intensely loyal to those who were close to him. Aeofel had no choice but to chase Leer and end up in that acid pit.

When our characters find themselves in real danger of dying, we can forget that the RP in RPG stands for "roleplaying." It's understandable that we want to keep our characters alive. They spend their entire lives with us, after all, so we're pretty attached to them. We do whatever it takes to protect them, like all good parents should.

But for our characters to become more than numbers on a piece of paper, for the battles we recount to our friends and our patient nongaming partners to become more than just moving minis around and rolling dice, and for us to realize the true potential of RPGs as collaborative storytelling, we gamers *must* engage our imaginations, commit to our characters, and break the unbreakable rules to better serve the story.

I haven't had a character die in . . . I'm not exactly sure how long. Not since I was a teenager, certainly, and even then, characters weren't *dead* dead, because we all kept locks of our hair in special jars labeled "In case of death, break glass and resurrect, y'all." But Aeofel is really, truly, I'm-totally-serious-about-this dead. He might find a way to come back as a revenant, but if he does, he will be *changed* by the experience. If it's possible, and 30 years of acting experience tells me it is, Aeofel will be even *more* serious, *more* overly dramatic.

Regrets? Well, obviously. My character is *dead*, but he died doing what he loved—what he *had* to do. I'm happy that I stayed true to Aeofel's beliefs and played him the way I wrote him.

So remember, kids: Never split the party . . . except for those times when you must.

*WIL WHEATON is an actor, an author, a publisher, and a champion of geek culture. A lifelong gamer, he was introduced to D&D at the age of 10 when his great-aunt gave him the Red Box Set in 1982. Currently, he is best known to his fellow D&D players as the eladrin avenger Aeofel, in the wildly popular series of Acquisition, Incorporated podcasts with Mike Krahulik, Jerry Holkins, and Scott Kurtz. He lives and games in Los Angeles.*

# RISING TO THE (SKILL) CHALLENGE

A well-designed skill challenge codifies complex situations into easy-to-follow rules and allows you to draw on a deeper range of your character's talents than just those needed to slay monsters. Instead of passively watching an encounter unfold around you, when you participate in a skill challenge, you actively shape the course of events. The outcome of a skill challenge can influence not only the course of the current encounter, but the shape of the adventure still to come.

Skill challenges give you a chance to reinforce your character's individuality. Your character's skills reflect his or her background; the way your character employs those skills reflects his or her personality. A barbarian born into the leadership of the tribe is likely to utilize Diplomacy when interacting in social situations, and a berserker raised on combat is likely to try Intimidate. A rogue who is a dashing rebel uses vastly different skills from one who is an angry cutthroat.

Although skill challenges vary widely, they all have a few things in common. No matter what shape a skill challenge takes, the party needs to work together to make a specified number of successful checks before failing a given number of checks. Success at certain skills (called primary skills) adds to the overall total of successes, and success at other skills (secondary skills) applies other benefits to the challenge, such as giving bonuses to particular primary skills or opening up new options within the challenge.

## WHAT WOULD MY CHARACTER DO?

Some players get caught up in scanning their characters' skill lists for the right option, losing sight of the fact that a skill challenge represents characters interacting with the world. Don't limit yourself to the seventeen skills on your character sheet. Instead, ask what actions a character in the world might take to overcome the difficulty represented by the skill challenge.

If your characters have to get across town without being spotted by the guards, you could assume that a series of Stealth checks is required. But if you instead imagined it as a scene from a movie, you might see your characters leaping across rooftops, using contacts to plant false rumors about your movements, and remembering tales about infamous criminals who used forgotten underground tunnels to escape the law. Once you bring up these ideas, the DM can decide that they represent Athletics checks, Streetwise checks, and History checks, respectively. Even if he or she didn't anticipate your actions, the fact that you've described them in terms of what your character might reasonably attempt makes it more likely that the DM will agree.

As a player, you're responsible for finding a way to actively take part in every encounter. Don't just roll the same skill checks over and over; think of all of the ways in which your character can use his or her skills to help the party succeed.

## Primary Skills

In some skill challenges, you can tell which skill checks will contribute successes toward your eventual victory. When negotiating with the duke, you expect Bluff, Diplomacy, and Insight to come into play as you maneuver for social advantage. Maybe the DM even tells you which skills will start off the challenge.

A well-designed skill challenge, however, typically includes a couple of primary skills that might not be obvious. Perhaps the duke appreciates tales of ancient warfare, and a History check would raise your standing in his eyes. Maybe he's easily distracted, allowing you to stand in the back and juggle knives (with a successful Acrobatics check) to keep him from focusing on the negotiation.

When presented with a skill challenge, listen for subtle clues that a DM might drop. Whether he or she is aware of it or not, how a DM presents the information relevant to a skill challenge often provides insight into the best way to approach it. For instance, if the characters are trying to persuade an NPC to hear them out, listen to the voice and choice of words that the DM uses for him. If the NPC speaks in a haughty or self-important manner, then attempting to sway him by intimidation probably won't work, but appealing to his ego with flattery might. Listen for these cues when facing a skill challenge; the DM usually has a plan of how to approach the challenge, and the way that the pertinent details are delivered to you is often the quickest way of figuring it out.

Whenever possible, send your experts up against these primary skill tasks. If you aren't trained (or don't have a high key ability score) in a skill, you shouldn't risk failure by making that primary skill check.

## Secondary Skills

The same advice applies to determining what might be appropriate secondary skills in the challenge. Even if you don't think you can contribute with a primary skill check, look for ways in which your character could use his or her other skills to help.

If your character is a terrible sneak, can she fast-talk a guard long enough to let others slip past? If he doesn't have the diplomatic ability to broker a deal, can he stand back as an intimidating show of strength? It's unlikely that your character won't possess at least one useful secondary skill, so take a moment to find it.

STAN! BROWN

You don't necessarily need to be an expert, or even trained, in a skill to try one of these options. Secondary skill checks often don't impose a failure on an unsuccessful result, so don't be afraid to give it a shot.

## Other Options

Don't let the name "skill challenge" fool you; skill checks aren't the only way to contribute toward a skill challenge. If you can't fast-talk a guard, you could still try old-fashioned bribery. Just because you're incapable of disarming the complex mechanism of a booby-trap doesn't mean that you can't try jamming a sword in the gears to keep it from going off.

DMs respond best to these outside-the-box solutions if they include the expenditure of a resource—gold, consumable equipment, action points, and daily powers all get the DM's attention, they demonstrate your commitment to the idea. These small sacrifices are well worth the reward of aiding your party members in victory rather than watching from the sidelines. Always be on the lookout for ways you can help the group effort, even if the path you take isn't an obvious one.

## Guiding the Challenge

Don't hesitate to drop hints during skill challenges. Even the best DM can't imagine every possible angle of approach when designing a skill challenge, and you might think of one that the DM hadn't considered.

Here's a great tool for subtly guiding the DM's thinking. Rather than just taking the action you're considering, float it as a suggestion among the group. This lets the DM hear your idea and process it without feeling under pressure to make a judgment right away. When you finally decide to take the action a few minutes later, the DM is more prepared to say yes.

Sometimes, it's even in your best interest to force a skill challenge. For example, if the party needs to enter a city encircled by a massive enemy army, it would be ridiculous for the characters to fight their way through. Instead, the characters could draw on their skills to sneak, lie, and negotiate their way through the camp. Even if the DM didn't plan for the event to turn into a skill challenge, how the party chooses to approach things could make a skill challenge the simplest, most logical way to handle things. As a player, it can be more rewarding to think your way through a scenario than to charge into the fray.

## Skill Challenges in Combat

Most skill challenges happen outside combat, but under the right circumstances they can be a part of a combat encounter. Unlike a usual skill challenge, this scenario applies an action cost for participation, depending on the skill you use and the task you attempt.

The objectives of these in-combat challenges vary widely. Your party might be fighting in an arena with slowly closing walls that threaten to crush everyone inside, or it could be trying to convince an opponent to see reason and stop fighting. Regardless, remembering a few guidelines during in-combat skill challenges can help you succeed.

**Don't Ignore Other Threats:** A party facing a skill challenge during combat also faces enemies trying to kill them. Establish a balance between fighting and contributing to the skill challenge. Avoid the temptation to focus entirely on one or the other, since many in-combat skill challenges include the pressure of a limited time frame, such as disabling an artifact before an enemy can use its power. Focus too much on the monsters, and the evil wizard gains

immortality; focus too much on the artifact; and the wizard's minions cut you in half.

**Use Teamwork:** Some in-combat skill challenges appear to draw on a single character's skill set, such as a deadly trap that repeats its attacks every round. Even though a character trained in Thievery should expect to spend some time on this challenge, don't leave your rogue or artificer alone to disarm the trap. While that character is out of the fight, the party gains no benefits of his or her combat powers.

Instead, have a few characters take turns dealing with the skill challenge. The rogue might spend most of his or her time disarming the trap, but if the whole party contributes, then no one is left doing all the dirty work (since skill challenges are often less interesting than combat) and the party gets the use of each character's powers for at least part of the fight. Think about the secondary skills or other actions your character could use to help overcome the skill challenge. A well-designed challenge has more than one path to success. Do whatever you can to help the party discover the solution, and don't leave your fellow characters out in the cold during combat.

## TELL US ABOUT YOUR CHARACTER

Many years ago, at the end of the Spellplague, the human Joroneen Kaal was a zulkir of some standing among the Red Wizards of Thay. He lived in Nethtabar, a small city on the Plateau of Thay, with his dour wife, Gulca, and their daughter, Parshala.

When Parshala was 6, Joroneen killed Gulca in public after discovering that she had not sufficiently rebuffed the advances of a would-be lover. Parshala learned to fear her father that day, but could not have guessed what he would later become.

Years later, when Parshala was 14, Joroneen brought home a gift for her, a prize from his exploits in Akanul. The gift was a stormsoul genasi infant girl, whose parents he had slain. He thought his daughter would be charmed by the amusing little "doll" with lightning in her eyes.

Parshala accepted the gift, but had no particular love for the infant. She named the genasi child Skeak, a goblin word for lightning. She cut the child's cheek in a vertical line to the jaw: a mark that designated her as the property of the Kaal family. Skeak was raised by Gulca's handmaid, a middle-aged woman named Hegga who bore the same mark.

Joroneen grew distant from his daughter and manor. He had begun working on the walls and buttresses of a fortress that would ring their town of Nethtabar entirely, and as the months and years passed, he seemed to grow increasingly obsessed with the ring-fortress.

In reality the ring-fortress was one of many loci of the infamous ritual of Szass Tam: a Dread Ring. Joroneen was secretly a loyal agent of Szass Tam, the self-proclaimed regent of the Thayan Plateau, and was helping to complete Tam's master ritual, the ritual that would destroy Toril and make Szass Tam a god.

As Joroneen's obsession became madness, Hegga took the adolescent Parshala and the baby Skeak and fled to the city of Nethjet to the west. They never saw Joroneen again. Szass Tam's ritual was thwarted, but not before Thay was transformed into an undead kingdom. Joroneen secured a place in Szass Tam's necrarchy: He became a lich and a prominent tharchion in Tam's service.

Parshala, embittered by the fact that she would never complete her birthright training as a Red Wizard, grew into a shrewd young woman and eventually turned to mercantilism to make a living. The Red Wizards had been chased off and dispersed, but Parshala, clinging to her ill-fated lineage as one of them, was desperate to be part of the group, even if that group was now nothing more than an association of merchants.

When Parshala was 26, she abandoned Hegga and left Nethjet. She headed to the city of Undumor to build her career as a merchant. She took 12-year-old Skeak with her to do chores and errands. Skeak was traumatized by the loss of her adoptive mother. She came to daydream of becoming a mighty warrior, using her lightning-quick blade to rescue Hegga from the brigands and rats of Nethjet.

Six years later, Parshala was an important merchant of Undumor, conducting trade in the Sea of Fallen Stars. She had even created a strategic partnership with Mariss Bez, the leader of Company Bez and the captain of the skyship *Storm of Vengeance*. Skeak had grown into a stunning young woman (except for the scar on her cheek), but she was a mere handmaid with virtually no interaction with the wider world.

One night after a failed negotiation with rival merchants, Parshala and Skeak sailed back to Undumor aboard a Company Bez galleon. Parshala grew increasingly drunk and angry until she was violent. She beat Skeak savagely. At first, Skeak didn't fight back; she never did. But Parshala didn't relent. Skeak panicked and grabbed a scullery knife to defend herself. Parshala, indignant and furious, charged at the girl, and Skeak blindly swung, lightning roping from her hands and around the knife blade. The blade cut Parshala's cheek and the lightning cauterized it, leaving a jagged, ugly wound unlike the simple scar Skeak bore. Parshala, bewildered, froze. Skeak dashed from the galley and dove overboard, knowing that Parshala would kill her if she remained.

Four years have passed since that night. Skeak chose the name Eska and resolved to make a new start. She learned to wield a blade in case Parshala tracked her down. She dreams of finding Hegga again but doesn't know whether the woman who raised her still lives.

# KNOWING WHEN TO REST

Usually, being a hero means knowing how to use all the resources at your disposal to vanquish evil. Heroes push themselves to the breaking point—using every last power, spending every last healing surge, and drinking every last potion—to win the day.

That said, successful heroes know when to put their feet up and take a breather.

Short and extended rests, described on page 263 of the *Player's Handbook*, allow characters to regain resources spent during encounters. Understanding how best to manage your rests is part of the resource management of D&D.

## Short Rests

Representing about 5 minutes of in-game time, a short rest gives your character a chance to stop and catch his or her breath, to regain strength and wipe the blood off his or her blade, to tend to injuries, and to ready mind and body for the next difficulty. In game terms, you renew your encounter powers and spend any number of healing surges you want.

Typically, a character needs only a single short rest to be ready for another encounter, but there's no reason you can't take multiple short rests one after another. In fact, if you have a leader in the party, multiple short rests are the most efficient way to heal damage. Unless you have time pressure keeping you from waiting around, a party that has a leader should never spend a healing surge during a short rest except as a result of that leader's class-based healing powers. Those powers can easily double the hit points provided by each healing surge, so take as many short rests as you need to renew those powers over and over again. See the sidebar "Healing Outside Combat," page 113, for more on this topic.

Taking a short rest doesn't mean the party can't accomplish other tasks. You can't perform strenuous activity while resting, but you can keep watch, sort through treasure, and plan your next move. You can even rest while traveling, as long as you aren't the one walking or flying. Some DMs might frown at riding a mount during a short rest, but sitting in a wagon is perfectly restful, at least as far as D&D is concerned.

The entire party need not rest simultaneously. If the cleric needs to perform a ritual or the fighter wants to clear rubble from the collapsed tunnel, your rogue could take a short rest while you wait. Because the nonresting character doesn't get any of the benefits of that short rest, your party might need to take another one when he or she finishes.

## Extended Rests

An extended rest accomplishes everything a short rest does as well as renewing daily powers and replenishing your hit points and healing surges to their full values. An extended rest also resets your milestone progression, starting you once again with 1 action point and one magic item daily power use (or more at higher levels). It is the most potent method of recharging your character's capabilities in the game.

However, the extended rest comes with a substantial cost of time: 6 hours of enforced inactivity (nonstrenuous activity is acceptable), and you can't take another extended rest for another 12 hours after that. This means your characters can't take an extended rest any time they want, and each extended

KALMAN ANDRASOFSZKY

rest comes with the knowledge that the campaign's storyline advances another day.

In many adventures, an extra day spent overcoming difficulties might not prove meaningful. You should never assume this to be true, though; DMs have a fiendish way of making you regret the overuse of extended rests by adding reinforcements to later encounters, planning ambushes to catch your characters unaware, or even letting the villain finish his or her master plan before you get there.

A hidden cost of the extended rest is a loss of tension around the table. Taking an extended rest means every player becomes a little less worried about how his or her character can make it through the next fight. Sometimes, pushing on with low resources is the right decision because it gets everyone at the table more excited about upcoming events.

All this means that your decision to take an extended rest shouldn't be made lightly. Make sure the payoff is worth not only the downtime for the characters, but also the lost excitement. Avoid the temptation to take an extended rest just because the party has used all its daily attack powers. Yes, these are exciting and powerful, but ultimately they're only attacks, and every character has plenty of those even without daily options. Heading back to camp because one or two characters are out of daily attack powers encourages everyone to use them all up early in the day to avoid being the character who doesn't get to use his or her best powers.

The more important resource you must manage with extended rests is your supply of healing surges. Without healing surges, you can't regain hit points in most of the usual ways. A character without healing surges can probably survive a single encounter (if he or she is careful), but a tough fight, bad tactics, or unlucky rolls could prove disastrous.

As soon as a character has one or no healing surges left, the group should talk about the possibility of taking an extended rest. You might have other options, such as powers that swap or restore healing surges, or new tactics that would protect that character from

## TELL US ABOUT YOUR CHARACTER

When we started a weekly Dungeons & Dragons night two years ago, I knew it was going to be fun, but I also knew that we were a crazy bunch of idiots who wanted to make each other laugh just as much as we wanted to kill exotic monsters for their pocket change. I had to create a character that would let me do both and with such a sense of self-righteousness that I could blame everything on my character's devotion to god, to justice, to his backstory, or some other such umbrella. In other words, I would be an obnoxious paladin.

Ptah Trakken swung a bastard sword because it was the biggest sword I could find and it was the only weapon with a curse word in it. I wasn't in the mood to play a character with finesse or subtlety. I wasn't showing up to pick pockets or talk to plants. I can do that stuff in real life. Here, I wanted to run in sword-first and remove chunks of things: a great way to get out stress and relax.

Of course, I wanted to be a wiseass while doing it. We're a creative bunch of Hollywood writers, artists, and prop guys, so we all created snarky or humorous characters and played to make each other laugh as much as to get experience points. Often, Ptah would slam his sword against a goblin's shield while yelling, "I mean you no harm!" or shout at the biggest baddie in the crowd, "Don't you dare die before you fight ME!" I was one crazy nut of many, but I'd never play this way if I weren't playing with friends.

But even among friends, a character like this can grow a little tiresome. Ptah tended to give away our position with ill-timed battle cries (after all, my deity rewarded bravery), and there was that one little disagreement about splitting up treasure. Hey, when the rogue tried to pocket some treasure for herself, I don't see that I had any option other than throwing her across the room and threatening to kill her.

The other players eventually tried teaching me lessons aimed at changing Ptah's behavior. Running headlong into battle and provoking opportunity attacks garnered less and less sympathy. They even argued that Ptah should give up some of his goodies to help the weaker characters. "Wouldn't a paladin want me to have a higher Armor Class?" the dwarf asked. Yeah, I thought, why don't I give you a massage after each battle, too? You're not getting my ring of +1 AC.

Sadly, Ptah's self-confidence would get him killed, but not at the hands of a horde of monsters like you'd expect. Instead, he overheard some werewolves warn each other that the last thing they should do was pull a certain lever. Of course, what the villain says don't do, the hero does. That was quite the jolt of electricity that fried Ptah to beef jerky. Everyone was upset—you might even say shocked—that such a fun character died.

Of course, that didn't mean they lifted a finger to stop the zombies from carrying off his corpse. Ha ha, guys.

After all those months of playing Ptah, I think I got enough stress out of my system to play a character who was a little less disruptive. Turns out my catfolk ranger/scout can stay in the background and shoot arrows with enough damage to blow monsters away just fine. The only controversy left is my friends' disbelief that a single arrow can bring that much pain!

*DOUGLAS GOLDSTEIN is a television writer and points to being co-head writer of Robot Chicken to prove it. He forgives, but he does not forget.*

taking damage, that can keep you going. But if those options don't exist, a character out of healing surges becomes a liability. He or she can't stay in combat long, can't be healed by normal methods, and could easily fall unconscious or even die in the next encounter.

Though most DMs don't ambush characters on their way out of the dungeon, always keep in mind the possibility that even after you fight what you believe to be your last battle, you aren't safe until you're back at the tavern (and sometimes not even then). Pushing forward until everyone's tank is empty leaves you terribly vulnerable to even a low-level encounter on the way home.

Another time to consider taking an extended rest is before an encounter you expect to be very challenging. Time or story constraints might not allow this decision—you can't exactly take a 6-hour time-out when the dragon shows up to eat you—but if those aren't a factor, think about facing the big fight with a full tank of resources.

Sometimes, the right time for an extended rest comes because of the timing of your sessions. When you reach the end of a game session, taking an extended rest before the next session starts makes record-keeping easier for everyone. Otherwise, each player must record his character's current healing surges, which daily powers he or she has expended, and how many action points and magic item daily power uses he or she has remaining. Taking an extended rest resets all these values, so even when it's not entirely intuitive, it can be the right choice.

With very rare exceptions, an extended rest is a group activity: Everyone finds a place to bed down, perhaps with someone keeping watch, and you all gain the benefits of resting. Having some characters take an extended rest while others stay active leads to a confusing mix of milestones and resource tracking, so avoid having the characters rest at different times except in dire circumstances.

That doesn't mean that someone shouldn't keep watch; such nonstrenuous activity is allowed during an extended rest. Choose a character who has a good Perception check or who can see well in dim light or darkness. Even better is a guard with those qualities who doesn't need to sleep, such as an eladrin, a revenant, or a warforged. If you don't have a good night guardian, invest in a Warding ritual such as Eye of Alarm. For 25 gp each night, the watchful eyes of this ritual let everyone get a good night's sleep.

## Seriously . . . Get Some Sleep

Some players can't stand the idea of taking a rest when monsters remain to be slain. These players are convinced that every minute wasted somehow makes the rest of the adventure that much harder.

In reality, the reverse is true. Ignoring opportunities to rest is perhaps the best way to get characters killed. Pushing ahead for one more fight when you're out of healing surges often feels thrilling, but that doesn't make it smart.

It might seem unusual that not taking action is vital to a character, but it makes sense if you take a moment to think about it. Imagine your character, weighed down by armor, arms aching from swinging a weapon, or drained from ripping apart an enemy with powerful magical forces. Being a hero takes its toll, and the toughest champion needs to take a break from time to time. Like every vital reserve at your character's disposal, make sure that when you decide to take advantage of a rest, it benefits not only your character but the entire party.

DM: *"... and the note is signed, 'The Emissary.'"*

Joe: *"I wonder who that is."*

Kevin: *"Wasn't that the guy we fought last month?"*

DM: *"No, that was the Adversary."*

Viet: *"It still sounds familiar. Didn't we see that name on another note three sessions ago?"*

Joe: *"Don't look at me, I missed that session."*

Viet: *"Yeah, I swore I wrote it down on my character sheet, but I don't see it here."*

Kevin: *"Remember, we leveled up last time. You probably just threw away your old sheet."*

Joe: *"If it's important, I'm sure the DM will tell us again later."*

If this conversation sounds like the players at your table, consider starting a campaign journal. By recording the notable people, places, objects, and events of each session, you create an archive that preserves your shared story and provides a reference for later sessions.

Like any new habit, the first and most difficult hurdle of keeping a campaign journal is starting it. Early on, this record-keeping can seem onerous, and its value doesn't always become apparent right away. After a few sessions, however, maintaining the journal turns into a normal part of your gaming routine, and your group begins to reap its rewards.

## The Journal

Your campaign journal can take a variety of forms. The simplest and most familiar method for many groups is to use a three-ring binder with one section full of blank pages for keeping notes and another with transcribed versions of those notes. A hard copy has the benefit of being readable anywhere and at any time, but unless you make multiple copies, it limits accessibility to one player at a time.

You can also use a host of online document sharing services to craft a journal that any player can reference or even edit from the comfort of home. A wide range of different web-based services are available, and many are free. A digital campaign log can be as complicated as a link-embedded encyclopedia, or as simple as a thread in a forum. No matter what method you plan to use, find one that your group can agree on and use it.

### The Journal Keeper

Some fortunate groups have a member not only willing to keep notes and transcribe them into a journal, but talented at doing so. If you find yourself in such a group, consider yourself blessed, and make sure that the writer knows how much you appreciate his or her hard work.

Most often, no one looks forward to the extra responsibility of maintaining your group's campaign journal. In that case, find ways to share the work.

For instance, one person can keep notes, passing them to a second player to turn into journal entries. Just make sure everyone can read the first person's writing. Alternatively, players can take turns as journal-keeper. This method gives up some continuity of style, but it ensures that nobody feels too burdened by the task.

You can also take advantage of technology to spread the work around. By using a wiki or a similar format for your campaign journal, every player can contribute. Even in this situation, however, it pays to have one person in charge of setting up the wiki and keeping it tidy.

If you take on any portion of the responsibility for tracking campaign events, keep your end of the bargain. When it is your turn to write, don't slack off. If one person in the group doesn't keep it up, it puts that much more work on everyone else, and there's no faster way to kill a campaign journal.

### What to Write

Another challenge to keeping a good campaign journal involves deciding how much to write down. Your journal should be more than a list of monsters killed and treasure obtained, although that's a good place to start. The world of your campaign brims with interesting details that you could include, from the NPCs you meet to the exotic locations you visit. Puzzles, conspiracies, and clues serve as the mile markers along your group's path of adventure, and all deserve mention. Prioritize the information you believe most significant to the session, but don't forget to add the details that help you remember the events of the session. Mentioning the verbal tic of an NPC instantly brings that character to everyone's mind. If you describe the city you visited as "Gruenveldt, a trading capital built upon bridges across the Khyler River," even the players who don't remember the city's name might still recall its unique architecture. And who knows? Some of those details might end up being crucial to the story later.

Whenever possible, include the "why" of events in your log. It's easy for a group to forget what was so important about meeting with a cleric, but if the log mentions "we met with a bombastic cleric of Pelor to discuss the undead plaguing his village," then everyone not only remembers that you met the cleric, but a brief detail about him and why you were there in the first place.

ADAM PHILLIPS

Avoid too much complexity, or keeping the journal becomes a chore. You can reduce even the most convoluted game sessions down to a few brief paragraphs. The important thing is that the details are there for you to reference when you read the log later.

As you play and use your journal, pay attention to the entries that come in most useful. Knowing the kinds of details that pay off later can help you focus on those things at the table.

## Other Benefits

A campaign journal can be crucial if your group includes one or more members who don't regularly attend. Without up-to-date game notes, the group either spends time bringing the absentee player up to speed on current events or leaves the player in the dark, struggling to understand the significance of the names and places that pop up in conversation.

The same goes for new players joining a long-running game. You'd be surprised how much assumed knowledge builds up in a game after only a few months; trying to explain it all to a new player in one sitting can leave him or her feeling overwhelmed.

Even if your group doesn't suffer from either of these issues, sometimes real-life responsibilities or emergencies arise that prevent a group from meeting regularly. Missed or intermittent sessions can leave everyone struggling to recall current quests, key relationships, and other game details. Without a clear record of your objectives, a game facing these circumstances can stumble or even fall apart. A campaign journal solves this problem by functioning much like a "saved game" file, reminding you exactly where you were when you last played.

In any case, a campaign journal—especially one that can be read online or distributed electronically—lets any player catch up on a wealth of detail away from the table at his or her own pace. A new player can even use the journal to help build a character that fits into the events of the campaign.

The journal also provides the DM with a measure of which elements of the campaign have resonated with the players. Because the players write the journal, it gives the DM a perspective on how much of the plot the players actually pick up, understand, and stay interested in.

Last, your completed journals provide a wonderful way to recap a campaign, whether just after finishing or even years later. Just like logging a great trek, keeping a journal of your campaign provides you with a permanent version of the story you told together with your friends. You might discover clues or story threads that you didn't notice earlier. It brings back memories of momentous occasions, both the climactic battle and the ludicrous interaction between the gnome and the archvillain.

Your journal can also inspire new campaigns and new characters. Perhaps one of the players wants to run a short game based in a city you visited, or the group decides that it wants to build a new set of characters belonging to an organization it encountered. Sometimes, reading about the places you have been can show you where you would like to go next.

No aspect of slaying a dragon is more anticipated than claiming its treasure: mounds of silver and gold dotted with scepters, swords, scrolls, and gems, but also guarded by deadly traps. Some players find sorting through a treasure hoard the most enjoyable moment of any adventure.

Unfortunately, dealing with loot can get ugly. How do you decide who gets the magic amulet? How should you split up the gold and gems? How do you keep your collection of magic items from becoming useless, annoying, or (worst of all) boring? When you bring a character into a game above 1st level, how should you equip yourself?

This section walks you through the treasure-gathering process, from getting it, to dividing it up, to deciding what to do with your share.

## Acquiring Treasure

D&D characters gain treasure in two basic ways. Either the DM gives it to them—whether as part of a treasure hoard or as a reward for a completed quest—or they obtain it through their own means (such as by buying or making magic items).

### Creating a Wish List

The *Dungeon Master's Guide* suggests to DMs that asking players for wish lists of magic items can help ensure that treasure hoards hold items that players want for their characters. If your DM uses this idea, don't ignore the opportunity to help customize the contents of the next treasure chest you find.

To create your wish list, review the lists of magic items ranging from one to four levels above your own. Start with the lists for armor, neck slot items, and weapons or implements (depending on what your character uses). For your first draft, jot down each item that sounds exciting. After you finish, cut the list down to no more than two or three items of each level. This should give you a list of about ten magic items.

Including more than one item at each level gives your DM extra flexibility to place items that fit the encounters, the adventure, or the campaign's overall storyline (and to leave out items that he or she doesn't feel comfortable including).

As a low-level character, don't worry about including items from other slots or categories on your first wish list. You need a good magic weapon or implement, a suit of armor, and a neck slot item to keep your attacks and defenses up to par. You can always go back and buy low-level bracers or boots later (see "Filling the Gaps," below).

Once you have an item in each of those three categories, which should happen by 4th or 5th level, extend your wish-list search to other slots, and eventually to wondrous items. Even with this expanded range of options, try to keep your wish list to around ten items. Not only does this prevent your DM from becoming overwhelmed—remember, he or she has to read through a wish list from every player at the table—but it also helps you remember which items you wrote down when one of them shows up.

Each time you gain a new level, review your magic item wish list to ensure it still represents what you'd like for your character. If you found a new magic weapon in the last session, consider crossing off any weapons appearing on your list—your DM might not remember that you just found a *+3 jagged greataxe* when he or she places the *+3 adamantine greataxe* that you forgot to take off your wish list. Conversely, if your paragon tier wizard is still running around with a measly *+2 magic wand*, it might be time to ask the DM for an upgrade. You should also add a new level of magic items to your wish list.

Just because you've written a wish list, the DM isn't limited to placing only those items. Part of the fun of D&D is finding unexpected treasure, so don't get mad because you haven't found that fabulous cloak you wanted. See "Filling the Gaps" for advice on how to address your need for magic items that aren't included in the DM's treasure hoards.

### Unexpected Windfalls

You've slain the dragon, found its hidden treasure chamber, deactivated the traps, picked the locks, and sorted through the loot. When the DM announces that you've discovered a *+3 rod of the pyre*, you look at each other blankly. Then somebody says, "Uh . . . did anybody want one of those?"

Even if you use the wish list method described above, some DMs love to drop seemingly random items into treasure hoards. They say it makes the world feel more realistic or mysterious, but players often conclude that the DM likes to mess with them. Before you start whining about never finding the gear your character needs to keep up with the monsters, let's explore some questions that can help you deal with those unexpected discoveries.

**Can you use it?** First, figure out if anyone at the table could reasonably use the item. If you don't have a divine character, even the coolest holy symbol probably doesn't do much, but even your wand-wielding wizard could use a magic staff. Most DMs know

better than to place an item that no character can use, so don't immediately jump to the conclusion that you've found something useless. That said, if your DM has done this, it might be time for a friendly chat. Maybe he or she doesn't know your characters very well, or maybe your DM has a different idea of how random treasure should be.

**Does it come with a story?** Some DMs place magic items as adventure hooks or to help describe their campaign worlds. Ask to make an Arcana check or a History check to learn more about the item. Maybe it's linked to the villain you're pursuing, or its presence here provides a clue to the current mystery you face. It might be part of an item set, leading you to seek out the rest of the set in future adventures. Or maybe it provides a little more insight into the world that the DM has crafted for the campaign.

**Can you adjust the item?** Many DMs would prefer to tweak an item than have the characters sell it for gold (or disenchant it for *residuum*). If you find *+1 sylvan hide armor*, but your rogue doesn't want to spend the feat for proficiency with that armor, ask yourself if you could use *+1 sylvan leather armor* instead. The Transfer Enchantment ritual accomplishes this nicely for a mere 25 gp, but some DMs will agree to retroactively change the item: "Did I say hide armor? I meant leather armor."

**Can you adjust to use the item?** Even if your barbarian prefers to wield a greataxe, maybe it's worth changing a feat choice to use that shiny new greatsword you just discovered. The retraining rules allow you to swap out one option the next time you gain a level (see "Retraining," page 47). If you have more than one feat or power invested in your old weapon, ask your DM if you can retrain them all when you level up. Come up with a story about the intense training your character undergoes to master his or her new acquisition to help explain the sudden change.

MIKE FAILLE

**Can you trade the item?** Depending on your DM's campaign, you might have the option of swapping the item with an NPC for another item of similar value. This can be a much better deal than selling it, depending on how accommodating your DM is willing to be. If you can trade the item for something no more than four levels lower, that's more efficient than selling it.

**Can you sell the item?** Your last resort for dealing with an unwanted item is to sell it for gold (or to use the Disenchant Magic Item ritual to turn it into

## THE PARTY WISH LIST

Many time-crunched DMs rely on party wish lists to place most magic items. This makes players happy because they get the gear they want, but it can leave out many useful and iconic magic items that aren't designed to benefit individual characters. For instance, every party likes to have a *bag of holding*, but who's going to put it on a wish list in place of a 5th-level magic weapon?

To address this issue, some DMs ask players to add a party wish list to their character wish lists. This list includes items designed to help the entire group, such as *everlasting provisions* or a *rope of climbing*. Ask your DM if you can make a party wish list like this. Keep the list short, and make sure that each player gets a say in what goes on the list.

*residuum*). This nets you only 20 percent of the item's value, which is the equivalent of an item five levels lower than the one you're getting rid of. But if you can't find a use for it, even a little gold is better than cluttering up your character sheet or your hand of power cards with something you won't use.

## Filling the Gaps

In most campaigns, you can't rely on your DM to place all the magic items you want or need. Even the best wish list can't fill every slot or stock your bag with the right collection of consumable items. Use the gold you find to round out your gear, following the guidelines below.

### That Guy Has More Stuff Than Me!

No matter how carefully your DM places treasure, no two characters will ever have an equal store of magic items. That's a good thing—if every character's list of item levels was identical, finding treasure would start feeling predictable.

Accept that sometimes your character will have fewer items or lower-level items than another character. After all, there's always another treasure chest waiting to be opened. If you think a real problem exists—for instance, the wizard got the last three magic items, and you haven't seen a new weapon in eight levels—talk to your DM. Maybe he or she doesn't realize that you've gotten left out of the magic item lottery.

This disparity can be even more apparent when a character joins an existing group. If you've paid attention to how magic items get passed out normally, you can see that the items handed to a new character doesn't quite match up to what a normal character would have at the same level. After all, treasure parcels include items up to four levels above the party, so most other characters have at least one item that is more than a level higher than the characters' level.

This disparity is intentional. It keeps new characters who join an existing party from outshining their comrades right away, and it also gives your new character a reason to go adventuring: You want better gear.

On the other hand, you have an advantage of flexibility that the other characters don't necessarily possess. Getting a big chunk of gold to spend on rituals, consumables, and cheap items gives you a unique opportunity to customize your equipment. Characters who grow organically over many levels tend not to have that flexibility, so you will likely end up with a more focused selection of items than your new companions.

No matter what the cause of a perceived disparity in loot, don't worry: Within a couple of levels, the distribution will probably be completely different.

**Primary Items:** If you're lucky, your DM keeps track of the enhancement bonuses of your armor, neck slot item, and weapon or implement and makes sure you have a reasonable item in each of those categories. Ultimately, though, this responsibility lies with you, and writing *+3 magic longsword* on your wish list doesn't mean you'll find one.

Each time you reach a new tier, check your enhancement bonuses. At paragon tier, you should have a +3 enhancement bonus in at least two (if not three) of these three items. By 21st level, this goes up to +5. If your big three items don't measure up, consider using your gold to buy a basic version of the item in question (*magic armor*, an *amulet of protection*, or a *magic weapon* or *magic implement*). Borrow gold from another character if necessary; remind him or her of how important it is for the whole party that your character remains alive and effective.

**Secondary Items:** Use your other item slots to improve your strengths, shore up your weaknesses, and add variety to your character. In addition to the needs you identify in play, keep these specific issues in mind when purchasing or making magic items.

Don't focus on items near your level; you probably don't have the gold to afford them. Instead, drop down five or even ten levels and look for bargain purchases. The *battlestrider greaves* (level 12) might have been too pricey when you were at 10th level, but a 21st-level character can easily afford them.

By the paragon tier, you might find your non-AC defenses lagging behind the target numbers (see "Know the Numbers," page 112). Look for items that provide situational or even always-on bonuses to these defenses. For example, a *belt of vim* (level 8 and up) grants you a bonus to Fortitude; by the time you reach paragon tier, it's a pretty inexpensive purchase.

Nobody argues with healing. If you struggle to get through tough or long encounters, pick up an item to keep you (or an ally) alive. *Gloves of healing* (level 12) improve your healing powers and also let you spend a healing surge to heal an adjacent character. These functions are useful even for a 30th-level demigod.

Higher-level monsters commonly rely on frustrating tricks such as flight, teleportation, and invisibility. Make sure someone in the group can deal with such tactics; magic items offer some good options.

**Backup Weapon:** Even if you love your weapon or implement with the passion of a thousand burning suns, it pays to have a backup available for special circumstances. Fighters don't make many ranged attacks, but when the dragon hovers out of reach, that *+3 distance javelin* might be your only means of keeping it marked. Having a *flaming weapon* in the group comes in very handy when a pack of trolls shows up.

And maybe your DM is the kind of person to set a few rust monsters on your trail right after you sell off that *+1 magic longsword* you weren't using any more.

**Consumables:** We mentioned in Chapter 3 to beware spending too much gold on potions and the like (see "Consumable Resources," page 111). But "don't spend too much" isn't the same as "don't buy any," and having a few consumable items handy provide another way to keep the party going for another encounter.

Every character needs at least one *potion of healing* (or a higher-level equivalent). Beyond that, spend your gold to grab consumable items that give you an option fundamentally different from what you can already do. A *potion of mimicry* probably doesn't help you win a fight, but who knows when you might need to look like someone else?

If you have the luxury of knowing what you might face in upcoming encounters, pick up some consumables to address those threats. Everyone going into the Hall of the Fire Giant King should have a *potion of resistance (fire)* in hand.

**Ritual Components:** If you use rituals, make sure you have plenty of *residuum* handy. Don't be bashful about asking for party contributions to the *residuum* fund; these rituals are for everyone, not only for the caster.

At a minimum, you should always carry enough *residuum* to cast your most expensive ritual at least once. If you routinely use any particular ritual multiple times in each adventure, consider keeping a steady supply of *residuum* with you sufficient to cast that ritual at least five times. Who knows when you'll have the opportunity to buy more?

## Starting Above 1st Level

Before getting into details, it's worth mentioning this up front: Your DM gets the final say on the magic items that your character starts the game with. Your brand-new 18th-level barbarian doesn't have any right to a particular item or group of items. That's why the original guidance on "Starting at Higher Level" appeared in the *Dungeon Master's Guide*, rather than in the *Player's Handbook*. Respect your DM's preferences on this matter.

Now that we have that out of the way, let's talk about the most common method of equipping your higher-level character. The *Dungeon Master's Guide* suggests that you choose one item of your level + 1, one item of your level, and one item of your level – 1. In addition, you have gold pieces equal to the value of one magic item of your level – 1, which you can spend on whatever you need to fill out your character.

Use your three item slots to select a weapon or implement, armor, and a neck slot item (in that order). Spend about half the gold on a few other magic items that fit your character. Spend about a quarter of the gold on potions, ritual components (if needed), and other consumable equipment. Hold on to the last quarter to deal with unexpected costs that arise in the adventure (or save it for your next item purchase).

DREW POCZA

# Dividing Treasure

We've seen more arguments and more crazy schemes about treasure distribution than about any other part of the game. It's hard to blame players for taking this element seriously.

Agreeing on a method of splitting up the loot you find should be one of the first discussions your group has after building the party. Trust us: The sooner you talk about how you plan to assign ownership of the magic items, gold, and gems you're going to find, the happier everyone will be later.

Every group has its own method of dividing treasure; to be honest, most of these are probably well-intended but flawed systems that unintentionally create inequitable comparisons, bruised egos, and selfish behavior. Here are a few common methods that we've seen used, and their strengths and weaknesses.

## The Even Split

This method aims to give each character an equal share of the loot recovered during the session.

Whenever you divide up treasure, each character gets precisely the same amount of gold (or gold-equivalent), right down to the last copper piece. What could be easier?

**Good:** Nobody complains about an inequitable distribution of wealth. Also, this method seems intuitively fair, particularly to new players. If players can't get along or agree on anything, this method prevents argument over who gets what.

**Bad:** This method runs into a simple but unfortunate mathematical truth: Once you factor magic item values into the equation, splitting the loot equally becomes impossible without extensive bookkeeping and getting rid of items the party needs.

Let's look at a typical haul for a 1st-level group's first session:

*+1 vicious longsword* (worth 520 gp)
Two pearls (worth 100 gp each)
One *potion of healing* (worth 50 gp)
70 gp in coins

This represents treasure parcels 4, 5, and 7 (see page 126 of the *Dungeon Master's Guide*), which is a reasonable haul for one night of adventuring.

Obviously, giving the longsword to the fighter (thrilled to find an item from his wish list) makes dividing the rest of the loot impossible. The sword's worth more than all the rest put together.

You could sell the longsword and add the resulting gold to the pool, but this decision effectively eliminates all magic items from future treasure hoards. If characters carry only the items they can afford to buy with their meager split of the gold, the entire party becomes weaker.

Some groups use long-term bookkeeping to achieve an even split, tracking each character's haul from session to session to ensure equality. But isn't that exactly the sort of chore that we play D&D to escape?

**Note:** Even if you use a different method of distribution for items, we recommend using this one for all the gold, gems, and other currency discovered. Even if one character gets a magic item and another doesn't, both should get the same amount of gold. It makes the game simpler.

## The Random Draft

This method relies on the dice to decide the fate of the treasure you find.

When you divide treasure, each player rolls a die. The players then choose one item apiece from the loot list, starting with the highest roll and proceeding down until all items are gone. If there are more items than players, reverse the order after each player has an item, allowing the lowest-rolling player to choose a second time, then the next-lowest-rolling player, and so on.

**Good:** Like the Even Split method, this process theoretically achieves equity over the long term. Assuming an even distribution of die rolls, everyone eventually gets to pick first, second, third, and so on. After all, how can you complain about unfairness with random die rolls?

**Bad:** The drawbacks to this method are less obvious than in the Even Split, but they're just as insidious and potentially even more divisive.

First, there's no guarantee your party will achieve an even distribution of rolls. When you get lucky and roll the highest three times in a row, try telling the other players that this method is fair.

Also, who decides how often you roll? If you roll every time you find an item, only the high roll really matters, since you often find single items. But if you save up the rolls until you have a whole level's worth of magic items, that means some items sit around unused for several encounters. How is it a good idea to let the *+3 rod of obliterating wrath* gather dust when the warlock desperately needs a new implement?

The worst part of this system, though, is the greedy, party-destructive behavior it encourages. If you don't see any items appropriate for your character when your turn in the draft comes up, you might reasonably select an item anyway, thinking that you could always sell it or disenchant it. Not only does this waste a newly discovered item, but how does the next player in the order feel when you take his or her ideal item just to trade it in for a 20 percent payout? Trust

us, that player won't remember you kindly when he or she gets the same opportunity in the next random selection.

Over time, the Random Draft method can not only create a magic-poor party, like the Even Split method, but it can also easily foster ill will between the players. Use this system only if your group can handle the competitive mindset it creates, or if the players at your table are incapable of cooperation when dividing up treasure.

## Fixed Draft

This method replaces a random order of selection each time with a fixed order of selection that lasts for the entire campaign.

As with the Random Draft, each player rolls a die at the start of the campaign. The high roller becomes the "active selector" and automatically gets the first item found. The next item goes to the player who has the second-highest roll, and so on down to the last player. Then you reverse the order, as described in the Random Draft method, taking turns up and down the fixed order you determined at the start of the campaign until your characters retire.

If you find multiple items in the same hoard, you can either determine their order of assignment randomly or let the active selector choose among the available options.

**Good:** This method improves on the Random Draft by eliminating the chance of any player picking first (or last) more often than another. It also clarifies the frequency of selection: Every time you get an item, the next player takes it.

**Bad:** You're still stuck with the worst drawback of the Random Draft method: the greed factor.

**Variant:** Some players give the active selector the right of first refusal for the next item, rather than automatically assigning it. If no one chooses it, the first player in order automatically gets it. This slightly improves the chance that each character will receive a useful item, but it makes every noncrucial item found a potential disappointment.

### The Party Fund

The game includes many expenses that benefit the entire group, from the bribe you pay the city guard to sneak into the armory to the *residuum* the wizard uses for rituals. Sure, you can divide these costs evenly between all the characters every time they come up, but why not establish a central account of gold—a "party fund"—from which to draw such expenses?

The simplest way to set up a party fund is to give it an equal share of the gold and similar currency you find each session. For example, if you have five players, each player gets one-sixth of the gold, and the party fund gets the remainder.

Once established, the party fund covers all costs deemed to be "group expenses." Make sure you set the criteria for this decision early on to avoid arguments. Some groups, for instance, include the costs required to return a dead party member to life, but others put that expense on the dead character instead. You don't need a comprehensive list of everything the party fund covers, as long as you discuss its most likely uses and reach a consensus on the fund's purpose.

If the fund runs low, ask everyone in the group to pitch in an equal amount to refresh it. Alternatively, the fund can take out a loan from one of the characters; just make sure you agree when the loan's due.

As with any house rule or social contract, write down your decision. If you have a campaign blog or wiki, include it there. Make sure new players see it and understand why you're doing it.

## Get What You Need

This method foregoes any systemic attempt at equality in treasure distribution, instead relying on the players to cooperate in assigning items and gold to the characters who can best use them.

Whenever a magic item shows up, the players take time to discuss which character needs it most. Sometimes, the item itself suggests an obvious solution: if only one character wears hide armor, the *+4 great cat hide armor* probably goes to that character.

More often, however, two or more characters can reasonably lay claim to any item you find. That's when you need calm, reasonable discussion between the players. If both the fighter and the ranger want that *+2 amulet of vigor* you just found, you must weigh the benefits and drawbacks of either choice. Here are some good questions to ask during the discussion.

- Does it replace an existing item? If the fighter already has a *+2 amulet of protection*, that should factor into the decision.
- Who benefits more? Continuing the example started above, imagine that the ranger has only a *+1 amulet of warding*. Clearly, the increased enhancement bonus makes this quite useful to that character. On the other hand, the fighter's player points out that the ranger hardly ever spends healing surges, so the new item's power and property aren't worth as much to that character.
- Who got the last new item? If the fighter just found a *+2 magic longsword* in the last treasure hoard, it might be time for someone else to get a new toy.
- Who makes the final call? If the group can't all agree on a decision, you must have a method of

making a final decision. Although the classic "cut-the-baby-in-half" method has some appeal—if you can't agree, we'll sell the amulet for gold—it's still a reversion to the Even Split method. A majority vote is a good place to start, with a dice roll or a coin flip to break a tie vote.

- What happens to old items? Whether the new amulet goes to the fighter or to the ranger, it will replace an existing neck slot item. Does the character get to keep that old item (perhaps selling it for gold), or does it go back into the party for reassignment to a new character? The former option feels fairer to many players—it's my item, I can do what I want with it—but the latter choice helps the party more. Assume the new amulet goes to the fighter. If the ranger would rather have the fighter's existing *+2 amulet of protection* than the *+1 amulet of warding* he currently wears, it makes little sense to sell off the fighter's old item for gold.

**Good:** With the right group of players, this system ensures an equitable and effective distribution of magic items. Characters get what they need, the party doesn't waste good items by selling them, and everyone gets a say in what happens with the loot.

**Bad:** Discussions take time, and an indecisive group can become paralyzed by this method. This method also requires a level of trust and cooperation that often takes a new group many sessions to achieve. A single player can wreck this system by putting a claim on every item or refusing to respect other players' opinions. Also, players uncomfortable with debate tune out of the discussion, and they often end up feeling excluded from the group.

### DM Assignment

If all else fails, you could put the responsibility for treasure distribution in the hands of the Dungeon Master.

Instead of letting players decide who gets which item, the DM can assign each found item to a particular character. Perhaps magic items are given to individual characters as rewards, rather than as seemingly random treasure discoveries. Alternatively, magic items in the DM's campaign might have a strange affinity for particular individuals, seeking them out and functioning only for them.

**Good:** This method avoids the unfortunate consequences of drafts, and no items need to be sold off to equalize treasure distribution. This method also encourages the DM to create a story for every item placed. Why did the ranger get that *+2 amulet of vigor*? Does it have some link to the character's past? Are such items traditionally linked to members of the organization that the ranger recently befriended?

Best of all, though, this system ensures that every player gets items that he or she wants. Most DMs who use a method like this one use player wish lists (see page 150) to help them make appropriate selections.

**Bad:** This system can appear arbitrary. Unless all the players trust the DM entirely, some players could feel slighted because another character got a better item than the ones they did.

Some players will miss the old-school feeling of divvying up the loot after a dungeon crawl. Knowing that every item found already has an intended destination takes some of the mystery out of the game.

This method requires a lot more work of the DM. He or she must figure out which character gets each item, taking into account the players' wishes, the characters' needs, and the levels of the items he or she has already given to each character. Using player wish lists is a start, but a DM relying on this method should also record all the items given out as treasure to make sure that no player is accidentally getting better items than everyone else.

## Customizing Your Gear

If you ever find yourself complaining that your magic items are nothing more than a list of numerical bonuses, it's time to take matters into your own hands. By taking a few minutes to describe the look of your item and imagining what story lies behind it, you turn a block of game statistics into a part of the campaign world.

### Defining the Look

*The Thayvian markings on Solandria's vermilion cloak suggest it might have been created by a Zarchion of Illusion. When she walks, the swirling cloak reveals three vertical slashes on the left side of her leather armor, a style once prevalent in the land of Durpar.*

*She carries a Moonshaevian dirk, honed from obsidian that formed after the explosion of Mount Kasterlak on the Sword Coast during the Spellplague. It sits in a scabbard that bears ancient Impilturan markings, passed down to her from her father. Slung across her back is a yew greatbow, crafted in the style of the half-elf bowyers of the Yuirwood nearly three centuries ago.*

After a session in which you find a new magic item, take a few minutes to describe its appearance. What color is it? Does it have a special pattern or texture? Does it look old or new, and is that appearance accurate? Does its look suggest its power or property, or does it conceal its nature? Does it bear any other sen-

sory details, such as an odd hum when used in battle or the smell of brimstone when activated?

Many magic items include a bit of visual description, but you aren't constrained by those. You're the one wearing *hero's gauntlets*, so if you want them to be tight black leather rather than shiny steel, go ahead.

### Adding Story

Just because your DM hasn't created a story for every item that appears in the campaign doesn't mean those stories don't exist. Writing up a few details for your newly found *+1 pact dagger* turns it from a collection of numbers into a part of the world.

Ask yourself some questions about the item to spark your creativity. Who made the first one of its kind? Are these items still made using a special process or ingredient? If so, who controls the knowledge or supply? Does this item have any connection with a specific person, place, group, or event? Does carrying the item have any social or cultural significance? Does its presence signal the approach of a momentous time in history? Did the item once belong to someone else, and does that someone actively seek it?

Don't try to write a novel for every item. Start with a few details, then share your ideas with the DM. Perhaps he or she has thoughts about the item that aren't apparent yet, or maybe your work suggests a connection that your DM hadn't imagined. Together, you can use the item to add to the story of the campaign setting, integrating it and your character into the overall plot line. Look back at the descriptions of Solandria's items—these hint at story without locking in too many details.

*Adventurer's Vault 2* includes many magic items with background information. The description of an *alfsair spear* details the rare trees required to craft these unusual weapons and the druids who harvest the wood, even including a few interesting locations for the DM to place into his or her campaign world. If you need help crafting a story for your magic items, check out these samples for a creative kick-start.

When your DM understands that it's important to you to know the story of items, you might find that he or she responds to the challenge. Rather than just coming across a *+2 dagger* that also can deal poison and acid damage, you want to find the *dagger of Omharia*, which was named for a beautiful maiden in the court of Rarien the Cruel. When Rarien thought Omharia was dallying with his brother, Rarien stabbed her with this dagger, making her hideous. She became a hag, and legend tells of her slashing young maidens with this dirk as she had been cut, dealing poisoned acidic wounds that left horrible scars.

## Other Rewards

Gold and magic items aren't the only forms of treasure. (No, really, hear us out.)

If your DM has read *Dungeon Master's Guide 2*, he or she might have noticed the section on "Alternative Rewards," which starts on page 136. It includes three different types of nonitem rewards. Divine boons represent the gratitude of a powerful temple or a deity. Characters might gain legendary boons by fulfilling deeds worthy of myth. A character seeking to learn rare techniques might pursue grandmaster training.

If any of these ideas interest you, don't wait for your DM to use them, suggest the ideas in your regular chats or email conversations about the campaign. (You do have regular chats with your DM, right?) Ask how your dragonborn paladin of the Raven Queen might earn his deity's favor, and you might get an exciting adventure out of it. Better still, your character might end up with something that nobody else in the campaign—or perhaps even the entire world—has.

Although these alternative rewards specifically replace magic items, rewards can come in other, less material forms as well. Building a friendship with a prominent NPC can give your character an edge in social situations. Gaining membership in an elite organization can offer you access to equipment and assistance that others would envy. Learning a well-kept secret can unlock campaign mysteries or provide fodder for blackmail. Even a single clue gleaned from a thorough investigation propels you farther along the plot line. Recognizing the value of these unorthodox rewards not only improves your party's chances of success in future encounters, it allows you to appreciate your past victories even more.

# DON'T BE A JERK

At some point, every group that plays D&D has to deal with "that player." This player stabs allies in the back. He or she kills vital NPCs without provocation. This player monopolizes the DM's attention and ignores other players when they need help. He or she somehow manages singlehandedly to make the entire experience less fun for everyone else.

This player is a jerk.

Worst of all, it's possible to be a jerk without even being aware of it. If you suspect that you could be acting like a jerk, this section provides a few suggestions to alter your behavior and make the game more fun for everyone at the table.

## Hogging the Spotlight

One of the worst things the jerk does is hog playing time. It happens to all of us occasionally, and for very understandable reasons. D&D is an exciting game, and while you're imagining your character cleaving through armies of the enemy, it can be easy to forget that while you're taking your turn, everyone else is waiting for theirs.

You can take up more than your fair share of game time in several different ways. One of the most obvious is by taking too long to describe what you're doing. Although you should try to illustrate your character's actions in an interesting way, waxing poetic about the ancestral sword the character uses in combat before performing every attack is unnecessary. No matter how interesting the weapon's pedigree is to you, everyone else wants you to hurry up so they can have a chance to act, too. Save long descriptions for moments of roleplaying and downtime, not when everyone else is itching for their opportunity to attack.

Every time you narrate the specifics of what your character is doing, you walk a fine line between saying enough to be interesting and saying too much. This is a good time to take a cue from your fellow players. If you can see them going glassy-eyed or fidgeting, odds are that you're overdoing your narration. Do your best to be compelling while remaining concise.

## Lack of Preparation

Another way that players overextend their turns is by not being prepared when their turn comes up. Lack of preparation takes many different forms, but the result is the same—your turns last longer than they need to. You can refer to "Combat Lasts Too Long," page 129, for some tips on dealing with this problem, but above all else pay attention to the game, even when it isn't your turn to act.

Waiting until your turn comes up to start thinking about what to do frustrates everyone else trying to enjoy the game. Pay attention, so that when you have the opportunity to act, you can take it without hesitation. As your fellow players act around you, you should be loosely sketching a plan of action to execute on your turn. The more attention you pay to the events that lead up to your turn, the easier it will be to adapt and respond to them. As you and the other players master this technique, you might be surprised at how naturally your party begins to work together, and how effective you all become at dispatching the challenges you face.

## Interruptions

Another way you can dominate the spotlight doesn't even happen on your turn, but on everyone else's. Avoid interrupting during another player's turn or the DM's turn. If you feel inclined to take action based on what other players do on their turn, wait until your turn to describe your action. If a player or the DM misinterprets a minor aspect of the rules, wait until the end of the encounter or the end of the session to bring it up. No matter what, don't interrupt the flow of the game to quibble over the rules. Doing so slows down the game for everyone and will only frustrate and annoy the entire group. The group has a finite amount of time to play the game, and everyone participating in the game deserves an equal share of it.

## Ignoring Your Team

Another thing that a jerk does is ignore the teammates that he or she should be working with. D&D isn't a game about you, singular. D&D is about you, plural: a group of heroes who have come together to defeat everything that the world (or the DM) throws at them. Against the overwhelming odds that a hero is sure to face, a team of heroes who work side by side offers the most certain path to success.

Be there for your group when the other members need you. A good player is ready and willing to lend a helping hand. Whether you attack a monster to draw it away from a vulnerable ally, give a *potion of healing* to a wounded comrade, or loan someone a handful of gold coins for a big purchase, assisting your fellow players helps to guarantee that when you need them, they'll be there for you. When you watch another player's back, it becomes that much harder for someone to stick a knife in yours.

DREW POCZA

Being there for the party can also be quite literal. Characters who constantly break away from the group to pursue their own agendas hurt the game in several different ways. First, when your character runs off on his or her own, it creates a hole in the party that enemies can exploit. Second, it forces the DM to simultaneously run separate games. If the DM has to split his or her focus between different groups simultaneously, the less detail and attention each group receives.

By keeping the group together, you move the game forward and reduce the number of things that your DM must remember. The fewer extraneous things that a DM has to pay attention to, the more detail he or she can put into the world around you.

## Arguments

No matter how well your party works together, though, the cardinal rule of playing D&D is that although characters can argue, bicker, and fight to their hearts' content, players should not. Arguments between players—or between a player and the DM—are unproductive, divisive, and take up time that you could use playing the game. If you find yourself regularly bickering during games, take a moment to consider why.

If your arguments are over an interpretation of the rules, try to wait until after the session is over to discuss them. The middle of a game is the worst time to get into a debate with the DM or another player. Let the DM's ruling stand, and bring up your analysis of the rules during a break or at another appropriate time.

Arguments within the party can be especially tricky when there is treasure to be had. When the party has one more fighter than the treasure hoard has magic swords, it's easy to imagine an argument ensuing. Head these arguments off by agreeing in advance how to divide up the loot (see" Dividing Treasure," page 154).

### Closing Thoughts

D&D is a game, and we play games to have fun. When you act selfishly rather than as part of a group of friends working together to tell exciting stories, you make the game less enjoyable for everyone else at the table.

If you learn nothing else from this book, remember the golden rule of gaming: Do unto other players as you would have them do unto you.

When it comes right down to it, everything else is secondary.

# ADD TO YOUR D&D® EXPERIENCE.

Bring more to your characters and campaigns with a constantly growing source of new and exclusive content, tools, articles, and applications. Whether you're a player, a DM—or both— D&D Insider™ will help you get more out of every game.

CHAPTER 1

# Chaos Incarnate

A riotous realm, the Elemental Chaos is incomprehensible to those who have not experienced it firsthand. Here, flame speaks and lightning dreams, iron hates and seas hunger.

Islands of earth, ash, mud, salt, or semisolid smoke and flame, some as vast as continents, float amid an endless sky. Rivers of water, lava, or liquid air flow from oceans bounded by nothing solid, cross landscapes of broken crystal, and spill over cliff faces made of tangible lightning. Winds of heavy vapor are guided by currents of chaos, whipping into enormous storms of burning hail and sharp-edged thunder.

As disconcerting as the substance of the Elemental Chaos is, worse still awaits visitors. Direction has no meaning. Locations shift constantly. Even gravity is capricious, exerting its pull differently on living things than on objects.

This chapter helps you to comprehend this tumultuous place. Using this material, you can better convey the wonders, terrors, and peculiarities of the realm to your players. It offers tools to let you work the Plane Below into your adventures and campaigns, ensuring that your players experience it as someplace truly alien. It covers the following topics.

- **The Basic Elements:** An overview including game mechanics for travel, direction, and gravity.
- **Features of the Plane:** Descriptions and rules for some of the peculiar environments, terrains, and hazards of the Elemental Chaos.
- **Skill Challenges:** Situations that might arise as adventurers explore the plane.
- **Campaign Arcs:** Illustrative campaign arcs—one for each of the four varieties of planar campaigns discussed in the *Manual of the Planes* supplement.
- **Adventures:** A selection of adventure ideas, including sample hooks.
- **Patrons:** A review of elemental patrons for your adventuring party.
- **Orders out of Chaos:** Organizations that might serve as friend, foe, or both.
- **Artifacts:** Powerful magic items that have ties to the Elemental Chaos or its denizens.

ZOLTAN BOROS & GABOR SZIKSZAI

**ELEMENTAL CHAOS TRAITS**

As first presented in *Manual of the Planes*, the Elemental Chaos has the following traits. These qualities are expanded on in the sections that follow.

**Type:** Fundamental plane.
**Size and Shape:** Infinite in extent.
**Gravity:** Elemental buoyancy.
**Mutability:** Unstable.

## Nature and Size

The Elemental Chaos is the source of the material and energy that make up every other realm in the multiverse. Stone and smoke, fire and metal, water and light, ice and lightning, wind and raw magic—all combinations are the substance of the Plane Below.

Thus the Elemental Chaos is considered one of the two fundamental planes, along with the Astral Sea. These two realms anchor the entire cosmos; without them the world, and most other planes, could not exist.

The Elemental Chaos is infinite in size and shape, but each of its known regions and locations is contained within a finite, if enormous, space. Those who travel beyond the known reaches of the Elemental Chaos might make astounding discoveries that outshine the City of Brass or the Pillars of Creation, but more likely they'll become utterly lost amid the most alien and hostile environments conceivable.

### Elemental Realms

The Elemental Chaos as a whole might be limitless, but the same is not true of the various elemental realms. Ranging from a few yards in diameter to a volume large enough to swallow worlds, these areas are carved from the Elemental Chaos by powerful magic or individuals of inconceivably strong will. In these regions, the environment is relatively stable. Some areas have normal gravity. Others feature elemental buoyancy, similar to that of the Elemental Chaos beyond, but perhaps with a different orientation of up and down. Still other realms have subjective gravity, where each creature decides for itself which is up and down. Most regions lack the unstable mutability of the Elemental Chaos—their substance is locked in place by the power or the mind that created them.

Uncountable numbers of elemental realms populate the Plane Below. Among the best known are the City of Brass, various githzerai monasteries, and the dreadful Abyss, which qualifies as both an elemental realm and a plane apart from the Elemental Chaos.

## Elemental Buoyancy

The Elemental Chaos has no north or south, no sunrise or sunset. Gravity does pull in a consistent direction to give the otherwise unpredictable plane a definite up and down. Even so, gravity isn't always reliable.

Inanimate objects and materials native to the Elemental Chaos are not subject to gravity. Islands of earth or ice (also called earthmotes), rivers flowing without beds, and broad oceans unbounded by shores remain suspended in the skies of the Elemental Chaos. Pitch a rock off the edge of a cliff, and it comes to rest where its forward momentum stops. Lift water in your cupped palms, and it hovers when you drop your hands away.

Nonnative objects, however, and living creatures (regardless of origin) do not benefit from this buoyancy. For them, gravity functions as it does in the natural realm. Drop your sword, and it hits the ground at your feet. Step off the edge of an earthmote, and you could have a long drop during which to contemplate that error in judgment.

Whether native to the realm or not, though, any object does not remain in one place for long—all are propelled by the plane's ceaseless currents of chaos.

### Currents of Chaos

Currents of chaos shape the Plane Below, but no one agrees on what exactly they are.

Chaos currents provide an easy explanation for the randomness inherent in the Elemental Chaos. Masses of land and other elements move constantly, making locations impermanent and often meaningless. An island here yesterday is somewhere else tomorrow. A route that was once straight now twists back upon itself. Winds blow unpredictably, storms move in opposition to those airstreams, mountains rise and fall—all in no apparent pattern. Observers write off such changes as a metaphor for the reality of living in the Elemental Chaos.

Nevertheless, chaos is a real force on this plane, no less so than fire or lightning, and it has its own ebb and flow. Elemental vessels such as *chaos gliders* latch on to something, and the same energy guides slaads and other entropic beings on their mysterious paths. Whether the currents of chaos are responsible for the fluctuations attributed to them is unclear, but no better explanation has been devised.

## Unstable Mutability

Islands drift, winds shift, water becomes fire, rivers change their course, and lightning carves tunnels through the lands. Travelers can't count on a specific destination being in the same place from one day to the next, or even on its having the same shape or being made of the same substance. Some regions

**Move Object:** Standard action.
- ✦ **DC:** The DC is based on the object's size—Tiny or smaller, DC 5; Small or Medium, DC 10; Large, DC 15; Huge, DC 20; Gargantuan, DC 25.
- ✦ **Success:** You move an unattended object. You move the object 1 square, +1 square for every 5 points by which you beat the DC.
- ✦ **Failure:** You can't try to move the same object until after a short rest.

**Alter Object:** Standard action.
- ✦ **DC**: The DC is based on the object's size—Tiny or smaller, DC 20; Small or Medium, DC 25; Large, DC 30; Huge, DC 35; Gargantuan, DC 40.
- ✦ **Success:** You change an unattended natural object into a different element or type of energy of the same size. For example, a boulder can be changed into a ball of fire.
- ✦ **Failure:** You can't try to alter the same object until after a short rest.

**Stabilize Area:** 1 minute.
- ✦ **DC:** The DC is 5 + 1 per square affected.
- ✦ **Success:** You lock an area into its current form for 24 hours. Double the area or the duration for every 5 points by which you beat the DC.
- ✦ **Failure:** You can't try to stabilize the same area until after an extended rest.

**Alter Area:** 1 minute.
- ✦ **DC:** The DC is 20 + 1 per square affected. Add 10 to the DC if the area has been stabilized (see above). Double the area or the duration for every 5 points by which you beat the DC.
- ✦ **Success:** You change the terrain of an area for 24 hours. For example, a bare rocky plain can be changed into a forest.
- ✦ **Failure:** You can't try to alter the same area until after an extended rest.

change constantly, hour by hour or minute by minute. Other places remain steady for hundreds or thousands of years, only to be suddenly reshaped in an instant by violent convulsions.

Most of the changes in the Elemental Chaos are random, but some transformations are driven by the will of living beings. So subject to change is the Plane Below that any powerful mind can shape its surroundings without magic, although certain rituals make the task easier. With concentration, a creature can cause an object to move or even change shape and substance: for example, a burning fire might be turned into a sculpture of ice, or a large uncut crystal into sandstone. An especially powerful being can even temporarily alter the nature of an entire area.

## Influencing the Chaos

Creatures in the Elemental Chaos can alter their surroundings by spending a certain amount of time in concentration and making a successful Intelligence check (see left).

Only unattended objects can be moved or altered. You can use this planar instability to create interesting encounters—terrain that rises and falls, footing that shifts from solid to liquid, pools of water that become flaming hazards.

## Mutability in Combat

Creatures strong in mind can attack enemies by manipulating the Elemental Chaos. This is an at-will basic attack, as described below.

This system requires some adjudication by the Dungeon Master as to its effects in combat. For a simpler combat option, see the *influence instability* power described below.

**Influence Instability** — Basic Attack

*You bend the plane to your will, smashing a nearby object into your foe or creating energy that does it harm.*

**At-Will ✦ see text**
**Standard Action** **Ranged** 15/30
**Target:** One creature
**Attack:** Intelligence vs. Reflex
**Special:** If you are trained in Arcana, you can add your implement's enhancement bonus to your attack roll. This power does not become an implement attack.
**Hit:** 2d10 + Intelligence modifier damage. This damage can be acid, cold, fire, lightning, poison, radiant, thunder, or untyped.
*Level 21:* 4d10 + Intelligence modifier damage.

You can adjust the efficacy of this attack according to the locale, imposing a penalty to attack rolls in more stable realms or a bonus in easily altered areas.

### Optional Rule: Very Long Range

Weapons that hurl projectiles are usually constructed in the world, so the elemental buoyancy of the Elemental Chaos has no effect on their ammunition. But what happens if a character uses a projectile weapon that was constructed in the Elemental Chaos, or just decides to pick up and hurl a rock? Although such objects are not subject to gravity, they are nonetheless pulled off course by the currents of chaos that invisibly shape the Elemental Chaos, much as gravity acts on a missile in the world.

Where the churning chaos of the plane is somewhat quiescent, you might allow a projectile of elemental origin to gain an additional range category. Very long range extends from the limit of long range to twice that limit. Attacks made at very long range take a -5 penalty to attack rolls. Beyond that distance, even if the projectile encounters no other obstacles, hitting a target is impossible barring extraordinary circumstances and godlike aim.

# Traveling the Elemental Chaos

Navigating the Elemental Chaos is difficult. In the world, travelers can rely on landmarks, the sun, the stars, and a compass. Also, much of that realm can be reached by foot or boat. In contrast, the Plane Below features few dependable landmarks, and predictable foot travel is possible only in limited stable regions, such as the City of Brass, Zerthadlun, or the Canaughlin Bog (page 70).

Nevertheless, the Elemental Chaos does contain some stretches of solid surfaces. Some are composed of dangerous substances, but many are not inherently harder to traverse than regions of the world, except where they are broken by great chasms, impossibly tall peaks, walls of lightning, or rivers of acid. Some of these areas even contain reasonably permanent landmarks. Getting to such a surface, though, might be a greater challenge than traveling across it.

## Riding the Chaos

Visitors to the plane who have no other options can try to "piggyback" on the drifting masses, though only the most desperate or most adventurous travelers practice such travel. A piggyback journey (sometimes called "riding the chaos") requires hopping from one swift-moving body to another, making zigzag progress toward a final destination. Given the constant motion of the Elemental Chaos, it is only a matter of time before a stable mass drifts by in the right direction.

In some regions, suitable motes pass through regularly. In others, the masses are visible in the sky but difficult to reach. To make the jump between motes might require chartering a short flight on an airship, performing a teleportation ritual, or raising a floating stairway through sheer willpower. In the last resort, it might be possible for travelers to bribe a titan into hurling them across the gap.

Aside from the problem of reaching the mass, a traveler must determine which passing object is the best conveyance. Without some method of prediction, riding the chaos is a matter of picking a habitable mass moving in the right direction and hoping it continues on that way. A common method of choosing a suitable drifting "vessel" was devised by the efreets, through a divining practice called *al-buraj*. Securing such assistance, however, always comes at a high price—and dealing with efreets is a perilous proposition. Other creatures might have a more instinctive understanding of the currents of chaos, but their guidance cannot be easily secured regardless of price.

### Elemental Collision

When large masses of elements collide, cataclysm results. One body might shatter the other, creating new, smaller masses in an instant of extreme violence. Sometimes one entity absorbs or encompasses the other, such as when an earthmote plunges into a vast ocean and becomes a sunken continent. The two objects might even transform each other: An earthmote and an enormous ball of fire might create a continent of lava, or a windstorm and an ocean of magma could give rise to a rain of fire.

By creating an impending elemental collision, you can set a time limit for characters' heroics or provide an impetus for a dramatic escape.

## Flight

Flight is available through spells or magic items, but most of those methods grant the ability for too short a time to be of much use in exploration. A character might be able to hop from one mote or vehicle to another, but that's about it. Other sources of flight, such as *flying carpets* and mounts created by the Phantom Steed ritual, are limited by altitude restrictions and thus are incapable of flying between widely separated masses.

Some rituals and items grant long-distance flight, but even they are not without danger. In the world, when a flight effect wears off, a solid landing surface is often nearby. In the Elemental Chaos, no such guarantee exists. Additionally, some magical flight ends if the affected character takes any action other than flying. Getting into a fight while far away from a solid surface could be deadly. Only a few powers, such as the cleric's *cloud chariot*, are truly effective means of long-range flight.

## Teleportation

Because travel throughout the plane is so difficult, many settlements of the Elemental Chaos make use of teleportation circles. Such transport is common in the City of Brass and can be found in other efreet outposts, genasi and giant communities, githzerai monasteries, and Elemental Chaos-based headquarters of worldly factions and cults. The infamous Choking Palace (page 72) is said to have teleportation circles of solid smoke that slowly shift through a predetermined pattern, making them useful only at certain times.

Travelers can find teleportation circles at seemingly random points across the various drifting masses of the Elemental Chaos. Some are engraved bands that have known origins, marking the sites of old communities or strongholds. Others were created by secretive factions to facilitate unseen assemblies for purposes still concealed. Strangest of all, a few circles seem to have been created by nobody but appear fully formed from random fluctuations of chaos and magic. One infamous transport point, made of everburning flame, floats in empty space with no solid footing beneath.

Of course, teleportation circles are useful only to those familiar with their patterns. Some portal signatures (such as the public circles in the City of

Brass) can be learned through research, but many runic combinations require firsthand observation. As a result, teleportation is better as a way to return to a known location than as a tool for exploration.

## Vehicles and Mounts

Mounts and vehicles, including magic vessels, are common means of traversing the Elemental Chaos. Some adventuring parties purchase and crew their own, but most hire such conveyances.

Vehicles traveling to major trade centers and communities, such as the City of Brass and Gloamnull (page 74), are relatively easy to find. The farther one travels from the centers of the plane's civilizations, though, the scarcer such vessels become.

The Brazen Bazaar (page 68) is a caravan of wagons that travels the Elemental Chaos, sometimes stopping in the world or on other planes. Travelers are allowed to accompany it if they can afford a modest fee and shoulder their own load. Voyagers who shirk their duties, do not pay enough, or anger the caravan attendant risk becoming just another commodity sold to or by the efreets.

**ELEMENTAL CHAOS VEHICLES AND MOUNTS**

| Mount or Vehicle | Overland Speed | Miles per Day | Miles per Hour |
|---|---|---|---|
| Airship (*AV* 18) | fly 15 | 180[1] | 7½ |
| *Apparatus of Kwalish* (*AV* 17) | 6, swim 6 | 15, 15 | 3, 3 |
| *Chaos glider* | fly 10 | 120[1] | 5 |
| *Chaos ship* | fly 12 | 144[1] | 6 |
| Gorgon, iron (*MM* 143) | 6 | 30 | 3 |
| Gorgon, storm (*MM* 143) | fly 10 | 50 | 5 |
| Griffon (*MM* 147) | fly 15 | 75 | 7½ |
| Griffon, rimefire (*MM* 147) | fly 15 | 75 | 7½ |
| Hippogriff (*MM* 146) | fly 15 | 75 | 7½ |
| Hippogriff dreadmount (*MM* 146) | fly 12 | 60 | 6 |
| *Lightning skiff*[3] | fly 100 | 1,200[1] | 50 |
| Ornithopter (*AV* 19) | fly 5 | 25 | 2½ |
| *Planar dromond* (*MP* 159)[2,4] | swim 5 | 60[1] | 2½ |
| *Spelljammer* (*MP* 159)[2] | fly 15 | 180[1] | 7½ |
| Thunderhawk (*MM* 221) | fly 15 | 75 | 7½ |

***AV*** = ***Adventurer's Vault***
***MM*** = ***Monster Manual***
***MP*** = ***Manual of the Planes***

**1: This vessel can travel 24 hours per day, rather than 10.**

**2: This vessel can cross from one plane to another.**

**3: *Lightning skiffs* "ride" lightning from place to place. If no storms or other sources of lightning exist in a region, a skiff cannot travel there.**

**4: Normal *planar dromonds* are capable of traveling only through water, but many such vessels are enchanted to survive damaging liquids such as magma or acid. A few have outriggers resembling skis that can be lowered for sailing across thick mud, snow, or loose-packed sand or salt; this sort of travel reduces overland speed by half.**

Many travelers prefer to ride beasts native to the Elemental Chaos, such as rimefire griffons, because such mounts can easily find their way in the wild plane. Natural creatures such as hippogriffs are also common, but more suitable for short-distance transport. In general, mounts are riskier than inanimate vessels—a safe place to set down might not be available when the beast tires.

Some characters strike bargains with great creatures of the Elemental Chaos to transport them safely. Referring to them as mounts is grievously insulting to such intelligent beings, though; they are best treated as companions. The dragon eel is one such creature, as are tempest dragons and pyroclastic dragons (see *Draconomicon: Chromatic Dragons*), although they require travelers to find a way to endure their damaging auras.

## Vehicle and Mount Travel Times

The *Player's Handbook* (page 261) gives travel times for basic mounts and vessels. The *Adventurer's Vault* supplement (page 15) covers a wider variety. The table on this page presents vehicles and mounts common or well suited to the Elemental Chaos.

In addition to the terrain modifiers given on page 261 of the *Player's Handbook*, use the following modifier for Elemental Chaos travel using creatures that are not native to the plane.

**ELEMENTAL CHAOS TRAVEL MODIFIER**

| Multiplier | Circumstance |
|---|---|
| ×3/4 | Nonelemental mount |

*Spelljammers* and *planar dromonds* are most commonly associated with the Elemental Chaos, but other vehicles have been developed for travel in the plane. They are described below.

**Lightning Skiff**
Gargantuan vehicle

**HP** 250 **Space** 2 squares by 4 squares **Cost** 20,000 gp
**AC** 4; **Fortitude** 20, **Reflex** 2
**Immune** lightning
**Speed** fly 100

**Pilot**
The pilot must stand at a control wheel, typically at the rear of the *lightning skiff*.

**Crew**
In addition to the pilot, a *lightning skiff* requires a crew of three, all of whom use a standard action each round to control the vehicle. Reduce the *lightning skiff's* fly speed by 40 for each missing crew member. At fly speed 0, the *lightning skiff* sails out of control.

**Load**
Ten Medium creatures; one ton of cargo.

**Out of Control**
An out-of-control *lightning skiff* moves along the lightning at half speed.

**Lightning Keel**
A *lightning skiff* flies along lightning. Lightning that the skiff is riding cannot harm its pilot, crew, or passengers.

**Chaos Glider**
Huge vehicle

**HP** 100 **Space** 2 squares by 3 squares **Cost** 13,000 gp
**AC** 4; **Fortitude** 12, **Reflex** 4
**Speed** fly 10

**Pilot**
The pilot must control the *chaos glider's* wings with both hands.

**Crew**
In addition to the pilot, a *chaos glider* requires a crew of four, all of whom use a standard action each round to control the vehicle. Reduce the glider's fly speed by 4 for each missing crew member. At fly speed 0, the *chaos glider* sails out of control.

**Load**
Six Medium creatures; 100 pounds of cargo.

**Out of Control**
An out-of-control *chaos glider* moves at half speed in a random direction.

**Chaos Propulsion**
A *chaos glider* rides the currents of chaotic energy that ripple through the Elemental Chaos, so it functions only there. Its propulsion is uncertain at best. Passengers on a *chaos glider* can be becalmed at times, tossed to unknown locations, or hurled to their destination in the blink of an eye. On average, a glider moves at its listed speed.

**Chaos Ship**
Colossal vehicle

**HP** 2,000 Space 27 squares by 16 squares **Cost** n/a
**AC** 3; **Fortitude** 20, **Reflex** 2
**Speed** fly 12 (hover), overland flight 15

**Pilot**
The pilot must stand at the wheel, which sits atop the sterncastle deck. The wheel is mounted on a gimbaled lever that controls pitch and altitude. Cables running beneath the deck connect to three *anarch sphere* cradles. These *anarch spheres* provide motive power and lift. The ship will hover without a pilot or crew, but forward motion requires both.

**Crew**
In addition to the pilot, a *chaos ship* requires a crew of three for any movement other than hovering. Each must be stationed adjacent to one of the three inset *anarch spheres*. Each of the crew must spend a standard action each round to help control the vessel once it is under way. Reduce the ship's fly speed by 4 for each missing crew member. If the ship reaches fly speed 0 on any given round after it is under way, the ship is unable to be steered and flies out of control. Once it is out of control, regaining control requires 3 consecutive rounds with the pilot and three crew members manning their stations.

**Load**
200 Medium creatures; 4,000 tons of cargo.

**Out of Control**
When the ship is out of control, it moves forward at half speed. Each round, roll a d20. On a roll of 1-5, the ship descends. It descends 5 squares per round for the first 10 rounds it's out of control. After 10 rounds, it descends 10 squares per round. If the ship hits a solid mote in the Elemental Chaos or the Abyss after traveling out of control for more than 20 rounds, it is destroyed.

**Chaos Attunement**
A *chaos ship* functions only in the Elemental Chaos and the Abyss.

**Wheel and Three Anarch Spheres (Navigation Focus)**
This vehicle is equipped with three *anarch spheres*, which serve as the navigation focus for the wheel mounted on top of the sterncastle deck.

## Finding Your Way

Up and down are never in doubt in the Plane Below, but cardinal compass points are meaningless. No sun rises or sets to establish direction. Landmasses drift continually. That anyone can find a route through this constantly shifting place is amazing. Travelers who can see their destination are not likely to get lost. Otherwise, navigation is a constant concern.

Elemental creatures have an instinctive sense of the flow of chaos in their environment and might guide outsiders who request their services. Some beings, such as efreets, claim to recognize patterns in the plane's seemingly random fluctuations. Natives can use either Arcana or Nature to navigate, as can outsiders who have spent several months within the Elemental Chaos and have grown somewhat acclimatized to its turbulence. Other explorers can use only Arcana. The "Lost in the Wilderness" skill challenge (*Dungeon Master's Guide*, page 79) and the "Sailing the Sea of Fire" skill challenge on page 27 are good examples of how to handle navigation in the Plane Below.

### The Chaos Ship: Riding in Style

The most dependable way of traversing the Plane Below is on a *chaos ship*. Only a few of these enormous vessels exist, and finding one or booking passage on it might not be easy, but for many adventurers it's worth the effort.

The upper deck of a typical chaos ship is 130 feet from stem to stern. A 5-foot-high railing surrounds the upper deck. The railing holds stanchions every 5 feet, through which hawsers can be tied to secure crew or cargo.

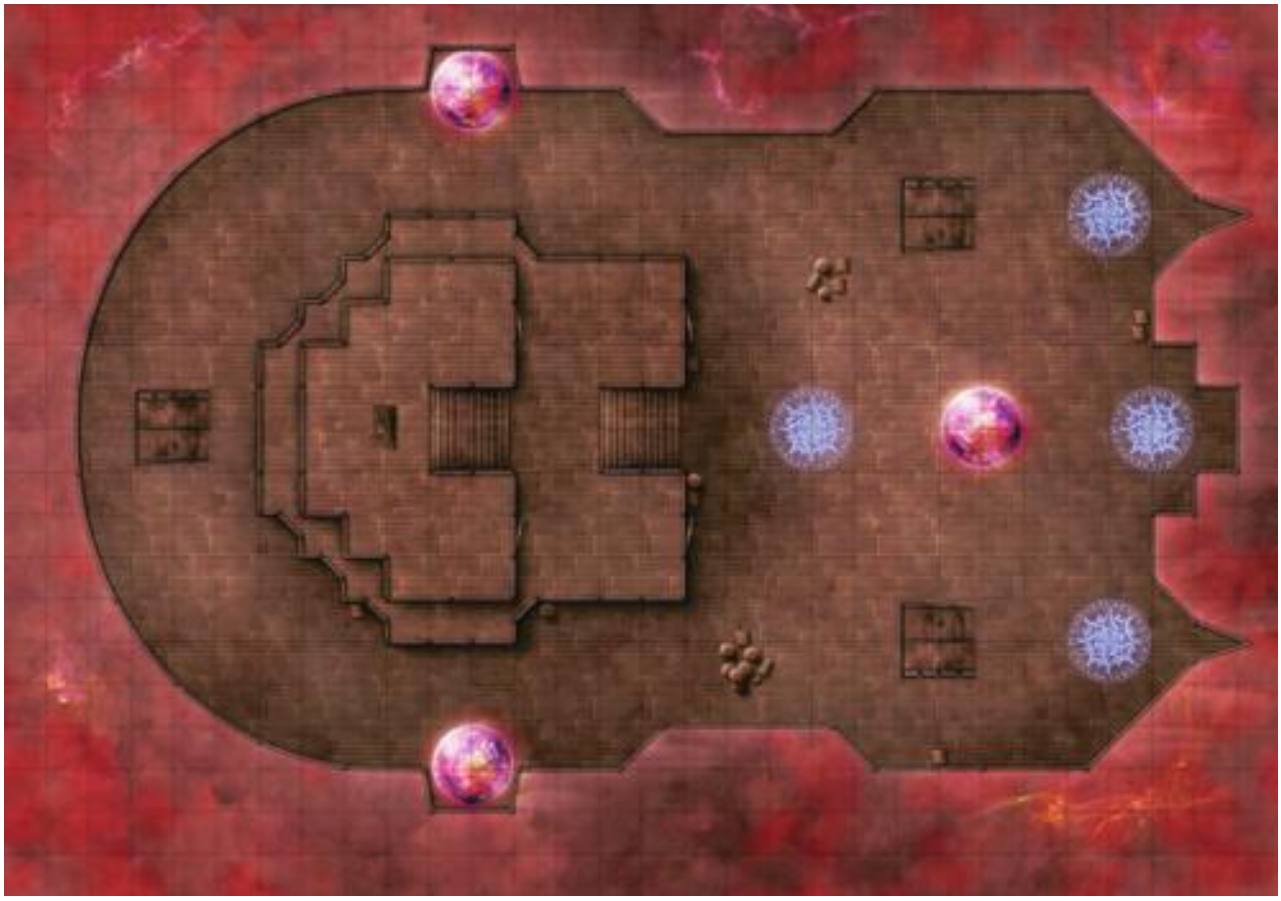
One of these vehicles plays a major part in the epic tier adventure *Prince of Undeath*. The illustration on the facing page depicts a *chaos ship*'s major features.

**Sterncastle:** This two-story structure occupies much of the ship's stern. One set of stairs provides access to the first level, and a second set of stairs to the second level. The top level of the sterncastle contains the wheel that steers the craft.

**Hatches:** The three hatches on the main deck lead to the belowdecks areas where cargo is stored.

**Anarch Spheres:** These three crystal spheres sit in cradles. Each contains the bottled essence of chaos, and provides the ship's motive power.

**Magic Circles:** Each of these inscribed circles provides teleportation access to a different, distant location, depending on the ship's current position and the rituals used to create the circles.



# FEATURES OF THE PLANE

A spike of solid thunder erupts from a bubbling magma field before dissipating into storm clouds. The clouds spawn torrential rains that solidify the magma. This igneous rock shatters into a swarm of earthmotes, which crash into a sea of acid. The impact creates a tidal wave that spills into volatile lakes of liquid lightning hugging a rime-covered shore. An explosion melts the icy beach and pushes a river out into the clear skies. That rushing torrent slams into a plain of fire. The confluence of opposing elements hisses into a steam geyser, a half-mile wide and incredibly high. The elemental steam is so hot that it vaporizes everything nearby.

Such chaotic manifestations continually shake the Plane Below. Some sections of the plane are hospitable to the primordials alone. Other swaths are inhabited only by creatures spawned from the churning crucible, or those magically protected from its violent extremes.

Still, not all areas of the Elemental Chaos are anathema to visitors. In the infinity of this fundamental plane, countless areas and paths exist that nonnatives can travel. Surviving such a journey requires some preparation, a good dose of daring, and a careful step.

You can use the following tools to create evocative and interactive encounter environments in the Elemental Chaos and the Abyss. A brief description of strange weather and environments in the plane is followed by details of several new types of fantastic terrain. Finally, this section presents hazards and skill challenges to spice up elemental encounters.

## Weather and Environmental Dangers

The weather found in the world also manifests in the Elemental Chaos, although often more violent. Locales are obscured by fog, blinded by blizzards, and pummeled by rain, tornadoes, sand storms, and gales. Stranger forms of weather also exist—ice mists, acidic rain, fiery cyclones, and gales of boulders.

The Endure Elements ritual is a handy tool for traversing the Elemental Chaos, but it has its limits. The more hospitable sections of the plane feature temperatures between the natural-world extremes of –50 and 140 degrees Fahrenheit, but temperatures in most of the plane's regions extend beyond this range. In addition, the atmosphere can vary significantly in the blink of an eye. In areas of extreme temperatures,

creatures without protection expire quickly, and even warded individuals can hold out for only so long.

The Endurance skill gauges a character's ability to withstand environmental dangers. For normal dangers found in the world and in the hospitable areas of the Elemental Chaos (see *Dungeon Master's Guide*, page 159), a character must succeed on an Endurance check every 8 hours or lose a healing surge, unless under the protection of Endure Elements. Within less hospitable areas, the Endurance check DCs do not increase dramatically, but the frequency of checks does. Characters without the protection of Endure Elements must make a check every 5 minutes or lose a healing surge. Those protected by the ritual must make a check every 8 hours or lose a healing surge.

Extreme conditions in the Elemental Chaos are described below. Although the Endure Elements ritual neutralizes most natural dangers, the environmental threats of the Elemental Chaos are more severe. The term "primordial" indicates an extreme that requires a character to make Endurance checks even when protected by Endure Elements. For such regions, the Endure Primordial Elements ritual provides more reliable protection. (See the "Greater Danger, Greater Magic" sidebar.)

| Condition | Endurance DC |
|---|---|
| Primordial storms | 20 |
| Primordial winds | 21 |
| Primordial cold | 22 |
| Primordial heat | 22 |
| No air | 26* |
| Frigid primordial cold | 26 |
| Stifling primordial heat | 26 |
| Primordial smoke or ash | 26 |
| Mutating primordial chaos | 31 |

*** This check must be made every minute, rather than every 5 minutes, and Endure Elements does not lessen the frequency.**

### Greater Danger, Greater Magic

In many areas of the Elemental Chaos, the Endure Elements ritual reduces but does not eliminate environmental dangers. These extreme situations require a more powerful and much rarer ritual: Endure Primordial Elements.

Both rituals turn environmental dangers "on and off." Not until a character reaches the higher paragon tier is he or she able to overcome more intense elements by using the Endure Primordial Elements ritual.

Remember that these rituals protect characters from the ambient atmosphere and normal precipitation dangers of the plane. They do not protect characters from elemental attacks originating from terrain, hazards, or the powers of elemental creatures.

### Endure Primordial Elements

*Flames lick you, or lightning crackles around you, but you pay these threats no mind.*

**Level:** 17
**Category:** Exploration
**Time:** 10 minutes
**Duration:** 24 hours
**Component Cost:** 4,300 gp
**Market Price:** 12,000 gp
**Key Skill:** Arcana (no check)

You designate up to eight ritual participants, including yourself, who ignore penalties and Endurance checks associated with the extreme weather and environments of the Elemental Chaos.

An affected creature and its equipment ignore ill effects from extreme temperatures and other ambient threats. Creatures' attacks, terrain features, and traps or hazards are still potential dangers. In areas where you would normally have to make Endurance checks every 8 hours while under the effect of Endure Elements, you need not make any checks while under the effect of Endure Primordial Elements.

## Elemental Fantastic Terrain

Compared to even the most bizarre areas of the world, the strange terrain of the Elemental Chaos is fantastic. Few creatures other than the efreets can swim the Sea of Fire, and only the hardiest of elemental beings can survive the deadly pummeling of an earth storm. Other places are so alive with churning, warping elemental energy that they seem to come alive when creatures venture too near.

The following hazards only scratch the surface of the variety of fantastic terrain that exists throughout the Plane Below. You can use these selections to create a variety of features to add an unexpected twist to encounters, or mix their material and functions to create new and exciting terrain of your own: crawling ice, frozen lightning, or fire mist.

Some of the hazardous terrain described below is typical of the Abyss. Nevertheless, the ever-shifting nature of the Elemental Chaos means that such dangers might appear anywhere in the plane.

### Acidic Mire

Any quagmire can be dangerous and debilitating. In the Elemental Chaos, a swampy area filled with caustic liquid makes the peril far worse. Seas composed of flesh-dissolving liquids are bordered by shores riddled with moors that churn with acid bubbling up from below. Such confluences of muck and acid are deadly to traverse, so creatures that crave solitude build bastions amid this inhospitable terrain.

**Effect:** A square of acidic mire is difficult terrain for creatures without earth walk. They sink into the mire, muck clinging to flesh and clothing. In

addition, any creature that starts its turn in a square of acidic bog takes ongoing 5 acid damage per tier and is slowed (save ends both).

**Usage:** Acidic mire requires characters to trudge more slowly through an area. Artillery or controller monsters take advantage of such terrain to hinder melee attackers.

## Bonepowder Haze

In desolate sections of the Abyss, especially the dread region of Thanatos (*Manual of the Planes*, page 82), strange clouds of fine, white powder hover in the air and crackle with necrotic energy. This strange haze saps the life force of creatures within it, dissipating or corrupting that life force to empower nearby undead.

**Effect:** Fields of bonepowder haze are lightly obscured. Any living creature within a square containing this terrain regains only one-half normal hit points from healing effects. Furthermore, whenever a living creature receives a healing effect while in bonepowder haze, each undead creature within 3 squares of it gains a +2 power bonus to attack rolls until the end of the undead creature's next turn.

**Usage:** Pairing bonepowder haze with undead is a no-brainer. Even without undead, the haze makes any combat more dangerous by degrading healing. Brutes wade into the haze, knowing that the damage of their powerful strikes will persist longer. You can position artillery at the edge of a field of bonepowder haze to obscure the enemy and also hinder ranged counterattacks.

## Chaos Breath

An area of chaos breath contains powerful, unpredictable wind gusts that extend high into the atmosphere, equally affecting flying and grounded creatures. The gusts occupy several areas, each 1 to 4 squares across. The currents react to movement and other disturbances, making them appear to be aware.

**Effect:** When a creature enters a square containing chaos breath or starts its turn there, it slides 1d4 squares in a random direction and must make a saving throw to avoid being knocked prone. Creatures that are already allowed a saving throw to avoid being knocked prone gain a +2 bonus to this saving throw.

A creature within a square of chaos breath can attempt an easy Athletics or Acrobatics check to reduce the distance of the slide by 1 square, plus 1 square for every 5 points by which the check result beats the DC. A creature that does not slide any distance is not knocked prone.

**Usage:** Chaos breath confounds strategic maneuvering by adding unpredictability to movement. Since this terrain is difficult to spot (requiring a hard Perception check), it can catch both sides in a conflict off guard.

Because of the variability of the Elemental Chaos, the effect of chaos breath might not be consistently applied in all cases. In certain areas, the gusts might not be strong enough to affect larger creatures. Air creatures might sense an area of chaos breath and avoid it, or can have an innate resistance to its effect at your discretion.

To create more disarray—and more complexity—you could have chaos breath potentially affect the entire encounter area instead of specific squares within it. Each creature has a chance of being caught in a gust at the start of its turn, perhaps on a roll of 1-4 on a d20.

## Crawling Earth

The substance of the Elemental Chaos sometimes exhibits a destructive will, especially in the form of elementals, but sentience is not necessary for the semblance of living behavior. A prime example is crawling earth, which resembles normal ground but animates when stepped on, then quiets after a few moments.

**Effect:** When any creature ends its movement in a square of crawling earth, it triggers that square and any contiguous squares containing that terrain. The ground rises up and moves 1d4 squares in a random direction, carrying along any creature in that space. The movement is so quick and jarring that a creature in a square of crawling earth must make a saving throw to avoid being knocked prone.

A section of crawling earth is usually no larger than 4 squares on a side, but wider areas exist in particularly unstable sections of the Elemental Chaos.

**Usage:** The Elemental Chaos contains several fantastic terrain types that create a dynamic environment, but crawling earth does the best job. Such terrain discourages creatures from ending their movement in certain spaces, forcing them to move farther than they otherwise would (which favors melee combatants) or discouraging movement altogether (making them easy prey for ranged attacks). You might also set the crawling earth's movement in a specific direction or toward a given point to push the action a certain way or to enhance monsters' control effects.

## Demon Jags

These areas of sharp, rugged stone are formed when demons are trampled by other demons or otherwise violently absorbed into the surrounding surface. Most commonly encountered in the Abyss, demon jags could occur anywhere a demonic horde swarms.

**Effect:** Squares containing demon jags are difficult terrain, but any creature can move through the space normally by taking 5 damage per tier for each square entered. Demons are immune to this effect—the spars yield to their passing or retract into the

*Ice Maws*

ground. Furthermore, a demon occupying a square of demon jags can use its variable resistance without reducing its limit for the current encounter.

**Usage:** Demon jags serve well as walls and ramparts in demon lairs. Those unusual demons that have any degree of patience use the jags to slow or wear down approaching enemies.

## Demon Slick

Dangerous and debilitating, this odd black slime is a common terrain feature throughout the Abyss. It is particularly widespread where large numbers of demons congregate for long periods of time.

**Effect:** The vile gunk smells foul and makes footing treacherous, creating large areas of difficult terrain. Any nondemon creature that ends its turn in a square of demon slick takes 5 acid and poison damage per tier. In addition, the oily slick responds to certain attacks by extending and latching onto creatures within it. Any creature that is hit by an acid or poison attack while in a square of demon slick takes ongoing 5 acid and poison damage per tier (save ends).

**Usage:** Demon slick is a natural complement to demons that have acid or poison attacks, such as bebiliths, mezzodemons, and vrocks. Against characters without protection against such types of damage, the demons' debilitating attacks are even more effective.

## Earthflow

The world suffers the occasional mudslide or avalanche. In the Elemental Chaos, earth moves constantly in rivers of rock, dirt, or mud.

**Effect:** Each area of earthflow has a direction of current (see "Underwater Terrain," *Dungeon Master's Guide*, page 45). Different sections of a single area could flow in different directions, creating a particularly turbulent earthcourse.

Earthflow squares are difficult terrain. Each creature within an earthflow area at the start of its turn slides 3 squares in the direction of flow. If the creature is forced into an area with a different flow direction, it slides the remaining distance in the new direction. The creature must also make an Acrobatics or Athletics check to avoid sinking into the flow and becoming grabbed. (Use the "Skill Check Difficulty Class by Level" table on page 24 to set appropriate DCs and difficulty.)

Creatures that have earth walk ignore all earthflow effects.

**Usage:** Earthflow terrain forces the characters in a certain direction or puts them at a disadvantage against creatures that have earth walk. An entire encounter area filled with earthflow can be frustrating, though, so be sure the encounter contains other terrain and rewards clever use of skills to bypass the earthflow.

## Elemental Spout

Eruptions of material or elemental energy are a common occurrence in the Plane Below. Any substance can issue forth from solid surfaces, bodies of liquid, raging storms, or empty air.

**Effect:** An elemental spout fills a burst, 1 square per tier, centered on a particular origin square. The spout might erupt at intervals or when a creature moves within 1 square of the burst's center. For interval eruptions, the spout rolls initiative at the start of combat or takes effect at a specific time in a round; for an erratic spout, you might roll initiative each round.

The effect of an elemental spout depends on the type of energy or material it disgorges. A summary of common elemental spouts and their effects follows. Exotic spouts also exist that contain more than one substance.

*Acid:* 5 acid damage per tier, and ongoing 5 acid damage per tier (save ends).

*Frost:* 5 cold damage per tier, and the target is slowed (save ends).

*Lightning:* 5 lightning damage per tier, and the target is dazed (save ends). If a target is already dazed, it is instead stunned (save ends).

*Magma:* 5 fire damage per tier, and ongoing 5 fire damage per tier (save ends).

*Poison Gas:* 5 poison damage per tier, and the target is weakened (save ends).

JULIE DILLON

*Scalding Slick:* 5 fire damage per tier, and the target is knocked prone.

*Thunder:* 5 thunder damage per tier, and the target is pushed 2 squares from the spout's origin square.

**Usage:** Elemental spouts break up an encounter area and give the characters a reason to move in certain ways, whether to avoid the effects of the spouts or to use them in a clever tactical way. Creatures that have resistance or are immune to a spout's effects can take advantage of the spout to block and damage enemies.

## Energy Alteration Field

The air sparkles and the ground buzzes in the area of an energy alteration field. The terrain can be as big as an entire encounter area or as small as a few squares on a side.

**Effect:** When a creature within the field makes an attack that has a damage type, or such an attack targets a creature or a square within the field, the attack's damage type changes. For an attack that has an area of effect, the damage type changes only in the part of the area of effect that overlaps the field.

Energy alteration fields are inherently chaotic, each one producing a different effect. Use the following table to determine the new damage type, rolling once for each of the attack's damage types. If the new damage type is the same, nothing happens; an attack that has two or more damage types ends up with only one instead.

| d8 | Energy | d8 | Energy |
|---|---|---|---|
| 1 | Acid | 5 | Lightning |
| 2 | Cold | 6 | Poison |
| 3 | Fire | 7 | Radiant |
| 4 | Force | 8 | Thunder |

Creatures trained in Arcana can manipulate an energy alteration field as a minor action.

*Arcana Easy DC:* A successful check allows a creature to make one target ignore the effect of the energy alteration field until the end of that target's next turn.

*Arcana Moderate DC:* A successful check allows a creature to change the damage type of its attacks within the field to any other type that the field allows. This effect lasts until the start of the creature's next turn.

*Arcana Hard DC:* A successful check allows a creature to change the damage type of all attacks within the field to any other type that the field allows. This effect lasts until the start of the creature's next turn.

**Usage:** An energy alteration field lets characters and monsters alike tinker with their damage types and adds a surprise element to an encounter. It can be key strategic terrain in a battle, allowing a creature that specializes in limited damage types to diversify or to affect creatures that normally have resistance to such damage.

## Frozen Fire

Portions of the Elemental Chaos experience cold so intense that even fire freezes. In other areas, fire and ice mingle in ways that are contradictory to minds that are familiar only with the natural world. This mixing of opposites is highly unstable—the subtlest change in the surroundings can cause a dramatic explosion.

**Effect:** Patches of frozen fire are usually no larger than 6 contiguous squares, but larger areas can exist. When a creature without the cold keyword enters a square adjacent to frozen fire, or a square of frozen fire is subjected to fire, lightning, or thunder damage, that square explodes. The effect is a close burst 1, centered on the origin square, dealing 1d8 cold and fire damage per tier.

**Usage:** An encounter area containing several regions of frozen fire tightly limits safe zones on the battlefield. Such control particularly favors soldiers, forcing characters to make hard tactical choices during combat.

## Ice Maws

These expanses of permafrost seem tranquil from a distance, but when a creature approaches, the frozen ground seems to come alive with mouthlike openings that snap at the creature's feet. The voracious maws are individually small and slow, but their collective bite is debilitating.

**Effect:** If a creature without ice walk starts and ends its turn in the same ice maws space, it takes 5 cold damage per tier and is immobilized (save ends). The affected creature cannot make a saving throw against this effect until the end of its next turn.

**Usage:** Large sections of ice maws can encourage characters to pass through an encounter area with haste and discourage ranged attackers from staying in one place. Ice archons are well known for using ice maws to protect their crystalline fortresses.

### Exotic Terrain, Standard Effects

The Elemental Chaos is a place of wild magic and shifting elements, but not all its terrain requires special rules. You can adjust normal-seeming terrain to have unusual features that bring the Plane Below to life. A seeming lake might be traversed as if it were solid land. Stone might flow like water and use the same rules for combat and movement. Lightning could crawl slowly from the earth to the sky, allowing a creature to climb it as if it were a beanstalk.

## Fantastic Terrain from Other Sources

Several other D&D books contain fantastic terrain that can be found in the Elemental Chaos.

### Dungeon Master's Guide

Blood rock (page 67)
Choke frost (page 67)
Loadstone (page 68)
Mirror crystal (page 68)
Slides (page 68)
Whirlwind (page 69)

### Dungeon Master's Guide 2

Blast cloud (page 58)
Bolt stone (page 58)
Creeping ice (page 58)
Elemental windchurn (page 59)
Energy node (page 59)
Grasping bog (page 60)
Jade flame (page 60)
Rage stone (page 61)
Thunder shards (page 61)

### Manual of the Planes

Abyssal wellspring (page 21)
Elemental seepage (page 22)
Phase rock (page 22)
Energy crystals (page 22)

## Infectious Pallor

Pockets of diseased air drift through the Abyss. These vapors are often invisible, and those that can be seen appear innocuous. Light within an area of infectious pallor looks slightly different from that in surrounding areas. Also, creatures within this terrain appear sickly and wan, and any wounds they take seem to ooze with infection.

**Effect:** Each area of infectious pallor carries a specific disease (*Dungeon Master's Guide,* pages 49–50). Any creature that starts and ends its turn in a square of infectious pallor (even if they are different squares in the same area) is exposed to that disease. A common plague of the Abyss is demon pox, described below.

**Usage:** This terrain works well with undead and elemental creatures, both of which are commonly immune to disease and have no fear of being within the area. The disease you pick determines how scary the pallor is. Try positioning this terrain around areas that you want to be challenging to reach, or in places you want characters to pass through quickly.

## Lightning Mist

These fields of gray-blue fog that drift slowly through the Elemental Chaos are hazardous to traverse quickly. Lightning mist typically coalesces into an area 5 squares on a side, but masses miles wide and just as deep are not unknown in treacherous territories.

**Effect:** When the particles within the mist are stirred, a charge of electricity lashes out. Any creature that enters more than 2 squares of lightning mist during a single move action takes 5 lightning damage per tier. Squares containing the mist are lightly obscured.

**Usage:** Lightning mist forces creatures to slow down or suffer the consequences. Artillery monsters zero in on slowly moving creatures within the mist, gaining more attacks at a slight cost to accuracy. Elemental creatures that have resistance or are immune to lightning damage thrive in these areas.

## Liquid Thunder

After a powerful elemental storm ravages an area of the Elemental Chaos, gray and placid pools are left behind. These innocuous-looking puddles are actually highly volatile liquid coalesced from the force of the storm. Liquid thunder pools are so unstable that they are rarely larger than 1 square.

**Effect:** A pool of liquid thunder remains calm and mirrorlike until a creature or an object enters it. It then releases the tremendous thunder stored within it, blasting a creature in its square and each creature adjacent to that square. The force of the blast hurls the affected creatures 10 feet per tier into the air. Any creature that falls back to the ground takes 1d10 damage per tier; it can make an Acrobatics check as normal to reduce the falling damage.

**Demon Pox** — Level 5+ Disease

*Typically delivered by infectious pallors that waft through the Abyss, demon pox can also be contracted from the melee attacks of infected demons.*

**Attack:** Encounter level + 3 or demon level + 3 vs. Fortitude
**Endurance** improve DC 15 + encounter level or demon level, maintain DC 10 + encounter level or demon level, worsen DC 9 + encounter level or demon level or lower

◀ The target is cured.

**Initial Effect:** The target develops a multicolored rash of disgusting pox. Whenever a critical hit is scored against the target, it takes 1d10 extra damage and is dazed (save ends).

◀▶ The pox begins to ooze and scab over. The target loses a healing surge until it is cured. Whenever a critical hit is scored against the target, it takes 1d10 extra damage and is dazed (save ends). While the target is bloodied, it is also slowed.

▶ **Final State:** The target dies and 1d6 dretches (*Monster Manual 2,* page 54) tear free from its corpse.

**Usage:** Liquid thunder is a simple but dangerous obstruction. Creatures that have forced movement powers use it to great effect.

## Phase Crystal

This translucent, silvery crystal is related to phase rock (*Manual of the Planes,* page 22). It can be induced to discharge its extradimensional energy and shunt a creature out of phase for a short time.

**Effect:** When a creature ends its move in a square of phase crystal, it gains phasing until the end of its next turn. That square cannot affect another creature until the end of the encounter.

**Usage:** Combined with obstacles that restrict a battlefield, phase crystal allows characters or monsters greater mobility. You can restrict the terrain's effect by limiting the number of squares it covers. Try not to use phase crystal as the only way to get to a special area or encounter unless the terrain is large enough to affect the entire party at one time.

## Primordial Font

Volatile fountains of liquid elemental energy can erupt anywhere in the Elemental Chaos, changing those who bathe in them.

**Effect:** A creature that remains in a square containing a primordial font for its entire turn gains a random elemental keyword and an accompanying benefit, as shown in the table below. Alternatively, a creature in the font's square can spend a standard action to splash the liquid over itself, gaining the keyword and the accompanying benefit even if it does not end its turn in the font.

Whenever a creature gains a primordial font effect and is already under the effect of a previous result, the prior effect ends. Otherwise, a creature that is under a primordial font's effect rolls a d20 at the end of its turn. On a result of 9 or lower, the effect ends.

Creatures of the elemental origin that are affected by a primordial font can make a saving throw to avoid its effect.

| d6 | Keyword | Effect |
|---|---|---|
| 1 | Earth | You gain resist 5 to all damage. |
| 2 | Fire | You deal 1d6 extra fire damage per tier with melee attacks. |
| 3 | Ice | Each creature that starts its turn adjacent to you is slowed until the start of your next turn. |
| 4 | Lightning | Until the start of your next turn, you don't grant combat advantage or take a –5 penalty to attack rolls when you run. |
| 5 | Thunder | Each creature that starts its turn adjacent to you is dazed until the start of your next turn. |
| 6 | Water | You can shift as a minor action. |

**Usage:** Primordial fonts create interesting random interactions for monsters and characters alike. You can place them in an encounter when you want a strange and unpredictable battle. Alternatively, primordial fonts are useful in areas containing portals or other restricted zones that are accessible only to creatures that have a certain elemental keyword.

## Strangling Wind

The pressure of this wind is so great, and its blasts so turbulent, that it slows and even suffocates those who push themselves too hard. The winds are strong enough to hinder the accuracy of ranged and area attacks (even magical ones). A jet of strangling wind is typically 3 squares wide and 6 to 8 squares long at paragon tier, and 5 squares by 10 squares at epic tier.

**Effect:** A creature that starts its turn in a square of strangling wind is slowed until the start of its next turn. A creature that runs or takes a double move in strangling wind is dazed (save ends) at the end of that movement, even if it is no longer within the wind's area. With each failed saving throw, the target loses a healing surge.

Creatures take a –5 penalty to attack rolls with ranged or area attacks launched within or into an area of strangling wind.

**Usage:** Strangling wind makes a formidable barrier that penalizes creatures trying to move quickly through the area. Elemental brutes and soldiers, such as rockfire dreadnoughts (*Monster Manual*, page 104) and demons, love fighting in strangling wind. They can take their time beating the pulp out of their enemies without worrying much about ranged attacks.

## Wrath Mud

In parts of the Abyss, the land itself is subject to the insane rage that twists and contorts reality. Certain stinking bogs contain eerie mud that saps the sanity from creatures within it, pushing them to violence through psychic pain. The mud has a normal consistency but features an oily sheen, reflecting light in a swirling rainbow of sickly color.

**Effect:** Areas of wrath mud are difficult terrain. Any creature within a square of wrath mud that scores a critical hit with a melee attack deals 1d10 extra damage per tier on that attack. Furthermore, a creature that starts its turn in a square of wrath mud and does not make a melee attack before the end of its turn takes 5 psychic damage per tier.

**Usage:** Wrath mud is similar to, but more unforgiving than, blood rock (*Dungeon Master's Guide*, page 67). It is typically used to create bottlenecks that force bloody melee battles—the kind of fight that demons enjoy most.

# Elemental Hazards

The wilds of the Elemental Chaos are as dangerous as any of the plane's inhabitants. A variety of hazards threaten the unwary, and even natives give certain areas a wide berth. The hazards presented here expand on those in the *Dungeon Master's Guide* and *Manual of the Planes*.

**Gorgon Mud** **Level 8 Obstacle**
Hazard XP 350

*This viscous green mud forms pockets in bogs and soft ground. It erupts around those who disturb it to clutch at their feet, then hardens into an earthen prison.*

**Hazard:** This hazard consists of 10 squares positioned in a larger field of mud or soft earth. The hazard affects any creature that enters one of its squares.

**Perception**

✦ DC 19: The character can discern if any adjacent squares contain gorgon mud.

**Additional Skill:** Arcana

✦ DC 14: The character recognizes the hazard's nature.

**Trigger**

When a creature enters a square of gorgon mud, the hazard attacks.

**Attack**

**Opportunity Action** **Melee**
**Target:** The triggering creature
**Special:** A creature that has earth walk or that is immune to petrification is immune to the effect of gorgon mud.
**Attack:** +11 vs. Fortitude
**Hit:** The target is immobilized (save ends). *First Failed Saving Throw:* The target is restrained (save ends). *Second Failed Saving Throw:* The target is petrified (save ends).
**Miss:** The target is slowed (save ends).

**Countermeasures**

✦ A character can make a DC 14 Athletics check to grant himself or herself or an adjacent creature a +2 bonus to the next saving throw against the mud's effect.
✦ A character who makes a DC 19 Arcana check siphons the elemental energy from the mud, rendering inert 1 square, plus 1 square for every 5 points by which the check result beats the DC.

**Upgrade to Elite (700 XP)**

✦ Increase the DCs for Perception, Athletics, and Arcana checks by 2.
✦ If the target fails a saving throw against the petrified effect, a save can no longer end that effect. The target's allies must physically break away the hardened mud (AC 2; Reflex 2, Fortitude 15; hp 90). Each attack that deals damage to the hardened mud deals the same amount of damage to the trapped target (reduced by the petrified condition's resist 20 to all damage).

**Luminous Node** **Level 11 Blaster**
Hazard XP 600

*A glowing elemental mass pulses randomly, occasionally releasing lances of energy.*

**Hazard:** The node usually occupies 1 square, but it can be as big as 3 squares on a side. The node deals fire, force, lightning, or radiant damage (choose one or roll a d4). Its energy is attracted to moving bodies within range. Creatures can enter the node's space.

**Perception**

A luminous node sheds bright light in a 10-square radius. No check is required to notice it.

**Additional Skill:** Arcana

✦ DC 21: The character recognizes the hazard's nature.

**Initiative** +2

**Trigger**

When a creature enters a square within 10 squares of the luminous node's space, the hazard rolls initiative. The hazard also makes an opportunity attack against a creature that enters or starts its turn in the node's space.

**Attack**

**Standard Action** **Ranged** 10
or **Opportunity Action**
**Target:** One creature or the triggering creature
**Attack:** +15 vs. Reflex
**Hit:** 2d8 + 5 damage of a type from the following list, and an effect determined by that type.
*Fire:* 1d8 extra fire damage, and the target gains vulnerable 5 fire (save ends).
*Force:* The target is pushed 2 squares, knocked prone, and slowed (save ends).
*Lightning:* The target is dazed (save ends).
*Radiant:* The target is blinded (save ends).
**Miss:** Half damage.

**Countermeasures**

✦ With a DC 21 Acrobatics check made as part of a move action, a character can enter the node's space without triggering an opportunity attack.
✦ A character adjacent to or within the node's space can attempt a DC 16 Arcana check as a move action. If the check succeeds and the node's next attack hits, treat the attack as a miss. If check succeeds and the node's next attack misses, the attack deals no damage.
✦ A character within the node's space can attempt a DC 21 Arcana check as a move action. Results are as for a DC 16 Arcana check as above. In addition, three successful checks cause the node to dissipate, eliminating the hazard.
✦ A character within the node's space can attempt a DC 26 Arcana check as a standard action. Results are as for a DC 21 Arcana check as above. In addition, a character who makes a sucessful check can force the node to attack any target in range.

**Upgrade to Elite (1,200 XP)**

✦ The node attacks twice per turn. Each attack can have a different damage type.
✦ Dissipating the node requires six successful DC 21 Arcana checks instead of three.

**Steel Rain** **Level 15 Blaster**
Hazard XP 1,200

*Ahead, rain sheets down with a metallic tinkling. The ground beneath it is not damp.*

**Hazard:** Tiny shards of sharp metal drop from the sky and burrow into the ground or into any creatures they hit. The hazard occupies three areas, each 3 squares on a side. Steel rain squares are lightly obscured. At the start of each round, the hazard moves 1d8 squares in a random direction or in a direction you choose.

**Perception**

No check is necessary to notice the rain.

✦ DC 23: The creature sees that the "raindrops" are metallic.

**Additional Skill:** Arcana

✦ DC 23: The character recognizes the hazard's nature.

**Trigger**

When a creature enters a square of steel rain or starts its turn there, the hazard attacks.

**Attack**

**Opportunity Action** **Melee**
**Target:** The triggering creature
**Attack:** +20 vs. AC
**Hit:** 1d10 + 5 damage, and ongoing 10 damage (save ends).
**Miss:** Half damage.

**Countermeasures**

✦ A character using a shield can hold it overhead as a minor action, gaining a +1 bonus to AC against the steel rain but losing any shield bonus to AC and Reflex against other attacks. These adjustments to AC last until the start of the creature's next turn.

✦ If a character makes a DC 23 Arcobatics check as part of a move action and ends his or her move outside the area of steel rain, he or she does not trigger an attack when moving through the hazard.

✦ With a successful DC 18 Arcana check as a minor action, a character can force one area of steel rain not to move at the start of the next round. With a successful DC 27 check, the character can move that area 1d4 squares in a direction of his or her choice.

**Upgrade to Elite (2,400 XP)**

✦ Increase the DCs for Perception, Acrobatics, and Arcana checks by 2.

✦ The steel rain occupies four areas, each 4 squares on a side.

✦ Harmless precipitation lightly obscures the entire encounter area. When a creature is about to enter an adjacent square of steel rain, it makes a DC 23 Perception check as a free action; on a success, the creature spots the metal needles before moving into that square.

## ELEMENTAL FLEXIBILITY

The hazards of the Elemental Chaos are myriad. The dangers in this section can be transformed in style or approach without significantly altering their mechanics. Often, adjusting damage type is the only change needed.

**Voidblight** **Level 15 Blaster**
Hazard XP 1,200

*A mass of pulsing blackness slowly resolves into swarming motes of nothingness drifting over the ground, each one absorbing light, life, and sanity.*

**Hazard:** The voidblight occupies 9 contiguous squares. Each voidblight square must share a side, not just a corner, with at least one other voidblight square.

**Perception**

No check is necessary to notice the mass.

**Additional Skill:** Arcana

✦ DC 23: The character recognizes the hazard's nature.

**Initiative** +2

**Trigger**

The voidblight can sense nondemon living creatures within 20 squares, whether or not it has line of sight to them. When it does, the hazard rolls initiative. The mass moves on its turn, oozing through the air or dragging along the surface to a square occupied by a nondemon living creature. It has a speed of 5, fly 5 (hover). It then attacks such creatures that start their turns within its area.

**Attack**

**Opportunity Action** **Melee**
**Target:** Each nondemon living creature that starts its turn in the voidblight's square
**Attack:** +18 vs. Fortitude
**Hit:** 1d10 + 6 psychic damage, and ongoing 10 psychic damage and the target is affected by voidblight insanity (save ends both). While a conscious target is affected by the insanity, it must make a basic attack against an ally during its turn or take 10 extra psychic damage at the end of its turn.
**Special:** A creature cannot make a saving throw against the voidblight's effect while within the hazard's square.

**Countermeasure**

✦ A character can attack a square of voidblight (AC 29; other defenses 27; hp 30; half damage from melee and ranged attacks). When reduced to 0 hit points, that square of voidblight is destroyed.

**Upgrade to Elite (2,400 XP)**

✦ The voidblight fills 18 contiguous squares.

✦ Increase the voidblight's bonuses to attack rolls by 2.

✦ Increase all the voidblight's defenses by 2.

**Gates of Winter** **Level 16 Lurker**
Hazard XP 1,400

*The ambient temperature drops sharply, and hoarfrost gleams ahead. All is quiet . . . until a wall of ice rises violently before you.*

**Hazard:** On the hazard's turn, a wall of jagged ice rises from the ground. This hazard has a single origin square, but its effect is widespread.

**Perception**

No check is necessary to notice the area of the hazard. Between the triggering of the hazard and its attack, creatures can see the frost on the ground shift, rise, and crack.

✦ DC 25: The character notices an area of thick frost, which is the hazard's origin square.

**Additional Skill:** Arcana

✦ DC 25: If the character is aware of the thick frost in the origin square, he or she recognizes the hazard's nature.

**Initiative** +2

**Trigger**

The hazard normally triggers when a creature without the cold keyword comes within 20 squares of the origin square while the origin square has line of effect to that creature. Other triggers are possible. When triggered, the hazard rolls initiative. On its turn, the hazard creates an ice wall in a random part of the encounter area.

**Attack**

**Standard Action** **Area** wall 10 within 20 squares

**Effect:** A wall of ice erupts to a height of 6 squares. Any creature that starts its turn adjacent to the wall takes 2d6 + 6 cold damage. The wall blocks line of sight and blocks movement. If the wall appears in a space that a creature occupies, the creature slides to one side of the wall (roll randomly for direction) and is knocked prone.

The wall remains until the start of the hazard's next turn and then crumbles into broken ice. The space formerly occupied by the wall is difficult terrain, which lasts until the end of the encounter.

**Countermeasures**

✦ A character can make a DC 20 Acrobatics check or a DC 25 Athletics check as an opportunity action when the wall appears in that character's space; if the check succeeds, the character can shift 2 squares away from the wall and make a saving throw to avoid being knocked prone. A character who is normally allowed a saving throw to avoid being knocked prone gains a +2 bonus to the roll.

✦ With a DC 20 Arcana check or Nature check made as a minor action, a character can determine the rough shape and location of the next wall.

✦ A character can attempt a DC 22 Arcana check as an immediate interrupt when the wall appears; if the check succeeds, the character places 1 square of the wall in a different contiguous square. The wall cannot enter the original square. For every 5 points by which the check result beats the DC, the character can alter the location of 1 extra square.

✦ With a DC 25 Arcana check as a standard action, a character can siphon energy from the origin square. After three such successful checks, the hazard is disabled for 24 hours.

✦ A character who makes a DC 20 Athletics check as part of a move action can smash through part of the wall, leaving a hole and treating the square as difficult terrain instead of blocking terrain. The character takes 1d6 + 6 cold damage for moving through the wall this way.

**Upgrade to Elite (2,800 XP)**

✦ Increase the DCs for Perception, Acrobatics, Athletics, Arcana, and Nature checks by 2.

✦ The walls crumble into difficult terrain after 2 rounds. Thus, after the first round, the hazard has two walls in existence at a time, rather than one. These walls can cross each other.

*Gates of Winter*

**Elemental Eruptions** **Level 18 Obstacle**
Hazard XP 2,000

*The area ahead shudders, projecting heat and small lightning arcs. Suddenly, part of it bursts upward, exploding in elemental fury.*

**Hazard:** A surface contains unstable elements in an area 10 squares on a side. Five squares within that area are ready to burst.

**Perception**

No check is required to notice the area of the hazard.

✦ DC 25: The character can discern if any adjacent squares are ready to burst.

**Additional Skill:** Arcana

✦ DC 25: The character recognizes the hazard's nature.

**Trigger**

When a nonelemental creature enters a square that is ready to burst, that square attacks with a random effect. Once it attacks, the square is no longer ready to burst, but a secondary effect persists (see below).

**Primary Attack**

**Opportunity Action** **Melee**

**Primary Target:** The triggering creature

**Primary Attack:** +22 vs. Fortitude

JASON A. ENGLE

**Hit:** Roll a d8 to determine the attack's effect.

**1—Acid:** 2d6 + 5 acid damage, and ongoing 10 acid damage (save ends).

**2—Cold:** 2d8 + 5 cold damage, and the primary target is immobilized until the end of its next turn. *Aftereffect:* The primary target is slowed (save ends).

**3—Fire:** 2d10 + 5 fire damage, and ongoing 5 fire damage (save ends). Whenever the primary target takes the ongoing damage, each creature adjacent to it takes 5 fire damage.

**4—Force:** 1d10 + 5 force damage, and the primary target is hurled 20 feet into the air, falls back into its original square (taking 2d10 damage), and is knocked prone.

**5—Lightning:** 3d6 + 5 lightning damage, and the primary target is dazed (save ends).

**6—Poison:** 3d6 + 5 poison damage, and ongoing 5 poison damage (save ends). Whenever the primary target takes the ongoing damage, each creature adjacent to it takes 5 poison damage.

**7—Radiant:** 2d6 + 5 radiant damage, and the primary target is blinded until the end of its next turn. *Aftereffect:* The primary target takes a -2 penalty to attack rolls (save ends).

**8—Thunder:** 3d6 + 5 thunder damage, and the primary target is pushed 1d6 squares, knocked prone, and deafened (save ends).

**Miss:** Half damage.

**Effect:** The hazard makes a secondary attack that is a close burst 1 centered on the primary target.

**Secondary Attack**

**Secondary Target:** Each creature in burst

**Secondary Attack:** +21 vs. Reflex

**Hit:** 1d8 + 5 damage of the same type as the primary attack.

**Effect:** The burst creates an area of difficult terrain that lasts until the end of the encounter. When any creature enters the area or starts its turn there, the hazard makes another secondary attack as an opportunity action. 7On the hazard's turn each round, this area of effect expands by 1 square to a maximum of 4 squares.

**Countermeasures**

✦ With a DC 25 Acrobatics check made as part of a move action, a character can move through the hazard's area without triggering the primary attack. If the character ends its movement in an untriggered square that is ready to burst, it triggers that square's primary attack.

✦ A character who makes a DC 20 Arcana check as a minor action can choose 1 square of the hazard's area that does not erupt this round.

✦ A character who makes a DC 25 Arcana check as a standard action can force 1 square that is ready to burst to erupt immediately, or can disperse its elemental energy so that the square cannot erupt for 24 hours.

**Upgrade to Elite (4,000 XP)**

✦ Increase the DCs for Perception, Acrobatics, and Arcana checks by 2.

✦ 10 squares within the area are ready to burst.

## Elemental Transformation Field — Level 18 Lurker

Hazard — XP 2,000

*A hazelike heat rising from a desert fills the area with an oddly hued distortion. Suddenly, a companion is horribly transformed.*

**Hazard:** The air shimmers over a wide area, concealing 10 random squares of this hazard.

**Perception**

No check is required to see the air shimmering.

✦ DC 25: The character can discern if any adjacent squares contain an elemental transformation field.

**Additional Skill:** Arcana

✦ DC 25: The character recognizes the hazard's nature.

**Trigger**

When a creature enters one of the field's squares, the hazard attacks.

**Attack**

**Opportunity Action** **Melee**

**Target:** The triggering creature

**Attack:** +21 vs. Will

**Hit:** The target becomes a creature of flame, taking ongoing 15 fire damage (save ends). Until it saves against the ongoing fire damage, the following effects also apply.

✦ The target is immune to fire damage from any source other than this hazard.

✦ All the target's attacks deal fire damage rather than their normal type.

✦ Any creature that starts its turn adjacent to the target takes 10 fire damage.

*First Failed Saving Throw:* The target is also slowed (save ends both), as more of its substance is transformed into fire.

*Second Failed Saving Throw:* The target is also immobilized (save ends all).

*Third Failed Saving Throw:* The target is permanently transformed into a nonliving column of semisolid fire and stops taking the ongoing fire damage from this hazard. Each creature that begins its turn adjacent to the column of fire takes 10 fire damage. The Remove Affliction ritual can restore the target to normal.

**Special:** The elemental transformation field does not attack creatures that are already under the effect of a previous successful attack by this hazard. Creatures already immune to fire are unaffected by this hazard.

**Upgrade to Elite (4,000 XP)**

✦ Increase the DCs for Perception and Arcana checks by 2.

✦ The hazard deals an additional type of damage. Each attack has a single damage type, but the hazard can target a creature already under the effect of one attack with another that deals the second damage type. (Replace "fire" with the appropriate type.)

**Skystone Field** **Level 19 Lurker**
Hazard XP 2,400

*With a resounding crack, a chunk jettisons from the surface beneath you and rockets upward.*

**Hazard:** When this hazard is triggered, bits of a solid horizontal surface shoot upward, potentially taking creatures with them. The hazard occupies an area at least 10 squares on a side; random squares within the area attack.

**Perception**

✦ DC 22: The character notices an array of cracks running throughout the surface and sees that certain blocks bounded by the cracks twist and shudder.

**Additional Skill:** Nature

✦ DC 27: As Perception, above.

**Initiative** +2

**Trigger**

The trigger for a skystone field can be random, caused by the actions of creatures, or timed. When the field is triggered, it rolls initiative. Between the triggering of the field and its attack, characters in the area know that something is amiss—different bits of ground in the area begin to vibrate and twitch violently. On the field's turn, a random square within the skystone field is the origin of a close burst attack. The same square cannot attack more than once in an encounter.

**Attack**

**Standard Action** **Close** burst 1
**Target:** Each creature in burst
**Attack:** +22 vs. Reflex
**Hit:** The target is flung 30 feet into the air, then falls back down. It takes 3d10 damage and falls prone in a random square within 3 squares of its starting position.
**Miss:** The target slides to an unoccupied square adjacent to the burst. If no such square is available, the attack hits automatically.
**Effect:** The burst creates an area of difficult terrain.

**Countermeasures**

✦ With a DC 27 Nature check as a minor action, a character can determine the square on which the hazard will center its attack during its next turn.
✦ A character who knows which square of the hazard will attack next can attempt a DC 22 Arcana check or Thievery check as a standard action. On a successful check, the character stabilizes that square so that the hazard does not attack in that round.

**Upgrade to Elite (4,800 XP)**

✦ Increase the DCs for Perception and Nature checks by 2.
✦ The hazard attacks twice each round.

**Lightningstone Field** **Level 21 Warder**
Hazard XP 3,200

*A faint waver disturbs the air, and the smell of ozone brushes your nostrils. You feel a rumbling in your bones just before a massive lightning strike lances down.*

**Hazard:** A lightningstone field is an area charged with the potential of a lightning storm. When a creature enters the area, it disrupts the field, causing a thunderous lightning discharge. The field usually occupies an area 10 squares on a side. Predators and scavengers near a lightningstone field are attracted by the sound of the explosion.

**Perception**

✦ DC 22: The character recognizes that something is amiss in the area.

**Additional Skill:** Arcana

✦ DC 27: The character recognizes the hazard's nature.

**Initiative** +2

**Trigger**

When a creature enters a square of the lightningstone field, the hazard rolls initiative.

**Attack**

**Standard Action** **Melee**
**Target:** Each creature in the hazard's area
**Attack:** +26 vs. Fortitude
**Hit:** 1d10 + 3 lightning damage. Each creature adjacent to the target takes 5 thunder damage and is pushed 1 square.
**Miss:** Half damage.

**Upgrade to Elite (6,400 XP)**

✦ Increase the lightningstone field's bonus to attack rolls by 2.
✦ A target hit by the hazard is also dazed until the end of its turn.

**Void Crust** **Level 22 Obstacle**
Hazard XP 4,150

*The surface ahead seems dry and barren, and a chill in the air weighs on your spirit. Suddenly, the ground opens to expose a roiling void.*

**Hazard:** When a creature within the hazard acts violently, the area beneath the creature gives way, dropping it into a seething void below. A void crust typically occupies 20 to 30 contiguous squares, each of which must share a side, not just a corner, with at least one other void crust square.

**Perception**

✦ DC 24: The character notices that the area ahead is treacherous and fragile.

**Trigger**

If a creature attempts to move out of a square of void crust without shifting, makes an attack while in a square of void crust, or is hit by an attack while in a square of void crust, the hazard attacks.

**Attack**

**Opportunity Action** **Melee**
**Target:** The triggering creature
**Attack:** +25 vs. Reflex
**Hit:** 1d8 + 3 damage, and the target disappears into the void. It instantly reappears 20 feet above a random square 1d4-1 squares away and falls back to the surface, taking 2d10 damage. If the creature falls into its original space, it again takes damage and disappears into the void, falling again in another square.
**Miss:** The target slides to an unoccupied adjacent square. If no such square is available, the attack hits automatically.
**Effect:** The space vacated by the target remains open to the void. A creature forced into the opening can try to catch itself by attempting a saving throw before falling in. If it fails the saving throw, it is automatically hit by the void crust's attack.

**Chaotic Planar Rift** **Level 23 Elite Blaster**
Hazard XP 10,200

*A brilliant stream of crackling acid leaps from one hunk of floating matter to another like lightning, then transforms into a rain of silver arrows that plummets downward.*

**Hazard:** A chaotic planar rift is an unstable, plane-crossing phenomenon that randomly steals objects and energy from elsewhere and deposits them to harmful effect in the Elemental Chaos. The hazard typically covers a space at least 10 squares on a side.

**Perception**

Change occurs so rapidly and wildly in the area of a chaotic planar rift that an active one is impossible to miss.

✦ DC 29: The character detects subtle changes in the air and nearby surfaces that herald the imminent opening a chaotic planar rift.

**Initiative** +4

**Trigger**

The trigger of a chaotic planar rift might be random or the result of a living creature first entering the field. Once triggered, the hazard rolls initiative. On its turn, the chaotic planar rift attacks from a random square within its area.

**Attack**

**Standard Action** **Close** burst 1
**Target:** Each creature in burst
**Attack:** +26 vs. Reflex
**Hit:** Roll a d6 to determine the attack's effect.

**1—Greatsword:** 2d10 + 8 damage, and one creature adjacent to the target takes 5 damage. The sword then vanishes.

**2—Sprouting Tree:** 1d8 + 5 damage, and the target is knocked prone. One square of the target's space becomes difficult terrain until the end of the encounter.

**3—Swarm of Acid Toads:** 2d8 acid damage, and ongoing 10 acid damage (save ends). The toads then burrow into the ground and disappear.

**4—Quicksand:** The target is restrained (save ends). *Aftereffect:* The target is immobilized (save ends). A close burst 2 centered on the target is difficult terrain until the end of the encounter.

**5—Stone Casket:** Ongoing 10 damage, and the target is entombed within the casket (save ends both). While entombed, the target has line of sight or line of effect to no creature, and no creature has line of sight or line of effect to the target. Other creatures can attack the casket to release the entombed target (AC 5; Reflex 5, Fortitude 10; hp 40).

**6—Silver Headband:** The target gains vulnerable 20 to all damage (save ends).

**Miss:** Roll a d4 to determine the attack's effect.

**1—Undead Shield:** Zombie arms claw free of the ground in the target's space. When the target moves, the undead arms move with it. They do not attack the target. The next attack against the target hits the arms instead, and they dissolve into dust.

**2—Refreshed:** The target regains a healing surge and, if expended, its second wind.

**3—Simulacrum:** A duplicate of the target appears 1d6 squares away from it. On the target's next turn, both it and the simulacrum take actions simultaneously; these actions need not be the same. The simulacrum can make attacks just as the original can. The simulacrum then vanishes.

**4—Roots and Branches:** Grasping vegetation fills a close burst 3 centered on the target; +28 vs. AC; 1d12 + 6 damage, and the target is grabbed (escape DC 33).

**Corruption Sludge Pool** **Level 28 Obstacle**
Hazard XP 13,000

*The surface of this gooey, black-green pond is broken by bits of flesh. Serpentine forms disturb the fetid pool, revealing a flash of fang or a glimpse of bulging eye.*

**Hazard:** These brackish, pulsating puddles of hate, madness, and decay inundate the lower regions of the Abyss. They occur less frequently in other parts of the Elemental Chaos and on other planes. Sludge pools are typically 5 squares on a side but can grow larger, especially in the most dangerous parts of the Abyss.

**Perception**

No check is required to notice the pool.

**Additional Skill:** Arcana

✦ DC 28: The character recognizes the hazard's nature.

**Initiative** +2

**Trigger**

At the start of the encounter, roll initiative for the hazard. It makes a *lashing tendril* attack once each round when creatures are within reach. When any creature enters the pool's area or begins its turn there, the hazard makes a *sludge latch* attack.

**Lashing Tendril Attack**

**Standard Action** **Melee** 3
**Target:** One nondemon creature
**Attack:** +31 vs. Reflex
**Hit:** 1d8 +6 acid damage, and ongoing 15 acid damage (save ends). The target is pulled 4 squares toward any square of the pool.

**Sludge Latch Attack**

**Opportunity Action** **Melee**
**Target:** The triggering creature
**Attack:** +31 vs. Fortitude
**Hit:** 2d8 + 10 acid damage, and the target is grabbed (escape DC 26), takes ongoing 15 poison damage (save ends), and is exposed to level 28 demon pox (see page 16).

**Countermeasures**

✦ A character can ready a melee attack against a tendril that attacks him or her or attacks any ally adjacent to that character (an attack against any of these targets counts as one trigger for this readied action). On a hit (all the tendril's defenses are 40), the hazard can't make *lashing tendril* attacks (save ends).

**Upgrade to Elite (26,000 XP)**

✦ Increase the hazard's bonus to attack rolls by 2.
✦ The pool makes two *lashing tendril* attacks in each round. A separate readied action is required to attack and suppress each tendril.
✦ Increase the damage of the *sludge latch* attack to 3d8 + 10.

**Multielemental Transformation Field** **Level 28 Lurker**
Hazard XP 13,000

*Just at the edge of your vision, something flickers.*

**Hazard:** The air shimmers over a wide area, concealing 10 random squares of this hazard.

**Perception**

No check is required to see the air shimmering.

✦ DC 33: The character can discern if any adjacent squares contain a multielemental transformation field.

**Additional Skill:** Arcana

✦ DC 33: The character recognizes the hazard's nature.

*Multielemental Transformation Field*

**Trigger**
When a creature enters one of the field's squares, the hazard attacks.

**Attack**
**Opportunity Action** **Melee**
**Target:** The triggering creature
**Attack:** +31 vs. Will
**Hit:** The target becomes a creature of mixed elements, taking ongoing 5 acid damage, ongoing 5 cold damage, ongoing 5 fire damage, ongoing 5 lightning damage, ongoing 5 poison damage, and ongoing 5 thunder damage (save ends all). Until it saves against the ongoing damage, the following effects also apply.
✦ The target is immune to acid, cold, fire, lightning, poison, and thunder damage from any source other than this hazard.
✦ Any creature that starts its turn adjacent to the target takes 15 damage of one of the following types, determined randomly: acid, cold, fire, lightning, poison, or thunder.
*First Failed Saving Throw:* The target is also immobilized (save ends both).
*Second Failed Saving Throw:* The target is permanently transformed into a nonliving column of mixed elements and stops taking ongoing damage. The transformation field repeats the attack against each creature adjacent to the target. In addition, each creature that begins its turn adjacent to the column of elements takes 10 damage of one of the following types, determined randomly: acid, cold, fire, lightning, poison, or thunder. The Remove Affliction ritual can restore the target to normal.
**Special:** A multielemental transformation field does not attack creatures that are already under the effect of a previous successful attack from the hazard.

# SKILL CHALLENGES

Although the Plane Below is home to myriad enemies, it also presents challenges that cannot be overcome simply by fighting. Simply traversing the ever-shifting landscape of the Elemental Chaos can be a trial. Even in conversation, the Plane Below is unpredictable. Some elemental inhabitants are open to parley—but only if the bargainer obeys certain rules of decorum, abates the fear of the respondent, or clearly demonstrates the advantages of making a deal.

The following example skill challenges exemplify those that might be encountered by characters exploring the Elemental Chaos. Refer to the table in the sidebar to set the challenge DCs at the appropriate difficulty for your group.

## Bargaining with an Efreet

Arrogant and cunning, efreets are hard bargainers. They loathe owing anything to anyone and love to trick creatures into service. The characters must obtain an object, information, or favor from an efreet without paying more than a reasonable price.

This skill challenge can be a starting point for a party that must negotiate with various members of an efreet organization. That effort most likely involves dealing with several levels of efreet society. In that case, the challenge could involve a higher complexity, take more time, or be broken into several parts.

**Level:** Two levels higher than the level of the party, or the same level as the efreet (XP equal to the reward for one standard monster of the challenge's

### Difficulty Class

The table below, reproduced from the *Dungeon Master's Guide*, provides DCs for easy, moderate, and hard skill checks according to the level of a skill challenge. Use the appropriate numbers when tailoring a skill challenge to a particular level.

**SKILL CHECK DIFFICULTY CLASS BY LEVEL**

| Level | Easy | Moderate | Hard |
|---|---|---|---|
| 1st-3rd | 5 | 10 | 15 |
| 4th-6th | 7 | 12 | 17 |
| 7th-9th | 8 | 14 | 19 |
| 10th-12th | 10 | 16 | 21 |
| 13th-15th | 11 | 18 | 23 |
| 16th-18th | 13 | 20 | 25 |
| 19th-21st | 14 | 22 | 27 |
| 22nd-24th | 16 | 24 | 29 |
| 25th-27th | 17 | 26 | 31 |
| 28th-30th | 19 | 28 | 33 |

JULIE DILLON

level, or two standard monsters of the efreet's level if the efreet is elite).

**Complexity:** 1 (requires 4 successes before 3 failures), or 2 (requires 6 successes before 3 failures) if the efreet is elite.

**Primary Skills:** Arcana, Bluff, Diplomacy, Intimidate.

*Arcana (moderate DC by level, standard action):* The character displays a knowledge of efreet culture. If the check result beats the DC by 5 or more, he or she mentions something personally relevant to the efreet in question, such as a notable ancestor or a tale of its noble house. Success on this check grants a +2 bonus to any subsequent Diplomacy checks by the character during this challenge. This skill can be used to gain 1 success in this challenge.

*Bluff (hard DC by level, standard action):* Fast-talking an intelligent and deceptive efreet is difficult, but playing the game well can impress the creature even when it sees through the lies. The first time this check fails by less than 5, the efreet is amused at the attempt, and that result doesn't count as afailure.

*Diplomacy (moderate DC by level, standard action):* Efreets are vain—they expect lesser creatures to show proper deference during negotiations. A character who is respectful and knows one's place has the easiest road to success. If the check result beats the DC by 5 or more, he or she mentions something personally relevant to the efreet in question, granting a +2 bonus to that character's subsequent Diplomacy checks during this challenge.

*Intimidate (hard DC by level, standard action):* Efreets don't respond well when harsh tactics are used against them. Only a truly fearsome creature can intimidate an efreet. Citing a reputation for slaying monsters might work, however—efreets respect battle-hardened types. A successful check with this skill counts as 2 successes toward completing the skill challenge, but only one such result can be gained. Additional attempts to use Intimidate anger the efreet and result in failed skill checks.

**Secondary Skills:** Acrobatics, Thievery.

*Acrobatics or Thievery (hard DC by level, standard action, after an Arcana, Bluff, Diplomacy, or Intimidate check fails):* An angry efreet can sometimes be mollified with entertainment, such as impressive acrobatic tricks or dazzling sleight of hand. A successful check with one of these skills negates a failure in this challenge but does not count as a success.

**Success:** If the characters earn enough successes, they secure what they want from the efreet at a fair price. A party that succeeds in the skill challenge without gaining more than 1 failure might even earn a small discount from an impressed efreet.

**Failure:** If the characters earn 3 failures, they still acquire what they want, but only at a substantial markup or only if they agree to do a favor for the efreet. The favor might need to be undertaken immediately, but efreets often favor open-ended requests that place others in their debt for an indefinite period.

## Reasoning with a Slaad

Few creatures embrace chaos as thoroughly and willfully as slaads do. Communicating and reasoning with these creatures is incredibly difficult.

This skill challenge is appropriate when the characters must interact with a slaad other than through combat. It could be as simple as delivering an important message or as complicated as trading. The negotiation could also be an attempt to convince

JAKE MASBRUCH

the slaad to act in a desired way, such as leaving the party alone.

**Level:** Equal to the level of the party, or the level of the slaad (XP equal to the reward for one standard monster of the challenge's level, or two standard monsters of the challenge's level if the slaad is elite).

**Complexity:** 1 (requires 4 successes before 3 failures), or 2 (requires 6 successes before 3 failures) if the slaad is elite.

**Primary Skills:** Bluff, Diplomacy, Intimidate.

*Bluff (hard DC by level, standard action):* Deceiving a slaad is not easy, given its strange view of the universe. When a bluff does succeed, the creature is excited, believing the character has revealed a new aspect of reality it had not yet considered.

*Diplomacy (hard DC by level, standard action):* A slaad does not recognize the rules of diplomacy; it sees flattery or reasoning as sly trickery, which angers it. Once any character has failed a Diplomacy check, the next failure with this skill counts as 2 additional failures in the skill challenge. A successful Arcana check (see below) warns the character about this extreme reaction.

*Intimidate (moderate DC by level, standard action):* Although a slaad is easily antagonized by other approaches, it responds well to intimidation. It views bullying as the only acceptable form of social interaction.

**Secondary Skills:** Arcana, Insight.

*Arcana (hard DC by level, free action):* The character grasps how slaads react to communication. The character learns the difficulty of the primary skill checks, as well as the consequences of a second failed Diplomacy check (see above). This skill can be used to gain 1 success in this challenge.

### Reasoning with the Unreasonable

Those who are not insane might have difficulty trying to understand a slaad's bizarre mindset. Even a simple conversation is a frustrating experience. Attempting to learn anything from a slaad can be downright maddening. The following exchange depicts the difficulty of reasoning with a slaad.

*Udal the Sword:* Listen, creature, we are not here to harm you—we merely seek the Cosmic Door, through which we may see all the many planes briefly align! Surely you must know of it?

*Slaad:* Waves crash across the sky.

*Udal:* Er, yes . . . But listen! I know something of you slaads. You seek to find a path into a greater reality and escape the prison of the known, do you not? If you help us find the Cosmic Door, you serve your own ends, too!

*Slaad:* The face behind your face is a lie. The Door is a lie! You are a lie!

*Insight (hard DC by level, standard action):* Although slaads are creatures of chaos, they still follow a form of twisted logic. These rules change quickly, however. An insightful character picks up variances in the tone, context, and relationship between the parties, through the slaad's gestures, body language, and continual gibbering. A success with this skill grants a +2 bonus to subsequent Bluff, Diplomacy, and Intimidate checks during the skill challenge. This skill can be used to gain 1 success in this challenge.

**Success:** If the characters earn enough successes, they reach an understanding with the slaad.

**Failure:** If the characters get 3 failures, the slaad does not understand them and responds in a random way. Roll a d6 and consult the following table to determine its actions. If you prefer, choose the option that best suits the current adventure.

| d6 | Reaction |
|---|---|
| 1 | The slaad believes the characters no longer exist and ignores them unless they attack it. |
| 2 | The slaad understands the opposite of what the characters are trying to convey. It cannot be persuaded otherwise except through a new skill challenge, increasing the complexity by 1. |
| 3 | The slaad runs away, convinced that the characters are powerful individuals that wish to do it harm. |
| 4 | The slaad croaks continuously and loudly until the characters attack it or depart. This croaking attracts the attention of other slaads or hostile creatures in the area. |
| 5 | The slaad's head explodes, attacking in a close burst 3; skill challenge level + 4 vs. Fortitude; 2d4 + 5 damage. The rest of the slaad leaves.* |
| 6 | The slaad attacks in a rage. Whenever it hits with a melee attack, the attack deals 1d6 extra damage. |

*The characters do not gain experience for "killing" this slaad. It re-forms its head in a short time.

## Repairing a Lightning Skiff

Sleek *lightning skiffs* are the fastest means of traveling the Elemental Chaos, but their construction, and the potent forces that propel them, renders them accident prone.

In this skill challenge, the characters must repair a damaged *lightning skiff* under a time constraint. Perhaps the skiff is riding a rough storm and is in danger of dashing against an earthmote, or the characters must launch before a demon horde catches up with them.

**Level:** Equal to the level of the party (XP equal to the reward for an elite monster of the party's level).

**Complexity:** 2 (requires 6 successes before 3 failures).

**Primary Skills:** Acrobatics, Arcana, Athletics, Thievery.

*Acrobatics (moderate DC by level, standard action):* The character uses agility and balance to aid in repairs. This skill can be used to gain 1 success in this challenge.

*Arcana (moderate DC by level, standard action):* The character channels mystic forces to repair part of the *lightning skiff*.

*Athletics (moderate DC by level, standard action):* The character uses might and physical prowess to aid in repairs. This skill can be used to gain 1 success in the challenge.

*Thievery (hard DC by level, standard action):* The character relies on nimble fingers and finesse with mechanical and magic devices to repair part of the *lightning skiff*.

**Secondary Skills:** Nature, Perception, special.

*Nature (hard DC by level, once per hour):* If the characters have the time and the opportunity, one or more of them can forage for items useful to the repairs. A successful check with this skill grants a +2 bonus to subsequent Arcana or Thievery checks in this challenge. The characters can attempt this check only once in this challenge.

*Perception (hard DC by level, immediate interrupt, when an Arcana or Thievery check is failed):* The character points out a repair blunder before it happens. Doing so negates the triggering check's failure but does not earn a success in this challenge.

*Action Point (special, free action):* An artificer can spend an action point to negate 1 failure in this challenge.

**Success:** If the characters earn 6 successes, the *lightning skiff* is repaired.

**Failure:** If the characters get 3 failures, the *lightning skiff* is still damaged and cannot be repaired by the group. The party must find a new ship or someone more knowledgeable who can repair this one.

If the group includes an artificer, he or she can spend an action point to restart this skill challenge.

## Sailing the Sea of Fire

While the characters are crewing a *planar dromond* or another vessel capable of sailing the Sea of Fire, they work to avoid hazards and navigate the currents.

This skill challenge assumes the characters can steer the ship, and that the travel time is five days. The same basic structure can be used for shorter journeys, or you can connect two or more skill challenges for longer journeys.

Each day of the journey, unless at least one character makes an Arcana check to maintain the proper heading (see that entry, below), the party gains 1 failure. In addition, characters must make at least two different Athletics, Acrobatics, or Endurance checks each day for upkeep of the vessel or gain 1 failure. If they get a success with two upkeep checks, the group earns 1 success. Otherwise, they gain 1 failure.

Each character can make a single primary or secondary skill check each day.

**Level:** Equal to the level of the party (XP equal to the reward for four standard monsters of the party's level).

**Complexity:** 4 (requires 10 successes before 3 failures).

**Primary Skills:** Arcana, Athletics, Acrobatics, Endurance.

*Arcana (moderate DC by level):* The character draws on his or her understanding of the Elemental Chaos to prepare a heading and keep the ship on that course. Up to two allies can aid in this check.

*Athletics (moderate DC by level; upkeep check):* The character uses might to aid in upkeep and repairs. Allies cannot aid this check. A successful check with this skill contributes to the skill challenge as described above.

*Acrobatics (moderate DC by level; upkeep check):* The character takes advantage of his or her flexibility to aid in upkeep and repairs. Allies cannot aid this skill check. A successful check with this skill contributes to the skill challenge as described above.

*Endurance (moderate DC by level; upkeep check):* Through sheer grit, the character aids in upkeep and repairs. Allies cannot aid this skill check. A successful check with this skill contributes to the skill challenge as described above.

**Secondary Skills:** Nature, Thievery.

*Nature (Hard DC by level):* The character advises the navigator. If this day's Arcana check failed, a successful check with this skill negates the skill challenge failure. If the Arcana check succeeded, the character who makes the next day's Arcana check gains a +2 bonus.

*Thievery (Hard DC by level):* The character creates a makeshift patch to the ship's hull or some other clever repair). If one or none of this day's upkeep checks succeeded, a successful check with this skill negates the skill challenge failure. If one or more of those checks succeeded, the characters who make the next day's upkeep checks each gain a +2 bonus.

**Success:** If the characters earn 10 successes, they reach their destination safe and sound.

**Failure:** If the characters earn 3 failures, they do not manage to reach their destination on their own. Because failing this skill challenge could leave the party stranded, you should plan for that possibility. The characters might be attacked by pirates, seizing a new vessel if they win the fight or being captured if they lose. Alternatively, the characters could be met by a friendly crew that leads them to shore (perhaps for a price), or might limp into a nearby port short of their destination.

# CAMPAIGN ARCS

The Elemental Chaos is easy to use in passing—an encounter with an elemental here, an adventure within a planar conjunction there. But storylines involving the Plane Below need not be so limited. Making the Elemental Chaos the centerpiece of a campaign is an interesting and creatively satisfying way to integrate the Plane Below into your game.

Not all the campaign's adventures need take place in the Elemental Chaos—in fact, they probably shouldn't. Much of the Elemental Chaos's appeal lies in its alien nature, and overexposure risks rendering it mundane. In addition, the plane's environment is dangerously inappropriate for heroic tier characters. The influence of the Elemental Chaos can be felt throughout the campaign, even though only some events occur there.

The *Manual of the Planes* supplement discusses four varieties of planar campaigns. In an origin of monsters campaign, the planes are the source of adversaries, but the party rarely or never travels beyond the world. An exotic adventure campaign allows the characters to travel to another plane on occasion. In a planar progression campaign, the characters visit multiple planes as they work their way through the storyline. An extraplanar campaign takes place entirely beyond the world.

Each of the four campaign arcs that follow illustrates one of these campaign types, focused on or based around the Elemental Chaos. You can use them as frameworks to fill in with details as you see fit, or as inspiration for designing your own campaign.

## Hidden Elements

The City of Brass has been recently shaken by upheaval. Clever and prepared efreets took advantage of the chaos, consolidating power and increasing the authority of their noble houses. So widespread was the turmoil that the city has come under the sway of a new Lord of the Efreets.

Sheikh Ma'mun is not one of the efreets on the rise. His intricate schemes were superseded by those of others who were luckier and acted more swiftly. Seething at the lost opportunity, Ma'mun has turned his attention to the world. If he cannot seize power from within, he will build supremacy from without.

### Heroic Tier: Rumors of War

The various communities from which the characters hail have formed an alliance and are nervously exchanging messengers. Their leaders have heard tales that the great city-state of Hassiek is massing its troops for war. The militant state has already conquered a number of surrounding villages and seems poised for expansion. Over time, the heroes are hired more and more frequently to escort important individuals between towns to plan for war, or to gather intelligence in the areas conquered by Hassiek. They discover that the city-state is indeed expanding, and that its forces include elemental beings, demons, and arcane practitioners that have a strong elemental focus.

As the characters reach the top of the heroic tier, they have learned that Hassiek's leaders are being advised by cultists dedicated to a primordial and that saboteurs have infiltrated the governments standing against Hassiek. When the characters return to their home base with this news, the alliance vows to roust these enemies and stand strong against Hassiek.

### Paragon Tier: Scorched Earth

Given what the characters have learned, the allied leaders realize that war with Hassiek is not only inevitable but necessary. The cultists must be prevented from carving out their own kingdom in the region. The characters' adventures in the paragon tier vary, but nearly all of them relate to the war in some way. The characters might be assigned to stop agents of Hassiek from acquiring powerful magic items or rituals, to defend towns from sieges they cannot survive without assistance, and to undertake missions of infiltration and sabotage.

All the while, the influence of the Elemental Chaos on Hassiek grows ever more apparent. Elementals, demons, and archons appear with greater frequency among the city-state's forces. Agents of Hassiek seed settlements with slaad tadpoles as biological weapons to spread chaos phage (page 142). The characters learn that some prisoners taken by Hassiek have been sent elsewhere for purposes unknown. Finally, they discover that Hassiek's leaders are mere puppets of their advisors—a cadre of efreets ruled by Ma'mun.

### Epic Tier: Victory or Death

Horrid creatures spawned in the Plane Below rampage across the countryside, terrorizing innocent folk, and dire portents abound. Elemental cultists, plotting with the efreets, are developing rituals to tear open rifts to the Elemental Chaos, flooding the besieged towns with raw elemental energy and furious storms. The characters must halt these efforts, and this endeavor occupies the first few levels of the epic tier. In doing so, the characters learn that Hassiek's captives are being sent to the Elemental Chaos, there to swell the slave ranks of Ma'mun's household.

Eventually, the characters discover that Ma'mun seeks to conquer a large portion of the world and

use its resources either to overthrow the Lord of the Efreets, or—if that fails—to found his own elemental kingdom in the world. Only a final, desperate thrust into the Elemental Chaos to confront Ma'mun can stop this inexorable march. The characters must defeat the efreet lord to prevent him from transforming their homes and the surrounding lands into a realm of slavery, fire, and death.

## To Harness the Chaos

Solariel is an angel with a mission: Destroy the primordials once and for all. For this immortal creature, imprisonment of the primordials is not enough. As long as they live, they could break free. Even if they do not escape, many creatures still worship them; the primordials' destruction would send the gods' enemies into turmoil. Most immortals believe that trying to destroy the primordials is a fool's errand, but Solariel's divine master is curious to see what the angel might accomplish and has given it free rein.

Solariel knows that destroying the primordials will not be easy, but it has a plan. Although they were born of the Elemental Chaos, the primordials have definite bodies and thoughts, making them points of order in the Plane Below. The angel reasons that the best way to destroy them is to harness a force of purest entropy: the slaads.

### Heroic Tier: Book Work

The characters meet Solariel early in their careers. The angel might be impressed by their success on a mission or by their faith, or it might choose them out of desperation. The immortal presses them into service but does not inform them of its overarching scheme, explaining only that it needs help carrying out a plan for a major triumph of good over evil.

Solariel might have a number of adventuring parties in its service, but the characters prove the most capable. The angel observes the characters as they progress through the heroic tier, occasionally giving them guidance or a rewarding assignment. These adventures occur in the world and are largely unrelated to Solariel's plan.

At Solariel's behest, the characters steal a book of primordial lore. This act earns them the enmity of a cult dedicated to the primordial Mual-Tar, also known as the Thunder Serpent (*Manual of the Planes*, page 70). The cult dispatches elementals and initiates to destroy the party. As the characters approach the paragon tier, they manage to annihilate the cult, but its leader escapes. Solariel sends the party into the Elemental Chaos on a *spelljammer* to capture the fleeing head cultist. During this journey, the party encounters slaads and witnesses firsthand their destructive power.

### Paragon Tier: Legwork

The characters return to the world and engage in a few side adventures. Word of their activities has spread, and they must fend off attacks from other primordial cults even in the midst of unrelated activities. At Solariel's urging, they launch a preemptive strike against an even stronger cult, attacking its stronghold and defeating the giant that rules it.

When the characters are about halfway through the paragon tier, Solariel discloses part of the grand plan to them. It wants to tame the slaads, or at least curtail their destructive impulses, and is ready to put this idea into motion.

First, the characters must return to the Elemental Chaos and confront slaads directly. The angel tasks the party with bringing back samples of slaad anatomy, including flesh, organs, and bones, as well as a living slaad tadpole. Solariel gives the characters control of the *spelljammer* and grants them wide discretion in how to confront the slaads. The immortal does suggest several areas they might search—one of which is the besieged githzerai monastery of Sanzerathad (page 86). The characters undertake a mission or two on behalf of the githzerai and win their trust. With these valuable allies, the party has a secure base of operations for continuing forays into the Plane Below.

### Epic Tier: The Work of Angels

By the time the characters reach the epic tier, they and Solariel have gathered all the information they need. Now the immortal explains the next stage of the plot. The characters might have serious misgivings about the idea, but the angel wins them over by emphasizing the great good that will follow the destruction of a primordial, perhaps hinting of one that is nearing escape.

To gain control over creatures as wild as the slaads requires something truly remarkable. The information uncovered points to Liricosa (page 148), a revered githzerai hermit who could be instrumental to the plan. Solariel believes that the monk has achieved such control over his body and his environment that, when equipped with an artifact called the *Scepter of Rulership*, he can control an entire army of slaads—at least for a short time. First, though, the artifact and Liricosa's aid must be secured.

Once they have accomplished these preliminary efforts, the characters and Solariel put the plan into motion. They gather a slaad army and assault a primordial in its prison realm, clashing with the most powerful of its followers and finally reaching its restrained body. Then everything goes wrong. The slaads, rather than destroying the primordial, destroy only its shackles. With a shriek of triumph, the horror breaks free. It dispatches Solariel with contemptuous ease, then turns toward the party. A final, cosmos-shaking battle ensues.

## The Bigger They Are . . .

In an age so long ago it is mythical, the gods and the primordials battled for sovereignty over creation. Numerous primordials, defeated but not slain, were bound in divine prisons and left afloat in the depths of the Elemental Chaos. One of these was Solkara, the Crushing Wave (page 152), an entity of unspeakable destructive might. Since that time, her loyal servants have struggled to free her by focusing elemental fire against the glacier that holds her.

The leader of one such sect is the mad storm titan Mirmakur, the Raving Priest (page 154). He has tried for centuries to free the primordial. Frustrated by his efforts in the Elemental Chaos, the titan has turned his eyes elsewhere. Mirmakur recently learned that sources of potent flame– perhaps intense enough to melt away Solkara's prison–exist outside the Plane Below. The titan will stop at nothing to gain this power.

### Heroic Tier: Tinder

During the course of a few otherwise unrelated adventures, the characters gradually become aware of something strange. In some of the dungeons and ruins they explore, they encounter an unusual number of elemental-oriented opponents–fire bats, lower-level magma beasts, galeb duhrs, and so forth. These creatures are not normal inhabitants of those areas, for they have slain native creatures. The elemental intruders appear to be searching for something.

At the same time, the characters learn about murders in various larger towns and cities, committed by undead creatures. The heroes might be drawn to investigate by curiosity, or might be hired to do so by frightened aristocrats or overwhelmed city administrators. They learn that the murder victims were clandestine members of diabolic cults, and that the undead questioned them about their fellow devil-worshipers. The party eventually follows the trail to the master of these undead, a vampire lord who dwells in the Shadowfell. The characters confront him, breaching his fortress and fighting their way through his undead minions. They discover that the vampire holds no malice toward the diabolists but is merely a link in the chain. He was hired to learn all he could about the region's devil cults, and his employer is a fire giant.

### Paragon Tier: Spark

As the characters return to their world, likely wondering why a fire giant is hiring undead to investigate devil cults, they find the region caught up in a furor.

JASON A. ENGLE

Giants of all varieties—including those not known for collaborating—have attacked several towns and are laying siege to major cities.

Much of the party's career at the paragon tier involves fighting off rampaging bands of giants, repelling their sieges, and rescuing their prisoners to learn more about what's going on. Eventually, the characters determine that every community being attacked is home to a cult of Mephistopheles. The giants are focusing their attacks on the cultists' homes and shrines and have taken numerous cultists alive. The characters might be inclined to leave the devil-worshipers to their fate, but innocents are also dying at the hands of the giants.

After working through ever more powerful foes, the characters learn that the giants are being directed from a fortress deep in the Elemental Chaos. They must explore portions of the plane and perhaps gather allies. In the end, they must infiltrate or assault a bastion teeming with giants and their archon guards. They confront the titan leaders and discover the truth of what's been happening: A storm titan priest of Solkara seeks to wrest the secret of hellfire from the worshipers of Mephistopheles. The titan, Mirmakur, believes that this flame, imbued with the diabolic power of damned souls, might be able to melt the divinely empowered ice that imprisons the Crushing Wave. If he is correct, a dreadful primordial could soon be loosed on the cosmos.

### Epic Tier: Flame

The epic tier adventurers engage in a prolonged race against time. While gathering information on Mirmakur, and perhaps Solkara and Mephistopheles, the characters must survive constant attacks from the storm titan's soldiers. Eventually, they track their attackers back to the Elemental Chaos and Mirmakur's lair, but the Raving Priest is long since gone. He has descended into the second layer of the Nine Hells with a cadre of his mightiest followers, seeking the source of hellfire.

Following the titan, the characters become embroiled in a war between the invading elemental creatures and Mephistopheles's most powerful operatives. Reluctantly, the party agrees to work alongside the devils against a common threat. After much efforts, Mirmakur finally manages to retrieve a quantity of hellfire contained in a mystical vessel. He leaves a sizable force to delay his enemies while he returns to the Elemental Chaos. The characters dispatch the rear guard and pursue. They arrive in time to confront the storm titan on the ice of Solkara's prison and try to stop Mirmakur before he unleashes the Crushing Wave.

## Planar Adventurers

The efreet noble Qassemi has trafficked with dark powers to contrive a sinister plan, but he needs help to pull it off. If he succeeds, he will strike a mortal blow against the githzerai of the Elemental Chaos, all the while maintaining deniability for any involvement. What begins as a series of planar jaunts ends in an agonizing decision and a fearsome confrontation.

This campaign arc begins and ends in the Elemental Chaos but has stops in every other plane. Characters of nearly any race—from githzerai to goblins to minotaurs—could be appropriate for this campaign.

### Heroic Tier: Mutiny on the Phelddagrif

The characters begin as slaves aboard a small *spelljammer* called the *Phelddagrif*. In their first adventure, they break free, overpower the ship's genasi captain, and take control of the vessel.

Shortly thereafter, the characters receive a message from the efreet noble Qassemi, owner of the *Phelddagrif*. Rather than being angry, the elemental being is impressed. He offers the escapees a deal: They can keep the *spelljammer*, without cost or pursuit, as long as they agree to work for him from time to time—no questions asked. If the characters press for details, the efreet explains only that certain tasks need performing, but he cannot take public responsibility for them.

Throughout the heroic tier, the characters travel the planes, visiting fantastic worlds and following adventure wherever it leads. The Feywild, the Shadowfell, and the world are likely spots for adventures in the heroic tier, but the party might also visit the Astral Sea. The group receives a few missions from Qassemi, consisting mostly of minor tasks involving the transport of cargo or personages.

### Paragon Tier: The Great Game

In the paragon tier, the characters become more entangled in Qassemi's affairs and his wheelings and dealings in the City of Brass. They infiltrate the stronghold of one rival efreet and attack the trading vessels of another. In between these assignments, the group continues its travels, likely visiting the otherworldly domains of the Astral Sea. As the characters approach the epic tier, Qassemi summons them to the Elemental Chaos. The efreet has a task for them: an assassination. He doesn't care if the heroes have moral objections to such an assignment—they agreed to their service and are bound by its terms. The target is an individual aboard a large *spelljammer* currently traveling somewhere in the Elemental Chaos.

### Epic Tier: Crashing the Gates

The assassination target is well protected by elemental creatures, golems, and other powerful beings. Investigation or observation reveals that the target is an elderly githzerai called Mericam. She is one of the Sustainers who protect Zerthadlun (*Manual of the Planes*, page 77) and is on a rare mission outside the city. Mericam explains that Qassemi wants her dead for the same reason that she is away from Zerthadlun—she is gathering allies to strike against Ashblack, a major vassal outpost of the City of Brass. The efreets of that stronghold are conspiring to destroy Zerthadlun. She insists that the characters choose a side.

If the characters complete their mission and kill Mericam, they are responsible for the destruction of the largest githzerai city in the cosmos, and that stigma haunts them for the remainder of their careers. If they choose to turn against Qassemi, they attack Ashblack at the head of a combined army of githzerai and elemental creatures. As the assault force occupies the bulk of Qassemi's forces, the characters smash their way into the palace and confront efreet guards, flanked by demons and dragons. The campaign comes to a climax as they confront Qassemi and see him in his true form. Qassemi has become an enormous beast: part efreet, part dragon, and part demon.

## Adventures

Even if your campaign is not focused on the Elemental Chaos, any number of adventures can take the characters to this fundamental plane, or can involve creatures and phenomena of an elemental bent.

The most basic adventure consists of a typical dungeon or a ruin stocked with elemental-themed monsters, hazards, and terrain. More involved story arcs could incorporate themes or weave in story threads that focus on specific details of the Elemental Chaos. For example, a dungeon might be full of elementals because an ancient portal to the Plane Below is slowly opening. Perhaps the characters are trying to recover a powerful artifact before servants of the renegade efreet Sheikh Ma'mun do (see the "Hidden Elements" campaign arc on page 28).

Simply surviving the hazardous, turbulent environs of the Elemental Chaos can be a tremendous challenge, even for characters who aren't normally threatened by environmental dangers. By emphasizing the perilous surroundings, you reinforce the extraplanar feel of the adventure and add time pressure—such as dwindling supplies—to any encounter. At the very least, the weird and perilous nature of the Elemental Chaos should be a factor in such adventures. They should include the plane's bizarre terrain features and unique hazards to remind the players that the party is exploring an alien realm. Nothing reduces the impact of an Elemental Chaos adventure more than making the environment seem ordinary.

Not all Elemental Chaos adventures require elementals as major participants. The heroes might ally with djinns or githzerai against a greater threat, cooperate with one efreet house against a more dangerous clan, or lead an army of archons against a horde of slaads that threaten to spill into the world.

## Adventure Hooks and Quests

The following plot seeds and quests can help you set up a variety of Elemental Chaos adventures. Some stories take place entirely within the Plane Below; other tales begin in the world and shift the action later. Feel free to use them as written, tweaking the details and levels as needed, or just find in them inspiration for building your own adventures.

The level notation for each adventure hook, given before the title, is a rough estimate. Each adventure includes quest hooks and rewards, with the amounts of those rewards appropriate for a group of five characters of the indicated level.

### 9: On the Rocks

The dwarven community of Hammerfast, near the Dawnforge Mountains, has a problem. For several months, more and more dwarven villages in the mountain range have gone silent, whole communities vanishing overnight. More recently, distant farmsteads of Hammerfast proper have met the same fate—entire families are gone without a trace. The Hammerfast dwarves want to seek aid from their neighbors in the Nentir Vale, but the insular mountain communities around it do not trust outsiders. The longer the stubborn, prideful dwarves wait to call on outside help, the greater their losses will be.

The missing dwarves have been kidnapped by a tribe of galeb duhrs from the bowels of the Dawnforge Mountains. These ancestral servants of the Rockbrow tribe of hill giants have grown tired of their forced labors. Because it does not occur to them to abandon their masters, these galeb duhrs have instead decided to increase the size of the giants' labor pool. The kidnapped dwarves are being held until the galeb duhrs believe they have sufficient numbers to deliver as slaves to the hill giants.

**Quest Hook:** One of the dwarves of Hammerfast, bucking the isolationists' wishes, petitions for aid from Fallcrest or one of the other nearby cities. The characters get wind of this call for help. They

investigate the disappearances by tracking, setting ambushes, or traveling to the attacked cities.

Alternatively, one of the characters (particularly a dwarf) has a personal connection with Hammerfast or the other dwarven communities in the mountains. He or she decides to help out after hearing rumors of trouble.

*Quest XP:* The mountain dwarves are furious at the presence of outsiders, out of shame that their troubles have been revealed. If the characters get the dwarves to accept their aid without resorting to threats and violence, or without giving up and leaving the insufferable isolationists to their fate, they receive a minor quest reward of 400 XP.

When the characters learn that the perpetrators are galeb duhrs, they earn an additional minor quest reward of 400 XP.

**Quest Hook:** After the galeb duhrs are identified as the root of the problem, those dwarves who have accepted the characters' presence call on them to track down the kidnappers, free the hostages, and prevent further raids. Some adventurers might choose to do this because it's the right thing to do; those who are mercenary can be induced to act in return for a reward in the form of one or two level 8 treasure parcels.

*Quest XP:* Finding the galeb duhrs' lair requires more than searching a few mountain caves. Their tunnels are conduits to the Elemental Chaos, leading to the heart of an enormous earthmote floating in the wild tempest. In addition to galeb duhrs, the characters must battle various earth-oriented elemental creatures. They could come face to face with some of the Rockbrow hill giants.

If the heroes free the kidnapped dwarves and hurt the galeb duhrs enough to discourage them from trying such action again, they earn a major quest reward of 2,000 XP. This reward should be greater if you have included higher-level foes or created a longer adventure that spans several levels.

## 13: Seed of Chaos

Githzerai from the Henzathra monastery, though militant and insular, are peaceful. But recently and without warning, they attacked several *planar dromonds* and *spelljammers*, as well as a few genasi trading communities. The assaults are thieving raids—the githzerai gather what goods they can and depart, fighting and killing only enough to collect their booty. What they're stealing isn't especially valuable: mostly foodstuffs and basic necessities, either grown in the more habitable regions of the Elemental Chaos or imported from the world.

The githzerai of Henzathra are preparing for a siege. One of them recently acquired a chunk of stone from the Abyss that thrums with evil power. Recently, a cadre of demons learned about the abyssal stone. They believe that the stone's energy can transform other sorts of slaads into Abyss-tainted void slaads. The demons intend to raze the monastery, take the stone, and advance their own destructive schemes. The githzerai have learned of the impending attack and intend to fight to the last.

If you wish to further complicate the plotline, consider involving a powerful—and unusually subtle—slaad in the quest for the evil stone. It too has learned of the threat and seeks to prevent the demons from getting their hands on it. The scheming slaad operates behind the scenes, impeding the demons and aiding the heroes when they least expect it.

**Quest Hook:** A genasi village or the captain of a *spelljammer* or *planar dromond* in the Elemental Chaos contacts the characters, or takes advantage of an existing link from prior adventures. The characters are asked to stop the githzerai raids.

*Quest XP:* Countering the attacks isn't hard. The githzerai aren't interested in pitched battles, and they stop raiding once the demonic siege of Henzathra begins. If the characters track them down and learn the truth (not easy to do, given the githzerai's distrust of everyone) they earn a minor quest reward of 800 XP.

**Quest Hook:** Once the characters learn the truth behind the demonic attack, it shouldn't take much for them to aid the githzerai. A cadre of demons that has the power to transform any slaad into a void slaad isn't good for anyone.

*Quest XP:* If the characters help the githzerai fight off the first wave of the siege, they earn a minor quest reward of 800 XP. If they are able to eliminate the demonic cabal seeking the stone, they earn a major quest reward of 4,000 XP. They gain another minor reward of 800 XP if they suggest a practical means of destroying the stone or otherwise rendering it harmless.

## 20: War of Seasons

The courts of the Feywild are barely less discordant than the Elemental Chaos, though their conflicts are more subtle. Fey factions work constantly to trump each other, maneuvering for influence, magic, territory, or prestige. Most fey eschew blatant warfare in favor of more restrained contests, but rogue elements among the Court of Stars are angry, evil, or desperate enough to engage in open bloodshed. Recently, war between a fiefdom of the Summer Court and certain nobles of the Gloaming and Winter Courts has spilled out of the Feywild. The Winter Fey sought allies among the creatures of cold and ice in the Elemental Chaos. In turn, the Summer Court called upon creatures of fire. The result is an intermittent battle of multiple factions.

JULIE DILLON

The characters begin in the city of Irriad's Glen, a peaceful community in a bucolic setting of the world. Perhaps they have just completed an adventure, or maybe they're looking for items found only in a community of this size. Everything seems normal, except that the weather is oddly warm and dry for this time of year. While the characters are still in the city, alarms sound and the gates slam shut. An army of fire archons, along with fire-based elementals and fire giants, is advancing on Irriad's Glen.

**Quest Hook:** Irriad's Glen needs the characters' help to repel the assault. The characters cannot defeat the attacking monsters on their own, but they can provide much-needed support to the besieged city. Besides, they're the only help around.

*Quest XP:* By helping to fight off the attack, the characters earn a minor quest reward of 2,800 XP.

**Quest Hook:** The characters might be curious about why the elemental army is attacking Irriad's Glen. Even if they aren't, the city leaders definitely want answers and offer a reward for further information.

If the characters decide to investigate, they trace the attackers back to one of several fortified bases. There, they discover that the fire creatures were attacked and driven out by a larger force of water- and cold-based elemental beings. By studying the various battles that are taking place all over the region and by questioning the survivors, the heroes learn that the two elemental forces are proxies in a war between fey powers. Each faction is struggling to take over a region of the world as a staging ground. This area includes a number of portals to the Elemental Chaos.

*Quest XP:* If the characters discover the origin of the invading army, they earn a minor quest reward of 2,800 XP.

**Quest Hook:** At this point, the characters might be inclined to just hole up and let the conflict play out, but they cannot. Irriad's Glen represents too great a prize—if one army takes it, the city becomes a secure bastion with a sizable work force. In addition, the influence of the Feywild and the Elemental Chaos is threatening the world. The weather changes drastically depending on which side has the upper hand. When the fire armies make headway, the area becomes hot and parched; when the forces of cold advance, freezing winds and blizzards sweep the land. Crops and herds grow sickly due to the disrupted cycles, and supplies are running low.

The heroes aren't powerful enough to stop the armies from fighting. Instead, they must get to the source of the problem, severing the Fey Courts'

alliances with their proxies in the Elemental Chaos. Such a task requires diplomacy, tact, intimidation, and possibly demonstrations of physical might. The archons leading the armies of the two sides must be convinced that the war is too costly or otherwise against their interests. Alternatively, the characters can resolve the conflict by confronting the nobles of the warring fey courts. To end the war requires navigating labyrinthine politics, bribing officials with favors, and launching targeted assaults.

*Quest XP:* If the characters succeed against either the armies' leaders or the fey nobles, they earn a major quest reward of 14,000 XP.

### 26: There Goes the Neighborhood

Shaken by recent turmoil, the City of Brass is ill-equipped to deal with a new elemental realm that has appeared not far from the city. The garrison at an outpost reports that a nebula of caustic smoke and liquid fire that had raged for decades has transformed itself in mere hours. A wall of lightning-charged iron now surrounds a flat plain of rock over a mile across. The efreet nobles know how much physical power and mental strength is needed to stabilize portions of the plane, and they are deeply worried about the proximity of a being mighty enough to reshape such a massive stretch so swiftly. They are keen to determine whether this newcomer is a threat or a potential ally.

**Quest Hook:** The Lord of the Efreets is hard-pressed to restore order in the aftermath of the city's recent upheaval. Despite having no allies to spare who can investigate the event, the monarch cannot leave the mystery unresolved without losing face. Hiring the characters is the ideal solution, since they are expendable outsiders who have no binding connections to any efreet faction.

*Quest XP:* If the characters infiltrate this new elemental realm and learn the identity of its master, and perhaps his or her agenda, they earn a minor quest reward of 9,000 XP.

**Quest Hook:** The master of this new realm is Qualquineska, a primordial naga druid who has guarded elemental secrets for millennia. The naga recently came across knowledge of magic so potent that, she believes, she can use it to ascend and become a true primordial. Establishing her own realm in the Elemental Chaos is merely the first step of the process.

*Quest XP:* The magic that Qualquineska has access to, and what she needs to ascend, are up to you. The characters earn a major quest reward of 45,000 XP if they stop the naga, and an additional minor quest reward of 9,000 XP if they find a way to keep any other potent creature from following in her footsteps.

## Patrons

Visitors to the Elemental Chaos might battle slaads, become enmeshed in the schemes of wily efreets, or trade goods with xenophobic githzerai. Characters who regularly interact with the plane, or who come to the attention of the powers that be there, might also cultivate an elemental patron. This section describes several possible elemental benefactors for the characters. They fill much the same roles as worldly patrons, providing missions, equipment, safety, and sources of adventure.

The patrons presented here are iconic examples of their races or organizations. You can drop them into your campaign as they are, or use them as examples when creating patron characters of your own.

### Shah Abdul-Azim Abassi

**Efreet Karadjin** (*Monster Manual*, page 100)

The efreets of the City of Brass collect tools—many of them living. They have numerous uses for mortal pawns.

#### Background

Abdul-Azim Abassi has been deeply embroiled in the politics of the City of Brass all his life. He is a high-ranking efreet in the city, with a number of lesser efreets and scores of slaves in his service. At the same time, he answers to more powerful nobles. Abdul-Azim chafes at this aspect of his situation and yearns for more power.

#### Using Shah Abdul-Azim

Abdul-Azim schemes to increase his own political power and decrease that of his rivals. Efreet society is so complex and far-reaching that the shah can accomplish these goals in a number of ways, giving rise to plenty of adventure possibilities.

Abdul-Azim can send characters on the following sorts of missions.

- Spy on or sabotage the household of a rival efreet.
- Put down a slave uprising.
- Incite a slave uprising to discredit a rival.
- Acquire an item, person, or piece of information.
- Destroy enemies of Abdul-Azim or of the efreets in general, such as genasi pirates or a slaad colony.
- Establish positive relationships, perhaps for the sake of trade, with forces in the world or elsewhere.
- Find a new source of raw materials for Abdul-Azim's slave force to plunder.

# The Stone Council

**Earth Titans** (*Monster Manual*, page 122)

Three earth titans make up the Stone Council. They rule an earthmote hollowed by tunnels and packed with servants—hill giants, enslaved dwarves and kobolds, galeb duhrs, earth elementals, and a few stone giants.

## Background

The Stone Council began when a group of earth titans conquered the earthmote and dubbed their new domain Allrock. Desiring a realm of their own, the titans set about securing subjects. Now, after dozens of raids to the world to acquire dwarf and kobold slaves, Allrock has become crisscrossed with passages. Elemental creatures keep arriving, attracted to the power of Allrock, but the earthmote has run out of space to hold them.

## Using the Stone Council

Earth titans might not be the brightest of their kind, but the Stone Council members are smart enough to realize that their kingdom must expand or be torn apart. The titans have been looking to secure new territory for Allrock's growing population.

Characters in the service of the Stone Council could take advantage of their generally higher intelligence to deceive their patrons. If the earth titans were to discover such deception, however, they would bring all their might to bear on the transgressors.

The Stone Council can send characters on the following types of missions.

- Explore an unoccupied area of the Elemental Chaos to determine its suitability for an expansion of Allrock.
- Travel to the world to get more slaves who can help secure new territory.
- Attack and conquer a nearby area of the Elemental Chaos controlled by another force, such as other giants, slaads, githzerai, or efreets.
- Devise a practical way to expand Allrock, such as finding a reliable method of transforming the surrounding elemental substance into earth.

# Valaphyr

**Djinn Thunderer** (*Monster Manual 2*, page 71)

The djinns are native to the Elemental Chaos, but they haven't been a significant force for a long time. Much of their populace remains trapped in objects or other magical prisons, and the free djinns have lost a great deal of their former power. All djinns long to return to glory, but none are more keen for it than Valaphyr.

## Background

After being trapped in a magic flute for millennia, Valaphyr won his freedom when a group of adventurers discovered the golden instrument in a young dragon's hoard. One incautious party member sounded the flute before it was definitively identified. After an untold time in magical slumber, the djinn was eager to exercise his power. The adventurers, weakened from their battle with the dragon, had no chance. Valaphyr collected their magic equipment in addition to the dragon's hoard, then secured passage to the Elemental Chaos. Once there, he sought shelter among a group of djinns in a small cloud citadel.

Valaphyr had chalked up his lengthy imprisonment to supremely bad luck but has since learned that most of his kind were even less fortunate. The djinn has vowed to free his race from its shackles and punish the gods for such cruel treatment. To this end, he plans to liberate the djinns, recover their old holdings, and, ultimately, free a primordial and march upon the gods' domains.

## Using Valaphyr

Although his first act as a free djinn was to slay the adventurers who unwittingly rescued him, Valaphyr holds no enmity for their kind. He appreciates the resources and enterprise of adventuring parties and regularly uses them to achieve his goals. He has no interest in endangering himself, and he regards the lives of his fellow djinns as too precious to risk. In contrast, adventurers are cheap to hire, and their lives mean nothing to Valaphyr.

The djinn seeks an audience with any adventuring party that ventures close to his cloud citadel. He also goes out of his way to invite adventurers he believes to be especially capable. Though he cares little for their well-being, he treats such characters fairly—he has need of their services and prefers not to make unnecessary enemies. On the other hand, he has little patience for any who disrespect him or the djinns.

Valaphyr can send characters on the following kinds of missions.

- Rescue a djinn from a magic prison.
- Defeat the current denizens of a former djinn stronghold.
- Slay a devout or important divine servant.
- Forge an alliance with other allies of the primordials or enemies of the gods.
- Gather magic items or an artifact for the djinns.

## Zat

**Githzerai Mindmage** (*Monster Manual,* page 131)

The insular githzerai nevertheless must seek the services of outsiders from time to time. A few individuals, such as Zat, go out of their way to find them.

### Background

Zat operates out of the genasi city of Threshold (page 57), where she keeps an eye on the massive portal to the world. She has lived in the Elemental Chaos all her life and grew up fascinated by the legends of the githzerai race. Although young, she has developed into an excellent mindmage and recently traveled to Threshold at the behest of her githzerai superiors. They provide her with the resources to act as an able patron.

### Using Zat

Zat frequents the area near the portal to ensure that she makes initial contact with visitors. Occasionally, she uses the passage to find and establish agents in the world. Although she is not native to the city, Zat has come to love Threshold and its people. She serves the interests of the githzerai, the city of Threshold, and her own notions of what is best.

Zat can send characters on the following sorts of missions.

- Slay enemies of the githzerai, particularly mind flayers and githyanki, on which Zat offers a standing bounty.
- Serve as diplomats to a race or an organization in the world that would be hesitant around, or hostile to, the githzerai.
- Recover a lost githzerai item or individual.
- Establish contact with a githzerai or genasi colony in the world or in a remote location of the Elemental Chaos.
- Spy on a power within the Elemental Chaos, such as the City of Brass efreets or a cult dedicated to a primordial.

# Orders Out of Chaos

With the exception of the most potent efreets, the powers that dwell within the Elemental Chaos are rarely more organized than the plane they call home. The constantly changing nature of the plane and the great distances between communities prevent control over multiple populations. Those leaders that inspire cults aren't interested in cooperation between sects or in forming larger faiths. The nonnative inhabitants of the Plane Below must expend so much time and effort on survival that they have little energy or motivation to pursue other goals.

Yet as a source of unimaginable power, the Elemental Chaos calls to groups of individuals who seek to explore and to exploit its depths. A few examples of Elemental Chaos-linked organizations follow. As always, pick and choose the details you are fond of, or let them inspire you to create groups of your own.

## The Cult of the Elder Elemental Eye

The Temple of Elemental Evil: Nearly every sage, priest, or adventurer has heard its name whispered in rumors and legends. It has been destroyed more than once by the forces of good. Just as many times, it has risen from the rubble to plague the world.

The Temple of Elemental Evil is but one symptom of a deeper malady. It is the holiest site of the Cult of the Elder Elemental Eye, a horrific organization not fully understood even by its own worshipers. The cultists are not highly organized, and internecine struggles for control of the temple are constant. Still, if one sect can impose its will on the others and raise the group to prominence once again, it can direct the cult's awesome resources to end creation in any number of ways.

### Cult of the Elder Elemental Eye Lore

**Arcana, History, or Religion DC 15:** The infamous Temple of Elemental Evil was the heart of a religious sect that terrorized the surrounding regions. The group hired bandits, consorted with demons and evil powers, and caused much destruction before it was defeated.

**History DC 20:** The Cult of Elemental Evil arose multiple times, and the temple was destroyed and rebuilt at least twice.

**Arcana or Religion DC 25:** The so-called Cult of Elemental Evil was in fact a sect of worshipers devoted to Zuggtmoy, a foul demon of slime and fungus. The elemental trappings of the sect were an

attempt by the demon lord to attract a wider array of followers. When Zuggtmoy's aspect was slain during a raid on the temple, Zuggtmoy's followers lost faith, and the demon turned her attentions elsewhere.

**Arcana or Religion DC 30:** Zuggtmoy was merely a pawn in a larger game. She was not the true power behind the Temple of Elemental Evil. The Cult of the Elder Elemental Eye was the ultimate threat, an organization worshiping a primordial entity of enormous power. The name of the cult's master is unknown, but rumors indicate that other primordials have cooperated with it, including Imix, Lord of Fire.

**Religion DC 40:** The title of the Elder Elemental Eye refers not to a primordial but to the Chained God, Tharizdun—the mad, figurative father of the Abyss. That he is the power behind the Cult of the Elder Elemental Eye is a fact known only by the sect's highest members. Not all worshipers of Tharizdun are members of the sect. The cult represents only one group of mad fanatics, albeit one of the largest and most infamous.

## Organization

With little organization and no unified leadership, the Cult of the Elder Elemental Eye has never reached its full potential. Still, its members work tirelessly, clandestinely seeking ever more power for their evil patron. Their ultimate goal is to bring Tharizdun into the world—a event that would be catastrophic for the entire cosmos.

**Leader:** Only a few faction leaders have a chance to attain dominance over the sect. Falrinth, a male human wizard, is an ancient fanatic who has already survived two separate offensives against the temple. Dein, a male stone giant warlock, believes that natural humanoids have no place in the cult except as slaves. Karreska Redhand is a female orc druid whose older half-sister, Smigmal, was a sect champion until she was slain.

**Headquarters:** The Temple of Elemental Evil is an enormous stone edifice with hideous carvings and demonic gargoyles, constructed and reconstructed in varying styles over the years. The temple contains multiple passageways to the Abyss and the Elemental Chaos, as well several pockets of the Plane Below made manifest in the world.

Legend tells that the temple exists in both the world and the Elemental Chaos, two spiritual halves of the same structure kept separate by planar boundaries. According to the tales, if the two temples were ever brought into conjunction, they would form a permanent, enormous conduit between the planes.

ERIC L. WILLIAMS

Dimensional boundaries for miles would waver and blur, opening the way for a massive invasion of demonic and elemental creatures.

**Hierarchy:** The cult's hierarchy is simple: Whoever has the power leads. All worshipers are devoted to the spread of elemental evil as a concept, even if some of them direct that devotion to different entities than others do. This common goal keeps the cult operating.

**Members:** Although its leaders are usually skilled warriors or elemental spellcasters, the cult accepts anyone. Worship of Tharizdun isn't required to join, nor does the cult incorporate only such worshipers. The selfish, the bitter, the ambitious, the anarchic, and those who dabble in forbidden lore are all drawn to the cult. Evil and obsessed, they seek power at the expense of nonbelievers and are welcomed with open arms.

Many cultists aren't natural humanoids. They include elementals desiring power over the world, giants seeking the return of their lost empire, and demons reveling in the chance to destroy.

### History

When the Cult of the Elder Elemental Eye first arose is impossible to say. Worshipers of Tharizdun, under his various titles, have existed since the end of the Dawn War. When the temple was first built decades ago, it appeared to be dedicated to the destructive powers of the elements, but was in fact faithful to the demon Zuggtmoy. Even then, some members secretly revered the Elder Elemental Eye, working to steer the sect to their own purposes. Were they instrumental from the beginning, manipulating the demon into founding the cult? Did they come along later to take advantage of what Zuggtmoy had begun? So secretive is the sect, and so varied the accounts of its factions, that none can say.

### Goals and Methods

The cult's ultimate goal is to fray the boundaries between the world and the Elemental Chaos (or the Abyss) and thus free its dreadful patron. It seeks to increase the power of its members, especially its leaders, while offering worthy sacrifices in hopes of granting its master enough strength to break free.

What it lacks in organization, the cult makes up for with determination and sheer power. As a group, the cultists are extremely potent and learned. On more than one occasion, they have succeeded in summoning horrific beings to the world.

Cultists engage in various schemes. These plots have included imprisoning powerful entities and indoctrinating them, using magic to drive entire populations mad, transforming powerful creatures into elemental beasts, and weakening the boundaries between the world and the Elemental Chaos. All the while, they have deceived large groups, including other cultists, into worshiping and sacrificing to one entity while believing that they serve another.

### Adventure Ideas

Just the words "Temple of Elemental Evil" can get your players raring to go. For those who still need convincing, here are a few ways to get their characters involved.

The Cult of the Elemental Eye adds an elemental theme to an entire campaign. Its servants and thralls can appear at early levels, gathering sacrifices or competing with the characters for magic items. At the paragon tier, the characters might struggle against higher-level priests and various elemental monsters, perhaps even making forays into the Elemental Chaos or the upper levels of the Temple of Elemental Evil. Heroes at the epic tier can delve into the temple's depths and take on the demonic or elemental powers to whom the sect's factions are devoted.

## The Grave-Minders

Faced with passing years, great riches, and power waiting to be claimed, even those who zealously hold to a purpose can drift astray. Such was the case with the Grave-Minders.

This holy order was once dedicated to guarding the divine bonds on the primordials and was set to warn the various priesthoods and temples of the world if those prisons weakened. Since its founding, however, the group has devolved into a band of scavengers and treasure hunters. In their ambition, they scour the graves and prisons of the primordials for their own gain.

### Grave-Minders Lore

**Arcana, History, or Religion DC 20:** The Grave-Minders were founded by members of the earliest religions. Fearing that the turmoil of the Elemental Chaos might blind the eyes of the gods, they set up several strongholds in the Plane Below, monitoring the prisons and graves of the primordials to ensure that none would rise again.

Little has been heard of them for centuries.

**Arcana or History DC 30:** The Grave-Minders did not disappear, but the order has avoided notice because its members have turned away from their original mission. They are more interested in raiding primordial tombs for ancient treasures and powerful magic, whether left behind since the Dawn War or gathered by worshipers attempting to free their primordial masters.

### Organization

The Grave-Minders were viewed as heroes and martyrs in their early days—parables and psalms were written about them. Today, the organization keeps its existence secret. Only its regular contacts, several informed denizens of the Elemental Chaos, and a half-dozen high priests of primordial cults and divine churches are aware of the group's current activities. None of them think much of the Grave-Minders.

**Leader:** The organization's leader is elected by acclaim, based largely on his or her accomplishments. The current head is Ephram Kiembretz, a male human invoker, but he's nearing retirement. His likely successor is Lathlenvia Viell, a female tiefling rogue.

**Headquarters:** On the rare occasions when the Grave-Minders assemble, they do so on the *spelljammer* galleon *Ice Princess*, which sails the skies and vapors of the Plane Below.

**Hierarchy:** The Grave-Minders are divided into autonomous cells of procurers, who are essentially adventuring parties, and researchers, consisting mainly of older members. Each team has its own commander, who reports to the organization's leader.

**Members:** The group accepts anyone ambitious and capable enough to travel to the hazardous regions of the Elemental Chaos where the primordials are imprisoned or entombed. Particularly knowledgeable sages or experts serve as researchers; all the other members of the Grave-Minders are adventurers. Followers of gods and primordials alike are welcome, as long as they don't object to the Grave-Minders' activities.

### History

The Grave-Minders have little recorded history. Supposedly, the organization was founded within a few generations of the end of the Dawn War. Given how obscured in myth that time is, that claim cannot be confirmed.

A thousand years ago, members began to lose interest in standing watch against an event that nobody thought would ever occur. Instead, they became increasingly interested in the treasures and power to be gained in the Elemental Chaos. Those guiding the society, no matter how devout, could not resist the income and influence those treasure hunters brought to the Grave-Minders. At first they justified their actions as using these resources to guard against the primordials' return, but eventually that excuse was abandoned. When an adventuring rogue by the name of Avirras was acclaimed leader several hundred years ago, the society's shift was complete—pretended guardianship became undisguised robbery.

### Goals and Methods

The goals of the Grave-Minders are simple: Locate the resting places of primordials, living or dead, and loot the powerful and valuable treasures found there. Some members aspire to be rich enough to buy and sell entire cities. Others enjoy testing themselves against dangers that would challenge the gods. Some seek rulership, conquest, or even apotheosis, and believe these items can aid them. A rare few still serve the original mission, keeping an eye on the primordials and thwarting the efforts of their fellow members.

Most members of the Grave-Minders explore the Elemental Chaos. The rest conduct research in the greatest libraries of the world and in the recorded histories of those few elemental cultures that bother to keep such writings. Once a primordial grave or prison has been located, a team of tomb raiders travels there to secure whatever wealth and magic it contains.

In other words, the Grave-Minders is an adventurers' guild interested only in the deadliest dungeons and most fearsome foes.

### Adventure Ideas

The Grave-Minders can function well as allies, as enemies, or as recruiters. The group might cooperate with the characters in exploring the grave of a primordial, or it might compete for the recovery of an artifact. The heroes could join the Grave-Minders to fulfill the group's original purpose—guarding against the awakening of a primordial. Alternatively, they might be dispatched to thwart the organization by a religious faction that fears the Grave-Minders' meddling will cause the very awakening the group once feared.

## The Speakers of Xaos

Also called the Xaos-Speakers, this organization is respected by the few who know of it, and feared by the fewer who know it well. A cabal of arcane and scholastic explorers studying the nature of the Elemental Chaos, the Speakers of Xaos (pronounced like "chaos") pursues a variety of ambitions that, if successful, could grant its members access to world-shattering information.

### Speakers of Xaos Lore

**Arcana or History DC 15:** The Speakers of Xaos is a college of wizards, sages, druids, priests, and explorers who seek a complete understanding of the Elemental Chaos. Although a few small subgroups meet in the world, the group's primary campuses are in the Plane Below.

DAVE ALLSOP

**History DC 20:** The Xaos-Speakers don't have a unifying motivation for their study of the Elemental Chaos. Some members gather knowledge for its own sake. Other individuals hope to understand the magic that underlies all reality and thus increase their own abilities. Still others seek mastery over various elemental creatures and the primordials—either to maintain the divine order, or in hopes of freeing the primordials and controlling their awesome power.

**Arcana or History DC 25:** The Speakers of Xaos resulted from the merger of two orders: the Xaositects, an anarchist faction that operated within the city of Sigil, and the Lyceum Elemental, a combination cabal and social club for researchers investigating all matters elemental and primordial.

**Arcana DC 30:** One of the Speakers' primary lines of research is the study of chaos. By identifying patterns in what others see as randomness in the Plane Below, they believe they can predict the future. They hope to learn to manipulate the nature of the Elemental Chaos and, through it, the world.

## Organization

The Speakers of Xaos is not a clandestine organization, but its activities and research are closely guarded secrets. Individual members pursue their own hidden experiments, refusing to share evidence and conclusions even within the group.

**Leader:** The Speakers of Xaos is a gathering of like-minded individuals, not a regimented order, and its leadership is informal. The members elect a director, who approves expenditures and groupwide activities but otherwise has little say over individual members' actions. The current holder of that office is Director Callum Rell, a male deva invoker.

**Headquarters:** The group has a number of small institutions and meeting places in the world. More prestigious complexes are scattered throughout stable regions of the Elemental Chaos, including a library in the City of Brass. The organization's central college is located outside the githzerai city of Zerthadlun—far enough that the githzerai don't object to its presence, but near enough to take advantage of the city's stabilizing influence on its surroundings.

**Hierarchy:** Other than the elected director, no Xaos-Speaker has official authority over another. Unofficially, associates defer to long-standing, powerful, and influential researchers.

**Members:** Officially, the group is open to anyone who seeks knowledge and understanding of chaos, the natural order, and the Plane Below. In fact, only those who demonstrate sufficient power to survive the rigors of the Elemental Chaos, or provide lore or knowledge that the group lacks, are admitted. Any Speaker can nominate a candidate for membership.

### XAOSITECTS

A great conflict surged through Sigil's streets some time ago, realigning factions, organizations, and entire systems of belief. Though the Lady of Pain remained inviolate and in control, many other lesser power structures faltered or failed altogether, including the faction called the Xaositects. Calling this group an organization would be a stretch. The loosely connected order, while older than many others, had a habit of disbanding, re-forming, and changing its name. Such behavior not only makes it difficult to compile a reliable history of the Xaositects but also leaves open a question: Are all those earlier Xaositects gone, or are some still rattling around the planes? The Speakers of Xaos don't care.

Confirmation requires the approval of another member of equal or greater seniority, as well as that of the director. Similarly, anyone can be blacklisted by agreement of the director and two senior members.

### History

Since before the world's recorded history, the Xaositects were a philosophical faction in the great planar city of Sigil. Some members were pure anarchists, but many were dedicated to seeking meaning and patterns in chaos. The group's mantra was that reality is chaotic, and only by understanding disorder can it be mastered.

Eventually the Xaositects disbanded, partly due to the efforts of rival sects and partly in obedience to a decree of the enigmatic Lady of Pain. The anarchists continued on as they always had—what did the existence of a recognized structure matter to them? More regimented members sought out new homes and a rededication of purpose. They began communicating with the Lyceum Elemental, a cabal of sages and researchers who had become fascinated with the Elemental Chaos's theoretical effect on events in the world. The combination of the Lyceum's theoretical knowledge with the former Xaositects' applied experience resulted in the birth of the group known today as the Speakers of Xaos.

### Goals and Methods

All Speakers are united in their goal of understanding the Elemental Chaos—from finding patterns in the fluctuations of its energy to learning precisely how this fundamental plane influences the nature of reality and events in the world.

Why do they gather this information, how do they go about doing so, and what do they plan to do with it? The answers vary from member to member. Certain Speakers, including the current director, are interested only in gathering knowledge and perhaps using this insight to aid others. They watch and record the movements of the Elemental Chaos and the behavior of elementals, trying to find patterns. Other members manipulate the activities of elementals, or even experiment on such creatures, to learn more of the Plane Below's secrets. They seek to increase their own personal magical acumen, perhaps even using the power of the Elemental Chaos to gain godlike stature. So far, their efforts have been in vain.

Some Speakers cultivate ties with the efreets of the City of Brass, hoping to learn more about the *al-buraj* divining system (see "Mapping Chaos," page 54), but so far they've had little luck. The long-term nature of *al-buraj* practice is part of the reason, but mostly, the efreets are unwilling to cooperate with outsiders trying to learn their secrets. The few who would consider the idea demand something major in exchange.

### Adventure Ideas

The Speakers of Xaos can be a catalyst for all manner of adventures, as allies of the characters, as enemies, or—given the differing methods and goals of its members—as both at the same time.

The group's more scholarly members might hire the characters to gather information, observe certain inhabitants of the Elemental Chaos, retrieve magic items, or map a specific location. They might require aid against enemy elementals or cults whose power they cannot match, or help in delivering vital supplies to their bastions in the Elemental Chaos.

The group's more ambitious members could become regular adversaries of the party. They might ally themselves with rogue efreets who trade knowledge about *al-buraj* in exchange for aid in various schemes. They might spark war between communities in the Elemental Chaos by kidnapping and vivisecting elemental beings. They could even conquer a region of the world with power gained through a deeper understanding of elemental nature.

## Artifacts

Countless potent magic relics originated in the Plane Below. The following are examples of artifacts that might hail from, or be linked to, the Elemental Chaos. Their history, purpose, and power can drive adventures or entire campaigns.

### Plastron of Tziphal

The *Plastron of Tziphal* is appropriate for characters in mid-paragon tier and upward.

**Plastron of Tziphal** Paragon Tier

*This ceremonial breastplate is fashioned from dark stone. The surface is chipped and the edges jagged from the chisel that fashioned it. When worn, it merges with its wearer's flesh, turning skin to a rocky armor as hard as plate.*

Although it looks like only a breastplate, the *Plastron of Tziphal* functions as *+4 warplate armor.* It has the following properties and powers.

**Enhancement:** AC

**Property:** You gain resist 10 poison.

**Property:** You gain an item bonus equal to the *Plastron*'s current enhancement bonus to saving throws against slowing, immobilizing, petrifying, or restraining effects that a save can end.

**Power (Daily):** Standard Action. You gain resist 5 to all damage until the end of the encounter; or Immediate Interrupt. *Trigger:* You are hit by an attack. *Effect:* You gain resist 15 to all damage until the end of your next turn.

**Power (Daily):** Minor Action. You gain a power bonus to Fortitude equal to the *Plastron*'s current enhancement bonus until the end of the encounter.

**Power (Daily):** Free Action. *Trigger:* You make a saving throw to end an effect. *Effect:* You make the triggering saving throw again and use either result.

## THE MOUNTAIN BUILDER

None today know whether Tziphal is truly dead. Mauled and cursed by the gods, he lies within a cairn deep in the Elemental Chaos (see "The Mountain Builder's Barrow," page 100). The body within might be utterly lifeless or rest in some intermediate state between life and death. Creatures that have powers of petrification (Tziphal's "children") and a few worshipers of the primordial occasionally claim to hear a deep and rumbling voice at the very limits of their hearing. They cannot yet make out the words, but they feel an ever stronger compulsion to seek out its source and obey whatever instructions it might have for them.

Few descriptions of the Mountain Builder survive, and those that do are often contradictory—though all agree that his flesh was the hue and consistency of stone. Some portray the primordial as an enormous, featureless humanoid form of blocky stone, standing hundreds of feet tall. Other images depict him as a creature far longer than he was tall, with a dozen pairs of legs and multiple swaying torsos. All stories describe Tziphal as staggeringly huge—a peculiar detail, considering that no creature of such size could possibly fit within the mystical barrow said to be his grave. Either all tales of Tziphal's appearance are false, or the Mountain Builder was capable of altering his form to a tremendous degree.

Whether or not Tziphal still lives depends on the needs of your campaign, but you need not involve him personally to base adventures around him. Multiple cults of the Mountain Builder exist still among elemental creatures said to be created by him, as well as among humanoids of the world. Many followers seek to restore the primordial to his former glory, while others believe they follow a sacred mandate to petrify all natural beings. The leaders of such cults claim to be guided by that mysterious, rumbling voice. Are they speaking the truth, or using Tziphal's name to justify their own ambitions? What is the voice telling them to do? And is it truly the voice of Tziphal, or some other entity taking advantage of his cultists' faith?

## Goals of the Plastron of Tziphal

- Thwart and destroy worshipers of the gods, especially of those deities that existed at the time of the Dawn War.
- Increase the influence of elementals and primordials, as well as earth, rock, and petrifying creatures created by Tziphal.
- Locate the grave of Tziphal, deep in the Elemental Chaos, and bring the primordial back to life.

## Roleplaying the Plastron of Tziphal

The *Plastron* doesn't communicate much with its wearer, indicating its desires through flashes of emotion. The artifact might project rage toward a creature it wants slain, fear of someone it wants to avoid, or a yearning for a location it wishes to visit. The *Plastron* cares little for how the wearer accomplishes these goals.

In its hatred, the *Plastron* coaxes its wearer to attack divine characters and immortal creatures. If the artifact foresees an opportunity to accomplish one of its goals, however, it might be willing to put up with the presence of such enemies in the short term.

## Plastron of Tziphal Lore

**Arcana DC 20:** The *Plastron* was carved from the rocky flesh of Tziphal the Mountain Builder, said to be the progenitor of creatures that petrify. The armor retains a bit of the primordial's power, as well as his hatred for the divine order that cast him down.

**CONCORDANCE**

| Starting score | 5 |
|---|---|
| Owner gains a level | +1d10 |
| Owner completes a quest that contributes to the release of a primordial | +3 |
| Owner is a goliath or a dwarf | +1 |
| Owner kills an immortal creature or a divine character (maximum 1/day) | +1 |
| Owner gains a level without slaying an immortal creature or a divine character | -1 |
| Owner is immortal or is a divine character | -3 |
| Owner thwarts actions that contribute to the release of a primordial | -4 |

### Pleased (16–20)

*"I am chosen of Tziphal. He shall walk the world again, leaving forests of stone in his wake, and I shall thrive in his shadow."*

The wearer is a worthy champion of the primordials. The *Plastron* takes great steps to keep the champion alive and successful.

The artifact's enhancement bonus becomes +5.
**Property:** You gain an item bonus to Fortitude equal to the *Plastron*'s current enhancement bonus.
**Power (Daily):** Immediate Reaction. *Trigger:* You are hit by a melee attack. *Target:* The triggering creature. *Effect:* The target is immobilized (save ends). *First Failed Saving Throw:* The target is restrained (save ends). *Second Failed Saving Throw:* The target is petrified (save ends). *Third Failed Saving Throw:* The target is petrified (no save).

### Satisfied (12–15)

*"Though I remain a lowly being of worldly flesh, through the power of the primordials I can become so much more."*

The *Plastron* still views the wearer as inferior, but it has seen potential. It empowers the wearer in hopes of creating a more useful instrument.

**Property:** You gain a +2 item bonus to Strength-based checks and a +2 item bonus to weapon damage rolls.
**Property:** The item bonus to saving throws applies only to effects imposed on you by a divine character or an immortal creature.

### Normal (5–11)

*"I can sense that this armor holds me in contempt, but it desires that I serve as an instrument of its will."*

The armor finds nonelemental beings and those it considers unworthy to be distasteful, but it prefers any wearer to none. It is as patient as earth and stone, willing to wait for this one to prove worthy.

### Unsatisfied (1–4)

*"The Plastron grows ever more disgusted with me. It sees in me all the weakness of those who have no elemental heritage."*

The *Plastron* has lost hope that the wearer might prove valuable. It bides its time until it can move on, or until the wearer improves its concordance.

The artifact's enhancement bonus becomes +3.
**Property:** You take a -2 penalty to attack rolls and damage rolls against earth creatures and creatures that have petrification powers.
**Special:** The first time each day a critical hit is scored against you, you are immobilized (save ends). *First Failed Saving Throw:* You are restrained (save ends). *Second Failed Saving Throw:* You are petrified (save ends). *Third Failed Saving Throw:* You are petrified (no save).

### Angered (0 or lower)

*"I represent everything the Plastron despises, all that Tziphal seeks to destroy. I must die to pave the way for Tziphal's return."*

The *Plastron* views its wearer as just another package of divine energy in a fleshy wrapping that should be destroyed.

The artifact's enhancement bonus becomes +2.
**Property:** You take a -2 penalty to attack rolls and damage rolls against elemental creatures.
**Property:** Elemental creatures and earth creatures can score critical hits against you on a roll of 19–20.
**Special:** The first time each day that a critical hit is scored against an ally you can see, that ally is immobilized (save ends). *First Failed Saving Throw:* The ally is restrained (save ends). *Second Failed Saving Throw:* The ally is petrified (save ends). *Third Failed Saving Throw:* The ally is petrified (no save).

### Moving On

*"The Mountain Builder calls . . ."*

The *Plastron of Tziphal* disappears, reappearing elsewhere in the world to continue its quest. If the *Plastron* is at least satisfied, the wearer gains a stony appearance, along with a permanent +1 bonus to AC and a permanent +2 bonus to saving throws against slowing, immobilizing, petrifying, or restraining effects that a save can end.

An unsatisfied or angered *Plastron* curses the wearer, draining away essence and transforming his or her body into a stone golem of the wearer's current level. The golem is compelled to seek out the nearest primordial cult and serve its members as though they had created it.

The wearer can be restored to life and flesh only by reducing the golem to 0 hit points and then performing the Remove Affliction and Raise Dead rituals in that order.

## Crystal of Ebon Flame

The *Crystal of Ebon Flame* is appropriate for characters in the upper epic tier.

The *Crystal* is a conflicted artifact. The item's goal is to release Tharizdun, but a divine curse has been laid on it to thwart that end.

**Crystal of Ebon Flame** Epic Tier

*This fist-sized, black, flame-shaped crystal whispers menacingly when grasped. It offers power but warns of corruption.*

The *Crystal of Ebon Flame* is a +6 implement with the following properties and powers. When a wielder first picks up the artifact, he or she can choose what sort of implement it functions as.
**Enhancement:** Attack rolls and damage rolls
**Critical:** +1d10 damage, and the target takes ongoing 10 fire and necrotic damage and is weakened (save ends both)
**Property:** When you use an attack power through this implement, you can score a critical hit on a roll of 19–20.
**Property:** You gain a +4 bonus to checks to escape a grab, and a +5 bonus to saving throws against immobilizing or restraining effects that a save can end.

**Power (Encounter ✦ Healing, Implement):** Immediate Reaction. *Trigger:* You reduce a creature within 10 squares of you to 0 hit points. *Effect:* You can spend a healing surge or make a saving throw against each effect on you that a save can end. The triggering creature is utterly destroyed. It crumbles to dust and cannot be restored to life with the Raise Dead ritual. (Epic destiny powers that allow a return from death, or other magic of similar potency, still function.)

**Power (Daily ✦ Fire, Necrotic):** Free Action. *Trigger:* You hit with a fire or necrotic power using this implement. *Effect:* The target also takes ongoing 20 fire and necrotic damage (save ends).

The wielder gains the following property from the divine curse, rather than the artifact.

**Property:** Each day until you use one of the *Crystal of Ebon Flame*'s powers, whenever you spend a healing surge, you gain additional hit points equal to one-half your level.

## Goals of the Crystal of Ebon Flame

The *Crystal of Ebon Flame* works to free the Chained God, but the divine curse embedded in it has its own goals. The objectives of the artifact and the curse are presented separately.

### Goals of the Artifact

- ✦ Free the Chained God.
- ✦ Corrupt the wielder to evil and destruction.
- ✦ Empower those who revere the Elder Elemental Eye.

### Goals of the Curse

- ✦ Contain the power of the artifact.
- ✦ Ensure that the *Crystal* never falls into the hands of a cultist of the Elder Elemental Eye.
- ✦ Convey the *Crystal* to a just and righteous hero who will serve as its custodian.

## Roleplaying the Crystal of Ebon Flame

Both the artifact and the divine curse speak to the wielder in dreams and visions. The *Crystal* tempts the character with power in exchange for bending to the artifact's will. The curse's visions plead with the character to be strong and keep the artifact contained, revealing the dire consequences if the Chained God is freed.

## Crystal of Ebon Flame Lore

**Arcana DC 26:** Some researchers claim this artifact is a tear from Tharizdun, the Chained God, cast forth when the deities confined him in a secret prison. Other scholars believe it is a seed of evil he planted in the Elemental Chaos before his imprisonment, one that works even now to win his escape.

**Arcana DC 31:** This artifact is the object of desire for depraved worshipers of the Elder Elemental Eye, and a burden for any adventurer chosen to keep it from them. A group of gods once tried—and failed—to destroy it. Instead, they placed a powerful divine curse on it, forcing it to move from owner to owner. The *Crystal*'s current wielder is tasked with containing it, while the artifact tempts him or her to use its powers and serve its master, the Chained God.

**CONCORDANCE**

| Starting score | 5 |
|---|---|
| Owner gains a level | +1d10 |
| Owner uses the artifact to utterly destroy a creature | +2 |
| Owner uses one of the *Crystal*'s powers (maximum 1/day) | +1 |
| Owner kills the servant of a deity or entity other than Tharizdun | +1 |
| Owner kills a demon or a servant of Tharizdun | -1 |
| Owner uses the *Crystal* as an implement during an entire combat encounter without using any of its powers | -2 |

ERIC L. WILLIAMS

### Pleased (16–20)

*"The Ebon Flame shows me the awesome terror of the Chained God awakening. I glory in knowing that I bring this monumental event closer."*

The *Crystal* believes that its wielder zealously shares its goal of freeing Tharizdun.

**Power (Daily):** No Action. *Trigger:* You die. *Effect:* You return to life with hit points equal to your bloodied value. Each creature within 5 squares of you takes ongoing 20 fire and necrotic damage (save ends).

### Satisfied (12–15)

*"I have taken the first steps toward the true power of utter oblivion."*

Although the artifact hopes for better, the wielder seems to be its best means to free the Chained God at the moment.

**Property:** You gain a +5 bonus to death saving throws.

### Normal (5–11)

*"The artifact and the divine curse placed upon it are in perfect harmony. I hear each of them speaking to me, coaxing me . . ."*

Neither the artifact nor the divine curse has any great hope for the wielder, but does not view him or her as detrimental to its goal.

### Unsatisfied (1–4)

*"The Crystal thinks me a tool of deluded creatures that cannot face the truth that Tharizdun has shown them."*

The *Crystal* is disappointed in the wielder's actions, but it continues to offer its powers in hopes that the wielder will succumb. The curse grants the wielder greater resilience to contain the *Crystal's* power.

The following property is bestowed by the divine curse.

**Property:** Each day until you use one of the *Crystal of Ebon Flame*'s powers, whenever you spend a healing surge, you can make a saving throw.

### Angered (0 or Lower)

*"The Crystal believes me to be a weakling who cannot face the ultimate fate of the universe."*

The *Crystal* is desperate to move on, while the curse struggles mightily to prevent it from doing so.

The wielder loses the properties of the artifact but does not gain the benefit of the curse's property. The artifact's anger is so intense that it can block this aspect of the curse.

### Moving On

*"It is time for another to champion the cause."*

The *Crystal of Ebon Flame* moves on either while it is pleased or it is angered, typically when the wielder gains a level. The artifact disappears, putting itself in position to be discovered by its next wielder. If it is pleased, it moves on to a new wicked wielder who will start a Cult of the Ebon Flame and work toward the artifact's ultimate goal. If the artifact is angered, the divine curse takes effect instead, moving the *Crystal* to a new champion who serves as custodian for a time.

When the *Crystal* moves on after being pleased, it grants the following special power to its wielder.

**Consumption of the Ebon Flame** — Artifact Granted Power

**Daily ✦ Healing**
**Immediate Interrupt** **Personal**
**Trigger:** You reduce a creature within 10 squares of you to 0 hit points.
**Effect:** You can spend a healing surge. The triggering creature is utterly destroyed. It crumbles to dust and cannot be raised using the Raise Dead ritual. (Epic destiny powers that allow a return from death, and other magic of similar potency, still function.)

When the *Crystal* moves on after being angered, the divine curse grants a boon to its wielder. The next time the character dies, he or she rises again on his or her next initiative count with full hit points and all encounter powers recharged.

## Wave

*Wave* is appropriate for lower paragon tier characters.

**Wave** — Paragon Tier

*This trident is ornately decorated with aquatic images. When grasped, it emanates a divine fervor, urging its bearer to follow its lead.*

*Wave* is a *+3 magic trident* (*Adventurer's Vault*, page 9) with the following properties and powers.
**Enhancement:** Attack rolls and damage rolls
**Critical:** +3d6 damage, or +3d10 damage against aquatic or elemental creatures that do not worship Melora or one of her exarchs
**Property:** You gain a swim speed equal to your land speed.
**Property:** You cannot be surprised by aquatic or elemental creatures that do not worship Melora or one of her exarchs.
**Power (Encounter):** Minor Action. Until the end of your next turn, you ignore cover and concealment when making an attack using *Wave* against an aquatic or elemental creature that does not worship Melora or one of her exarchs.

## Goals of Wave

- Spread the worship of Melora and her exarch Sekolah.
- Spread Melora's and Sekolah's dominance to all aquatic and water creatures, and to all bodies of water in all worlds and all planes.

## Roleplaying Wave

*Wave* remains silent much of the time, but it immediately commands its wielder to take action if an opportunity arises to pursue its goals. It is particularly keen to attack aquatic and elemental creatures that are not worshipers of Melora or Sekolah. If the bearer fails to act quickly and decisively, *Wave* becomes angry, insulting and cursing him or her before subsiding into sullen silence.

## Wave Lore

**Arcana DC 18:** This trident was crafted by giants who were imprisoned by aquatic enemies and turned away from their primordial masters, becoming devout followers of Sekolah, exarch of Melora.

### CONCORDANCE

| Starting score | 5 |
|---|---|
| Owner gains a level | +1d10 |
| Owner worships Melora or one of her exarchs | +2 |
| Owner kills an aquatic or elemental creature that does not worship Melora or one of her exarchs (maximum 1/day) | +1 |
| Owner refuses to attack an aquatic or elemental creature that does not worship Melora or her exarchs when the opportunity arises (maximum 1/day) | -1 |
| Owner attacks a creature that worships Melora or her exarchs (maximum 1/encounter) | -2 |
| Owner is an aquatic or elemental creature that does not worship Melora or her exarchs | -4 |

### Pleased (16–20)

*"The unyielding power of the tides flows through me, and I guide that power in Melora's name."*

*Wave* and its bearer are fully aligned, working together to spread the word of Melora.

The artifact's enhancement bonus becomes +4.
**Critical:** +4d6 damage, or +4d10 damage against an aquatic or elemental creature that does not worship Melora or one of her exarchs
**Property:** When using this weapon, you deal 1d10 extra damage against aquatic or elemental creatures that do not worship Melora or one of her exarchs.
**Property:** When aquatic or elemental creatures that do not worship Melora or one of her exarchs flank you, you do not grant combat advantage to them.
**Power (Daily):** Standard Action. Until you take an extended rest, each ally within 20 squares of you can breathe water as if under the effect of the Water Breathing ritual.

### Satisfied (12–15)

*"Though I am born of dry land, my soul is of the sea."*

*Wave* is content with its wielder but believes that he or she could make greater efforts toward its goals.

**Property:** While wielding *Wave*, you gain the aquatic keyword (*MM* 280).
**Power (Daily):** Standard Action. Until the end of the encounter, each ally within 10 squares of you can breathe water as if under the effect of the Water Breathing ritual.

### Normal (5–11)

*"Wave demands that I worship Melora and spread the glory of the waves."*

*Wave* awaits the wielder to prove amenable to aiding its goals.

### Unsatisfied (1–4)

*"The trident is displeased with me, and its anger grows."*

The wielder is making no effort to spread the word of Melora. *Wave* has all but decided that it must find a new owner unless something swiftly changes.

**Special:** You do not gain *Wave*'s benefit against surprise when facing aquatic or elemental creatures that do not worship Melora or one of her exarchs.

### Angered (0 or lower)

*"The fearsome wrath of the sea is against me, channeled through Wave's own anger."*

*Wave* despairs of its wielder and will soon take its leave.

The artifact's enhancement bonus becomes +2.
**Critical:** +2d6 damage, or +2d10 damage against aquatic or elemental creatures.
**Special:** You do not gain a swim speed.

### Moving On

*"Like the sea, Wave is capricious. Now it seeks to move on."*

*Wave* wants to go where it can pursue its goals. When the wielder next gains a level, the artifact disappears, its sentience and other abilities traveling to another land in search of help in spreading Melora's word. If *Wave* is at least satisfied when it departs, its former wielder gains a swim speed equal to his or her land speed.

CHAPTER 2

# Races of Chaos

**The Elemental** Chaos is strange, and its inhabitants are equally bizarre. Life that arose in such a foreign environment rarely resembles that of the natural world.

Elementals come first to mind as natives of the Plane Below: bestial amalgamations of substances, with little purpose beyond an instinct to survive. Aside from those wild creatures, though, exist many other sentient races, each with its own culture.

This chapter discusses the major races of the Elemental Chaos, their societies, beliefs, and behavior. Some form organized nations, such as the rigid, despotic empire of the efreets; others, such as the erratic slaads, are linked by little more than physiology and disposition. They include:

- **Archons:** These elemental soldiers created in the Dawn War form regimented settlements devoted only to war.
- **Djinns:** Beings of ancient, noble heritage now dispersed and imprisoned, the djinns seek freedom and revenge.
- **Efreets:** Tyrannical beings of flame, efreets navigate the unpredictable plane with their mystical tradition of al-buraj.
- **Genasi:** Despite their elemental heritage, genasi struggle to survive in the Plane Below.
- **Giants and Titans:** Once servants of the primordials, these mighty elemental beings now pursue their own ends.
- **Githzerai:** Refugees from ancient slavery, these disciplined people impose order in the midst of chaos.
- **Slaads:** Wildly destructive and seemingly insane, slaads have no real society but pursue the roiling chaos storms that sweep the Plane Below. Does their behavior serve a deeper purpose?
- **Other Races:** These beings exist in smaller numbers or are isolated within the plane. Some are of the natural world, including humans and dwarves, who exploit the resources of this fantastic place. At the other end of the spectrum are terrible dangers: bestial demons lusting for ruin and imprisoned primordials that strain for freedom and world-shattering vengeance.

ZOLTAN BOROS & GABOR SZIKSZAI

# ARCHONS

The disciplined soldiers of the disordered elements, archons require no sustenance and no comfort. Created in war, they live only for fighting.

In the earliest days of the Dawn War, the primordials never considered the possibility of defeat. The gods were fewer in number, and the mortals who served them were easily slain. But as the gods learned to work together in a unified force, so did their angels, forming a highly skilled army that decimated the elemental hordes.

The primordials, scarcely comprehending such organization, would never have thought to form a true army of their own without outside guidance. Some scholars claim that the early djinns provided the idea; others maintain that it came from an angel or even a deity who turned traitor to the gods. Only then did the primordials study the nature of life in the Elemental Chaos and determined how to shape it for an ordered purpose.

The primordials split apart wild elementals, separating their components and reshaping them into more controllable beings. They formed new shells from the inanimate material and then imbued their creations with sentience. These first archons were born with certainty of purpose, untainted by the flaw of free will. Those who followed remained as driven and inexorable as their predecessors.

Archons sometimes arise spontaneously from accumulations of certain elements, known as archon forges. These events don't occur often, but when they do, great numbers of newborn archons appear. Many archon bastions are built around such locations. It is said that someone who knows the proper rituals can enforce the obedience of all archons who emerge from a given forge.

## Archon Society Lore

**Arcana DC 20:** The primordials shaped archons from elementals during the Dawn War in response to the angels of the gods. It is believed that outsiders guided the primordials in this task.

**Arcana DC 25:** Archon society is based on rank, and each member knows its place in the hierarchy. Archons exist only for war and constantly train for the next conflict. They sometimes take slaves to perform manual labor or to serve as practice opponents in combat exercises.

**Arcana DC 30:** Sometimes archons spontaneously arise in areas of intense elemental activity. These places, known as archon forges, are often the sites of archon fortresses.

**Arcana DC 35:** Archons build fortresses all over the Elemental Chaos. The largest is the great stone pile of Thrak-Harda, but the threefold Mordram Bek poses the greatest threat to the natural world.

## Life and Culture

Archons of every sort exist now, whether ice or fire, air or iron. Although their physical makeup differs, their communities always have the same structure, dictated by the martial purpose for which they were created. Such collections of archons are not cities so much as strongholds.

Rank determines every aspect of life in an archon stronghold. A single archon leads, adjutants pass along its orders to battalion commanders, and so on down the line to the lowest foot soldier. Determining an individual's rank can be difficult for an outsider, since the archons themselves do not bother with titles: Each simply knows whether another outranks it.

Archons have no personal ambitions; they do not compete for rank or challenge one another's authority. Each is satisfied with its station, knowing that it best serves in that role. From the moment of its creation, an archon is fully aware of its physical capabilities and its innate skill at strategy and tactics. The leader in a given stronghold is the archon that has the greatest personal power and military acumen.

When they are not engaged in warfare, archons spend their time sparring or engaging in tactical exercises. Practice improves their martial skills and prepares them for any conceivable situation they might face in battle. Primarily, though, such activity satisfies the archons' innate drive to make war, keeping them busy until the next real fight.

On rare occasions, archons enslave other creatures. Such slaves endure a short and wretched existence. Some perform manual labor, and many are slain in practice combat, forced to fight to the death against their masters. The rest often die of simple neglect. Archons treat their slaves poorly, not out of deliberate cruelty, but because they do not understand how fragile creatures of flesh are.

## Outlook and Interaction

The chaotic evil alignment of archons, though not evident from their rigidly disciplined society, is apparent in their outlook toward others. Created as instruments of war, archons have a single, overriding goal—to kill nonelemental creatures. They exist for no other purpose, and they cannot be talked out of violence; it is a biological imperative, as irresistible as other beings' urge to reproduce.

Other beings often mistake this drive for genocidal mania, but archons don't need to wipe out all other creatures. If they did, what purpose would they serve? This point is the hardest aspect of archon psychology for others to grasp. Archons live for fighting, not necessarily winning. Victory allows an archon to survive and fight again but is not itself the goal.

Rather than wait for enemies to come to them, archons might hire themselves out as soldiers, guards, and assassins. They work for any employer that can provide a fight—even one that is not elemental—but don't value material wealth. Archons might purchase weapons and tools with their payment, but most of what they earn for their service gathers dust in their bastions. Archons actually want outsiders to come to them and try to take their treasures. A fight is a fight, whether offensive or defensive in nature.

## Major Sites

Archons sometimes conquer settlements of other races and convert them to strongholds. Most such fortresses, however, are built new, for defense and for marshaling forces. Hundreds of archon strongholds are scattered across the Elemental Chaos; several are large or infamous enough to warrant special mention.

### Irdoc Morda

This bastion of the iron archons (presented in detail on pages 76–77) is well known as a place of power for these elemental soldiers. What is less well known is that it marks the birthplace of these iron warriors, the first time that any creature other than a primordial was able to alter the nature of an archon forge. Only a few entities within the Elemental Chaos are privy to this knowledge.

As the Dawn War raged, the primordials and their servants observed that the creatures of the gods forged weapons for themselves—first primitive implements of wood and stone, then stronger tools of bronze, and eventually iron. So the primordials, with the aid of their war leaders and followers, set about forging weapons of their own to strengthen elemental entities whose substance would be otherwise less sturdy or destructive.

As the archons, galeb duhrs, and other elemental servitors mined the area that would become Irdoc Morda, their very presence began to influence and shape the Elemental Chaos around them. This influence produced an archon forge at the site, as is often the case where a great many archons are concentrated. Initially, archons of earth and stone arose from that forge. But as the miners dug deeper into the ore and crafted ever more iron weapons, the nature of the creatures emerging from the forge began to change. The first iron archons came into existence.

Not only was this event the first time that new types of archons had arisen without the intervention of the primordials, but their emergence apparently resulted from the thoughts and desires of those already present. As the archons of Irdoc Morda focused on forging iron into potent arms, they also created living iron weapons.

If this supposition is true, and the rise of the iron archons was not mere coincidence, the implications are staggering. Any elemental creature with sufficient numbers, intense focus, and access to an archon forge could potentially create new species of these elemental soldiers.

### Mordram Bek

This mighty stronghold connects three different locations across two separate planes. Permanent portals connect Mordram Bek's center within the Elemental Chaos to two wings in the world: one in an isolated mountain range and one a thousand miles away from that location on an archipelago. The fortress's vast barracks hold thousands of archons, poised to catch the world in a pincer attack.

### Thrak-Harda

Thrak-Harda is a sprawling stone fortification built not only to house an enormous army of earth archons, but also to guard a mystical gem that legend dubs the Diamond of Despair. Thrak-Harda is ruled by the stone titan King Brakkamul, to whose authority the archons have yielded in order to more effectively guard the gem. The powers of the Diamond remain unknown, but they must be fearsome, given that the archons are willing to override their instincts to defend it.

# Djinns

Creatures of mercurial whim and capricious fancy, djinns once lived only to fashion shape and function out of nothingness. They were famed for crafts whose ingenuity, beauty, and design were matched only by their endurance. The raw stuff of the Plane Below was as clay in their hands. Legend says that many of the most beautiful objects in the world today are poor copies of the originals that still reside in efreet vaults or in lost djinn households. But the djinns' rich and proud cultural heritage was scattered to the winds long ago.

The ancient djinns sided with the primordials against the gods and, as punishment, were bound to worldly objects of changeless form. The story of their fall is widely known, but scholars differ in their suppositions about what prompted it. The prevailing theory is that djinns, although not warlike by nature, saw the primordials' struggle as their own: At stake was their continued mastery over creation. Since today's djinns no longer have the nearly limitless power their race once held, that conjecture might be close to the truth.

## Life and Culture

Before the Dawn War, the djinns boasted the most advanced society of all the elemental races. It had none of the regimentation of efreet civilization, nor the militant fanaticism of the titans, but was a marvel of soaring inspiration, intellect, and creative power. As the lords of air and sky, the djinns considered themselves the born nobility of the Elemental Chaos—both literally and figuratively above all other beings. This attitude persists among the few who exist today.

The sky citadels of the djinns were wonders of the previous age. Each was a vast cloud fortress that served as a seat of rulership, a gallery of magnificent art, and a home to a tribe of powerful djinn warriors, led by a mighty caliph. The ruins of some sky citadels still float through the Plane Below, awaiting someone to restore them to their former glory. Djinns leave many such places abandoned, though, as cautionary reminders of their fall from power.

## Djinn Society Lore

**Arcana DC 20:** The djinns are an ancient elemental race that enjoyed unequaled mastery of air and cloud. They were imprisoned by the gods in punishment for their support of the primordials in the Dawn War.

**Arcana DC 25:** Djinns believed themselves the natural rulers of the elemental realm, and they built magnificent floating palaces that are largely abandoned today. Ruled by a caliph, each cloud fortress was a breathtaking monument to art.

**Arcana DC 30:** Djinns hold that their race was born with the first cloud, and there they built the First City. Some say that if an imprisoned djinn caliph can escape and find the First City, all the others will be freed as well.

## Outlook and Interaction

The djinns of today little resemble their once-mighty forebears in outlook. They have become a grim race in diaspora, desperate not only to shake off the yoke of their shameful punishment, but also to reclaim their lost glory—even if only an echo of it.

Instead of building grand cities, djinns exist in small clans or travel alone, sometimes with a handful of elemental allies or trusted servitors. Their numbers have increased since the Dawn War, but the great caliphs remain bound in penance for their subjects' deeds. Until those mightiest of djinns are freed, the others see little purpose in rebuilding their society as it once was.

## Major Sites

Most of the djinns' ancestral homes were destroyed during the Dawn War or fell to ruin in the wake of their ensuing imprisonment. Yet one fabled location remains—one that could be the race's salvation.

### The First City

Djinns rarely mention the origin of their kind, but any that could be induced to speak of the First City would recount the tale with a prideful expression and a far-off look.

The djinns believe that their race was born at the spot in the Elemental Chaos where the first cloud took shape. This cloud grew and grew until it stretched for miles in every direction. Upon it the djinns built the First City—a sprawling work of living art that was the ancestral home of their race. Here too the djinns developed the ritual practice of *al-buraj* (see "Mapping Chaos," page 54) to better navigate the primordial realm.

This First City continuously moved, as do many locations in the Plane Below, but so great was its presence that it warped the very essence of the Elemental Chaos where it passed. When the gods prevailed at the end of the Dawn War, even they were unable to destroy the city. Instead, they emptied it of its inhabitants and left it to drift until the end of time—or until the djinns return in triumph.

Some djinns believe that if even one of the imprisoned caliphs can be set free and somehow find the First City, the gods' punishment can be undone. That single act would release the remaining caliphs and restore their race to glory.

# EFREETS

The efreets are the most notorious and feared among the great elemental races. They are well known for their willingness to leave the Elemental Chaos at the behest of mortals—for a price. Arrogant and resentful of servitude, efreets strive to pervert any arrangement into which they enter, adhering to the letter rather than the spirit of the deal. Hence the axiom "Take care what you ask of an efreet, lest it take you at your word."

Some efreets believe that they were the archetype for entities of flame crafted by the primordials and later by whatever malign will guided the formation of the Nine Hells. This origin theory explains not only the resemblance of the eldest devils to efreets, but the prevalence of flame among such beings. Such an outlook is typical of efreets, who see themselves as the first elemental race and the rightful masters of the Plane Below—an attitude that brought them into conflict with the ancient djinns.

The race was nearly untouched by the Dawn War, unlike most other elemental creatures. Efreets cared no more for the primordials than for the upstart gods. They watched from the sidelines, content to shore up their own power base in the Plane Below while others ravaged the Plane Above (the Astral Sea). Rumors whisper of a faction of efreets that got involved late in the war, but only to help the gods punish the djinns for their participation. The truth of the story is unknown, as is the nature of the aid provided, but producing solid supporting evidence might well reignite active war between the two ancient races.

## Life and Culture

Ancient and conniving, efreets have developed an intricate social system. Their ancestral home, the City of Brass, boasts over 200,000 efreets—and nearly twice that number of slaves—and has evolved over millennia to its present structure. Spreading beyond the City of Brass throughout the vast Elemental Chaos, the efreets take their sacred laws with them wherever they go.

Efreet culture is a curious mix of sophisticated, time-honored tradition and free-flowing mercantilism. At the top of the social pyramid sits the Lord of the Efreets. Chosen from the most powerful and successful noble house, the lord holds supreme authority. Below the lord is a council of viziers (known colloquially as the Ring of Smoke), representatives from the other noble houses who outrank the rest of the efreet aristocracy. Below the nobility are the merchant class, then free residents of other races, and finally the slave caste. An entire slave army is sworn to the defense of the City of Brass.

The efreets' mercantile ways and bureaucratic social structure are widely known, but no less important is their tradition of erudition and scholarship. The libraries of the City of Brass are the envy of the literate universe, and even nonelemental sages credit the efreets with transcribing the Primordial language into the Barazhad script. Efreets have an unsurpassed understanding of the Elemental Chaos and of the movements of bodies within it, through their mastery of an ancient divinatory practice called *al-buraj*.

## Efreet Society Lore

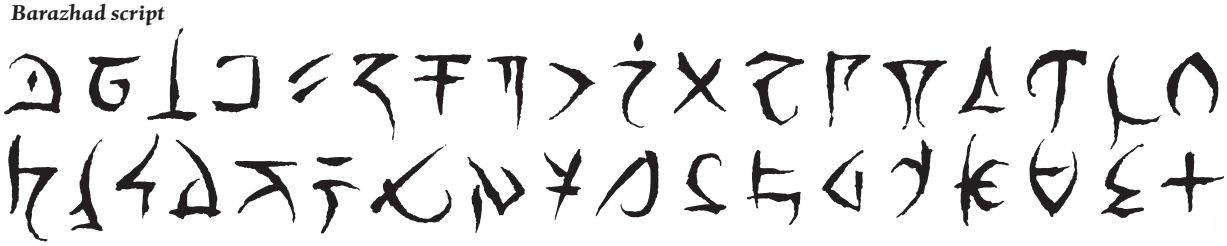
**Arcana DC 20:** The efreets are an ancient elemental race of cunning and fire mastery. They remained neutral during the Dawn War and thus avoided the destruction that came to others. Efreets strive to make deals advantageous to themselves and adhere to the letter rather than the spirit of an arrangement.

**Arcana DC 25:** Efreets hold that they, not the djinns, are the nobility of the Elemental Chaos. The two races are age-old enemies, and some stories say that the efreets gave the gods the means to imprison the djinns.

**Arcana DC 30:** Scholarship is as important to efreets as possessions and power. The City of Brass holds vast libraries of knowledge, and efreets first transcribed the Primordial language into the Barazhad script. Efreets have perfected the elemental navigation of *al-buraj*, first invented by the djinns.

**Arcana DC 35:** Efreet society is regimented, relying heavily on slavery, and each of their settlements is governed by their sacred laws. Aside from the famous City of Brass, the efreets have established cities and outposts throughout the Plane Below. The Smoldering Gate is a mighty fortress that guards the mouth of the Abyss itself.

***Barazhad script***



## Outlook and Interaction

The City of Brass is a relatively welcoming destination within the inhospitable Elemental Chaos, offering safe harbor from the dangers of the plane. Since it is one of the few points there that stays in place, the city has become the center of trade in the Plane Below and the cosmos beyond. The efreets, for all their arrogance, are not so foolish as to turn away visitors—and the profit they represent.

Although outsiders are tolerated in the city, they must abide by restrictive policies. Security is high, especially around the harbor and the Charcoal Palace (the lord's citadel), and transgressions of the law are punished with varying periods of servitude. Those who don't cause trouble, though, are usually left alone.

Slave labor forms a large part of efreet society, and the concept of servitude is complex and longstanding. It is central to the efreets' worldview, perhaps even to their nature: Bondage to another efreet is the harshest punishment possible in the race's culture. Some scholars claim that the efreets were once enslaved by the first primordial of flame.

### Mapping Chaos

Being stationary relative to the rest of the Elemental Chaos, the City of Brass has obvious advantages. As well as offering safety from chaos storms (*Manual of the Planes*, page 67) and other planar perils, this static vantage point allows inhabitants to study the tempest in detail.

Efreets conduct this eternal investigation with a ritual form of "astronomy" called *al-buraj*. The djinns originally created the art, but since their diminishment at the end of the Dawn War, they have contributed little to its progress. The efreets chart patterns in the fluctuations of the Elemental Chaos, which they believe not only reveal what has occurred but also presage events to come.

The practice of *al-buraj* combines seemingly incompatible outlooks: rigorous natural philosophy and intensely devotional ritual. An observer records precise measurements of elemental bodies' composition and movement through the plane relative to his or her location; the stable City of Brass provides a known reference point. This mathematical precision is combined with deep meditation to reveal metaphoric truths, often in a trance induced by powerful elixirs.

The art's ritual practitioners, called *sahaars*, are important and respected members of efreet society. Oracle, climatologist, and security advisor, a *sahaar* predicts impending storms and tracks the movements of earthmotes and other elemental bodies that might threaten travel. Temple observatories grant all *sahaars* the ability to gaze into any area of the Elemental Chaos.

The efreets claim that other beings are physically and mentally incapable of practicing *al-buraj*, or even of grasping its deeper cosmological underpinnings. Such a claim might be based on the efreets' secrecy and arrogance rather than on any real information.

## Major Sites

The efreets oversee a classic empire that holds sway over people, places, and resources far beyond their home region. They maintain their dominance by means of an army of archon slaves and maintain holdings throughout the Plane Below.

### The City of Brass

The most famous location in the Elemental Chaos, the ancestral home of the efreets is described in detail in the *Manual of the Planes* supplement (pages 73–76).

### Dar el-Hariq

The enlightened few who are familiar with the *sahaars* (see the "Mapping Chaos" sidebar), and their service to the efreets over the centuries, know that their temples are not limited to the City of Brass. The practice of *al-buraj* involves using multiple observatories, each of which can be located by any other, as markers in the ever-changing tempest. In this way the *sahaars* perform the arcane triangulation that is the basis of the ritual art.

Over millennia, as the efreets spread through the Elemental Chaos, they established many satellite observatories, to better serve the *sahaars* of the City of Brass and the greater glory of their race. Dar el-Hariq was one such site, part of a former outpost on a massive block of elemental earth tumbling through the plane. The outpost was lost to attackers that emerged from a nearby chaos storm, but the temple observatory remained. Today, a group of rebellious efreets reside there, performing their own *al-buraj* rituals and biding their time until they sense the perfect moment to act.

### The Smoldering Gate

The name of this massive fortress in the Elemental Chaos is misleading. Although it does have gates, the Smoldering Gate is named not for those but for its purpose.

Millennia ago, the Lord of the Efreets sent an army of efreets, accompanied by a cadre of the most powerful constructs that their magic could sustain, on a one-way mission into the Elemental Chaos. The legion's objective was to find the major portal to the Abyss nearest to the City of Brass and build a watchtower on the most defensible position overlooking it.

The result was a nearly impregnable fortress, populated by efreets and their unliving servitors. It has remained in roughly the same place ever since, at the very threshold of the Abyss. In all those long years, the soldiers of the Smoldering Gate have never

*The Sultan of Brass*

JIM NELSON

willingly entered the portal or even revealed the existence of their stronghold to outsiders. The guardians' movements are strictly regulated, and they remain ever vigilant despite the monotony. Always they watch, against the day when the mouth of the Abyss yawns wide to spill forth its horrors.

## The Tower of Djamela

Djamela's Tower is built on a steep-sided, floating island that juts up in the midst of the Sea of Fire. On the horizon, the distant spires of the City of Brass shimmer above the haze of the lava sea. An ancient stone dike surrounds the island, bolstered by arcane rituals that help keep the lava at bay. The tower itself is a sheer obsidian monolith that dominates the island.

Years ago, this island was home to Djamela, an eccentric efreet mage whose passion was the study of raw chaos. The mage was particularly interested in the mutability of the Elemental Chaos, which she sought to harness and control. Her research was so dangerous that she was driven from the City of Brass, so she relocated to this remote location to continue her work.

Djamela raised a monolithic tower filled with traps, and she conjured golems and spectral defenders to defend against intrusion. Her enemies eventually found her, though, and managed to slay the efreet mage. The creatures that Djamela had conjured were left to run free, preventing others from continuing her research.

Without its creator to maintain the strengthening rituals, the dike began to decay, and the island was nearly consumed by the Sea of Fire. A shadar-kai mercenary named Sarshan moved into the tower at some point and now apparently controls it. The shadar-kai has also established control over the mage's traps.

### Change in the City of Brass

The Scales of War adventure path in *Dungeon* magazine chronicles events that can affect the City of Brass, summarized here. If you are setting your own stories in the City of Brass, you could integrate some of the following material into your campaigns.

Bashamgurda, Lord of the Efreets for nearly four centuries, insulted and enraged the noble houses by allowing an outside force to use the City of Brass as a staging ground for an army, and the houses hold him responsible for the carnage that followed. Acting with the support of every key noble house other than Bashamgurda's own, a seasoned general named Estumishu stepped up to take the Brass Throne. The coup itself was nearly bloodless, costing the life of only Bashamgurda himself. The fallout was less pleasant.

Enraged, Bashamgurda's house declared war on Estumishu's family and was destroyed for its blatant violation of efreet law. Estumishu's palace guard, the Ring of Fire, massacred the males of the house and enslaved their wives and children to the new lord. Only a few escaped to a distant outpost, Dar el-Hariq. Not every house agreed with this draconian response, but all saw little choice but to fall in line.

This upheaval at the highest levels of efreet society has changed the sense of welcoming cultural openness once prevalent in the City of Brass. Today, anxiety oozes from the highest halls of power and permeates the city's mood. Life under Bashamgurda had been stable if unsatisfying for some among the nobility. But many who thought they knew who Estumishu was, and what he would represent once in power, are now doubting themselves.

Recently Estumishu acquired the nickname "the Smiling King," allegedly for the way his oversized teeth protrude even when he is silent. No one else seems to be laughing, though. As word of Estumishu's coup spreads throughout the Elemental Chaos, many of the other communities are holding their breath. The efreets are the largest and most organized power in the plane, and no one knows whether the Smiling King intends to maintain the status quo or steer efreet society to a new and unexpected course.

# GENASI

Although most genasi dwell in the world, substantial numbers yet inhabit the Plane Below. Genasi are strongly attracted to places of strong elemental power, and the Elemental Chaos calls to them despite its dangers. They are drawn to areas that share their manifested element; watersoul genasi, for example, feel safer in environments dominated by water.

## THE ORIGIN OF THE GENASI

The story of the race's beginning is lost to history, but genasi have an astounding number of contradictory creation myths. Many legends claim that the genasi were once humans who became infused with elemental power. The most popular and widely accepted story states that a group of human wizards called *sha'irs* worked closely with powerful elemental beings and eventually became so steeped in elemental power that their children were infused with it—becoming the first genasi.

Other stories abound. Perhaps the genasi developed from human agents of the primordials who were twisted by dark elemental energy, or they were brave champions who stole power from the primordials. Perhaps they were simply trapped in the Elemental Chaos and absorbed its ambient power.

A number of genasi resent the implication that they must have grown from human stock. They seek to distance themselves from humans and establish themselves as a unique race. A popular tale claims that the genasi were the first humanoids created. The primordials made the cosmos long before the gods arrived, and as they spun the raw stuff of existence from the void, their great generative power gave life to some of it. Thus were the first elementals born. The primordials soon became aware of these bits of elemental conglomerate that did not act randomly or naturally. They were pleased with the results and experimented with creating additional forms of life. Many of these did not survive, but djinns, efreets, giants, and genasi are all results of the primordials' efforts.

The merciless environment and fierce competition with the other children of the primordials weeded out the weakest of the genasi stock, so that only the cleverest remained. Even though the survivors were able to hold their own, their numbers were few, and as a group they were still no match for the other new races.

Teetering on the brink of extinction, the genasi gathered together for one last desperate try at protecting their race: They struck at the primordials. Most died in this heroic attempt, but a few survived, clutching small fragments of their creators' power. Employing arcane means to harness this essence, they created the first archon forges. Then, with armies of elemental soldiers at their disposal, the genasi carved out domains for themselves and multiplied, until other servants of the primordials stole the forges, claiming them as their own creations.

Genasi are as scattered in the Elemental Chaos as they are in the world, and few strong communities exist in either realm. Ironically, genasi cannot tolerate the extreme environments of their ancestral home, so they must compete with other creatures such as githzerai, djinns, and giants for the limited habitable areas. Genasi rarely win such conflicts and so end up forming enclaves in other races' settlements.

The elemental currents in the Plane Below strongly influence genasi who are native to the plane, making their elemental manifestations more extreme than those of genasi who were born in the world. For example, firesoul genasi are wilder and more destructive, while earthsoul genasi are more deliberate and implacable. Those native to the plane do not consider their extreme nature to be unusual and even exploit their elemental attunement by switching manifestations as needed. Thus, a stormsoul genasi might switch to earthsoul when patience is necessary.

## Life and Culture

The physical weakness of genasi limits their choices in the plane's hostile environment. Many are slaves in the City of Brass or in settlements of other powerful beings; those who are not can barely scratch out a modest living. Others live among the githzerai, contributing to their communities and learning their ways.

The few genasi settlements that do exist in the Plane Below are well-fortified areas with dedicated defenders, much like githzerai communities. Unlike the githzerai, who overcome the dangers of the plane through tight social bonds and intense martial training, genasi have a loose system of government. A council of experienced elders rules on important matters, but citizens work together for the sake of shared survival.

Genasi crafters, farmers, and traders work with vastly different materials from those in the natural world. Their manufactured goods incorporate pulsing crystal, semisolid fire, or stranger substances; farmers grow mineral-rich crops in sludge-filled swamps or herd elemental beasts across lightning-flecked fields of ice.

## Genasi Society Lore

**Arcana DC 20:** Although genasi are elemental beings, they are not native to the Elemental Chaos and struggle to survive there. Conflicting legends claim they arose from humanoids imbued with elemental essence or were creations of the primordials predating other forms of life.

**Arcana DC 25:** Genasi who are native to the Plane Below manifest elements more intensely than genasi do elsewhere, and they are able to alternate between different manifestations.

**Arcana DC 30:** Genasi legend holds that the race was instrumental in saving the world from the aftermath of the Dawn War, and the genasi still revere the hero Twenisto, called the Water Thief.

**Arcana DC 35:** Some genasi of the Elemental Chaos form hunting bands called *zar-son,* which roam the Plane Below in pursuit of dangerous elemental monsters.

## Outlook and Interaction

Despite all their hardships, genasi as a whole have no quarrel with the other elemental races. They feel a kinship to all children of the elements, even if individuals mistreat them.

Some genasi grow bitter about their race's lowly status and depart through portals to the natural world, but many are loath to leave their home plane, harsh as it is. A few such genasi form bands they call *zar-son,* which loosely translates as "great hunters." A *zar-son* band consists of four to twelve genasi, usually exhibiting various manifestations, who adventure across the Elemental Chaos and fight powerful elemental creatures. Some bands exist only to gain experience and strength from these hunts, while others search for a hospitable place to call home.

## Major Sites

Genasi tend to congregate in small populations within the cities of other races but occasionally form communities of their own.

### Gloamnull

This genasi trade city, struggling to survive in the Elemental Chaos, is detailed in chapter 3 (page 74).

### Hatsnarl

This genasi town (population roughly 4,000) is built on a cluster of small earthmotes—the largest is a mere mile across. Rope bridges link every floating rock with at least one or two others, though the windsoul genasi who make up most of the population often just fly between them.

The town is ruled by an enigmatic storm giant of unusual shrewdness named Aphyr. Through Aphyr's masterful diplomacy, the town has formed alliances with elementals and other storm giants, and an elite cadre of air archons defends it. The genasi of the city are particularly disciplined, and many study ritual magic at its extensive library. Other forces in the area are beginning to look toward Hatsnarl with some concern about Aphyr's goals.

### Threshold

The largest genasi city in the Elemental Chaos is also the most likely to attract visitors from the natural world. With a population of almost 10,000 genasi, Threshold is a bustling settlement built around an enormous portal that opens once each month for 72 hours. Each time, the portal connects to a seemingly random location in the world or, rarely, some other plane. The genasi use this short window of opportunity to trade their wares, secure new materials, or contact long-lost kin.

### The Wild Quarter

This area of the Iskalat district in the City of Brass (*Manual of the Planes, pages* 73–76) is home to most of the city's genasi. Many are freed slaves who work to earn freedom for their kin. The genasi's elemental nature works against them, though; with so many firesouls living so close together, mad celebrations and rages continually break out, giving the quarter its name. The efreets, having little tolerance for chaos, must patrol constantly to break up the disturbances. Despite the genasi's noble aims, they have become a citywide joke.

### The Water Thief

Genasi consider themselves to be resourceful and clever, and nothing exemplifies this attitude better than the story of the Water Thief.

During the long years of the Dawn War, life in the world was a struggle. The blasted landscape was unsuitable for growing crops or even rebuilding. Ash, salt, and scoria fouled streams and lakes. The creatures of the world had no choice but to drink the tainted water, shortening their lives and exposing them to horrible disease.

A group of genasi scholars, who had long ago fled their primordial masters and taken up residence in the world, decided to solve this problem. They knew that the Elemental Chaos contained vast resources of pure water. Being elemental in nature, the genasi were best suited to secure a supply, but the scholars could find none willing to travel to the Plane Below. Fear of the war and of the primordials overwhelmed them.

Finally, a watersoul genasi called Twenisto appeared at the scholars' doorstep. He didn't volunteer to travel to the Elemental Chaos to secure fresh water but simply grinned, claiming to have already done so. The scholars drew water from their well and were astonished to find it pure and sweet—as it was throughout the world.

The genasi hailed Twenisto as a hero, calling him the Water Thief, and their mythic traditions credit the race with the survival of all natural peoples. The other races remained ignorant of his accomplishment, though some genasi note that stories exist in other cultures that echo Twenisto's tale.

The hero did not linger in the world to enjoy the acclaim. He returned to the Elemental Chaos, his heart stolen by a beautiful lightning elemental. A prominent genasi family with the surname Waterthief claims Twenisto's lineage to this day.

# GIANTS AND TITANS

In the beginning, giants of every kind labored long for their elemental overseers to construct a beautiful place of ever-shifting primordial wonder, in the perfect image of the Elemental Chaos that had birthed it.

Then the gods interfered and changed everything. They made the world stable, predictable—mundane. New races spread swiftly through the hospitable new realm. Villages rose and became towns, towns became cities, and cities became nations. Dwarves disemboweled the earth, elves drowned dry places, and humans overran the whole. This ordered realm, ruled by gods-favored creatures, was an abomination to the primordials. They tried to restore it to its former perfection, but they were overthrown by the upstart gods.

Giants and titans have served their own aims since the end of the Dawn War, but some remain loyal to the trapped primordials and see it as their duty to destroy what the gods created. They tear down buildings, burn crops, and soak the ground with the blood of the world's creatures, hoping to overturn the triumph of the gods and free the primordials to recreate the world they intended.

### THE BATTLE OF THE TORN PLAIN

When the gods and the primordials waged their ancient war, a great battle took place on a wide plain in the natural world. On one side were angels and other servants of the gods, led by the archangel Odamiel. On the other were elementals and archons commanded by the mighty earth archon Phaeron. The forces clashed repeatedly, tearing the ground and burning the sky, but the armies were too evenly matched; the battles always ended in stalemate.

No giants were involved at the start of this battle, for they were fighting elsewhere. They soon prevailed in their other endeavors, however, and force-marched to reinforce their allies on the plain. The giants and the titans threw themselves into the fray, even though they were exhausted from their earlier battles and their march.

In the midst of the desperate fight, the great storm titan lord Thoran paused, having slaughtered all before him. At that moment, Odamiel dispatched the elemental creatures facing her. The two mighty beings' eyes met across the ravaged land.

Odamiel charged. Thoran turned his gaze to the heavens, and storm clouds blotted out the sun. With a crash of thunder that split the earth, an enormous stroke of lightning flashed down and blasted the archangel to ash.

Thus did Thoran win the Battle of the Torn Plain. The archon Phaeron knelt and paid him homage.

## Giant Society Lore

**Arcana DC 20:** Since the end of the Dawn War, most giants no longer serve the primordials, but they still destroy the creations of the gods in an attempt to return the cosmos to its former primordial existence.

**Arcana DC 25:** Giants rarely organize beyond small groups led by powerful leaders. Titans, however, are powerful enough to stabilize large portions of the Elemental Chaos. They create domains reflecting their nature and command giants and other elemental creatures.

**Arcana DC 30:** Giants' and titans' territories often contain portals connecting the world to the Elemental Chaos through areas of intense elemental activity.

## Life and Culture

Giants are barely civilized, forming loose bands if no leader directs them. Their motivations are simple: They like their own kind and creatures that share their base element, and they hate and destroy the rest—even other giants.

When giants do form larger communities, their characteristics depend on the inhabitants' kind. Hill and earth giants group into clans under a chieftain, while stone giants live in more widely distributed tribes. Frost giants are tightly controlled by a jarl, who brooks no argument, and fire giants organize military units under one leader. Storm giants claim wide swaths of land as their domains, in which they establish courts of all giantkind.

Titans take their elemental nature to the extreme. Rarely do they live in the natural world, which they consider beneath notice. They establish communities in the Elemental Chaos that resemble those of their kin but are more ambitious in scope. A powerful titan lord can carve out many square miles of territory in the Plane Below, and the titan's power draws followers to its banner: usually different titans and giants, as well as a few other elemental creatures.

Each titan holding is a relatively stable area of the Elemental Chaos, dominated by its master's native element—fire in a fire titan's domain, water and wind in a storm titan's, and so forth. Such realms are sometimes transient because of the shifting nature of the plane. However, especially strong-willed titan lords can hold their territories together long enough for them to show up on some maps of the Elemental Chaos.

Giants often hoard treasure, which is reason enough for adventurers to confront them, but their territories in the Elemental Chaos also harbor portals to the world. These open into inhospitable areas, such as the heart of a volcano or the center

of a raging storm. Sometimes a single community of giants spans both planes. Perhaps giants seek out such places, or their presence somehow opens portals. Regardless of their origin, these portals allow giants to wreak havoc in both planes.

## Outlook and Interaction

Giants are straightforward creatures. They like destruction and their favored element, and they gravitate toward power. Without leaders, giants are rampaging monsters. A strong leader can unite them to some degree, but generally only as a personal force of rampaging monsters.

Most giants serve their own interests or those of their immediate masters. They have forgotten their ancient lords, ignore them, or pay them only lip service. A significant minority, however, still revere the primordials. These giants are better organized and focus on the long-term goal of destroying the gods and their servants. They rein in their reckless nature, making them more cunning than others of their kind.

Most creatures that encounter giants have a fight on their hands. Skilled characters can sometimes negotiate with a giant or titan leader to secure safe passage or simply avoid a fight. Giants usually demand treasure in such an exchange.

## Major Sites

Because giants are so widespread and their communities so loose, few legitimate settlements exist. Those that do are titan realms and significant centers of power, though visitors find little but hardship.

### Kaltenheim, Kingdom of the Howling Ice

Kaltenheim is the domain of the frost titan Thrym, who rules from a citadel of deep blue ice. His territory's frigid landscape includes iced-over seas, caves of ice stalactites, and bone-snapping storms of snow and hail. Thrym seethes with hatred of his opposite, the fire titan Surtur, and he constantly plots to destroy his enemy and freeze Surtur's kingdom, Sakath-Mazim. Kaltenheim is the frozen reflection of that burning realm.

### The Rune-Carved Keep

The eldritch titan Xantis rules this castle in a remote area of the Elemental Chaos. The keep is sparsely populated with eldritch giants, golems, and a few other creatures of an arcane bent. Githzerai explorers claim that Xantis did not build the keep but discovered it. Its original constructors are a mystery, as is the meaning of the runes inscribed on its surface. Xantis intends to find the answers to both puzzles and exploit them.

JAKE MASBRUCH

### Sakath-Mazim, Kingdom of the Ashen Storm

The mighty fire titan Surtur rules this realm of burning ground and searing, ash-filled winds. Fire elementals of all types prowl the blistering landscape, slaying outsiders. In his castle of ever-flowing lava, Surtur plots against his nemesis, the frost titan Thrym.

### Torrakor, Kingdom of the Black Waves

The storm titan queen Ysaga rules this ravaged expanse of dark waters: a sailor's nightmare of huge waves smashing against each other, driven by ferocious storms. Thunder rolls constantly, and the only illumination comes from the lightning that continuously lances from the boiling clouds. Monstrous creatures reach up with maws or tentacles to catch any creature foolish enough to travel upon the waters. Ysaga has worked hard to ensure her solitude, even from other beings related to her favored elements. Some say she toils in search of a mystic remedy for some ancient curse or tragedy. Whatever the reason, she wants no company other than the storms, the waves, and the mindless beasts that dwell below.

Githzerai settlements are the most habitable by visitors in the Elemental Chaos. They are more stable than genasi towns and less harsh than efreet cities. However, githzerai are suspicious of strangers. Anything new brings change, which githzerai abhor; they study chaos only to control and avoid it. Grim and unfriendly as they are, though, they rarely turn away people in need.

Githzerai are an introspective people who see themselves as the calm within the literal storm of the Elemental Chaos. They believe that by mastering the chaos of the universe, they can create perfect order, which leads to enlightenment. Others describe them as philosopher-monks, and githzerai culture is decidedly monastic. This structure is not imposed by rulers; it is a natural consequence of both the githzerai's outlook and the reality of surviving in the Elemental Chaos.

## Githzerai Society Lore

**Arcana DC 20:** Githzerai settlements are rare points of order in the Elemental Chaos. The githzerai are grim and focused on control, but they do assist travelers in need.

**Arcana DC 25:** Perfection and discipline drive the githzerai, exemplified by their monastic traditions. Githzerai also value individuality highly and encourage all to follow their own paths.

**Arcana or History DC 30:** After the ancient gith overthrew the empire of mind flayers that enslaved them, a rift developed involving their leader, Gith. Zerthimon, her most vocal critic, prevailed against her in a duel and led his followers to the Elemental Chaos. They became the githzerai.

**Arcana DC 35:** Somewhere in the Elemental Chaos is the legendary Arsanith monastery. It is said to be a center of perfect order, cloaked from all who are not worthy. Anyone who has found enlightenment is welcome there.

## Life and Culture

Githzerai strive to perfect themselves and their culture, believing this practice to be the path to enlightenment. They have not forgotten the stories of their time as slaves, and thus their society is only loosely regulated. Nevertheless, a definite order and sense of shared destiny emerges.

Monastic traditions unite the githzerai in pursuit of their common goal. Their training emphasizes the harmony of soul, mind, and body. Such intense focus unlocks impressive mental ability, honed further by the constant effort of will necessary to control the Elemental Chaos. Physical exercises incorporate martial training as a means to mastering unarmed combat—perhaps in recognition of the ancient duel between Zerthimon and Gith.

Swearing never again to let tyranny quash their will, githzerai also pursue their own interests, from warfare to fine art. They aspire to perfection even in their hobbies and vocations: A githzerai works as hard to be the best crafter or farmer possible as to be the best warrior or wizard.

### The Origin of the Githzerai

Eons ago, the mind flayers ruled a horrible empire that spanned planes. In the empire's early days, the illithids conquered a gaunt, yellow-skinned race of humanoids. As the empire expanded, the mind flayers took many more peoples as thralls, slaves, and food, but that ancient race of humanoids remained the most populous.

After millennia of imprisonment, a powerful leader named Gith arose among that enslaved people. She led a sweeping rebellion against the mind flayers that ultimately collapsed the empire. The slaves were freed. The mind flayers fled into the deep places of the worlds, vowing to rebuild their strength and to wreak terrible vengeance. The race's original name has long been lost, but scholars named it *gith* in honor of the great liberator.

The gith did not have long to celebrate their new freedom. Even before their wounds had been healed and the rubble cleared, problems arose. The gith were still strictly regimented and controlled by a leader who treated them as an army fighting a war, rather than as a free people ready to build a new society.

Such discipline comforted many gith, but others chafed against it. Among the latter, Zerthimon was the most vocal in denouncing Gith: Although she had been an excellent leader in war, she had proved unable to lead a people in peace. He called for her to step down.

Gith refused to relinquish her command, but Zerthimon and his followers would not tolerate another tyrant. Zerthimon challenged Gith directly. The two great gith leaders lifted their blades, stained with the blood of mind flayers, and met each other on the battlefield as the gith looked on.

Although Gith's skill in battle was superior, Zerthimon gained an advantage over her and won the contest. He spared her life, but the conflict had created a deep division within the gith race. Zerthimon led his supporters away from the ruined illithid empire to make a new home in the Elemental Chaos. Gith and her followers also left the world, but they moved to the Astral Sea.

The two halves of the gith people developed along different paths, ultimately becoming separate races. Gith's followers in the Astral Sea became the githyanki, and Zerthimon's followers in the Elemental Chaos became the githzerai.

Each githzerai settlement is an oasis of calm in the seething Elemental Chaos, usually a walled city built on an earthmote. Cenobites and mindmages patrol the wall, watching for incursions. Other githzerai sit or stand in quiet meditation throughout the fortress-city, exercising their focused will to keep the turmoil at bay. Outsiders receive close scrutiny, often having cenobites assigned to keep track of their moves and moods.

As mortal creatures, githzerai require food and water. They can direct the unstable plane's mutability to transform some of the local environment to elemental water, but food is harder to acquire. Crops and livestock are brought in from other planes, particularly the Feywild and the Astral Sea. Visitors to a githzerai settlement might be surprised by markets featuring ears of silver corn or hulking, red-skinned hogs.

### Zerthimon's Fate

As with so many figures of myth, Zerthimon's final fate remains unknown. Githzerai historians agree that after his duel with Gith, Zerthimon led his followers to the Elemental Chaos, where they established their monastic society. They also agree that he was an able leader for many decades, and that he trained the first githzerai monks. Then, apparently, he simply disappeared.

Many stories purport to tell Zerthimon's fate. The most popular among githzerai is that he achieved a profound form of enlightenment, far deeper than that attained by the hermit Liricosa (page 148)—perhaps even divine insight. Zerthimon transcended his mortal form to become an immortal being of pure energy, subtly guiding his people in their quest to follow him to this supreme state. He is no longer troubled by thoughts of violence against his enemies, and those who sense his presence can feel his peaceful nature.

Other scholars scoff at these tales, calling them existential nonsense. Zerthimon was a great leader and left a great heritage, but his end was no mystery. He simply died, as all mortals do; his followers held a grand funeral for him, and all knew of his passing. Only later, when Zerthimon's life and death became clouded from the passage of time, did historians and wishful thinkers invent more fantastic fates for him.

A darker story, and one that offends most githzerai, is that Zerthimon did die—but only in part. Unwilling to abandon his people, he delved into forbidden arts to extend his life beyond death. He became a lich, just as Gith herself had done. However, after performing the rituals necessary to achieve this state, Zerthimon was horrified at what he had done. He realized that if his people saw him in this state, they would turn from his teachings and all his achievements would be for naught. He fled to some forgotten place in the Elemental Chaos, where he dwells still, wrestling with the evil of his existence and trying to guide his people without their knowledge.

Interestingly, githyanki also take bitter offense at this tale, because they believe it would diminish Gith if their race's greatest traitor had managed to join her in immortality.

## Outlook and Interaction

Githzerai are suspicious of outsiders, but they reserve true hatred for their ancient enemies: the mind flayers and their brutal kin, the githyanki. They kill such creatures on sight, and they form special groups to hunt them down across the planes. Anyone who grievously wrongs the githzerai people might also be the target of relentless pursuit.

## Major Domains

The githzerai boast more communities within the Elemental Chaos than most other races, but only a few are large or important enough to be known to outsiders.

### Arsanith

Arsanith is a legend among the githzerai, but a few planar travelers report having actually seen the place. Tales say that it is a small monastery deep within the Elemental Chaos, far from any other outpost of civilization, where only those who have touched enlightenment dwell. Arsanith's inhabitants are said to have such control over the surrounding chaos that they alter it purely by instinct, keeping out elemental beasts and demons. They similarly notice any other creature that nears their monastery and cloak their existence if they do not wish to be found. However, the tales also say that anyone who has glimpsed enlightenment is welcome in Arsanith—even githyanki.

### Sanzerathad

This githzerai settlement barely survives the wilds of the Elemental Chaos. For more information about Sanzerathad, see page 86.

### Zerthadlun

The largest githzerai city in the Elemental Chaos is one of the best places for outsiders to enjoy some of the safety and comforts of civilization. Zerthadlun is described in more detail in *Manual of the Planes*, pages 77–78.

# SLAADS

Embodying disorder and entropy, slaads claim all of the Elemental Chaos as their stomping grounds. They are not primordials, elementals, nor demons, but chaos made flesh, and they delight in the fury of clashing elements.

Those slaads that prize knowledge and intelligence more highly than instinct know several hundred origin myths regarding their kind. Most such stories contradict each other, but one theme is shared by all of them: Slaads claim that they are the only sentient beings to inhabit the universe, and that all other creatures that believe themselves to be self-aware have that belief only in their own fevered imaginings.

The conflict between the slaads' origin stories invalidates all of the tales, in the opinion of most sages, and is just one more example of the chaos that slaads embrace. However, one controversial theory claims that all the stories are true because many alternate realities exist—possibly even an infinite number. That individual slaads tell different stories indicates that these unique creatures descended from different universes and perhaps can yet see dimly into realms other than the one they occupy. Perhaps multiple universes collapsed into a single cosmos, and only slaads still remember the infinite possibilities of other timelines. Now trapped in a single reality, they rebel against its strictures and embrace chaos as a way of breaking free into the wider multiverse.

Scholars generally consider this idea ludicrous at best. Slaads' thoughts are clouded with maddening images, and they seem aware of things beyond the perception of other creatures, but these facts do not prove the existence of a wider reality.

## Slaad Society Lore

**Arcana DC 20:** Most slaads seem insane and distracted, as though they are aware of things that other creatures cannot perceive. Those capable of more reasoned thought claim that they are the only sentient creatures in the cosmos.

**Arcana DC 25:** Slaads roam the Plane Below in search of areas of spectacular chaos. This quest sometimes brings them into contact with demons, who share their taste for destruction, but the two groups do not cooperate.

**Arcana DC 30:** Slaads have hundreds of conflicting origin stories, and one theory claims that all are true. The slaads see multiple realities at once. Their search for chaos is an attempt to tear down the walls that separate universes. They follow chaos storms in this pursuit, the largest of which is the Great Red Tempest.

**Arcana DC 35:** From time to time, slaads are drawn to a strange object known as the Spawning Stone. This huge artifact is needed for reproduction, but scholars also believe it might trap the slaads in their current form and reality.

## Life and Culture

A slaad's life is filled with constant bedlam; peacefulness and inactivity are torture to these frenzied creatures. Chaos is almost as vital as food for slaads—when tumult dies down, they suffer pangs of discontent.

Slaads have no permanent home and never rest. They roam the Elemental Chaos in small packs, hunting for food and for spectacularly chaotic or violent phenomena. Slaads are sometimes encountered with demons, even though the two groups share no affinity, because both kinds of creatures are drawn to acts of devastation. Once the destruction is complete, though, the two groups might end up fighting each other.

Just as hunter tribes of the world follow migrating herds, slaad packs trail chaos storms (*Manual of the Planes*, page 67). A storm might drag large masses of stony or watery debris in its wake, creating a temporary landscape that pursuing slaads briefly inhabit. Slaads relish these violent manifestations of chaos and seem to be immune to their effects. They fall upon creatures wounded in a storm's tumult or salvage interesting materials transformed by its reality-altering power. If slaads do perceive other worlds simultaneously, they might be attracted to chaos storms because they believe the barriers between multiple realities are thinnest at a storm's center.

## Outlook and Interaction

Slaads seem interested only in increasing entropy, both through violent actions and by growing their own numbers with the spread of chaos phage (page 142). Thus, their interaction with other creatures is rarely harmonious. Even demons and devils can be bound by pacts, however short-lived those agreements might be. Making a deal with a slaad is nearly impossible.

Those who hold to the multiworld theory of slaad origin believe that slaads act as they do for a deeper reason: Slaads spread chaos in an effort to break down the structured bonds of reality. Constrained to one existence, one time, and one rule of cause and effect, slaads rail against order because it is their prison, and they embrace chaos as the key to freedom.

## Major Sites

Slaads wander most of the Elemental Chaos, but they are always found in some locations.

### The Great Red Tempest

The storms of raw chaos that sweep across the Plane Below threaten travelers and natives alike. Some are so large and long-lasting that they have acquired names. The Great Red Tempest is one such monster: a churning, blood-colored maelstrom that slowly rolls through the Elemental Chaos.

A typical chaos storm (*Manual of the Planes*, page 67) is rarely more than a few feet in radius, but the Great Red Tempest extends for miles in all directions. Several slaad packs ride behind it on tumbling, burrow-riddled stones the size of mountains or swim in the miniature seas that spin in its wake. When the storm boils across an inhabited region, the slaads launch themselves out to tear into survivors who are still regaining their bearings.

The tunnels that pierce the storm-lashed boulders are strewn with oddities collected from the storm, sometimes valuable but often merely shiny junk. Ruined structures sprawl across one rocky mass, apparently the remains of a compound founded by humans to establish a foothold for their explorations of the Elemental Chaos.

Slaads come and go from the Great Red Tempest, but one is always at the storm's heart: a void slaad called Vinakr Abudn. The other slaads supply the ebony creature with food and water as it meditates constantly, seeking a way to use the power of the storm to tear down the walls of creation.

### The Spawning Stone

Drifting through the Elemental Chaos is a great whorled and multicolored sphere several hundred feet in diameter, cloaked by an enormous vortex of churning elemental fury. The whorls gradually mix across the sphere's face, and burning white runes gird it in three broad bands at, above, and below its equator. This huge structure is known to slaads as the Spawning Stone.

Every few years, according to no predictable schedule, a subset of the slaad population feels an undeniable urge to travel to the Spawning Stone's location and procreate. The stone's power tugs relentlessly at slaads wherever they might be, allowing them to find it unerringly as it wanders the Plane Below.

The slaads converge at the Spawning Stone in a mating frenzy. Some quality of the sphere quickens the egg sacs under their claws, enabling the growth of tiny embryos for implantation in prey; otherwise, slaads would produce no offspring. A few who visit the stone are transformed into slaad spawners

FRANZ VOHWINKEL

(*Monster Manual 2*, page 185), which begin to bud and grow embryos beneath their skin rather than under their claws.

The runes on the Spawning Stone are in no known script, but slaads that study the lore of their race believe them to be an arcane stricture. Whatever agency confined the slaads to a single reality seems also to prevent these beings of manifest chaos from developing new physical forms over generations. The offspring of slaads that congregate at the stone are limited to a handful of toadlike shapes.

The most ancient living slaads, including Ygorl, Lord of Entropy (page 156), and Bazim-Gorag the Firebringer, might know the reason behind their limited forms. They might even be responsible for creating the burning runes. If so, none of these primeval slaads have ever revealed their knowledge. However, similar runes sometimes appear on the Pandemonium Stone (page 80), another curious artifact that could be the physical anchor for the slaads' imprisonment in just one existence.

A powerful and long-lived slaad called the Guardian of the Stone remains always with the sphere. The Guardian sees to it that the sphere remains off limits to any creatures other than slaads.

# OTHER RACES

Many other races also make their homes in the Plane Below, even if they are not as numerous or as influential as those described above. Demons, the native creatures of the Abyss, are discussed in more detail in Chapter 4.

## Dao

These reclusive creatures of earth occupy a unique place in the complex web of relations between the ancient elemental races. The dao took no sides in the Dawn War, remaining neutral even when the djinns begged them for help. The djinns blamed their refusal for the losses they suffered. Today, however, only the most hardened caliph still harbors acrimony toward that race, for the djinns' punishment was ultimately at the hands of the gods.

The dao are masters of earth and stone, and they consider their property to be all that naturally occurs or grows within those materials. Their love of gems puts dwarves to shame, and they might travel across planes to establish a new mine if the lode is promising. The possessiveness of dao leads them to reclaim treasures of the earth from other beings who, in their opinion, do not deserve them.

Dao have the most hierarchical society of all elemental races other than the efreets. The sharif is the supreme ruler, ensconced in the race's ancestral home in the Elemental Chaos. This place, called the Great Dismal Delve, is carved into a massive block of freestanding earth. Though the dao constantly bore through its interior, the stone constantly renews itself from within so that they can never remove it all. This cycle of activity spawns great earthquakes that rattle through the Delve.

## Demons

Demons normally dwell in the Abyss, and their behavior is described in more detail in chapter 4. Since no strict boundary separates the Abyss from the rest of the Elemental Chaos, though, demons can be encountered anywhere in the plane.

Demons in general don't form communities. They are living engines of destruction that slaughter everything in sight; when other victims are unavailable, they readily turn against one another. They have no underlying reason for their chaotic rampage, as slaads might, but act simply out of their nature.

On occasion, a more ambitious demon develops the urge to rule. The mightiest of these become demon princes, but the less powerful ones browbeat weaker demons into service and enslave other creatures rather than destroying them. Such rulers are as instinctively destructive as other demons, but their devastation is slightly more organized and on a larger scale.

Each demonic regime reflects the persona of its ruler, but all share certain features. There are no laws beyond requiring instant obedience to the ruler's every whim, which is enforced through cruelty and torture. Daily life is nothing more or less than a struggle for survival: The strong literally prey on the weak. Their rulers constantly seek to expand by conquering neighboring settlements, and their demonic armies are made up largely of volunteers. Soldiers in the service of demon overlords receive slightly better treatment than most others—as long as they keep winning and don't irritate a foul-tempered superior.

## Dwarves

Dwarves are not native to the Elemental Chaos, but a few dwell there nonetheless, hidden in the crags and caves of mountainous regions. Some are descendants of the giants' slaves from ages past who did not mutate into new races such as the galeb duhrs. Others arrived more recently, after delving so deep into the world that they were transported to regions of elemental earth in the Plane Below. Both groups are insular and heavily suspicious of outsiders.

Such dwarven communities must survive on scant resources, since few regions of the Elemental Chaos can support crops or herds. Their inhabitants rarely trade or interact with others except out of necessity, and their dour attitude only reinforces the worst stereotypes of a race that is already seen as standoffish. These communities develop strict and intricate codes of law, and the punishment for violating these traditions can be brutal—another disincentive for others to visit. However, the dwarves might lend a sympathetic ear to outsiders who seek aid to fight giants or to free an enslaved population, since they have never forgotten their long-ago servitude and still resent their former overlords.

### CREATING ELEMENTAL BEASTS

In addition to the elementals presented in the *Monster Manuals* and other publications, countless elemental beasts wander the Plane Below. You can translate a beast or magical beast of nonelemental origin into an elemental version with a minimum of work. A cave bear could become a stone-based predator simply by giving it the earth keyword and immunity to petrification; a nightmare can be made of pure fire and given the fire keyword and immunity to fire. Such beasts need not look like their natural counterparts—an elemental bear might resemble a hulking, rocky mass, while a shark might be formed of viscous water with teeth of ice.

## Elementals

Elementals are the wild animals of the Elemental Chaos, as are other bestial elemental creatures, such as magma beasts, flame snakes, and rimefire griffons. Though some are more intelligent than natural beasts, they are creatures of instinct rather than intellect. They consume and reproduce, with no desire to form communities or even such loose groups as tribes.

Elementals sometimes form packs or extended family units that hunt in a somewhat organized way. Such groups do not govern areas as sentient beings do, but they dominate a region through sheer numbers. More intelligent creatures of the Plane Below occasionally capture and train elementals as pets or servants.

## Humans

The Elemental Chaos is home to a considerable number of humans. Some are new arrivals, but many groups of humans have been here for generations; like genasi, most humans dwell in communities dominated by other races. The City of Brass has a large human population, made up mainly of slaves, though freed servants, merchants, and craftsfolk are common as well. Genasi settlements, though rare, frequently include sizable human minorities. Several giant communities keep humans as slaves. A few human-dominated communities exist as well, from isolated, struggling villages to major trading centers.

Becasue humans reproduce and spread more rapidly than other civilized races do, surviving in the Elemental Chaos is even more difficult for them.Few areas offer sufficient fertile soil and drinking water to support an expanding population while lacking hazardous elements or creatures, and many nascent human populations do not survive. Those human communities that do sustain themselves in the Plane Below are just as varied as those in the natural world, with an enormous variety of cultures and governments.

## Phoelarchs

These natural humanoids (described in *Monster Manual 2*) share their souls with the elemental phoeras, winged entities of fire perhaps related to the wondrous phoenix. Although most phoelarchs dwell in the natural world, a few have become fascinated with exploring their dual nature. They travel to the Elemental Chaos, hoping to track down the phoeras with whom they share their essence. Phoeras, although intelligent, lack the desire to form communities, instead soaring through the heights of the Elemental Chaos alone or in flocks.

Some phoelarchs join existing communities, but a few have established villages of their own. These small societies have little interest in interacting with outsiders, but neither are they innately hostile. Travelers in need of shelter or assistance might be welcome (or at least tolerated) for a brief time. Phoelarchs are rigidly honorable, but their customs and sense of honor differ greatly from one community or individual to the next. Formerly affable hosts might turn on a visitor suddenly in response to the slightest offense, or for reasons the outsider never fully understands.

## Primordials

Those primordials who survived the Dawn War remain imprisoned or deep in slumber, scattered across the breadth of the Elemental Chaos. The presence of even a dormant primordial greatly influences the development of any nearby community, regardless of the races that populate it. Such societies drift toward the worship of that primordial, or of primordials in general, whether in hidden cults or open temples. Perhaps the primordial's resting place draws those already inclined to worship it, or its overwhelming presence slowly twists the minds of other beings.

A primordial's influence is evident in a community's appearance and character, even if the worship itself is hidden. A settlement built on a primordial of stone displays low, squat architecture, while one near an entity of water might have curved streets and flowing artwork featuring soft lines. The regions surrounding such communities are home to concentrations of elementals that share the nearby primordial's essence, and the citizens might consider such creatures to be holy.

### Those Who Roam

Conventional wisdom and religious doctrine maintain that all primordials were either slain or imprisoned by the gods at the end of the Dawn War.

This is untrue.

A scant few unchained primordials yet roam the cosmos—primarily the Elemental Chaos, but the other planes as well. How beings of such immense power and such destructive instinct can remain hidden is unclear. Scholars hypothesize that the free primordials have either lost much of the power they had in their prime or are so subtle that they—and their terrible plots—are invisible to all.

Even the most learned sages know the names of only two free primordials. One is Iktha-Lau the Ever Empty, the utter cold from the darkest voids. The other, Ulctilantilokla, is a creature only partly real that is said to have germinated from the seed of the multiverse's first dream.

CHAPTER 3

# Elemental Locales

**The Elemental** Chaos is infinite: Even the portion known to natural creatures dwarfs their world. You might lead the characters along ways wending through preconceived locales or fill previously unknown spaces with cultures and landscapes pulled from the peculiar, grotesque, and scintillating depths of your psyche.

Whether you prefer examples of adventuring areas in the Plane Below, or want some details about its most important or infamous regions, we've got you covered. This chapter presents ten areas of the Elemental Chaos, some unique and others archetypal. By introducing variations to suit the strangeness of the Elemental Chaos as you perceive it, you can make them unique to your campaign.

Each locale described in this chapter includes the following information.

- **Overview:** Here you'll find a general description of the locale and its place in the Plane Below.
- **Inhabitants and Culture:** If the area contains organized settlements, their nature is described here. Some areas are too wild to have an identifiable culture, but significant inhabitants are discussed.
- **Major Areas:** This entry summarizes important cities, fortresses, and other sites of note in the region.
- **Adventures:** This entry includes a list of environmental hazards and notable terrain features in the locale, followed by several sample encounters to threaten the characters.

Following those ten sections are three mini-adventures, including tactical encounters, in a variety of interesting locations in the Elemental Chaos. You can run them as one-offs, plant them as seeds of larger adventures, or use them as models for elemental encounters of your own design.

ZOLTAN BOROS & GABOR SZIKSZAI

# THE BRAZEN BAZAAR

It begins as a gleam in the distance, flickers of fire amid a black thunderhead rolling over the horizon. As the billows of smoke come closer, they solidify into an elevated highway stretching across emptiness.

Atop this bridge of smoke, tongues of fire take the shapes of azer and genasi riders upon horses of flame drawing ebony buggies, painted wagons, and brass-gilded carriages. Within those vessels, efreet merchants tabulate the value of their goods. Salamanders and fire giants march alongside, sculpting living shapes from smoke and flame.

This is the Brazen Bazaar, a traveling marketplace and carnival originating from the City of Brass. Initially one of several caravans that supplied outposts, the bazaar has evolved into a market as great as any within the city that spawned it. It reaches deep into the Elemental Chaos and into other worlds.

## Inhabitants and Culture

In full, the Brazen Bazaar includes thousands of merchants managed by a cabal of efreets called the Golden Hearth. Few individuals see the entire bazaar. Depending on the importance of its destination, it manifests as anything from a handful of wagons to a caravan stretching as far as the eye can see.

Azers, genasi, and giants perform the physical labor of moving and maintaining the caravan. Workers of flame, such as salamanders and mystically inclined giants, provide side entertainment: flame sculptures, shows of strength, and acrobatics. But the largest crowds flock to peruse the rare and magical goods offered by the merchants.

Though the Golden Hearth considers the City of Brass its home, it holds no allegiance to the Lord of the Efreets or to any noble house. All creatures, including efreets, must pay for the goods, services, and information that the cabal has acquired from distant places.

## Major Areas

The Brazen Bazaar consists of wheeled vehicles and contraptions suited for easy transport across the bridge of smoke. The bridge coalesces a few dozen feet ahead of the first vehicle and dissolves a few dozen yards behind the last one.

Sometimes the bazaar sets up shop on the ground or another solid surface. At other times, the drivers establish a platform of smoke accessible to patrons by ramps or stairs. Given a significant enough location, the bazaar includes all the following structures.

**The Golden Market:** This elite section of the bazaar consists of enclosed wagons that are larger inside than out, due to pocket dimensions such as those in *bags of holding*. Lieutenants, such as other efreets and lesser creatures, run other market stalls, but the Golden Market is the exclusive province of the Golden Hearth efreets.

In a Golden Market wagon, rows of tables and shelves line long hallways lit by brass chandeliers and by solid elemental fire. All manner of magic items and rare goods are sold here, though their prices are higher than those in the City of Brass. Portals link the Golden Market wagons to the City of Brass, enabling the Golden Hearth to replenish goods that go out of stock.

**Attendant's Carriage:** Like Golden Market wagons, the homes-on-wheels of the Golden Hearth are larger inside than they appear. The greatest such carriage belongs to Attendant Hephrandiun, leader of the Golden Hearth. Its exterior is a large carriage, gilded in brass and draped in silks; inside, it resembles a mansion, replete with audience chambers, hidden rooms, and a shrine to the primordial Imix, Lord of Fire.

**The Tent:** When the Brazen Bazaar remains in a place for more than a few days, its workers erect a canvas tent several hundred yards wide. Covered in Barazhad runes and stitched with trails of elemental fire, the tent protects the portion of the market within it from bad weather and the plane's randomness.

## Adventures

The characters might seek the Brazen Bazaar if they require a rare item, or they might hear of an ally or an enemy traveling with the caravan. They might even join the bazaar to travel under its auspices. The traveling market sometimes crosses regions of fire and intense heat to appear in planes outside the Elemental Chaos, so the characters might encounter it in their world or in the Feywild (and follow leads from there into the Elemental Chaos).

The bazaar's merchants are rigidly amoral, and their heartless profiteering sometimes inspires heroic intervention. An efreet might offer provisions to a poverty-stricken community—in exchange for the enslavement of all the community's firstborn. A desperate adventurer might acquire an artifact, but only in exchange for an open-ended favor or a long-term oath of service. Efreets of the Golden Hearth use rituals to ensure that such oaths are kept.

### Environmental Features

The Brazen Bazaar travels above and across almost all kinds of terrain. Its only consistent environmental features are those that travel with it.

FRANZ VOHWINKEL

**Canvas:** The canvas of the protective tent is as tough as leather and immune to fire damage. It regenerates 10 hit points per round.

**Portals:** A few of the Golden Market's wagons contain portals to the City of Brass.

**Smoke:** Squares filled with smoke are heavily obscured.

**Smoke, Solid:** The solid smoke on which the bazaar travels has the consistency of stone.

## Encounter Groups

Efreets of the Golden Hearth leave the running of markets to servants when the Brazen Bazaar travels to small communities, so encounters can suit characters of a range of levels. The Golden Hearth hires anyone who proves useful and can survive the environment.

**Level 11 Encounter (XP 3,200)**
- 1 azer foot soldier (level 14 soldier, *MM* 22)
- 1 firelasher (level 11 skirmisher, *MM* 104)
- 2 flame steeds* (level 13 skirmisher, *MM* 196)
  *Treat flame steeds as nightmares, but with the elemental origin instead of shadow and adding the fire keyword.

**Level 17 Encounter (XP 8,000)**
- 1 azer beastlord (level 17 soldier, *MM* 23)
- 3 azer warriors (level 17 minion, *MM* 22)
- 1 firebred hell hound (level 17 brute, *MM* 160)
- 2 salamander archers (level 15 artillery, *MM* 226)
- 1 salamander noble (level 15 controller, *MM* 227)

**Level 22 Encounter (XP 22,600)**
- 2 efreet flamestriders (level 23 skirmisher, *MM* 99)
- 2 fire giants (level 18 soldier, *MM* 123)
- 1 fire giant forgecaller (level 18 artillery, *MM* 123)
- 1 fire titan (level 21 elite soldier, *MM* 124)

**Level 25 Encounter (XP 41,400)**
- 2 efreet cinderlords (level 23 artillery, *MM* 98)
- 2 efreet flamestriders (level 23 skirmisher, *MM* 99)
- 1 efreet pyresinger (level 25 controller, *MM* 99)
- Hephrandiun, efreet pyresinger demagogue (level 25 elite controller, *MM* 99 and *DMG* 178)

# CANAUGHLIN BOG

Hundreds of miles across, Canaughlin Bog drifts in chaos currents, bonding with other isles for hours or years at a time. Portions of Canaughlin are normal fens, complete with trees and other ordinary plants. Other parts exhibit signs of chaos: hillocks of ice and stone protruding from waters that swirl in physics-defying currents over caustic mud.

The swamp received its name two centuries ago from eladrin explorers of the Feywild. Its horrors and hazards have since defeated all manner of adventurers, other travelers, and enterprising elementals.

## Inhabitants and Culture

The fen supports sporadic villages. The largest groups of inhabitants are the Tinder-Takers and a fey community called Raenrirriel.

**Tinder-Takers:** The Tinder-Takers are a revolving assortment of genasi fugitives from Threshold (page 57) and Gloamnull (page 74), githzerai too undisciplined for monasteries, and slaves escaped from the efreets. The Tinder-Takers' numbers and the environment protect them from pursuers. They spend their time battling swamp hazards, raiding vessels and mounts in a rickety but well-armed airship called the *Poison Storm,* and honing and supplementing their skills in hopes of striking down their oppressors.

**Raenrirriel Fey:** The fey of Raenrirriel have dwelt in Canaughlin since the days of the first eladrin explorers. Over the years, they have mutated into uglier, more twisted creatures. A cabal of hags that have elemental powers leads the community. The hags have come to believe that they will master the plane. After all, the fey are creatures of nature, and what is nature but the elements? So far, however, the hags have not developed potent elemental rituals or gained a foothold in any elemental societies.

## Major Areas

Terrain and other hazards make deadly combinations throughout the bog, so any part of the swamp can be lethal. Three infamous areas are described below.

**The Black Pool:** Sinkholes and pits abound in Canaughlin. Among them is the Black Pool, normally an ordinary pit leading to a series of muddy underwater caves. At random intervals, it becomes a portal to Shedaklah, a festering, swampy layer of the Abyss overseen by the demon lords Juiblex and Zuggtmoy. Abyssal energy inundates the area around the pool. Elementals that die here rise as blight-born demons (page 132), and mortals rise as abyssal ghouls (*Monster Manual,* page 118) or other horrors.

**Flotsam:** This village, the home of the Tinder-Takers, has buildings made of pieces of stone and wood that the Tinder-Takers have procured from a hundred different sources. Flotsam stands on a low, broad hillock of acid-tainted soil, surrounded by a palisade of jagged wood and bits of broken iron and glass.

**Raenrirriel:** The fey settlement lies in a grove of petrified cypress trees protruding from a basin of thin, watery mud. Bolts of diseased yellow and bruise-purple lightning flicker between the trees, illuminating bone, iron, stone, and wood structures built among the branches. Upper echelons of fey live in these structures, while lesser fey dwell in chambers formed beneath the mud by the trees' roots. The area of and surrounding Raenrirriel is more stable than most of the Elemental Chaos; for hundreds of yards in every direction, it seems to be part of the natural world. Creatures that can normally manipulate the plane's turbulence are unable to do so here.

## Adventures

Of all the swamps throughout the cosmos, only the Fenreach in the world (*Draconomicon: Chromatic Dragons*, page 238), the Murkendraw (*Manual of the Planes*, page 45) and a few moors of the Shadowfell are larger than Canaughlin Bog. A soup of environments churns across Canaughlin, so that traveling across it is an adventure in itself.

Canaughlin harbors portals that lead to swamps in other realms, including those mentioned above and the mud flats of Minauros (*Manual of the Planes,* page 100). During the Blood War (*Manual of the Planes,* page 89), these last portals served the devils well.

### Environmental Features

Much of Canaughlin is typical swampland: shallow water and difficult terrain. Hillocks protrude from the muck of the bog's shallows and in deeper areas. The water ends abruptly at the edges and underside of the isle.

**Chaotic Depths:** Swamp water oozes among obstacles and through murky caves in the deeps. Elemental creatures, and fey who have dwelt in Canaughlin for generations, take advantage of these sluggish currents to move more freely through the swamp. As long as such creatures are swimming in water at least 5 feet deep, they can move without penalty through spaces one size smaller than they are and can squeeze through spaces two sizes smaller.

**Elemental Spouts:** Boiling, freezing, caustic, or venomous swamp water can erupt in elemental spouts, as described on page 14.

**Energy Moss:** Clumps of abnormally resilient moss hang from branches and float on swamp water. They absorb cold, fire, lightning, poison, or thunder energy from the chaotic environment. Each square of energy moss functions as a square of elemental seepage and as a square of energy crystals (*Manual of the Planes,* page 22).

FRANZ VOHWINKEL

**Icy Crust:** Swamp water can crust over with ice, forming difficult terrain. A character falling prone on the ice must make a saving throw or break through.

**Portals:** Parts of the bog, both underwater and on land, mystically connect to other locations. Locations linked by portals generally lie within 20 squares of and in line of sight to each other. A character ending its turn in a portal space teleports to the location linked to that space.

**Swamp Water:** Canaughlin water flows chaotically. Each round, currents push an affected creature up to 4 squares (1d6 – 2, minimum 0) in a random direction. See "Underwater Terrain" on page 45 of the *Dungeon Master's Guide* for more information.

*Swamp Water, Acidic:* A creature that starts its turn in acidic swamp water takes 1d6 acid damage. If the damage roll is 6, the creature is also blinded until the end of its next turn. Bogs of acidic mire (page 12) occur near deep pools of acidic swamp water.

*Swamp Water, Boiling:* A creature that starts its turn in boiling swamp water takes 1d8 fire damage.

*Swamp Water, Freezing:* A creature that starts its turn in freezing swamp water takes 1d6 cold damage, and the Endurance check DC to avoid losing healing surges from suffocation increases by 2.

*Swamp Water, Thick:* Thick water is difficult terrain for creatures swimming or walking through it.

**Trees:** Swamp trees might be living or petrified. They are blocking terrain and provide cover.

## Encounter Groups

Encounters that occur in normal swamps also happen in Canaughlin, but with elemental twists. Alien predators lurk in the waters, suspicious villagers turn on passersby, and the environment seethes with malevolent will.

Create the hags of Raenrirriel by using the frost adept and scion of flame templates (*Dungeon Master's Guide*, pages 179 and 181) or the druid, shaman, or wizard class templates. The 15th-level encounter below provides examples using the frost adept template.

**Level 11 Encounter (XP 3,175)**
- 1 Crushing Wave hierophant (level 10 artillery, page 154)
- 2 Crushing Wave initiates (level 8 soldier, page 155)
- 1 githzerai zerth (level 13 elite controller, *MM* 130)
- 5 human lackeys (level 7 minion, *MM* 162)

**Level 22 Encounter (XP 21,500)**
- 2 ash-wrought soulburners (level 19 controller, page 133)
- 1 consumptive swarm (level 21 elite skirmisher, page 133)
- 1 field of everflame hazard (level 18 blaster, *DMG* 92)
- 2 hezrous (level 22 brute, *MM* 56)

# THE CHOKING PALACE

Far from the City of Brass and the monasteries of the githzerai lies Fume, a duchy that swears fealty only to Ehkahk, the Smoldering Duke (page 146). In Fume's center, floating on roiling smoke, stands the Choking Palace, from where Ehkahk has ruled for more than a century.

Winged shapes flit and soar behind veils of smoke and among clusters of fantastically tall, spindly towers. The bastion's walls of steel-hard smoke resemble ash-coated iron. Its few windows weep tears of flowing smoke.

The castle existed long before Ehkahk took possession of it. The most widely accepted tale of its creation claims that Ehkahk or a creature like him converted the cloudstuff of a djinn fortress into smoke. Other tales attribute the palace's construction to a rogue efreet, to a primordial, or to devils requiring an outpost in the Blood War. Both efreets and devils have occupied the castle at different times, but Ehkahk now holds it firmly in his grasp.

## Inhabitants and Culture

The impoverished denizens of Fume love and fear their liege. Ehkahk offers gifts of gems and magic to those who please him and visits brutality upon any who offend or disobey him.

The duchy comprises half a dozen city-sized landmasses and a few dozen smaller ones. Whether of earth, stone, or swampland, they all contain mountains, fog, and smoke. The various races of creatures keep to themselves—elementals with elementals, humans with their kind, and so on—but all acknowledge the simple system of government: Do as Ehkahk's minions bid.

Courtiers in the Choking Palace know their place based on where they stand in Ehkahk's favor. They jockey for position, surreptitiously disobeying and discrediting superiors. Ehkahk, in turn, makes few demands except to insist on respect for himself and to enforce security.

## Major Areas

Medium and Large creatures move comfortably through the wide passageways and tall doorways of the Choking Palace, despite its narrow architecture. Countless staircases distinguish its interior from that of more horizontal structures.

**The Churning Emporium:** In the courtyard in front of the palace's blackened gates buzzes a marketplace supported by chunks of earth and paths of solid smoke. The stalls rise and fall like boats on a slow swell. Here, the peasants of Fume trade goods and news among themselves and with palace courtiers, as well as with traders and merchants working along the trade routes passing through Fume. Ehkahk allows only one public teleportation circle in Fume, located in the center of the marketplace. (A few private and transitory teleportation circles exist inside the palace.)

**Dungeon of Ash:** Those who anger the Smoldering Duke, if they are not slain outright, end up in the Dungeon of Ash, deep in the bowels of the Choking Palace. Poisonous vapors fill the dungeons, making every breath agony: Those who inhale them suffer the pain of suffocation without losing consciousness or perishing from lack of air.

**Library:** In the palace's central keep stands Ehkahk's library, an enormous repository of writings. Even the greatest temples of Ioun and Vecna

### OTHER MAJOR LOCATIONS

The *Manual of the Planes* supplement provides more information on several of the best-known locations of the Elemental Chaos.

**The Abyss** (pages 78-83)**:** This section of *Manual of the Planes* briefly describes the realm of demons. Chapter 4 of this book provides a more detailed overview of the Abyss's environment, inhabitants, and typical adventures.

**The City of Brass** (page 73)**:** The blazing City of Brass, ruled by the Lord of the Efreets, houses the efreet aristocracy and diverse servants and slaves. Canals of burning magma slice it into districts. Despite the heat, the marketplaces attract merchants, traders, and adventurers from across the planes.

**The Keening Delve** (page 76)**:** A great entity (some say perhaps the primordial Haemnathuun) rests in the Keening Delve, a network of howling, wind-blasted tunnels carved within masses of rock. The entity's power attracts a wide array of creatures, including slaads, demons, and efreet explorers. The Keening Delve also interests the mysterious dao (see page 64 of this book).

**The Ninth Bastion** (page 76)**:** Long ago, knights of the fallen empire Mira created the Ninth Bastion, one of the few Elemental Chaos strongholds held by natives of the natural world. Inhabitants of the Ninth Bastion serve the deities Bane and Erathis. Though they are militant and suspicious of outsiders, they nonetheless take in extraplanar travelers seeking shelter.

**Zerthadlun** (page 77)**:** The largest githzerai community and the closest thing that far-flung race has to a societal center, Zerthadlun is both a city and a sprawling monastery. Through mental and physical labor, githzerai maintain its calm aura. Other githzerai monasteries model their philosophies after those practiced in Zerthadlun. Visitors, though rare, can find shelter here, as long as their presence harmonizes with the githzerai's ordered existence. The monastery suffers attacks from slaads, efreet saboteurs, and other forces threatened by the githzerai or by the cause of order.

lack some of the forgotten histories and mystical lore contained in the pages of the volumes here. Ehkahk strives to acquire every bit of recordable knowledge that exists throughout the cosmos.

The Smoldering Duke spends much of the time in his library, perusing tomes and writing in his journals (or, according to gossip, falling asleep on the books he writes). He also scries on his palace through the smoke (see "Environmental Features").

**The Shrouded Throne:** The Smoldering Duke holds court in a hall in the central keep. He sits upon the Shrouded Throne, a seat of power formed of smoke and surrounded by eddies of black fumes. His audience can see only his eyes through the vapors. From here, Ehkahk can scry other parts of the palace through the smoke (see "Environmental Features") and teleport to any spot within Fume.

**Sooty Garden:** Ehkahk's Sooty Garden produces a profusion of plants for pipes and braziers: various smoking herbs and incense. It rests in a courtyard between two of the castle's towers. Druids and trained elementals tend the scores of different plants growing in soil imported from the Feywild. Ash and smoke in the air coat the plants, giving them a sickly appearance despite their healthy condition.

## Adventures

Ehkahk seeks to maintain power in Fume and to protect his people from outside threats, but he keeps any other objectives secret. Why does he collect ancient lore? Why does he maintain diplomatic relations with the City of Brass and other communities?

Because of his secrecy, Ehkahk can serve as any sort of adversary for the characters. They might have something he wants, or they might seek a magic item or lore that he also covets. Perhaps they are allied with someone he considers an enemy.

Ehkahk could also help the characters. They might need to gain permission to enter the library or negotiate for the release of a prisoner in the Dungeon of Ash. They might even arrive in Fume by accident and have to navigate the duchy's laws and customs before continuing on their way.

## Environmental Features

Smoke and vapors pervade the Choking Palace. Only the stoutest of respiratory systems escape unscathed.

**Smoke:** Smoke fills the chambers and hallways. Each creature other than Ehkahk and his minions must make a successful DC 26 Endurance check every 8 hours to avoid losing a healing surge (see "Environmental Dangers," *Dungeon Master's Guide,* page 159).

*Smoke, Magical:* Nearly every room of the Choking Palace contains a brazier or an open flame that emits magical smoke. Ehkahk and his servants can easily see through this smoke. For everyone else, smoky areas are lightly or heavily obscured, depending on the smoke's density. While he is in the library, upon the Shrouded Throne, or in his chambers, Ehkahk can scry on any chamber or creature through the palace's smoke.

*Smoke, Solid:* The solid smoke that forms walls and furniture in the Choking Palace has the consistency of iron.

**Vapors:** Each living creature that breathes the poisonous vapors of the Dungeon of Ash must make Endurance checks as though suffocating (*Dungeon Master's Guide,* page 159). A creature that has no healing surges left takes no damage from the vapors but suffers continuous, agonizing pain. Affected creatures must escape the vapors to regain any healing surges.

## Encounter Groups

The characters might encounter any sort of entity within Fume, because Ehkahk welcomes all beings that swear him fealty; however, the citizenry fights only if it must. Ehkahk's servants and soldiers, mostly elemental in nature, present the greatest danger. See "Ehkahk" on page 146 for other encounter suggestions.

**Level 13 Encounter (XP 4,600)**
- 1 beholder eye of flame (level 13 elite artillery, *MM* 32)
- 1 cloud of elemental steam hazard (level 14 blaster, *Manual of the Planes* 67)
- 2 firelashers (level 11 skirmisher, *MM* 104)
- 1 tempest wisp (level 13 controller, *Monster Manual 2* 102)

**Level 18 Encounter (XP 10,200)**
- 3 air archon zephyrhaunts (level 16 lurker, *Manual of the Planes* 114)
- 1 cambion hellfire magus (level 18 artillery, *MM* 39)
- 1 genasi elemental dervish (level 18 elite skirmisher, *Monster Manual 2* 116)

**Level 21 Encounter (XP 18,375)**
- 2 djinn thunderers (level 20 artillery, *Monster Manual 2* 71)
- 1 efreet fireblade (level 22 soldier, *MM* 98)
- 2 fire archon blazesteels (level 19 soldier, *MM* 19)
- 3 smoke hounds (level 23 minion soldier, page 147)

# GLOAMNULL, CITY OF RAIN

A genasi trade city, Gloamnull welcomes visitors. Adventurers can find standard and esoteric wares in its rain-soaked streets. Beneath the superficial friendliness, though, lurks a dark secret. The people of Gloamnull have turned to the demon prince Dagon (*Monster Manual 2*, page 45) to keep their city intact in the Elemental Chaos—and Dagon demands sacrifices.

Twenty years ago, an upheaval in the City of Brass eliminated many members of an efreet noble house. Slaves of the house escaped, including some genasi who established Gloamnull as a village on a jagged earthmote. Patronage by a nearby githzerai monastery kept the village alive, so the place became known as a safe harbor. More genasi gravitated to it.

Ten years ago, an efreet trading vessel arrived in town. The efreets found the genasi to be more tractable than githzerai. Thus, within a year, Gloamnull became a minor trade hub. It continued to swell, attracting more genasi and a few other creatures because of its prosperity.

Five years ago, clouds began to envelop the city. Over the course of several months, the clouds blocked out all external sources of light. Then a tainted rain—potable only if filtered—began to fall. It filled a natural trough around Gloamnull, forming a moat, and flooded the tunnels and caverns that riddled the earthmote.

Attacks by giants and archons followed the arrival of the rains, which continued to pour. Elementals born of the swirling chaos converged upon the city. Trade withered and stopped. Buildings collapsed, and walls fell. Genasi died.

In desperation, Gloamnull's inhabitants performed ritual sacrifices entreating Dagon to come to their aid. They swore their lives, their city, and their souls to him in exchange for his help.

Thereafter, demonic fish appeared in the moat, and the attacks slowed. A trickle of trade resumed. The citizens cheered, pushing their fear of Dagon deep into the recesses of their minds.

The rains continue to this day. Floodwaters spill over the sides of the moat and spout from holes around the earthmote's base.

## Inhabitants and Culture

Most of Gloamnull's citizens are genasi. They worship Dagon, or at least bow before the demon prince even if they do not swear him fealty. Though oppressed by gloom and rain, they struggle to put on cheery faces for outsiders and use firesoul and stormsoul manifestations (*Monster Manual 2*, page 118) to brighten the place. They long to escape Dagon's clutches but see no way to do so.

Gloamnull's inhabitants take pride in their city's longevity, because genasi settlements are rare and typically short-lived. They welcome other genasi, indoctrinating them in Dagon's worship when possible. Those who resist indoctrination end up strapped to altars in the city's depths. Every thirty days or so, a wail pierces all corners of the city, compelling those disloyal to Dagon to drown themselves. Visitors who arrive at any other time are relatively safe; only a few genasi are true zealots.

However, the inhabitants are even more prone to rage, depression, and mania than genasi in other places, which makes social and business interactions difficult. The chill and the damp prevail. Traders report weirdness but encounter few problems entering and leaving the city.

Genasi crafters have developed a means of solidifying water from elementals into a sludge with which to fashion wares. Such items rarely last more than a few days' travel from Gloamnull. The citizens drink an ale made from local water, fungus, and ground-up elemental extracts. They eat porridge made from crushed minerals and the bulging-eyed, weird fish that suck sludge from the moat's bottom.

## Major Areas

On its surface, Gloamnull is a trade city that has managed to survive the hardships of the Elemental Chaos. A closer look reveals its grimmer reality.

**Battlements:** Gloamnull still faces sporadic assaults from giants, elementals, and other hostile creatures. (Perceptive observers might note that the attackers are never demons.) Warriors patrol the walls and watch for incoming ships. Firesoul genasi send signal flares to patrols and to incoming travelers.

**Darmond's Tower:** Darmond, a shadar-kai wizard, moved into Gloamnull not long ago and erected a tower. He resists the town's faith and seems unaffected by the periodic wailing. He keeps to his tower, pointing a spyglass at the clouds, or uses magic to fly up to them, where he might remain for hours.

**The Grand Cathedral:** A temple to Dagon, the Grand Cathedral lies beneath the main market square. Waist-high water laps at a blood-soaked altar and at the feet of fishlike statues. Genasi and nastier creatures guard the hidden entrance against visitors' curiosity.

**Tunnels:** Demons grow in Gloamnull's watery tunnels. Sacrificed creatures return as twisted, stinking versions of themselves, and servitors of Dagon swim or wade through the darkness. Even the genasi do not know what dwells in the deepest reaches, but

zealots shiver with ecstasy at stories of sentient slime and probing tentacles.

**The Warming Fire:** Travelers frequent this inn, which has a fire elemental in the hearth to drive back the chill. Garl, the proprietor and a Dagon devotee, sometimes poisons his guests' food.

## Adventures

Gloamnull can serve your campaign as a simple genasi trade city affected by the strangeness of the Elemental Chaos. If you use it to introduce the cult of Dagon, though, you can overlay the area with pervasive despair and bloody sacrifices. The characters might need to escape the cult, resist a sporadic attack from outside forces, or investigate a disappearance. Enterprising characters (such as sympathetic genasi) might try to free the city from Dagon's grasp.

### Environmental Features

The elemental and demonic influences on Gloamnull create a variety of bizarre terrain and environments. Moss and mildew grow everywhere.

**Blood Rock:** Years of sacrifice and random slaughter beneath Gloamnull have resulted in patches of blood rock (*Dungeon Master's Guide,* page 67).

**Rain:** The soul-deadening rain always falls. A square being drenched by the rain is lightly obscured. The constant rain extinguishes unprotected natural flames.

**Sacred Circles:** Worshipers of Dagon have dedicated areas beneath Gloamnull and secret aboveground rooms to the demon prince. These function as sacred circles (*Dungeon Master's Guide,* page 68) for chaotic evil creatures. Some such areas also contain altars of zealotry (*Dungeon Master's Guide,* page 92).

**Slides:** Slime coats some of the sloping tunnels beneath Gloamnull, causing them to function as slides (*Dungeon Master's Guide,* page 68).

**Traps:** The genasi have littered Gloamnull (including the tunnels beneath it) with traps to prevent visitors from learning of their worship of Dagon. They primarily employ warder traps, preferring to deter visitors rather than kill them.

**Water:** Water floods tunnels under the city. When knee-deep or waist-deep, water is difficult terrain. For water-filled tunnels, see "Aquatic Combat" on page 45 of the *Dungeon Master's Guide*.

### Encounter Groups

If the characters glimpse Gloamnull's sickly underbelly, they might contend with genasi cultists and Dagon's ilk, such as demons, water-dwelling monstrosities, and aberrations twisted by ancient, unspeakable evil. Foulspawn can represent sacrificed humanoids or genasi warped by Dagon's influence.

ERIC L. WILLIAMS

**Level 8 Encounter (XP 1,800)**
- 1 canoloth (level 7 soldier, *Manual of the Planes* 120)
- 2 death shards (level 8 artillery, *Monster Manual 2* 34)
- 6 genasi lackeys* (level 7 minion, *MM* 162)
- 1 gorgon mud hazard (level 8 obstacle, page 18)

*Use the statistics for human lackeys.

**Level 12 Encounter (XP 3,400)**
- 1 foulspawn berserker (level 9 soldier, *MM* 112)
- 1 foulspawn grue (level 8 controller, *MM* 112)
- 1 foulspawn hulk (level 12 brute, *MM* 113)
- 2 foulspawn seers (level 11 artillery, *MM* 113)
- 1 vrock (level 13 skirmisher, *MM* 58)

**Level 16 Encounter (XP 8,000)**
- 1 aboleth overseer (level 18 elite controller, *MM* 8)
- 8 aboleth servitors (level 16 minion, *MM* 9)
- 8 canoloth harriers (level 13 minion, *Manual of the Planes* 120)

**Level 20 Encounter (XP 13,900)**
- 1 gibbering abomination (level 18 controller, *MM* 126)
- 4 kuo-toa guards (level 16 minion, *MM* 172)
- 1 larva mage (level 21 elite artillery, *MM* 175)
- 1 void crust hazard (level 22 obstacle, page 22)

# IRDOC MORDA

A stretch of jagged peaks marks the edge of a nation-sized landmass floating in the Elemental Chaos. Towering from the sides of those mountains and the bottom of the earthmote, an array of iron protrusions juts in all directions like stabbing blades. Some protrusions gleam as brightly as stars of the Astral Sea; others are choked by rust. These are the towers of Irdoc Morda, bastion of the archons.

Servants of the primordials have long used the rocky isle on which Irdoc Morda stands. In the latter days of the Dawn War, archons and other elemental soldiers began forging increasing numbers of weapons, having learned the value of such tools from followers of the gods. Thus, when other elemental beings discovered this isle, which was especially rich in iron but also in rare metals such as adamantine, they established a mining operation here. Earth and ice archons watched over giants and galeb duhrs, carving ever deeper into the stone. Primordials forged the first iron archons from the richest veins.

As the mine came to supply not just the archons but also various elemental communities, more archons arrived as guards. They built fortifications, first of stone, then of iron, so plentiful was the ore. Now Irdoc Morda's tunnels run throughout the mountains, and its towers protrude hundreds of feet.

After the Dawn War, elemental factions such as giant tribes, genasi, and efreets continued to mine Irdoc Morda's ore under the watchful eyes of the archon natives. Finally, miners depleted the ore, leaving a hollow shell of rock around a honeycomb of tunnels and caverns. They departed, seeking new resources. The archons remain.

## Inhabitants and Culture

Archons of nearly every variety inhabit Irdoc Morda. Earth archons patrol the tunnels and surrounding lowlands. Ice archons dwell in the extremities (up, down, or sideways, depending on the towers' orientation). Throughout it all, in the greatest numbers, live iron archons. Archons of yet other types appear in smaller numbers, as emissaries of other archon communities or of elemental powers.

Unusually for archons, iron archons feel a sense of proprietorship toward Irdoc Morda and claim leadership over all archons here. Even stranger, the other archons accept that claim. The leader of the iron archons, and thus of Irdoc Morda, is called the Twice-Forged General. A crescent blade battle champion (page 130 and *Dungeon Master's Guide,* page 176) currently holds the position.

Otherwise, archons in Irdoc Morda behave as they usually do elsewhere. They accept their ranks and positions based on their capabilities, carry out their duties, and pass along their orders.

ZOLTAN BOROS & GABOR SZIKSZAI

A small population of slaves also dwells in Irdoc Morda. Primarily azers, eisk jaats (page 136), galeb duhrs, and genasi captured during the archons' military endeavors, they help to maintain the fortress. Few of them survive long; because the archons understand little of other creatures' needs, many of the slaves starve or otherwise die of neglect.

## Major Areas

The passages of Irdoc Morda wind through the stone of the mountains and spiral up and down the towers' interiors. In a variety of chambers, archons practice their techniques of war, study layouts of nearby elemental communities, meet with outsiders, and offer service to fallen primordials. Hidden and guarded chambers hold treasure that the archons have received as payment or taken from defeated foes.

**The Hollow:** In the Hollow, a great cavern once rich in iron, the archons are building the largest *spelljammer* ever conceived. If they manage to complete it—a process requiring many years—they will own an iron-hulled, nearly unstoppable fortress from which to launch battles for their own or others' aims.

**The Vein:** Legend tells of a deposit of ironlike metal, unknown to sages, that yet remains below Irdoc Morda. If the legend is true, the Vein might hold a power that affects archons and other creatures—even making archons behave unusually.

**Watchtowers:** Magic-wielders infused three of Irdoc Morda's towers with scrying and divination magic. Each of these watchtowers—one looming above, one hanging below, and one protruding from the side of the great mountains—contains a lens that allows an observer to see for miles, even through deep cloud cover. The lenses' creators also tuned them to three locations that even untrained observers can scry on. Rumors vary as to the identity of those locations. Are they other archon bastions, the resting sites of primordials, or regions of other worlds?

## Adventures

The characters might confront the archons of Irdoc Morda as soldiers in a larger struggle, never navigating the fortress, or they might infiltrate the alien tunnels and passages that defy the rules of architecture. If they are troubled by something worse than archons, they might even consider taking shelter in Irdoc Morda, in which case they must consider what to offer the proprietors in exchange.

### Environmental Features

Worked rock and iron define the terrain of Irdoc Morda's passageways and chambers. Peaks and barren lowlands punctuate the surface landscape.

**Iron Walls:** The walls of the towers and of some interior chambers are iron. Use the hard DC for the encounter level when determining the difficulty of climbing or clinging to them (*Dungeon Master's Guide*, page 42).

**Loadstone:** Patches of loadstone (*Dungeon Master's Guide*, page 68) lace the corridors.

**Magnetic Slope:** Some tower passageways slope sharply and have bits of magnetic ore smelted into the iron. For a creature moving upward, such a slope is difficult terrain. A creature that is pushed, pulled, or slid downward on such a slope moves 1 square farther than normal. Metallic creatures and individuals wearing heavy metal armor are immune to these effects because of the magnetic pull.

**Rust Patches:** Some spots of Irdoc Morda's iron develop the same poisonous rust that covers injured iron archons. Any bloodied creature that starts its turn in a square of this rust takes 5 poison damage.

**Scrying Walls:** Enchanted iron walls allow creatures on one side to see the room or passage on the other side. A creature that uses a standard action to concentrate on such a wall can see the opposite area superimposed over the creature's reflection. Such walls are unmarked, so only those who know which walls are which and creatures capable of detecting magic can make use of them.

### Encounter Groups

Irdoc Morda is a fortification, so the place crawls with warriors. Related problems also threaten intruders, including trained elemental beasts, slaves, and traps.

**Level 14 Encounter (XP 5,800)**
- 1 earth archon ground rager (level 14 controller, *Monster Manual 2* 14)
- 1 gates of winter hazard (level 16 lurker, page 19)
- 1 ice archon hailscourge (level 16 artillery, *MM* 20)
- 2 iron archon interceptors (level 14 soldier, page 130)

**Level 17 Encounter (XP 8,800)**
- 1 earth archon rumbler (level 17 brute, *Monster Manual 2* 14)
- 1 field of everfrost* hazard (level 18 blaster, *DMG* 92)
- 1 ice archon rimehammer (level 19 soldier, *MM* 20)
- 2 iron archon crescent blades (level 16 skirmisher, page 130)

*As a field of everflame, but dealing cold damage.

**Level 21 Encounter (XP 16,700)**
- 1 earthwind ravager (level 23 controller, *MM* 104)
- 1 greater helmed horror (level 18 elite soldier, *MM* 155)
- 1 ice archon frostshaper (level 20 controller, *MM* 21)
- 2 ice archon rimehammers (level 19 soldier, *MM* 20)

# THE MOTESWARM

A jumble of small masses of every substance, the Moteswarm gives birth to strange effects and stranger elementals. Giants and githzerai are the only creatures other than elementals scratching an existence from the turbulence.

When a band of githzerai arrived in the Moteswarm recently, they discovered a lost archon forge among the floating motes. They shaped plans to take control of the forge and tame the Moteswarm. Before they could act, giants learned of their plans and attacked the githzerai. Elementals native to the place considered both races to be invaders and reacted accordingly.

Since that day, the three factions have struggled for control. When one faction gains the upper hand, the other two—and the chaos of the Moteswarm—bring it down.

## Inhabitants and Culture

Elementals, giants, and githzerai dwell in different parts of the Moteswarm. They interact with each other primarily as adversaries.

**Elementals:** The Moteswarm's maelstrom attracts elementals from other places and churns new ones into existence. The elementals are territorial beasts, attacking other creatures on sight; unusually intelligent elementals organize groups to coordinate attacks. Giants and githzerai also force or trick elementals into service.

**Giants:** When a storm titan named Kazzamir learned of the archon forge in the Moteswarm, he hatched plans to use its power to create his own kingdom. He gathered a hundred displaced giants to take up residence on a variety of motes that had been rejected by the githzerai. The giants' onslaught against the githzerai began.

The battles have continued ever since. When some giants fall, the lure of power and conquest draws others to replace them.

**Githzerai:** Most sane creatures would rather see the archon forge in the hands of the githzerai than held by the giants. The githzerai of the Moteswarm, though, are so intent on defeating the giants that they don't stop to think about what they would do with the forge. They simply accept that they must fight.

Unlike other githzerai, those of the Moteswarm sometimes alternate their coolness toward strangers with welcome, depending on the state of the war. They need all the help they can get.

The few hundred githzerai in this place live in one major monastery and in a few outposts, all under the leadership of the mindmage Glissa. Githzerai from elsewhere come to lend support and to keep their numbers up.

## Major Areas

Tides of the Elemental Chaos hold together the diverse pieces of the Moteswarm. Three locations important to the current inhabitants are described below.

**Archon Forge:** Built on a small mote of gold-flecked marble, the archon forge resembles a keep carved from the stone. It produces air archons (*Manual of the Planes*, page 114). An individual who has access to the proper rituals could take possession of the forge and control the archons.

The forge evades retention, capture, and even discovery. The Moteswarm is at its most chaotic in this area, which means it's a navigational challenge even to alight upon the forge's mote. Whirling firemotes and icemotes, clouds of searing mist, spikes of lightning, and shifting gales bar entry.

The githzerai that first reached the forge encountered ancient air archon guardians still defending it.

### A Page from a Battered Journal

I sit now in a small oasis of calm in this insane dimension. After phasing into the Elemental Chaos, my ship ended up here, which must surely have given the plane its name.

As soon as we appeared, the ship rocked beneath us and lightning flashed all around, accompanied by reverberating thunder. I rushed to the deck and looked about—just in time to see two great chunks of smoldering rock smash into each other. The superheated rubble burned down around us, slicing easily through the ship's hull. I shouted for Igram, but just then the wind rose in a shriek. My stomach dropped out as the wind flung our ship upward, and I knew we were doomed.

Everywhere I looked, there were bits of . . . stuff floating around. The scholars call them "motes": fragments of water, earth, and fire, and of stranger things, such as sheets of lightning, sprays of acid, and chunks of frost. As our ship sped upward, I saw hundreds of them, perhaps thousands, all around us. Some were the size of my fist, while others must have been a mile across. And they were not floating serenely, as I had naively imagined; they heaved through the void, slamming into each other, breaking into pieces, and scouring each other's surfaces. Our ship would be ground to pieces by the hurtling elements.

To my shame, my cowardice asserted itself. I jumped over the side. It was certain death—but far less horrible than staying on that ship as it fell upward into the maw of chaos. As I fell, I watched it break apart, but mercifully the howling wind drowned out the screams of my friends.

That's when a miracle occurred. I found myself arrested in my fall. I did not strike any surface—I was simply not falling anymore. I looked about, and to my astonishment saw one small ship with a handful of yellow-skinned humanoids skimming toward me.

They also found bits of bone littering the courtyard and huge claw marks marring the walls.

**Corehold:** The major githzerai monastery of the Moteswarm, Corehold perches atop a large island of crystal. Though the githzerai built the structure in haste, its materials—brittle crystal, gold, silver, and iron—lend it great beauty. Outsiders who win their way into the githzerai's good graces can find shelter and food here. Glissa hopes to establish Corehold as a meditation center.

For now, though, the monastery is anything but serene. Glissa focuses her efforts on securing the forge. The githzerai must continually rebuild walls destroyed by acid rains, impacts from flying rocks, and attacks by elementals and giants.

**Zahazrian:** Kazzamir's center of power is an islet of solid lightning called Zahazrian. The storm titan's will keeps the mote manifest enough to support habitation. Only storm giants and a few lightning-related elementals spend time on its crackling surface.

Kazzamir lives in a shack, formed by arcs of lightning, that he calls his castle. Seated on his chair, the only piece of furniture in the structure, he broods and plans. Sometimes he ventures forth to cleave enemies with his greatsword or to undertake a mission that he believes only he can accomplish. When he returns, he always finds—to his frustration—that he must recreate Zahazrian.

## Adventures

The Moteswarm is a microcosm of the Elemental Chaos, encapsulating its essence. It can showcase the Plane Below to an adventuring party that is new to the plane. Characters who pass through it should emerge with a sense of the danger of the Elemental Chaos. Those who spend time here can also become aware of the factions at work.

The characters might travel to the Moteswarm to aid the githzerai, to hunt Kazzamir's giants, or to find the archon forge for an outside power. They might stumble upon the Moteswarm by chance or seek in it a prize unknown to the giants or githzerai.

## Environmental Features

The Moteswarm contains every environmental feature presented in chapter 1 of this book or in *Manual of the Planes.* Creatures living here can predict the behavior of many such phenomena, including lightningstone fields, luminous nodes, multielemental transformation fields, skystone fields, and steel rain. This ability works to their advantage in combat against outsiders who are unfamiliar with such effects.

The following types of terrain are also common in the Moteswarm.

**Choke Frost** (*Dungeon Master's Guide,* page 67)**:** A few areas are cold enough to support this heat-stealing ice.

**Fonts of Power** (*Dungeon Master's Guide,* page 68)**:** These features, keyed to every elemental keyword, exist throughout the Moteswarm.

**Lightningstone Fields** (page 22): These dangerous areas abound in the Moteswarm.

**Pools** (*Dungeon Master's Guide,* page 65)**:** Water and other liquids (such as liquid thunder) collect in pools.

**Whirlwinds** (*Dungeon Master's Guide,* page 69)**:** Whirlwinds arise frequently in the Moteswarm's wild turbulence.

## Encounter Groups

Elementals, giants, githzerai, and natural hazards of the Elemental Chaos beset adventurers here. Characters might also encounter other travelers, such as other adventuring parties or efreet scouts, but most intelligent creatures avoid the Moteswarm.

**Level 11 Encounter (XP 3,000)**
- 1 ashfrost assassin (level 12 skirmisher, page 138)
- 2 firelashers (level 11 skirmisher, *MM* 104)
- 1 luminous node hazard (level 11 blaster, page 18)
- 1 rockfist smasher (level 10 brute, *Monster Manual 2* 100)

**Level 15 Encounter (XP 6,000)**
- 4 githzerai cenobites (level 11 soldier, *MM* 130)
- 1 githzerai mindmage (level 14 artillery, *MM* 131)
- 1 githzerai zerth (level 13 elite controller, *MM* 130)
- 1 steel rain hazard (level 15 blaster, page 19)

**Level 21 Encounter (XP 17,600)**
- 1 lightningstone field hazard (level 21 warder, page 22)
- 2 fire archon ash disciples (level 20 artillery, *MM* 19)
- 1 fire titan (level 21 elite soldier, *MM* 124)
- 1 skystone field hazard (level 19 lurker, page 22)

**Level 27 Encounter (XP 53,000)**
- 1 multielemental transformation field hazard (level 28 lurker, page 23)
- Kazzamir, storm titan (level 27 elite controller, *MM* 125)
- 2 storm gorgons (level 26 skirmisher, *MM* 143)

# PANDEMONIUM STONE

When the Pandemonium Stone exists, it appears only in the Elemental Chaos unless it is induced to materialize elsewhere by powerful wizards or sorcerers. A spire more than 100 feet in diameter and more than 500 feet tall, it consists of bone, flesh, ice, minerals, wind, wood, and other materials, always in flux. Rough carvings on it flare with roaring fire, crackling lightning, deafening thunder, and unbearable cold—and then die down. Blazing white runes in an unknown script sometimes march across the surface.

The Pandemonium Stone manifests randomly; even efreets using *al-buraj* (page 54) cannot predict its appearances. It bursts into existence like a volcanic eruption in a spray of fire, cold, lightning, or other energy, sending ripples in all directions through the Elemental Chaos.

Neither the gods nor the primordials claim to have created the Pandemonium Stone. They knew of it even before the Dawn War.

## Inhabitants and Culture

When the Pandemonium Stone disappears, it drags nearby objects and creatures with it. Creatures that fail to distance themselves from the stone have disappeared with it. Some such creatures elect to stay with it even after it reappears. Residents have formed two groups and built two permanent shelters, one near the base of the spire and one near the apex.

**Staff of The Trackless House:** A permanent holding near the base of the Pandemonium Stone is the Trackless House, an extraplanar sanctuary connected to other locations. The powerful beings that run it treat one another as family. They include a male earthsoul/watersoul genasi warrior named Altayar, a female phoelarch arcanist named Tarsa, and a male djinn called Farzan. Altayar tells visitors that Farzan established the inn, although rumor suggests that he cannot leave. Other staff members treat Farzan as a clan elder. He rarely interacts with visitors.

As neutral ground, the Trackless House serves as a safe house for delicate information, dangerous items, and individuals seeking low profiles. It also hosts an elemental cabal that serves djinn interests, including those of Sirrajadt (page 150) and his warriors. The staff quells strife among guests.

**Watchers of Tomorrow:** The other permanent shelter on the Pandemonium Stone, near the apex, is inhabited by the Watchers of Tomorrow. Mostly maruts, the group also includes angels sworn to no deities and a devil called the Breaker, who fled its kin's contract with Asmodeus.

The Watchers of Tomorrow believe that the Pandemonium Stone is the cocoon of an entity developing toward maturity as the cosmos grows more complex—perhaps a god of gods. When this being hatches, the Watchers will either swear their allegiance to it or, if it threatens them, try to destroy it.

In the meantime, they defend the Pandemonium Stone if the need arises. Sometimes they seek company at the Trackless House, but the two groups do not work together or know each other's secrets. The Watchers also observe the activities of slaads that are drawn to the stone whenever it appears.

**Slaads and Other Factions:** Other creatures respond to some call of the spire, including demons, djinns, elementals, slaads, and titans—all with conflicting goals. Even the slaad lords attend; only Ygorl, Lord of Entropy (page 157), holds back.

After a few days of war, a slaad elder arrives, forcing any emerging victors to accelerate or cut short their plans. No creature powerful enough to stand against the elder has ever joined the fray. The elder spares only the spire's permanent residents.

Once the slaads chase away contenders, they begin to croak out a disharmonic racket. The Watchers of Tomorrow believe that this "song" aids in the gestation of the god growing inside the spire. Other thinkers suggest that the spire is itself an immense slaad kept asleep by the cacophonous lullaby.

## Major Areas

The surface of the Pandemonium Stone constantly changes. The only two areas approaching permanence on it are the abode of the Watchers of Tomorrow and the Trackless House.

**Abode of the Watchers of Tomorrow:** Near the apex of the spire, wreathed by inconstant energy, the Watchers of Tomorrow look out over the Elemental Chaos from a balcony of obsidian. Inside, several large communal chambers and smaller private chambers make up their home.

**The Trackless House:** Like the Pandemonium Stone, the Trackless House evades easy location and winks out of existence for spans of time. It has adamantine double doors with its name inscribed on each of the panels in Barazhad and Davek script. A foyer leads to a common room where visitors and residents receive food and drink. Private rooms and a magic kitchen adjoin the common area. Behind the bar is series of private chambers accessible only to the proprietors and select patrons.

In the common room and private rooms, visitors can safely watch slaads gather. Once the slaads begin to sing, the staff warns that the spire will soon shift. Anyone who remains at the inn catapults to the Pandemonium Stone's next location and time.

Visitors searching for objects or individuals hidden within the Trackless House usually fail to find them. Farzan maintains portals to other locales and enlists powerful defenders to stymie access to them. He has also learned to summon slaads to defend the inn.

## Adventures

Wherever characters roam in the Elemental Chaos, the Pandemonium Stone can come to them. Because it can appear anywhere in the multiverse, it can also introduce adventurers to other planes. The characters might encounter the singing slaads, visit the Trackless House, or meet the Watchers of Tomorrow.

Someone might require the party's escort to the Trackless House, or the characters might need to retrieve something from the inn or hide there from an enemy.

The Watchers of Tomorrow offer adventures based on their experience with the spire and with slaads. Adventurers might earn their trust by doing an appropriate service—and thus learn their philosophy.

## Environmental Features

Every sort of terrain and environmental hazard in the Elemental Chaos and in the Abyss might occur on the slopes of the Pandemonium Stone. Two special features trigger upon specific events.

**Reentry Squall:** When the Pandemonium Stone appears, an intense elemental disturbance ripples out 600 feet in all directions. Each creature caught in the blast must succeed on a DC 23 Acrobatics or Athletics check, or that creature slides 2d20 squares, falls prone, and takes ongoing 5 psychic damage (save ends). Creatures on the surface and adjacent to or within the spire feel no effect from a reentry squall.

**Slopes:** The surfaces of the Pandemonium Stone continually change shape and substance. In some places they slope gradually, qualifying as difficult terrain. Elsewhere, the slopes are so steep that creatures must make Athletics checks of varying difficulty to climb them, up to a DC of 27.

## Encounter Groups

Slaads swarm around the Pandemonium Stone, but groups of other creatures also arrive to investigate it.

**Level 8 Encounter (XP 1,950)**
- 1 death shard (level 8 artillery, *Monster Manual 2* 34)
- 3 flux slaads (level 9 skirmisher, *Monster Manual 2* 184)
- 2 slaad tadpoles (level 5 lurker, *MM* 237)

**Level 17 Encounter (XP 9,400)**
- 2 blue slaads (level 17 brute, *MM* 238)
- 1 gray slaad havoc (level 15 artillery, page 143)
- 1 green slaad (level 18 controller, *MM* 238)
- 1 white slaad (level 16 elite lurker, page 145)

**Level 21 Encounter (XP 17,750)**
- 2 black slaads (level 20 skirmisher, *MM* 239)
- 2 green slaad spawners (level 18 elite controller, *MM* 238 and *Monster Manual 2* 185)
- 1 void crust hazard (level 22 obstacle, page 22)

JIM NELSON

# Pillars of Creation

Immense pillars are scattered throughout the Elemental Chaos. Some of these so-called Pillars of Creation stand straight; some lean. All extend out of sight in both directions, through thick clouds and empty sky, through crashing oceans and solid rock. Each is unique. Scholars know of the existence of more than half a dozen pillars; only the gods and the primordials know them all.

According to legend, these columns support the world. Each pillar rests upon the floor of the Elemental Chaos, from which all substances spring, as well as elementals, primordials, and more ancient forms of life. Each pillar reaches into the natural realm, infusing the place of intersection with the essence of its dominant material.

Yet the Elemental Chaos is also thought to be infinite, with no floor and no ceiling. Reconciliation of that idea with the concept of the columns as supports lies in the realm of theologians and philosophers. Suffice it to say that the Pillars of Creation have existed since before the world's genesis, and that all efforts to reach the end of any pillar have failed.

Every elemental substance, as well as combinations thereof, might have a corresponding pillar. Planar explorers and powerful denizens of the Elemental Chaos know the following Pillars of Creation best: the Obelisk of Ice, the Raging Storm, and the Torrent of Magma.

**The Obelisk of Ice:** Formed of many-hued ice, the ramrod-straight Obelisk of Ice averages a few hundred yards in diameter. It shows signs of intelligent influence: runes a few feet in height that resemble the Barazhad script.

**The Raging Storm:** Spongy, semisolid clouds encase the Raging Storm, a funnel of howling winds, pelting rain, and lightning. This pillar leans a few degrees from vertical and ranges in diameter from a few hundred yards to a couple of miles. See below for more information.

**The Torrent of Magma:** An undulating mass two to five miles wide, the Torrent of Magma flows as if under the influence of gravity. Fissures erupt from its center; pyroclastic islands whirl on its surface. Some of the islands can support the weight of explorers. Others break apart under the slightest pressure.

**Other Known Pillars:** Explorers have spotted other pillars, including a jagged tree of crystalline minerals, a beam of pure radiance, and a column of muck. Further pillars, if they exist, await discovery.

## The Raging Storm

Due to their variety, their mystic nature, and their embodiment of the deepest essence of the Elemental Chaos, the Pillars of Creation are far from fully documented. The text below details what is known about one of the better-known pillars: the Raging Storm. You must delve into your own Elemental Chaos to create your vision of the other Pillars of Creation.

### Inhabitants and Culture

Few creatures linger in the proximity of the Raging Storm. Nevertheless, clusters of inhabitants have arisen there.

The largest, at the heart of the storm, is Tharag Thryr. Once a community of storm titans and giants, Tharag Thryr grew into a center of worship of two primordials: Mual-Tar the Thunder Serpent and Solkara the Crushing Wave. Elementals, a few djinns, genasi cultists of Solkara, and air, water, and storm archons have so far established populations there.

## Major Areas

The semisolid contours of the Raging Storm form caves, passages, and even a few eyes of the storm: clearings free of wind and rain. Chunks of earth swirl at the clouds' perimeter, swept by gusts.

**The Cloudfield:** A certain area of clouds attracts bestial creatures of storm: rimefire griffons, storm gorgons, and the like. The same area produces storm-related elementals such as thunderblast cyclones, tempest wisps, windfiend furies, and dust demons (page 132). These elementals rove with the other predators in search of prey, rather than attacking them.

**Stormheart:** A region of cloud-walled canyons and valleys, Stormheart exists simultaneously in the heart of all storms everywhere. Rains of lightning sweep across it, on rare occasions teleporting each struck creature into the midst of a lightning storm elsewhere in the Plane Below or in another world.

## Adventures

Characters might visit the Raging Storm to tap its lightning, thunder, or water magic. They might hunt cultists dedicated to primordials, search for a *spelljammer* or an airship that vanished in the vicinity, or seek a better understanding of the Elemental Chaos and of the Raging Storm's link to the natural realm.

### Environmental Features

**Clouds:** Ordinary clouds float in air currents and passageways. A cloud's space might be lightly or heavily obscured, depending on the cloud's density. Such clouds mix indistinguishably with areas of semisolid and solid cloudstuff, forming hidden pit traps.

*Clouds, Heavy:* Hints of cloudstuff can infuse normal clouds to create heavy clouds. Their thick substance impedes movement: Whenever a creature enters a square of heavy cloud, it takes a cumulative –1 penalty to speed. The creature can remove this penalty as a move action. Air and water creatures are immune to the effect of heavy clouds.

**Cloudstuff:** Solid and semisolid surfaces in the Raging Storm—including the ceilings, floors, and walls of chambers and tunnels—consist of a substance known as cloudstuff.

*Cloudstuff, Semisolid:* Semisolid cloudstuff comprises most of the landscape. Any creature that starts its turn in a square of semisolid cloudstuff takes a –1 penalty to speed on that turn. Creatures that lack a burrow speed can burrow through cloudstuff at a speed of 2 or one-half their normal speed, whichever is lower. The spongy material offers easy handholds and footholds; any Athletics check to climb a vertical surface of semisolid cloudstuff gains a +2 bonus.

*Cloudstuff, Solid:* Solid cloudstuff is as strong as stone. It looks identical to semisolid cloudstuff.

**Extreme Weather:** Weather in some regions reaches supernatural ferocity. Primordial storms, primordial winds, and primordial cold frequently occur.

**Heavy Air:** Water or other vapors can supersaturate air, making it preternaturally thick. Any living creature in an area of heavy air must hold its breath or suffocate as if underwater.

**Lightning Mist:** Lightning in some clouds condenses into a charged fog, forming lightning mist (page 16).

**Lightning Seepage:** This crackling form of elemental seepage (*Manual of the Planes,* page 22) can occur anywhere.

**Rain:** Areas of light rain are lightly obscured. Places where the rain pours in sheets might be heavily obscured instead. Rain extinguishes unprotected natural flames.

**Wind:** The Raging Storm swirls with severe winds. Any creature that enters a square of strong wind slides 1 to 3 squares (or more, for extremely high winds) in the wind's direction. Otherwise, these winds behave like whirlwinds (*Dungeon Master's Guide,* page 69). In a few locations, these blasts grow severe enough to become strangling wind (page 17).

## Encounter Groups

Storm-related monsters abound on this pillar. Aquatic creatures dwell in rivers and in cataracts fed by the rains (which can fall in any direction). Other kinds of creatures might survive in calm areas or, with magical aid, in caves of cloudstuff.

**Level 20 Encounter (XP 14,000)**
- 1 elder tempest dragon (level 18 solo soldier, *Draconomicon: Chromatic Dragons* 193)
- 2 primal storms (level 20 artillery, *Draconomicon: Chromatic Dragons* 228)

**Level 27 Encounter (XP 63,000)**
- 1 primordial blot (level 26 solo artillery, page 140)
- 2 thunderblast cyclones (level 26 elite artillery, *MM* 105)

JAKE MASBRUCH

# THE RIVERWEB

The Elemental Chaos contains bodies of water and other liquids, forming oceans, rivers, and falls that plunge for miles into emptiness. A number of rivers support trade and travel. Boats and *planar dromonds* supply waterside communities for lower fees than those charged by captains of flying vessels.

Several thousand miles from the City of Brass, more than a dozen major rivers and a hundred streams converge in a network called the Riverweb. This nexus of forks, convergences, and other watery features stretches hundreds of miles. Whirlpools mark some junctions; ponds, lakes, and even seas form at others. Squalls erupt frequently. A few seas and rivers have banks of stone or crystal, but most flow suspended in space on different horizontal planes. Islands, mostly of stone but also of other substances, emerge from the waters.

All long-distance aquatic travel through mapped regions of the Elemental Chaos passes through the Riverweb sooner or later.

## Inhabitants and Culture

Communities exist throughout the Riverweb: on land, on water, and underwater. Below are descriptions of the busiest, most notorious, and deepest, respectively.

**Rheilvaltans:** The city of Rheilvalt (see below) throngs with several thousand inhabitants, primarily humans and genasi but also members of other humanoid races. A ruling mercantile council maintains the community's status as the center of trade for all oceanic commerce in the region. The council offers a reward to anyone who shatters the River Spiders' organization (see below); however, the council also pays tribute to the pirates, lest trade suffer.

**River Spiders:** Numerous pirates ply the rivers and byways of the Riverweb. The term "River Spiders" applies to all of them but most accurately refers to a flotilla of seven vessels armed and enchanted against the magic and extreme weather of the plane. A favorite River Spider tactic is to come up alongside a vessel near the edge of a river or lake and threaten to ram it over the side unless its crew submits.

The pirates' leader, a watersoul genasi barbarian named Thalkul, rules the band from the largest vessel, the *Drowned Widow*—a *spelljammer,* according to rumor. The River Spiders have several hideaways throughout the Riverweb and in other lakes and oceans of the Elemental Chaos. Their center of operation is a hidden village called Widowport.

**Underfolk:** In the deepest parts of the deepest bodies of Riverweb water dwell beings known to air-breathers as Underfolk. When Underfolk interact with surface-dwellers, they do so through intermediaries—usually water elementals but sometimes watersoul genasi or sahuagin. Sometimes they demand bribes for safe passage, sometimes they trade rare undersea treasures for magic items, and sometimes they attack without provocation.

Theories about the origin of the Underfolk abound. Some say they are elementals that have developed abnormal intelligence. Others claim they are storm giant cultists of Solkara, aquatic fey stranded in the plane, or elemental water spirits called marids.

## Major Areas

Given its expanse and variation, the Riverweb can host any kind of aquatic adventure. The following areas draw the most attention.

**Castle Torrent:** Castle Torrent literally rises from the rapids of a large river. Currents harden into the forms of an outer wall, half a dozen towers, and connecting structures, holding shapes as constant and impermeable as stone in the course of the flow.

Dark shapes sometimes move behind the walls. Though observers cannot see deeper into the castle, investigations suggest that water fills it entirely.

**Decktown:** In an area called the River's Fangs, where dozens of ships have wrecked, a small community called Decktown has developed among the rocks and shattered hulls. Parts of the town float, anchored to the rocks. Bridges, decks, and other structures narrow the channel but also line safe routes for passing vessels. Crews rest and conduct minor trade here.

**The Landing:** Near where a wide river feeds into a lake lies a low, stone island called the Landing. Floating rocks connect it to two other islands in adjacent streams. Regional trade vessels disembark at the Landing. Adventurers traveling to other places in the Riverweb might find transport here.

**Rheilvalt:** The largest surface community of the Riverweb, Rheilvalt rests on a series of islands linked by arched bridges. One island, in a passing river that never meets the lake, connects to the city center by a bridge that soars over empty space.

## Adventures

With its concentration of diverse communities and factions, the Riverweb offers the best opportunity for water-based adventures in the Elemental Chaos. Adventurers might travel through the region toward other destinations or investigate the mysteries of Castle Torrent or the Underfolk. Characters might deliver goods to Decktown or Rheilvalt, rout a sect of Solkara, or fight (or join) the River Spiders.

### Environmental Features

**Currents:** Rivers and streams, and even some lakes and seas, have significant currents (*Dungeon Master's Guide,* page 45).

**Edges:** Some rivers and streams flow independent of banks, and some have no beds. A creature or vessel

FRANZ VOHWINKEL

that falls over the edge, or a dense object that sinks through, plummets until it strikes something solid.

**Mist:** Mist covers much of the Riverweb. Misty squares are lightly obscured.

**Riverbanks:** Where they exist, riverbanks can slide and sink unpredictably. Their shifting surfaces are difficult terrain.

**Steam:** Parts of the Riverweb give off steam when they flow near fire or magma. Squares of steam are lightly obscured. Any creature that starts its turn in a steam square takes 1d6 fire damage per tier.

**Water:** Much of the Riverweb's water is clear and harmless, but it can hide dangers.

*Water, Boiling:* Any creature that starts its turn in boiling water takes 1d8 fire damage per tier.

*Water, Freezing:* Any creature that starts its turn in freezing water takes 1d6 cold damage per tier, and the Endurance check DC to avoid losing healing surges from suffocation increases by 2.

*Water, Solid:* Some water in the Riverweb forms solid objects even at temperatures above freezing. Such water is not ice but has the consistency of stone.

**Waterfalls:** Riverweb waterfalls can fall scores of feet or more. A current near a waterfall slides creatures 2 to 5 squares farther than a normal current.

**Whirlpools:** Whirlpools are aquatic versions of whirlwinds (*Dungeon Master's Guide,* page 69).

## Encounter Groups

The Riverweb seethes with pirates and water-based elementals. Islands and open sky present the possibility of encounters with other kinds of monsters as well.

**Level 10 Encounter (XP 2,900)**

- 2 Crushing Wave hierophants (level 10 artillery, page 154)
- 3 genasi stoneshields (level 10 soldier, *Monster Manual 2* 117)
- 1 jet of steam* hazard (level 9 blaster)

*Treat as an elemental eruption (page 20) that has only the fire effect.

**Level 15 Encounter (XP 6,800)**

- 1 storm archon squallshield (level 17 soldier, *Monster Manual 2* 16)
- 3 water archon shoal reavers (level 13 brute, *Monster Manual 2* 18)
- 2 water archon waveshapers (level 16 controller, *Monster Manual 2* 18)

**Level 25 Encounter (XP 42,350)**

- 1 elder sea worm* (level 24 solo soldier, *MM* 214)
- 2 storm giants** (level 24 controller, *MM* 124)

*Treat as an elder purple worm, but add the aquatic keyword, decrease base speed and burrow speed to 2, and add a swim speed of 8.

**The giants are mounted on the sea worm.

# SANZERATHAD

Successful githzerai monasteries are beacons of order and stability in the Elemental Chaos. In such centers of meditation and contemplation, githzerai peacefully learn to control internal and external chaos.

Sanzerathad is not one of those monasteries.

The ascetics who founded Sanzerathad selected the worst of locations: an earthmote at the exact confluence of multiple chaos currents. Perhaps they sought a challenge, or they failed to notice the dangers of that spot; maybe some other imperative motivated them.

Not even the utmost of martial and mental skill can completely hold off the ultraviolent forces that constantly assault the monastery. Every day, the tides of chaos crash more viciously against Sanzerathad's walls; every day, the githzerai lose ground.

No outsider knows why the Sanzerathad githzerai continue to fight. Only in the strictest confidence do they speak of a room with no doors, and never do they divulge what the room might contain.

The size of a large town, Sanzerathad squats behind stone walls on a landmass a few dozen miles across. The buildings were raised by sheer mental effort and then reshaped and adorned by physical craftsmanship. Now they hunker against the chaos in the pleasant geometric patterns typical of githzerai architecture.

## MIND OVER MATTER

Most creatures believe that the Elemental Chaos is the source of everything out of which reality is made. Time, the soul, and certain aspects of life might have been shaped by the gods above, but all else emerged from the Plane Below.

What, then, of thought itself? Ideas and dreams, urges and emotions—all of these existed in the primordials and the earliest efreets. Uncountable numbers of intelligent elemental creatures lived before the first mortals walked the world—indeed, before the world took form. Is thought another element that churns beneath the skin of reality?

The notion rarely occurs to most people. When it does, it is treated as nothing more than an interesting philosophical conundrum. To the githzerai, though, thought is a very real quantity. They would no sooner omit it from the list of elements than they would fire or water. This belief forms the core of the practices of many of their monasteries, including Sanzerathad. The githzerai are not guarding against just chaos but against madness.

Perhaps this idea is the truth, or it might be a delusion to which the githzerai cling. If true, the concept has interesting ramifications. Did the Plane of Dreams develop from the Elemental Chaos, just as the world did? Could corrupt thoughts and maddened dreams be the seed around which the Far Realm grew? Travelers might come across literal pools of thought and gain knowledge, dreams, or delusions from exposure. Thought elementals could roam the plane, and structures might exist that are formed of pure idea. Perhaps what lies in the Room with No Doors is a thought so terrible that its release would eventually corrupt all existence.

## Inhabitants and Culture

Because they devote their efforts to holding the roiling chaos at bay, Sanzerathad githzerai barely function as a society. Insofar as they acknowledge tradition, they follow standard githzerai customs. A few maintain gardens and food stores. All others fall into two groups: the Blades of Discipline and the Hands of Order. The Marshal of the Blades of the Discipline and the Custodian of the Hands of Order share authority over Sanzerathad. When they disagree, the monastery's oldest and most revered instructor, the male bard Master Arzendreth, makes the decision.

**Blades of Discipline:** Employing magic, martial arts, mental acuity, and weapons, the Blades of Discipline protect Sanzerathad's physical grounds. Under the leadership of Marshal Issithertha, a female swordmage, the Blades stand at the gates of Sanzerathad to battle demons, elementals, slaads, and worse. They patrol the streets to slay creatures that randomly manifest from the chaos. They live in violence and die early.

**Hands of Order:** A githzerai needs only to have a strong will to join the Hands of Order. The Hands spend hours in intense concentration, working in shifts to mentally hold Sanzerathad together. Custodian Zitholt, a male mindmage, leads the group.

## Major Areas

Sanzerathad has the typical sleeping cells, dining halls, and dojos of a githzerai monastery. It also has the following unique areas.

**Chapel:** The chapel chamber near the center of the monastery can house scores of meditators. Its architecture directs one's gaze from wall to wall and then upward, and an interplay of lines and angles in the ceiling focuses meditation. Otherwise, no adornments distinguish the chamber from other rooms. At least a dozen Hands of Order meditate here at any given time.

**Orchard:** A combination garden and pasture, the orchard grows near the chapel. Six githzerai, including at least two Hands of Order, tend crops and some livestock.

**Outer Wall:** Made of stone several feet thick and inscribed with runes and icons symbolizing order and strength of mind, Sanzerathad's outer wall stands against the physical dangers of chaos. Two steel gates engraved with runes break the wall's continuity. The Blades of Discipline walk the wall and stand sentry at the gates at all times.

**The Room with No Doors:** Somewhere deep within Sanzerathad hides its most important chamber. The thickness of the room's walls rivals that of the monastery's outer wall. No doors allow entrance. Only sheer force of will (which must defeat the combined efforts of the Hands of Order) can open a passage through the rock.

None but the githzerai know what the room contains. Does it house a holy object? A repository of lore? The heart of a slumbering primordial? A relic of the mind flayers from whom the githzerai escaped long ago? A portal to the heart of Zerthadlun, through which chaos would flow if left unchecked? Interested parties can only speculate—or wait until chaos finally overwhelms Sanzerathad.

## Adventures

Adventurers could end up in Sanzerathad as castaways from a chaos storm or after an attack. They might be following rumors about the Room with No Doors, coveting whatever legendary wonders they believe to be housed within. They could try to convince the githzerai to accept their help, whether of their own accord or in response to a plea from a githzerai monk acting without consent of superiors. The characters might arrive on behalf of another community plagued by chaos, in hopes that the githzerai of Sanzerathad might offer advice on how to ward it off.

## Environmental Features

Inside Sanzerathad's walls are ordinary stone streets (with the exception of random surprises born of the swirling chaos currents). The terrain outside the walls is a different story.

**Changing Terrain:** Outside Sanzerathad proper, tides of chaos wash over the terrain without pattern, transforming the land from one moment to the next. Any sort of terrain or environmental hazard can manifest there.

**Chaos Outbreaks:** Inside Sanzerathad's walls, outbreaks of chaos sometimes occur. A normal hallway might become a passage of swamp muck. A stone wall might turn to ice. Doors and hallways could suddenly lead to new locations in the monastery. (You can either map out the monastery in several sections and shuffle them or simply treat a door as a portal to elsewhere in Sanzerathad.)

**Chaos Storms:** Chaos storms (*Manual of the Planes,* page 67) frequent the grounds, constantly altering the terrain there.

## Encounter Groups

Encounters around Sanzerathad generally involve demons, elementals, slaads, and other creatures naturally given to chaos. The randomness can spawn chaotic or elemental variants of any creature, particularly aberrations and undead. Some such chaos-spawn remain in existence; others vanish after a short time. Most of them appear outside the outer wall. Sometimes, when the Hands of Order falter, warping walls and changes in the environment signal a new arrival inside the compound, which any available Blades of Discipline—and perhaps the characters—rush to exterminate.

**Level 13 Encounter (XP 4,600)**
- 5 canoloth harriers (level 13 minion, *Manual of the Planes* 120)
- 1 chaos storm hazard (level 16 blaster, *Manual of the Planes* 67)
- 2 foulspawn hulks (level 12 brute, *MM* 113)
- 1 gray slaad (level 13 skirmisher, *MM* 238)

**Level 19 Encounter (XP 13,200)**
- 1 Avernus cinderstorm hazard (level 18 elite blaster, *Manual of the Planes* 23)
- 2 gibbering abominations (level 18 controller, *MM* 126)
- 13 slaad spawns (level 17 minion skirmisher, *Monster Manual 2* 185)

**Level 21 Encounter (XP 18,600)**
- 1 black slaad (level 20 skirmisher, *MM* 239)
- 1 chaos storm hazard (level 16 blaster, *Manual of the Planes* 67)
- 1 consumptive swarm (level 21 elite skirmisher, page 133)
- 2 rot harbingers (level 20 soldier, *MM* 223)
- 1 skystone field hazard (level 19 lurker, page 22)

# THE GLITTERING MINE

**An adventure area for five 8th-level adventurers**

The Elemental Chaos has a little of everything. As in other worlds, however, the valuable bits of everything—such as certain ores and minerals—run in short supply.

Hak Karlum, the Faceted Plain, is one repository of such valuable bits. This small isle consists primarily of a peculiar crystal that develops rare gems in its depths. Thus, mining the crystal pays off in diamonds, emeralds, and rubies, as well as arcane treasures such as mirror crystal and phase crystal.

## Background

**Arcana or History DC 14:** Archons once held Hak Karlum as a fortress. They knew that the crystal on which they dwelled contained valuable gems, but they took no interest until the gems drew the attention of other beings: humans, efreets, xorns, and giants. Then the archons fought as many defensive battles as offensive ones.

**Arcana or History DC 16:** The demon prince Graz'zt sent a battalion of demons to raze the archon bastion so he could loot its riches. The demons outnumbered the archons and forced them from their demesne. Being not particularly determined workers, the demons gathered what gems they could easily pry from the caverns and departed. For a long time, the Faceted Plain then lay forgotten by all but the occasional peckish xorn.

**Arcana or History DC 19:** The Maldrookt tribe of hill giants dwells in both the Elemental Chaos and the natural world, thanks to a portal the tribe members found in an unexplored cave. They discovered Hak Karlum and put their galeb duhrs to work excavating a deep mine that yielded great riches. The Maldrookt tribe thrived because its members were clever enough not to reveal the location of their mine. The tribe's population grew to the point where the giants threatened the lands around their home in the natural world.

Every few weeks, the Maldrookts and their galeb duhrs depart the mine to dispense the fruits of their recent labors among the tribe members and to trade with allies. They have just embarked on such an expedition, so the mine lies dormant.

## Hook: Mine the Treasure of Hak Karlum

While the characters are searching for clues about their ongoing quests, they learn of Hak Karlum's gems and arcane crystals, and possibly rituals requiring those components. They could seek the crystals for their own purposes, or retrieve samples on behalf of an employer. They might also want to disrupt the hill giants that are threatening to overrun their homeland by stealing some of the mine's wealth and disrupting its operation.

**Quest XP:** If the characters obtain samples of the mine's crystals, they earn a minor quest reward of 350 XP.

## Environment

The size of a small island, Hak Karlum consists of rocky crystal with pits, hills, and other contours. The characters might engage in several encounters—perhaps including a giant or two—before reaching the mine. Expand on the area surrounding the mine as you see fit, or allow the characters to locate the mine directly if you just want to get to the action.

### Area 1: Access from Above

A large opening on the surface of Hak Karlum allows access to the mine in its interior. The edge of the opening is 100 feet above the floor. Fasteners for rope ladders at the lip hang empty. (The giants that remain enter and exit the mine by climbing the walls. Gargoyles carry galeb duhrs.) Rather than waste space with ropes and pulleys, the mine overseers levitate amounts of crystal and gems too heavy to carry up the shaft.

**Tactical Encounter:** "Over the Edge," page 90.

### Area 2: Ledges

Three ledges protrude from the walls of the opening at various heights. The elevation markers on the map indicate the ledges' distance above the floor of the mine; thus, the ledge marked "65 ft." is 55 feet above the floor.

**Tactical Encounter:** "Over the Edge," page 90.

### Area 3: Main Cavern

Sound echoes strangely in the main cavern, and light glitters off the crystals. The floor slopes down away from the shaft until it reaches its lowest elevation in the northwest corner.

**Tactical Encounter:** "In the Pits," page 92.

### Area 4: Jagged Wall

A jagged wall bears recent slashes from picks and other tools. Gems gleam inside it.

**Tactical Encounter:** "In the Pits," page 92.

### Area 5: Side Passages

Side passages either dead-end, where miners found no point in continuing, or lead to other chambers (if you wish to expand the mine).

# ENCOUNTER: OVER THE EDGE

**Encounter Level 9 (2,200 XP)**
The experience reward is adjusted for terrain advantageous to the galeb duhrs and gargoyles.

## Setup

**2 galeb duhr earthbreakers** (E)
**3 gargoyles** (G)

Galeb duhrs and gargoyles guard the opening into the mine to ensure that the mine remains undisturbed until the workers return from their delivery run.

**When the PCs approach the opening, read:**
*The crystal tosses reflections, mirages, and shadows before you like a puppet show. As you near a large shadow, you see that it is the uneven maw of a large opening. Nearer still, you can estimate its span at a hundred feet. It plunges deep into the crystal landscape. Its walls reflect light at strange angles and cast a web of shadow. Three ledges protrude from the walls at various depths.*

**Perception Check**
**DC 14** *A stone boulder on the middle ledge shifts, revealing its humanoid shape. A similar boulder sits on the floor at the bottom of the opening.*
**DC 19** *Three more rocklike figures, concealed in the shadows, unfurl wings and flex claws. You also notice that patches of crystal on the floor and ledges appear different from the rest. A couple of the patches look especially transparent. Others just seem a bit . . . odd, as though they are made of a different substance altogether.*

**Arcana or Dungeoneering Check**
A character who becomes aware of the patches of different crystal can make this check. On a success, read the passage below and then describe brittle crystal and mirror crystal as given in "Features of the Area" below.
**DC 19** *After a moment of study, you recognize the unusual crystalline patches as brittle crystal and mirror crystal.*

## Tactics

All the monsters attack as soon as the intruders reach the level of the highest ledge. They try to force characters onto brittle crystal. Since they lack ranged attacks, they keep away from mirror crystal when possible.

The galeb duhrs begin with *hurl stones*. When an intruder draws near to the galeb duhr on the ledge, that creature attempts to knock the character off the wall or the ledge with its *shock wave*. Both galeb duhrs fight to the death.

**2 Galeb Duhr Earthbreakers (E)** **Level 8 Artillery**
Medium elemental humanoid (earth) XP 350

**Initiative** +4 **Senses** Perception +12; tremorsense 10
**HP** 73; **Bloodied** 36
**AC** 22; **Fortitude** 23, **Reflex** 18, **Will** 20
**Immune** petrification, poison
**Speed** 4 (earth walk), burrow 6

⊕ **Slam** (standard; at-will)
+13 vs. AC; 1d8 + 6 damage.

**Hurl Stones** (standard; at-will)
Area burst 1 within 10; +13 vs. AC; 1d10 + 6 damage. All squares in the area become difficult terrain. The earthbreaker can create stones to throw when none are present.

**Shock Wave** (standard; recharge ⚄ ⁞⁞)
Close burst 2; +12 vs. Fortitude; 1d6 + 6 damage, and the target is pushed 1 square and knocked prone.

**Alignment** Unaligned **Languages** Dwarven, Giant
**Skills** Stealth +9

| | | |
|---|---|---|
| **Str** 23 (+10) | **Dex** 10 (+4) | **Wis** 16 (+7) |
| **Con** 19 (+8) | **Int** 12 (+5) | **Cha** 12 (+5) |

**3 Gargoyles (G)** **Level 9 Lurker**
Medium elemental humanoid (earth) XP 400

**Initiative** +11 **Senses** Perception +12; darkvision
**HP** 77; **Bloodied** 38
**AC** 25; **Fortitude** 21, **Reflex** 19, **Will** 19
**Immune** petrification
**Speed** 6, fly 8; see also *flyby attack*

⊕ **Claw** (standard; at-will)
+14 vs. AC; 2d6 + 5 damage.

**Flyby Attack** (standard; recharges after using *stone form*)
The gargoyle flies up to 8 squares and makes a melee basic attack at any point during the move without provoking an opportunity attack from the target. If the attack hits, the target is knocked prone.

**Stone Form** (standard; at-will)
The gargoyle becomes a statue and gains resist 25 to all damage, regeneration 3, and tremorsense 10. It loses all other senses and can take no actions in stone form other than revert to its normal form (as a minor action).

**Alignment** Evil **Languages** Primordial
**Skills** Stealth +12

| | | |
|---|---|---|
| **Str** 21 (+9) | **Dex** 17 (+7) | **Wis** 17 (+7) |
| **Con** 17 (+7) | **Int** 5 (+1) | **Cha** 17 (+7) |

### Gargoyles in Flight

Since the gargoyles stay in flight as much as possible, keep the following rules on flight in mind as you play out this encounter.

- While in flight, a gargoyle cannot make opportunity attacks or shift.
- A gargoyle crashes if it does not fly at least 2 squares on its turn and does not end its turn on the ground.
- A gargoyle that is knocked prone in midair crashes.
- Crashing means that the gargoyle falls 40 feet safely. If falling that distance puts the gargoyle on the ground, it takes no damage. If it is still above the ground, the gargoyle falls the rest of the way and takes falling damage.

The gargoyles take to the air and engage in *flyby attacks*. They focus on climbers, making bull rush attacks to push characters off ledges. Not the most intelligent of monsters, they stand on any type of crystal if given the opportunity to land beside their foes. If only one bloodied gargoyle remains, it attempts to flee deeper into the mine to join up with the hill giant.

## Features of the Area

**Sheer Walls:** The walls of the opening offer few handholds and footholds, requiring a DC 19 Athletics check to climb.

**Illumination:** Daylight brightly illuminates the upper 20 feet of the opening and dimly illuminates deeper areas. Due to the crystal's reflectivity, the radius of characters' light sources increases by 2 squares.

**Brittle Crystal:** A creature can move across or stand on squares of brittle crystal normally. (These areas are represented by purple shading on the map.) If a creature takes damage while standing on such a square, the crystal shatters, the creature is knocked prone, and the square becomes difficult terrain.

**Mirror Crystal:** Mirror crystal twists space. A creature standing on mirror crystal can look down and see all other mirror crystal spaces within 20 squares of it. A creature can make ranged attacks through mirror crystal, targeting a creature on or adjacent to another square of mirror crystal. The range to a creature attacked through mirror crystal is 1 square. (These areas are represented by blue squares on the map.)

**Phase Crystal:** This translucent, silvery crystal can be induced to discharge its extradimensional energy and shunt a creature out of phase for a short time. When a creature ends its move in a square of phase crystal, it gains phasing until the end of its next turn. That square cannot affect another creature until the end of the encounter. (These areas are represented by orange squares on the map.)

**Rubble:** Bits of broken crystal are difficult terrain. (These areas are represented by pink squares on the map.)

# ENCOUNTER: IN THE PITS

**Encounter Level 9 (2,000 XP)**
The experience reward is adjusted for terrain advantageous to the hill giant.

## SETUP

**1 capture crystal hazard** (C)
**1 hill giant** (H)

One hill giant overseer remains in the mine to help the galeb duhrs and gargoyles protect it. Unless the characters battled the guardians in the previous encounter in complete silence, they cannot surprise the giant.

As a precaution against intruders and against the hill giants' own servants stealing from the mine, the giants' shaman has converted some of the mirror crystal in the cavern into capture crystal.

**When the PCs reach the floor of the opening, read:**

*The cavern slopes down and away from you to crystal walls dozens of yards off. Crystal stalactites and stalagmites gleam. Light bounces this way and that, and sound falls flat. A hill giant thuds toward you, club swinging.*

**Hill Giant (H)** **Level 13 Brute**
Large natural humanoid (giant) XP 800

**Initiative** +5 **Senses** Perception +7
**HP** 159; **Bloodied** 79
**AC** 25; **Fortitude** 27, **Reflex** 21, **Will** 23
**Speed** 8

⊕ **Greatclub** (standard; at-will) ✦ **Weapon**
Reach 2; +15 vs. AC; 2d10 + 7 damage.

↓ **Sweeping Club** (standard; encounter) ✦ **Weapon**
The hill giant makes a greatclub attack against two Medium or smaller targets; on a hit, the target is pushed 2 squares and knocked prone.

↗ **Hurl Rock** (standard; at-will)
Ranged 8/16; +15 vs. AC; 2d6 + 5 damage.

**Alignment** Chaotic evil **Languages** Giant
**Skills** Athletics +16

| | | |
|---|---|---|
| **Str** 21 (+11) | **Dex** 8 (+5) | **Wis** 12 (+7) |
| **Con** 19 (+10) | **Int** 7 (+4) | **Cha** 9 (+5) |

**Equipment** hide armor, greatclub

When the hill giant is adjacent to a stalactite or a stalagmite, the giant can shatter it in a spray of crystal by hitting it with an attack. The stalactite or stalagmite is destroyed.

**Shattering Crystal** Single-Use Terrain
*The giant's greatclub smashes into the crystal, and rubble hurtles toward you.*

**Minor Action**
**Requirement:** The giant must be adjacent to a crystal stalactite or stalagmite.
**Check:** The giant makes a melee basic attack against the crystal (AC 5).
**Success:** The stalactite or stalagmite shatters and makes an attack, which is a close blast 3 or close burst 1 (giant's choice) centered on the stalactite's or stalagmite's square.
**Target:** Each creature in the blast or burst
**Attack:** +13 vs. Fortitude
**Hit:** 1d10 + 3 damage.
**Effect:** The blast or burst becomes an area of difficult terrain that lasts until the end of the encounter.

**Capture Crystal (C)** **Level 13 Lurker**
Hazard XP 800

*The crystalline floor emits a resonant hum, and then absorbs the creature above it with a painful flash of light.*

**Hazard:** When triggered, capture crystal absorbs a creature near it, trapping it in a small crystalline prison from where it can only look out helplessly.

**Perception**
✦ DC 18: The character recognizes that the patches of capture crystal are made of the same material as mirror crystal.

**Additional Skill:** Arcana or Dungeoneering
✦ DC 23: The character determines that a patch of capture crystal is a different sort of hazard from mirror crystal.

**Trigger**
The hazard tries to capture any creature that ends its turn in or adjacent to a capture crystal square that does not currently contain a trapped creature.

**Attack**
**Opportunity Action** **Close** burst 1
**Target:** The triggering creature
**Attack:** +16 vs. Reflex
**Hit:** 2d6 + 2 radiant damage, and the target is captured in a crystalline prison (save ends). While captured in the crystalline prison, the target is immobilized in a crystal chamber beneath the attacking square of capture crystal. It has just enough space to stand but cannot leave the chamber. It can see out of any square of capture crystal or mirror crystal within 20 squares of it. The target has line of effect to no creature and no creature has line of sight or line of effect to the target (although its image appears in other squares of capture crystal). When the effect ends, the target reappears adjacent to a square of capture crystal within 20 squares of the space it vacated. It cannot be captured again until the end of its next turn.

**Countermeasures**
✦ A character can make a DC 18 Arcana or Dungeoneering check as a standard action against an adjacent square of capture crystal to disable that square until the end of the encounter.
✦ A square of capture crystal can be attacked. It has AC 5, Reflex 3, Fortitude 8, and 20 hit points. Once it is destroyed, that square is disabled.

## Tactics

The hill giant charges into melee—perhaps taking a round to throw a chunk of crystal if it cannot reach the characters—and smashes the toughest-looking target. The giant knows to avoid the brittle crystal and knows how to use mirror crystal, but it cannot use phase crystal. It lures its enemies near stalactites and stalagmites so it can hurt them by shattering the crystal into sprays of shards.

## Features of the Area

**Illumination:** The area is dimly illuminated. Due to the crystal's reflectivity, the radius of characters' light sources increases by 2 squares.

**Ceiling:** The ceiling is 15 to 20 feet high.

**Thin Crystal Walls:** These features are represented by dark areas half a square wide or less. These walls are transparent, so they don't impede line of sight, but they do block line of effect. Thin crystal is as fragile as glass; the crystal in a square has AC 5, Fortitude 10, and 5 hit points. Breaking the thin crystal wall in a square does not bring down the wall in adjacent squares.

**Thick Crystal Walls:** These features are represented by dark areas more than half a square wide. A square containing thick crystal is opaque, blocking both line of sight and line of effect, and as strong as stone (AC 4, Fortitude 12, hp 80).

**Brittle Crystal:** A creature can move across or stand on squares of brittle crystal normally. (These areas are represented by purple shading on the map.) If a creature takes damage while standing on such a square, the crystal shatters, the creature is knocked prone, and the square becomes difficult terrain.

**Mirror Crystal:** Mirror crystal twists space. A creature standing on mirror crystal can look down and see all other mirror crystal spaces within 20 squares of it. A creature can make ranged attacks through mirror crystal, targeting a creature on or adjacent to another square of mirror crystal. The range to a creature attacked through mirror crystal is 1 square. (These areas are represented by blue squares on the map.)

**Phase Crystal:** This translucent, silvery crystal can be induced to discharge its extradimensional energy and shunt a creature out of phase for a short time. When a creature ends its move in a square of phase crystal, it gains phasing until the end of its next turn. That square cannot affect another creature until the end of the encounter. (These areas are represented by orange squares on the map.)

**Rubble:** Bits of broken crystal are difficult terrain. (These areas are represented by pink squares on the map.)

**Stalactites:** These features are depicted by spikes pointing downward. Because of the height at which the stalactites hang, they are difficult terrain only for Large and larger creatures and for creatures flying at an altitude of more than 5 feet.

**Stalagmites:** These formations, depicted by spikes pointing upward, are relatively short. They count as difficult terrain only for Medium and smaller creatures.

## Conclusion

Having overcome the mine's few guardians, the characters are free to pry some of the precious gems from its crystal. Each member of the party who spends at least 1 hour digging in the mine acquires gems worth a total of 80 gp (one-fifth of a level 8 treasure parcel).

You could expand this adventure into a longer one in a number of ways. If the mine has been rigged to signal the hill giants about intruders, the giants might send a larger war party to investigate. You can put time pressure on the party by making the trading group's return imminent. Further quests could involve seeking additional samples of gems, planning an ambush against the giants' trading party, or following the traders back to the tribe and assaulting the giants' settlement.

# THE BODY LUMINOUS

**An adventure area for five 15th-level adventurers**

Stormy masses snarl across the high reaches of the Elemental Chaos. One of them is the Body Luminous, a vestige of a future apocalypse that materializes in the present. Its mysteries beckon adventurers, explorers, and foul creatures alike.

## Background

**Arcana or History DC 18:** The Body Luminous resembles a coma of lightning-lit thunderheads, miles in diameter, that streaks across the Elemental Chaos. Observers at a distance presume it is nothing more than a fireball burning its way to extinction.

**Arcana or History DC 20:** The speed of the Body Luminous makes it difficult to locate; however, the wizard Torhana Inksoul has created a dozen compasslike devices that point toward it. Locating such a compass presents a challenge because of the compasses' value and rarity . . . and because Torhana has been missing for two decades.

**Arcana or History DC 23:** Expeditions that have intercepted the Body Luminous and pierced its stormy shroud have found a nucleus of chalky stone containing fossils of creatures and artifacts. One story describes an entire preserved city of bizarre architecture, filled with forms of unidentifiable beings.

**Arcana DC 26:** According to Torhana Inksoul's writings, the Body Luminous is an apocalyptic vestige thrown back from the future, so it holds knowledge of events to come. She could not say whether its appearance is a warning or a mere accident of fate.

## Hook: Find Torhana

A female human named Gaija Meloran contacts the adventurers. She has discovered the papers of her missing great-aunt, Torhana Inksoul, along with a compass that points to something in another world called the Body Luminous. Gaija never knew her great-aunt and wants to find her.

**Quest XP:** If the characters find Torhana Inksoul and report her fate to Gaija Meloran, they earn a minor quest reward of 1,200 XP.

## Hook: Slaad Stomping

A band of slaads has been seeking the Body Luminous in hopes of finding a way to pierce the barriers between realities. In their search, the slaads have left a path of destruction through the cosmos. The characters, having heard of or witnessed a slaad rampage, want to bring the slaads to justice. Alternatively, they are hired by a patron or a community leader to stop the rampages.

**Quest XP:** If the characters are able to defeat the slaads and return with proof of their success, they earn a major quest reward of 6,000 XP.

## Arrival

The characters must contend with the storm shroud and a rainbow of slaads before they can reach the heart of the Body Luminous.

**When the PCs see the Body Luminous from afar, read:**

*Thunderheads roll into view, tumbling in an arcing trajectory. Flashes of fire and lightning drag thunder in their wake. A rent in the clouds reveals a chalky core littered with irregularities. The rent closes, and the storm boils past.*

The characters must catch up with the Body Luminous and breach the storm shroud to reach the core.

### Environment

The core of the Body Luminous is a few miles in diameter. The surrounding thunderheads extend another mile above the surface, with only a few hundred feat of clear space beneath their churning bases.

**Speed:** Treat the Body Luminous as having a speed of fly 10. It is small enough that intersecting its trajectory requires calculation.

**Gravity:** Creatures within 200 feet of the Body Luminous sense it as "down" and fall toward it.

**Storm Shroud:** The storm clouds sheathing the core are violent and dangerous. When any creature passes through the clouds and enters an adjacent clear square beneath the shroud, the storm makes an opportunity attack against it: +18 vs. Reflex; 1d10 + 10 fire and lightning damage.

## On the Surface

**When the PCs reach the surface of the Body Luminous, read:**

*An expanse of chalky stone stretches to the horizon. Fossilized bones of animals, humanoids, dragons, and titans suffuse the stone, intermingled with centuries of ruins and the occasional chunk of a colossus.*

The ruins span a range of architectural styles, but the degree of decrepitude prevents identification of the cultures that built them.

The stubs of four broken towers define a concave courtyard 300 feet across. Offset from the center of the courtyard stands the body of a mostly petrified

slaad; all but a partly fleshy area around the mouth and chest is stone. The slaad guards a shaft that leads to the interior of the Body Luminous.

**Perception Check**
**DC 11** *Other visitors have left signs of their presence, including partial excavations and litter in the form of tent stakes, water skins, broken tools, and buried refuse.*
**DC 18** *Loose scales of various colors, large footprints made by webbed feet with clawed toes, and firebird carcasses showing wide-mouthed bites pepper the landscape.*
**DC 23** *The fossils and ruins lie along rough lines that converge toward a distant point.*

Creatures that succeed on the DC 23 check can trace the convergence to the courtyard.

**Arcana Check**
A character who notices the scales, webbed footprints, and firebird carcasses can make this check.
**DC 18** *These signs resemble those left by slaads.*

**When the PCs can see the courtyard's broken towers, read:**
*The remains of four pillars rise from the landscape. As you draw near, you see that they form the four corners of a courtyard several hundred yards wide. The courtyard slumps, creating a concavity. Near the center of the bowl hulks a froglike statue of a different stone than the rest of the landscape. It shows no signs of erosion. Next to it, chalky rubble rings the mouth of a shaft.*

A freak occurrence turned one of the exploring slaads partially to stone. The slaad's new state of existence is a unique condition, making its goals and desires even harder to figure out than usual. However, it can warn its companions below of intruders. It responds slowly enough that the characters have the chance to disable it or win it to their side.

**When the PCs near the petrified slaad, it calls out in Primordial:**
*"Come no closer, or I will warn the seekers below. Oh, see what they have done to me."*

## Petrified Slaad Guardian

The characters can appease or defeat the petrified slaad by succeeding on this skill challenge.

**Level:** 15 (XP 4,800).

**Complexity:** 4 (requires 10 successes before 3 failures).

**Primary Skills:** Arcana, Bluff, Diplomacy, Intimidate.

*Arcana (requires the Ritual Caster feat; DC 23, standard action):* The character uses knowledge of ritual magic to advance the process that partially petrified the slaad. On a successful check, the slaad moves closer to complete petrification. A success with this skill counts as two successes toward the skill challenge. A failed check counts as two failures.

*Bluff (requires the Primordial language; DC 23, standard action):* The character lies to and cajoles the slaad. On a success, the creature is intrigued enough that it would rather continue interacting with the characters than warn its comrades.

*Diplomacy (requires the Primordial language; DC 23, standard action):* The character attempts to placate the slaad, perhaps offering a certain food or following a nonsensical line of reasoning.

*Intimidate (requires the Primordial language; DC 18, standard action):* The character threatens the slaad with boredom, violence, or something else it fears so that it will remain silent.

**Secondary Skills:** Insight, special.

*Insight (DC 23, standard action):* The character attempts to follow the slaad's maddening logic. On a success, each character gains a +2 bonus to subsequent Bluff, Diplomacy, or Intimidate checks in the skill challenge. A success does not count as a success toward the skill challenge. The characters can attempt this check as many times as they like but can succeed only once.

*Ritual (special):* The Remove Affliction ritual ends the slaad's petrification. The blue slaad digester (see the statistics block below) calls down to the slaads in the upper vestibule to warn them of the characters' presence, then attacks the characters. The skill challenge automatically fails, although the characters do receive experience for defeating the slaad.

**Success:** The slaad allows the characters to pass down the shaft without alerting the creatures in the upper vestibule.

**Failure:** The slaad emits a constant, loud croaking sound that alerts the others.

## Area 1: Upper Vestibule

Torhana Inksoul's expedition excavated the shaft that is being guarded by the partially petrified slaad. A few days ago, a group of slaads opened the passage and gained access to a vestibule with a sealed valve, which they have not managed to budge.

**Tactical Encounter:** "Upper Vestibule," page 96.

## Area 2: Inner Lock

Beneath the valve in the upper vestibule, a vertical passage drops to an inner lock of hard, smooth material unlike the chalky stone encountered so far. The back of a humanoid skeleton partly protrudes from a translucent wall.

**Tactical Encounter:** "Inner Lock," page 98.

# ENCOUNTER: UPPER VESTIBULE

**Encounter Level 16 (7,600 XP)**

## Setup

**1 blue slaad digester** (D)
**1 gray slaad havoc** (H)
**1 green slaad madjack** (M)
**1 white slaad** (W)

**When the PCs peer into the shaft, read:**
*A vertical shaft drops 40 feet to a white floor.*

The walls of the shaft can be climbed with a DC 18 Athletics check. If the characters have the ability to fly, they can descend in that fashion.

**When the PCs reach the chamber floor, read:**
*In this chamber, a series of 15-foot terraces descend eastward to a ground floor. Cave-ins have reduced the area to a fraction of its original size. In the section that remains, large statues of humanoids clad in elemental garb pose in idealized grandeur. A gray creature with a wide, flat head works at a valve set in the floor on the lowest level.*

**If the slaads know of the PCs' approach, add:**
*Three creatures resembling the gray one, of various colors and sizes, leap toward you.*

**If the slaads do not know of the PCs' approach, add the following instead:**
*Three creatures resembling the gray one, of various colors and sizes, lounge in various places.*

**If the PCs attempt conversation, read:**
*The gray creature looks at you and replies in Primordial, "Did dreams lead you here, as us? Dreams of futures past and histories solvent? Of worlds that are not this world? Can you unlid the eye of tomorrow that vexes us? Are you succulent and filled with juicy blood?"*

The gray slaad continues to work or to spew questions until the heroes move within 5 squares of a slaad, or until they attack the slaads. Then all the slaads attack.

## Tactics

The digester and the madjack move forward first. The madjack tries to disorient foes, while the digester moves in and grabs anyone it can. The gray slaad havoc stays back and uses *havoc bolt* to keep enemies within reach of the others. The white slaad looks for opportunities to exploit combat advantage, splitting into its temporal replicas only if it is hard-pressed.

**Blue Slaad Digester (D)** **Level 14 Elite Soldier**
Large elemental humanoid XP 2,000

**Initiative** +14 **Senses** Perception +13; low-light vision
**HP** 332; **Bloodied** 166
**AC** 28; **Fortitude** 27, **Reflex** 26, **Will** 26
**Immune** chaos phage
**Saving Throws** +2
**Speed** 6, teleport 4
**Action Points** 1

⊕ **Grasping Claw** (standard; at-will) ✦ **Disease**
Reach 2; +19 vs. AC; 1d8 + 9 damage, and the target is grabbed and exposed to chaos phage (page 142). The blue slaad digester can grab up to two Medium or smaller creatures at once.

**Acidic Spew** (minor; at-will) ✦ **Acid**
One creature grabbed by the blue slaad digester takes ongoing 10 acid damage (save ends).

**Caustic Tongue** (opportunity, when a creature grabbed by the blue slaad digester escapes the grab; at-will) ✦ **Acid**
Reach 2; targets the triggering creature; +17 vs. Fortitude; the target is knocked prone and takes ongoing 10 acid damage (save ends).

**Covetous Claws** (standard; at-will)
The blue slaad digester makes two grasping claw attacks.

**Digestive Spray** (minor; recharge ⚅) ✦ **Acid**
Close blast 5; +15 vs. Fortitude; 1d8 + 6 damage, and ongoing 10 acid damage (save ends).

**Alignment** Chaotic evil **Languages** Common, Primordial
**Str** 23 (+13) **Dex** 20 (+12) **Wis** 13 (+8)
**Con** 16 (+10) **Int** 4 (+4) **Cha** 20 (+12)

**Green Slaad Madjack (M)** **Level 13 Elite Controller**
Large elemental humanoid XP 1,600

**Initiative** +8 **Senses** Perception +16; low-light vision
**HP** 268; **Bloodied** 134
**AC** 27; **Fortitude** 26, **Reflex** 23, **Will** 25
**Immune** chaos phage
**Saving Throws** +2
**Speed** 6, teleport 4
**Action Points** 1

⊕ **Claw** (standard; at-will) ✦ **Disease**
Reach 2; +18 vs. AC; 2d8 + 5 damage, and the target is exposed to chaos phage (page 142).

**Maddening Croak** (standard; recharges when first bloodied and again when the green slaad madjack spends an action point) ✦ **Psychic**
Close blast 5; +16 vs. Will; 2d12 + 5 psychic damage, and the madjack slides the target 3 squares and knocks it prone. Until the end of the target's next turn, the target must take a standard action to stand up.

**Maddening Visions** (minor 1/round; at-will) ✦ **Charm**
Close burst 2; targets one enemy in burst; +16 vs. Will; the target must make a melee at-will attack as a free action against one of its allies within its reach. The green slaad madjack chooses the attack and the target ally.

**Mind Spasm** (immediate reaction, when an enemy moves adjacent to the green slaad madjack; at-will) ✦ **Psychic**
Close burst 1; +13 vs. Will; 2d6 + 5 psychic damage. If the attack hits the triggering enemy, it is also dazed (save ends).

**Alignment** Chaotic evil **Languages** Common, Primordial
**Skills** Athletics +15, Stealth +13
**Str** 19 (+10) **Dex** 14 (+8) **Wis** 21 (+11)
**Con** 22 (+12) **Int** 16 (+9) **Cha** 14 (+8)

**Gray Slaad Havoc (H)** **Level 15 Artillery (Leader)**
Medium elemental humanoid XP 1,200

**Initiative** +10 **Senses** Perception +11; low-light vision
**HP** 116; **Bloodied** 58
**AC** 27; **Fortitude** 27, **Reflex** 28, **Will** 26
**Immune** chaos phage
**Speed** 6, teleport 6

⨺ **Havoc Claw** (standard; at-will) ✦ **Disease**
+22 vs. AC; 1d8 + 6 damage, the gray slaad havoc slides the target 2 squares, and the target is exposed to chaos phage (page 142).

➳ **Havoc Bolt** (standard; at-will)
Ranged 20; +20 vs. Reflex; 2d8 + 6 damage, and the gray slaad havoc slides the target 3 squares. If the attack scores a critical hit, the gray slaad havoc can repeat it once as free action.

✧ **Fog of Chaos** (immediate interrupt, when hit by a ranged attack; recharge ⚄ ⚄ ⚅)
Close burst 20; targets the triggering attacker; +20 vs. Will; the triggering attack instead targets one of the target's allies of its choice.

✧ **Reality Shift** (move; at-will) ✦ **Teleportation**
Close burst 10; targets one creature in burst; +20 vs. Will (no attack roll required against an ally); the gray slaad havoc teleports the target to any space within the burst.

**Alignment** Chaotic evil **Languages** Common, Primordial
**Skills** Athletics +14, Stealth +15
**Str** 14 (+9) **Dex** 17 (+10) **Wis** 19 (+11)
**Con** 20 (+12) **Int** 23 (+13) **Cha** 16 (+10)

**White Slaad (W)** **Level 16 Elite Lurker**
Medium elemental humanoid XP 2,800

**Initiative** +16 **Senses** Perception +14; low-light vision
**HP** 248; **Bloodied** 124
**AC** 29; **Fortitude** 29, **Reflex** 27, **Will** 26
**Immune** chaos phage
**Saving Throws** +2
**Speed** 6, teleport 4
**Action Points** 1

⨺ **Probability Claw** (standard; at-will) ✦ **Disease**
+21 vs. AC; 1d6 + 5 damage, and the target is dazed until the end of the white slaad's next turn and is exposed to chaos phage (page 142).

**Temporal Split** (standard; recharges when first bloodied or when the white slaad spends an action point)
The white slaad splinters into six white slaad temporal replicas, each appearing in an unoccupied space within 5 squares of the white slaad's previous space. The white slaad disappears, and it cannot attack or be attacked until it reappears. The temporal replicas thereafter act on the white slaad's initiative count. When the last temporal replica has been reduced to 0 hit points, the white slaad reappears within 5 squares of the space occupied by that replica and can act normally on its next initiative count. See also *advantage of time*.

**Advantage of Time**
Whenever a white slaad reappears after its temporal replicas have been reduced to 0 hit points, all enemies it can see grant it combat advantage until the end of its next turn.

**Combat Advantage**
A white slaad deals 1d6 extra damage against any creature granting combat advantage to it. In addition, that creature is dazed (save ends) instead of dazed until the end of the slaad's next turn.

**Alignment** Chaotic evil **Languages** Common, Primordial
**Skills** Athletics +18, Stealth +17
**Str** 20 (+13) **Dex** 19 (+12) **Wis** 13 (+9)
**Con** 22 (+14) **Int** 7 (+6) **Cha** 14 (+10)

**White Slaad Temporal Replica** **Level 16 Minion Lurker**
Medium elemental humanoid XP 0

**Initiative** +16 **Senses** Perception +14; low-light vision
**HP** 1; a missed attack never damages a minion.
**AC** 29; **Fortitude** 29, **Reflex** 27, **Will** 26
**Speed** 6, teleport 4

⨺ **Probability Claw** (standard; at-will)
+21 vs. AC; 8 damage, and the target is dazed until the beginning of the white slaad temporal replica's next turn.

**Combat Advantage**
A white slaad temporal replica deals 2 extra damage against any creature granting combat advantage to it.

**Alignment** Chaotic evil **Languages** Common, Primordial
**Str** 20 (+13) **Dex** 19 (+12) **Wis** 13 (+9)
**Con** 22 (+14) **Int** 7 (+6) **Cha** 14 (+10)

# Features of the Area

**Illumination:** Glowing rods sticking up from the top of each statue shed flickering light that dimly illuminates the chamber.

**Ceiling Entry:** The entry shaft leads down from a ceiling roughly 40 feet above the highest terraces and 85 feet above the ground floor.

**Statues:** The three Large statues are made of stone (AC 4; Reflex 4, Fortitude 12; hp 80). They provide cover. A character can make a DC 18 Athletics check to climb onto a statue.

**Floor Valve:** This metallic dome (the octagonal feature on the map) has large clamps and the word "Inksoul" etched on one side. For nonelemental creatures, the valve requires a DC 28 Strength check or Thievery check to open. Subtle magic imbued in the valve bars elemental creatures entirely; however, the slaads' persistence has nearly exhausted the magic.

# ENCOUNTER: INNER LOCK

**Encounter Level 15 (6,500 XP)**

## Setup

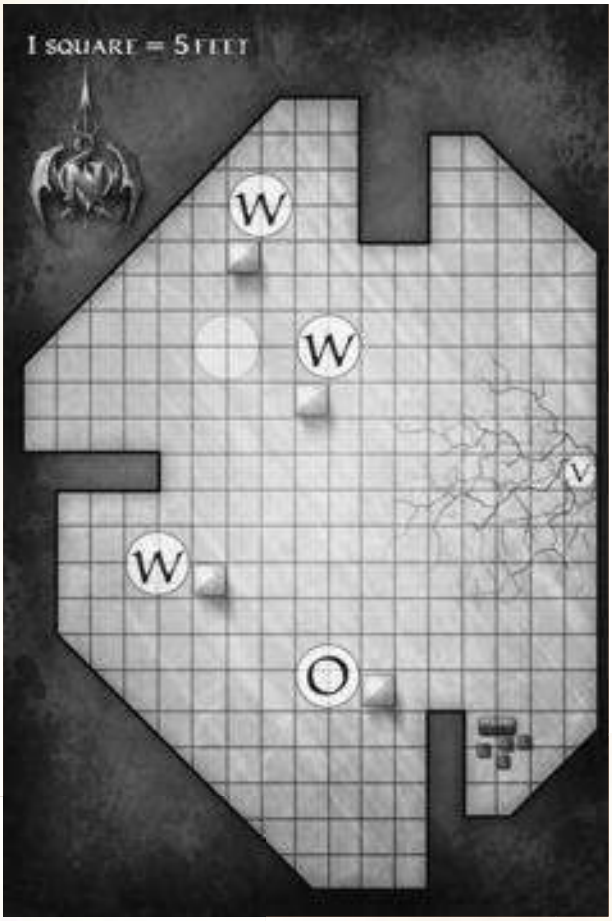
**3 oblivion wraiths** (W)
**1 spirit ooze** (O)
**Torhana, spirit vampire** (V)

Beneath the valve, a rough shaft descends 15 feet to the ceiling of the inner lock. Torhana's attempt to discover the secrets of the Body Luminous ended here, on the brink of success.

**When the PCs see the chamber, read:**
*The floor and all but one wall of this chamber are smooth and silvery, like cloudy mirrors. Crystalline obelisks protrude from the floor. Misty fog swirls at ankle height, too thin to conceal anything. Crates are piled in a distant corner.*

*Radiance leaks in through an unusual wall to the east, outlining the back of a humanoid skeleton on this side and hazy silhouettes on the other side. Radiating from the skeleton, scars fracture the wall and floor.*

**Religion Check**
**DC 23** *Necromancy infuses the mist on the floor but seems harmless in its current form.*



**3 Oblivion Wraiths (W)** — **Level 14 Brute**
Large shadow humanoid (undead) — XP 1,000 each

**Initiative** +13 **Senses** Perception +7; darkvision
**Nihil (Necrotic)** aura 2; each enemy that starts its turn within the aura takes 10 necrotic damage and cannot spend a healing surge until the start of its next turn.
**HP** 116; **Bloodied** 58; see also *death blast*
**Regeneration** 10
**AC** 26; **Fortitude** 25, **Reflex** 27, **Will** 24
**Immune** disease, poison; **Resist** 15 necrotic, insubstantial; **Vulnerable** radiant (if the oblivion wraith takes radiant damage, regeneration is negated until the end of its next turn)
**Speed** fly 6 (hover); phasing; see also *shadow glide*

**Nihil Strike** (standard; at-will) ✦ **Necrotic**
+15 vs. Reflex; 2d8 + 7 necrotic damage, and the oblivion wraith is invisible to the target until the end of the oblivion wraith's next turn.

**Obliviate** (standard; recharge ⚅) ✦ **Necrotic**
+15 vs. Reflex; 2d8 + 4 necrotic damage, and the target takes ongoing 15 necrotic damage and a -2 penalty to saving throws (save ends both).

**Death Blast** (when reduced to 0 hit points) ✦ **Necrotic**
Close blast 3; targets enemies; +15 vs. Fortitude; 2d8 + 7 necrotic damage, and the target loses two healing surges. *Miss:* Half damage, and the target loses a healing surge.

**Shadow Glide** (move; encounter)
The oblivion wraith shifts 6 squares.

**Spawn Wraith**
Any humanoid killed by the oblivion wraith rises as a free-willed oblivion wraith at the start of its creator's next turn, appearing in the space where it died (or in the nearest unoccupied space). Raising the slain humanoid (using the Raise Dead ritual) does not destroy the spawned wraith.

**Alignment** Chaotic evil **Languages** Common
**Skills** Stealth +18
**Str** 20 (+12) **Dex** 23 (+13) **Wis** 10 (+7)
**Con** 16 (+10) **Int** 10 (+7) **Cha** 18 (+11)

**When the PCs come within 5 squares of the skeleton, read:**
*A spirit steps out of the skeleton and coalesces into the shape of a female human. She turns to you and says, "So many things to see and learn! Are you here to see beyond the pale—to see what I've seen? Come, take a look with me!"*

Torhana's spirit continues to whisper disjointedly to the characters. Because she never saw what she spent her life trying to see, however, she tires of speech. Hunger for life overwhelms her and ripples through the mist, stirring the memories of her companions' souls. They congeal from the fog into oblivion wraiths and a spirit ooze.

## Tactics

The oblivion wraiths attempt to envelop characters in their *nihil* aura, while the spirit ooze attacks the nearest target mindlessly.

**Spirit Ooze (O)** **Level 16 Elite Lurker**
Large natural animate (blind, ooze, undead) XP 2,800

**Initiative** +20 **Senses** Perception +10; blindsight 10
**HP** 166; **Bloodied** 83; see also *split*
**AC** 32; **Fortitude** 27, **Reflex** 32, **Will** 31; see also *slippery phasing*
**Immune** disease, gaze, poison; **Resist** 10 necrotic, insubstantial; **Vulnerable** 10 radiant
**Saving Throws** +2
**Speed** fly 6 (hover); see also *spirit sink* and *phase away*
**Action Points** 1

⨁ **Spirit Sink** (standard; at-will) ✦ **Necrotic**
Reach 2; +19 vs. Fortitude; 3d6 + 5 necrotic damage, and the target is weakened (save ends). The spirit ooze gains phasing until the end of its next turn.

**Split** (when first bloodied; encounter)
The spirit ooze splits into two Large oozes, one occupying the original ooze's space and the other in a space adjacent to it. Each of the creatures has hit points equal to half of the original creature's current hit points. Both creatures act on the original creature's initiative count. Effects applied to the original creature do not apply to either individual after the split. The spirit ooze cannot split if reduced to 0 hit points by the attack that bloodied it. If left alone, at the end of the encounter the two individuals combine into one spirit ooze, which has hit points equal to the individuals' total.

**Combat Advantage**
A spirit ooze deals 2d6 extra damage against any creature granting combat advantage to it.

**Phase Away** (minor; while the spirit ooze has phasing; at-will)
The spirit ooze shifts 1 square.

**Slippery Phasing** (while the spirit ooze has phasing)
The spirit ooze gains a +2 bonus to AC and Reflex.

**Alignment** Unaligned **Languages** –
**Skills** Stealth +21
**Str** 16 (+11) **Dex** 26 (+16) **Wis** 15 (+10)
**Con** 17 (+11) **Int** 2 (+4) **Cha** 11 (+8)

Torhana drifts about in combat, making *spirit touch* attacks when she can. She moves to possess dead or unconscious characters as they become available.

## Features of the Area

**Illumination:** Light leaking through the translucent wall dimly illuminates the chamber.

**Entry Shaft:** The light-colored circle represents a 10-foot-diameter hole in the ceiling beneath the valve that the characters opened in the previous encounter.

**Ceiling:** The ceiling is roughly 15 feet high.

**Obelisks:** The obelisks block line of sight. They extend from floor to ceiling. An obelisk can be climbed with a DC 23 Athletics check.

**Cracks:** Squares containing cracks that radiate from the skeleton are difficult terrain.

**Translucent Wall:** Any living creature that touches the eastern wall is restrained (save ends). *First Failed Saving Throw:* The creature is restrained and knocked unconscious (save ends both). *Second Failed Saving Throw:* The creature is petrified as a crystalline mineral and fuses to the wall (no save).

**Crates:** The crates contain foodstuffs, rope, water, and other gear, all magically preserved. A chest in one of the crates holds the expedition's remaining funds: two level-15 treasure parcels.

**Torhana, Spirit Vampire (V)** **Level 12 Lurker**
Medium shadow humanoid (undead) XP 700

**Initiative** +14 **Senses** Perception +11; darkvision
**HP** 66 (99 if in a possessed body); **Bloodied** 33
**AC** 24; **Fortitude** 23, **Reflex** 24, **Will** 26
**Immune** disease, poison; **Resist** 5 necrotic, insubstantial (spirit form only); **Vulnerable** 5 radiant
**Speed** 6 (possessed body only), fly 6 (spirit form only); phasing (spirit form only)

⨁ **Claw** (standard; possessed body only; at-will) ✦ **Necrotic**
+17 vs. AC; 1d6 + 4 damage plus 1d6 + 4 necrotic damage.

⨁ **Spirit Touch** (standard; spirit form only; at-will) ✦ **Necrotic**
+15 vs. Reflex; 2d6 + 6 necrotic damage.

⨽ **Blood Drain** (standard; requires combat advantage; possessed body only; recharges when an creature adjacent to Torhana becomes bloodied) ✦ **Healing**
+15 vs. Fortitude; 2d12 + 8 damage, the target is weakened (save ends), and Torhana regains 16 hit points.

⨽ **Possess Body** (minor; at-will)
Torhana can possess the body of a dead or unconscious Medium or smaller humanoid. While in a possessed body, she has the following traits:
✦ She loses fly 6, phasing, and *spirit touch.*
✦ She gains speed 6, claw, *blood drain,* and a +7 bonus to Strength-based checks.
✦ She loses the insubstantial quality and gains 33 temporary hit points. When she loses the temporary hit points, the body falls prone in its square and Torhana resumes spirit form.
✦ While possessed, the body cannot regain hit points or awaken. A dying creature is considered stable while Torhana possesses its body. Healing the possessed creature deals damage to Torhana equal to the hit points regained.
✦ Melee and ranged attacks can target Torhana only. Close and area attacks target both the possessed creature and Torhana.
✦ Torhana can leave a possessed body as a minor action. When she does so, she resumes spirit form and the body falls prone in the square Torhana occupies.
✦ Once Torhana leaves a body, she cannot possess that body again until the end of the encounter.

**Vulnerable to Sunlight**
If Torhana starts her turn in direct sunlight, she is dazed and cannot use *possess body* until the end of her turn.

**Alignment** Chaotic evil **Languages** Common
**Skills** Bluff +17, Stealth +15
**Str** 6 (+4 or +11) **Dex** 18 (+10) **Wis** 10 (+6)
**Con** 16 (+9) **Int** 10 (+6) **Cha** 22 (+12)

## Conclusion

The characters have discovered the horrible truth of what happened to Torhana's expedition: The Body Luminous is a death trap.

If you want to expand this adventure, you can connect the mysterious body to a future catastrophe in your campaign world. An entire campaign arc could be devoted to learning the secrets that Torhana failed to find, or finding a way to see the visions that she saw without being destroyed by the deadly walls. The final event of the campaign might be the characters' desperate attempt to prevent the foreseen apocalypse from occurring.

# THE MOUNTAIN BUILDER'S BARROW

**An adventure area for five 25th-level adventurers**

Tziphal the Mountain Builder, primordial of folding earth, petrification, and volcanoes, nearly met his end in the Dawn War. The gods covered what remained of his body in stones from Celestia and mortared them with astral earth and divine blood. They wove elemental forces to lift the burial site aloft and shroud it deep within the Elemental Chaos. Tziphal has lain in stasis ever since.

## Background

**Arcana or Religion DC 27:** The body of Tziphal the Mountain Builder rests in a barrow raised by deities who defeated him during the Dawn War. Tziphal created most species that have the power of petrification—or their ancestors. His cairn attracts such creatures, as well as other beings of earth and stone.

**Arcana or Religion DC 32:** A malformed stone giant runecarver named Tholundru has spent years scouring the planes for a way to awaken Tziphal. In so doing, he has discovered secrets of the primordials. He has called and created primeval forces to aid him.

## Hook: Prevent Tziphal's Reanimation

The Mountain Builder's barrow drew Tholundru to it long ago. Since then, with religious fervor, he has sought the means to revive the primordial. In the process, Tholundru has awakened monstrosities from the Dawn War, including retrievers and a primordial colossus. Tholundru set the colossus to guard the barrow against heretics and dispatched the retrievers to bring him materials for the reanimation ritual.

The retrievers encounter the characters on one such mission. Upon investigation, the characters learn that more retrievers have been stealing components for an especially powerful reanimation ritual. Along with Tziphal cultists, goaded by Tholundru, they have also kidnapped or killed servants of deities. The party might find Tholundru's planar gate at a cult site or track a retriever to the gate.

**Quest XP:** If the characters stop Tholundru from performing the reanimation ritual, they earn a major quest reward of 35,000 XP.

### Planar Gate

Tholundru has opened a planar gate through which his retrievers come and go. The single opening on the barrow site might link to several other places. This gate does not appear on the maps of the area but lies farther down the slope of the mountains.

## Environment

The characters might come through Tholundru's planar gates, or they might arrive at the barrow by other means. The barrow lies among three earthmotes that form a cluster of mountains around its protective orb.

**As the PCs approach the barrow, read:**
*Three masses of earth form a cluster of mountains, down which flow three great streams: one of mud, one of lava, and one of semiliquid salt. Resting in a gap between them is a marble platform supported by four columns. Several statues protrude from its top, some continuations of the support pillars. The statues surround a great pile of stones.*

**Arcana Check**
**DC 30** *You deduce that the barrow is out of temporal alignment with its surroundings, and that some nearby object is responsible for keeping it so.*

**Lava:** A river of lava flows down one of the mountain slopes. The lava pours through a gap between the mountains and rains through the Elemental Chaos.

**Mud:** Smothering mud slides down one of the slopes. It oozes through a gap between the mountains, then slowly solidifies as it drops through the Elemental Chaos.

**Salt:** A stream of barely liquid, moisture-sucking salt runs down one of the slopes before dispersing into the Elemental Chaos.

**Time-Displaced Barrow:** The barrow is visible, but it is displaced in time from the rest of the area, existing just seconds behind the present. This displacement prevents visitors from meddling with the barrow. A creature can gain access only by retrieving and using a special key, which is in the hands of a primordial colossus standing in the lava river.

## Area 1: The Slopes

Rivers of lava, salt, and mud flow down the slopes into a vale whose bottom opens to the limitless Elemental Chaos. From there, the streams plummet downward until they are lost to sight. Characters who approach the slopes or the barrow must first defeat guardians that respond to the presence of intruders.

**Tactical Encounter:** "The Slopes," page 102.

## Area 2: The Barrow

The barrow, including platform and pillars, is slightly out of temporal synch with the rest of the area. The primordial colossus on the slopes holds the key that would bring the barrow back into alignment. Only defeating the primordial colossus allows access.

**Tactical Encounter:** "The Barrow," page 104.

# ENCOUNTER: THE SLOPES

**Encounter Level 26 (47,500 XP)**

## Setup

**1 primordial colossus** (P)
**1 retriever** (R)
**6 Tziphal xorns** (X)

The servants of Tziphal protect his tomb from creatures he does not favor. Using the key it keeps gripped in its left hand, the colossus can bring the barrow back into temporal harmony with the surrounding area. Tholundru has ordered the colossus to grant entry only to him and other followers of Tziphal.

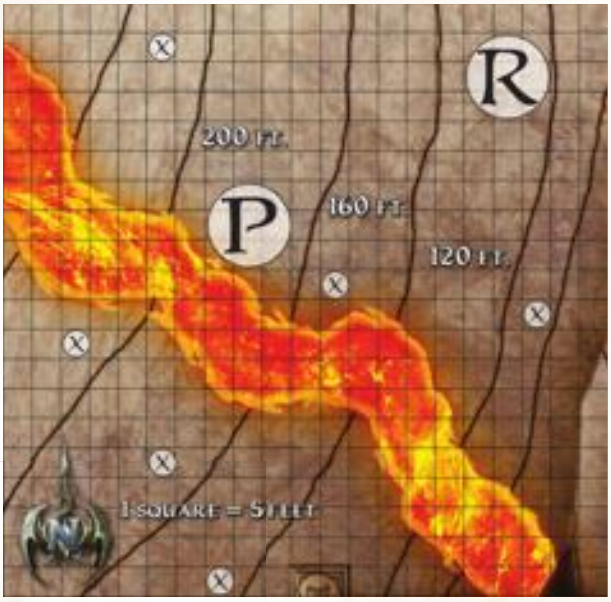
If the characters try to climb the pillars or land on or otherwise interact with the barrow and its platform before activating the key, they simply pass through as if the object were not there.

**When the PCs draw near enough to the slopes to make out details, read:**
*An enormous humanoid form stands next to the lava that flows down one of the trio of earthmotes.*

Do not place the retriever until the characters notice it. The xorns do not appear until they burrow up from below and attack.

**Arcana Check**
**DC 31** *The form near the lava is a construct with an aura of elemental power. The lava does not appear to harm it.*

**Perception Check**
**DC 31** *A huge creature like a metallic spider lurks amid tumbled rocks near the lava river. Its gemlike eyes blaze with elemental power.*



The monsters attack as soon as the characters draw close to them or attack them.

## Tactics

The monsters do what they can to hurl the characters into the lava. The retriever opens with its *eye rays* and then uses *retrieve* to carry enemies to the lava and drop them in. The Tziphal xorns rely on *erupt* to push foes headfirst into the stream.

## Features of the Area

**Illumination:** Glowing lava and daylight brightly illuminate the area.

**Slopes:** The slopes are difficult terrain for creatures moving up them. A creature knocked prone on a slope slides 1d4 squares on the scree. Forced movement down the slope increases by 2 squares.

**Lava River:** A creature that starts its turn adjacent to lava takes 1d10 fire damage. One that enters lava or starts its turn in it takes 5d10 fire damage. The

| **Primordial Colossus (P)** | **Level 28 Elite Brute** |
|---|---|
| Huge elemental animate (construct) | XP 26,000 |
| **Initiative** +21 **Senses** Perception +22 | |

| **Colossal Slam** (standard; at-will) ✦ **Acid, Cold, Fire, Lightning, Thunder**<br>Close blast 3; +29 vs. AC; 3d10 + 14 damage, and the primordial colossus can make a secondary attack. *Secondary Attack:* Close blast 3; +28 vs. Fortitude; 3d8 acid, cold, fire, lightning, and thunder damage, and the target is knocked prone. | |
| **Reactive Kick** (immediate reaction, when an enemy moves adjacent to the primordial colossus; recharges when first bloodied) ✦ **Acid, Cold, Fire, Lightning, Thunder**<br>Targets the triggering creature; +30 vs. Fortitude; 3d8 + 7 acid, cold, fire, lightning, and thunder damage, and the target is pushed 4 squares and knocked prone. | |
| **Primordial Stone** (standard; at-will) ✦ **Acid, Cold, Fire, Lightning, Thunder**<br>Ranged 20; +29 vs. Reflex; 3d6 + 14 damage, and the primordial colossus can make a secondary attack that is a burst 5 centered on the target. *Secondary Attack:* +28 vs. Fortitude; 3d8 acid, cold, fire, lightning, and thunder damage, and the secondary target is knocked prone. | |
| **Alignment** Unaligned | **Languages** – |
| **Str** 38 (+28) | **Dex** 25 (+21) **Wis** 27 (+22) |
| **Con** 30 (+24) | **Int** 3 (+10) **Cha** 15 (+16) |

current slides creatures 3 squares toward the opening at the bottom of the vale. Lava rivers are 20 feet deep and require a DC 24 Athletics check to swim.

A creature that falls in the river and is swept to its end is engulfed by a swirling cataract of lava before dropping through the gap. In addition to the damage from immersion in the lava, the creature takes 5d10 damage from the violent churning as the river spills into the Elemental Chaos. A mile below the earthmote stretches a rocky badlands; any creature that cannot fly or otherwise stop its fall is in grave danger.

## Conclusion

Defeating the colossus causes it to release the key, made of polished black obsidian.

**When the PCs defeat the colossus, read:**
*The colossus shudders and cracks apart, its chunks falling in a heap. Its clenched left hand breaks apart, and from the shattered grip drops a massive obsidian object shaped like a skeleton key.*

To gain access to the barrow, the characters need to retrieve the key. If the key fell into the lava, a character might have to scoop it out, use the *mage hand* power to grab it, or find some other means of obtaining the key.

Once the key is retrieved, a character must make a DC 30 Arcana check to activate it. Doing so causes the barrow to snap back into temporal alignment.

**When the barrow returns to normal time, read:**
*A crack splits the air. The platform's shimmering ceases, and it becomes more solid-looking.*

The characters can now climb up the columns supporting the platform, fly to its top, or try to jump onto it from the slopes.

### Mud and Salt

Though not shown on the tactical map, the fight could potentially move to one or both of the other slopes, including the elemental rivers flowing down them.

**River of Mud:** Moving through the thick mud is difficult and exhausting. Swimming requires a DC 28 Athletics check, and the DC of Endurance checks to avoid drowning increases by 4. The viscous flow is difficult terrain for swimmers. A creature that is immersed in mud and then leaves the river is slowed by the sludge (save ends). The mud has a downslope current of 3 squares.

**River of Salt:** The semiliquid salt forms a dense slurry that is almost impossible to swim in, requiring a DC 32 Athletics check. It is difficult terrain for swimmers, and the DC for Endurance checks to avoid drowning increases by 6. The salt leaches moisture from flesh, blinding any creature immersed in it; the creature remains blinded until the end of its next turn after leaving the river. The river has a downslope current of 2 squares.

**Retriever (R)** **Level 27 Soldier**
Huge elemental animate XP 11,000

**Initiative** +24 **Senses** Perception +20; darkvision, truesight 10
**HP** 248; **Bloodied** 124
**AC** 43; **Fortitude** 39, **Reflex** 40, **Will** 38
**Immune** charm, fear; **Resist** 5 to all damage
**Speed** 8

⨺ **Claws** (standard; at-will)
Reach 3; +34 vs. AC; 2d8 + 8 damage.

⨺ **Retrieve** (standard; usable only while the retriever does not have a creature grabbed; at-will)
Reach 3; +30 vs. Fortitude; 2d8 + 8 damage, and the target is grabbed. The retriever can move a creature it has grabbed without making a Strength attack.

✧ **Eye Rays** (standard; one ray recharges each round—roll a d4 to determine which) ✦ **Acid, Cold, Fire, Thunder**
The retriever fires all the rays as a single standard action, but each must target a different creature: ranged 10; +32 vs. Reflex.
**1—Acid Ray:** 2d10 + 9 acid damage, and the target is blinded (save ends).
**2—Cold Ray:** 2d10 + 9 cold damage, and the target is immobilized (save ends).
**3—Fire Ray:** 2d10 + 9 fire damage, and ongoing 15 fire damage (save ends).
**4—Thunder Ray:** 2d10 + 9 thunder damage, and the target is stunned (save ends).

**Self-Repair** (standard; recharges when first bloodied) ✦ **Healing**
The retriever regains 20 hit points and gains a +4 bonus to AC until the start of its next turn.

**Unerring Accuracy** (standard; daily) ✦ **Teleportation**
The retriever senses the general location of the target or nearest creature of the type it was commanded to locate. The retriever teleports to a space that is within 10 squares of the target. The target need not be on the same plane as the retriever when it uses this power.

**Alignment** Unaligned **Languages** –
**Str** 26 (+21) **Dex** 29 (+22) **Wis** 25 (+20)
**Con** 24 (+20) **Int** 2 (+9) **Cha** 10 (+13)

**6 Tziphal Xorns (X)** **Level 25 Minion Skirmisher**
Medium elemental magical beast (earth) XP 1,750 each

**Initiative** +21 **Senses** Perception +20; all-around vision, darkvision
**HP** 1; a missed attack never damages a minion.
**AC** 38; **Fortitude** 38, **Reflex** 36, **Will** 37
**Immune** fire, poison
**Speed** 5, burrow 5; see also *earth glide*

⨺ **Triple Claw** (standard; at-will)
One, two, or three targets; +29 vs. AC; 9 damage.

⨽ **Erupt** (standard; encounter)
The Tziphal xorn burrows its speed and attacks a nonflying enemy whose space it passes under: +28 vs. Fortitude; 15 damage, and the target is pushed 4 squares and knocked prone.

**Earth Glide**
A Tziphal xorn can burrow through lava and stone as if it were loose earth.

**Retreat** (immediate reaction, when missed by a melee attack; at-will)
The Tziphal xorn burrows its speed.

**Alignment** Chaotic evil **Languages** Common, Primordial
**Str** 27 (+20) **Dex** 24 (+19) **Wis** 26 (+20)
**Con** 28 (+21) **Int** 10 (+12) **Cha** 15 (+14)

# ENCOUNTER: THE BARROW

**Encounter Level 27 (62,000 XP)**

## Setup

**1 quake gorgon** (G)
**3 serpent-twined statues** (S)
**Tholundru, stone giant** (T)

After the characters activate the obsidian key and make their way to the top of the platform, they must deal with the barrow's guardians, including Tholundru himself.

Only death can turn Tholundru from his plan to revive Tziphal, so the characters must battle him or retreat.

**When the PCs reach the top of the platform, read:**

*Rough steps rise to a wide dais flanked by four statues of humanoid beings entwined with serpents. In the center of the dais lies a cairn of glittering boulders sealed with black, glossy mortar. A large bull-shaped creature of shifting stone stands atop the pile.*

*A malformed giant with stone-hued skin rises from its knees beside the dais and glares at you. Runes cover his body and his shining war pick.*

Three of the four serpent-twined statues are traps, which Tholundru triggers when combat begins.

**Quake Gorgon (G)** **Level 26 Soldier**
Large elemental beast (earth) XP 9,000

**Initiative** +21 **Senses** Perception +19; truesight 6
**Temblor** aura 3; at the start of the quake gorgon's turn, each enemy within the aura is pulled 3 squares. Any enemy without earth walk treats the area as difficult terrain.
**HP** 245; **Bloodied** 122
**AC** 42; **Fortitude** 40, **Reflex** 36, **Will** 38
**Immune** knocked prone, petrification, forced movement
**Speed** 6 (earth walk), climb 6

⊕ **Gore** (standard; at-will)
+33 vs. AC; 3d6 + 10 damage, and the target slides 3 squares and is knocked prone.

⊕ **Grounding Glare** (standard; at-will)
Ranged 20; +31 vs. Fortitude; 2d8 + 9 damage, and the target is pulled 4 squares and knocked prone.

**Trample** (standard; at-will)
The quake gorgon moves its speed and can enter enemies' spaces. The quake gorgon makes an attack against each enemy whose space it enters: +31 vs. Reflex; 1d10 + 10 damage, and the target is knocked prone.

**Eruption Breath** (standard; recharge ⚄ ⚅) ✦ **Fire, Poison**
Close blast 5; +31 vs. Fortitude; 2d8 + 8 fire damage plus 2d8 + 8 poison damage, and the target is slowed (save ends).

**Alignment** Unaligned **Languages** –
**Str** 30 (+23) **Dex** 23 (+19) **Wis** 26 (+21)
**Con** 29 (+22) **Int** 2 (+9) **Cha** 8 (+12)

**3 Serpent-Twined Statues (S)** **Level 26 Blaster**
Trap XP 9,000 each

*The serpents carved into these mountainlike sculptures flex and turn, glaring with glowing eyes.*

**Trap:** Enchanted serpent carvings petrify those who trigger them.

**Perception**
✦ DC 27: The character notices runes hidden in the carvings' contours.

**Additional Skill: Arcana**
✦ DC 29: The character determines that the runes anchor each statue's magic. Destroying or discharging the runes should disable the statue.

**Initiative** +21

**Trigger**
When combat starts on the platform, Tholundru activates the trap, which rolls initiative.

**Attack**
**Standard Action** **Ranged** 5
**Target:** One creature
**Attack:** +29 vs. Fortitude (does not provoke opportunity attacks)
**Hit:** 3d8 + 5 damage, and the target is immobilized (save ends). *First Failed Saving Throw:* The target is restrained (save ends). *Second Failed Saving Throw:* The target is petrified (no save). Creatures that are immune to petrification are unaffected by this attack.
**Miss:** Half damage, and the target is slowed until the end of the trap's next turn.

**Countermeasures**
✦ A character who makes a DC 28 Arcana or DC 32 Thievery check from an adjacent square as a standard action discharges some of the trap's runes. The trap takes a cumulative -2 penalty to its initiative count and makes an attack roll each time such a check succeeds. On the third successful check, the trap is disabled.
✦ A character can attack the trap to mar the runes (AC/Reflex 2; Fortitude 38; hp 150), but doing so grants the trap a +2 bonus to its next attack roll against the attacker. The attacker feels the energy of the trap flow toward him or her. Reducing the runes to 0 hit points disables the trap but does not destroy it.

**Shardstorm Vortex Whirlwind** **Level 23 Minion Skirmisher**
Medium elemental magical beast (air, earth) XP –

**Initiative** +21 **Senses** Perception +17
**Sandblast** aura 1; each enemy within the aura takes a -2 penalty to all defenses.
**HP** 1; a missed attack never damages a minion.
**AC** 37; **Fortitude** 35, **Reflex** 36, **Will** 34
**Immune** disease, poison
**Speed** 0, fly 8 (hover)

⊕ **Abrasive Slam** (standard; at-will)
+26 vs. Fortitude; 15 damage.

**Vortex Step** (move; at-will)
The shardstorm vortex whirlwind shifts 4 squares.

**Alignment** Unaligned **Languages** Primordial
**Str** 12 (+12) **Dex** 27 (+19) **Wis** 22 (+17)
**Con** 24 (+18) **Int** 5 (+8) **Cha** 6 (+9)

| **Tholundru (T)** | **Level 28 Elite Controller (Leader)** |
|---|---|
| Large elemental humanoid (earth, giant) | XP 26,000 |

**Initiative** +17 **Senses** Perception +23; low-light vision

**Hardened Focus** aura 5; each of Tholundru's allies gains a +4 bonus to damage rolls against immobilized enemies within the aura. Each petrified enemy within the aura loses all resistances and gains vulnerable 5 to all damage.

**HP** 514; **Bloodied** 257

**AC** 42; **Fortitude** 41, **Reflex** 36, **Will** 41

**Immune** petrification

**Saving Throws** +2

**Speed** 8 (earth walk)

**Action Points** 1

⊕ **Enruned War Pick** (standard; at-will) ✦ **Weapon**
Reach 2; +33 vs. AC; 2d10 + 11 damage (crit 3d10 + 22), and the target is slowed (save ends).

⸸ **Double Attack** (standard; at-will)
Tholundru makes two *enruned war pick* attacks.

✲ **Rune of Stony Sleep** (standard; recharge ⚄ ⚅) ✦ **Zone**
Area burst 1 within 10; +31 vs. Fortitude; 3d8 + 7 damage, and the target is slowed (save ends). *First Failed Saving Throw:* The target is petrified (save ends). *Effect:* The burst creates a zone of magical runes that lasts until the end of the encounter. Each enemy that starts its turn within the zone takes a –2 penalty to saving throws against immobilizing or slowing effects.

✲ **Rune of Thundering Echo** (standard; recharge ⚃ ⚄ ⚅) ✦ **Thunder**
Area burst 1 within 20; +31 vs. Fortitude; 3d8 + 9 thunder damage. A slowed or immobilized target also takes ongoing 10 thunder damage (save ends).

**Grasping Stone**
When Tholundru hits a slowed creature with an attack that would cause the creature to become slowed, that creature is instead immobilized (save ends).

**Stone Bones** (immediate interrupt, when Tholundru is hit by an attack; not usable while bloodied; at-will)
Tholundru gains resist 5 to all damage against the triggering attack.

**Stone from Air** (minor; recharges when first bloodied)
Tholundru calls four shardstorm vortex whirlwinds to his aid. Each appears in an unoccupied square within 15 squares of Tholundru and acts immediately after Tholundru's initiative count. The shardstorm vortex whirlwinds remain until killed, until dismissed by Tholundru as a free action, or until the end of the encounter. Characters do not gain experience points for killing the shardstorm vortex whirlwinds.

**Alignment** Evil **Languages** Common, Giant, Primordial

**Skills** Arcana +25, Athletics +27, Stealth +22

| | | |
|---|---|---|
| **Str** 27 (+22) | **Dex** 17 (+17) | **Wis** 28 (+23) |
| **Con** 25 (+21) | **Int** 23 (+20) | **Cha** 20 (+19) |

**Equipment** enruned war pick

## Tactics

The quake gorgon uses its *temblor* aura to keep the characters away from Tholundru and gores them while the stone giant uses area and ranged powers. It conserves *eruption breath* for bunched enemies and uses *grounding glare* to pull flying creatures into its reach.

Tholundru uses *stone from air* to place shardstorm vortex whirlwinds between himself and the characters, spacing the whirlwinds to foil area or close attacks. Then he hurls *rune of stony sleep* at the party and spends an action point to follow up with *rune of thundering echo*. While those powers recharge, Tholundru swings his *enruned war pick*. He focuses attacks on slowed characters to immobilize them, allowing his allies to take advantage of the attack bonus conferred by his aura.

Neither Tholundru nor the gorgon is affected by the statues' petrification, so they might try to maneuver enemies into range of the traps.

## Features of the Area

**Illumination:** Glowing lava and daylight brightly illuminate the area.

**Cairn:** The pile of stones slopes up from the center of the dais to 15 feet at its apex. It is difficult terrain. Any creature on the cairn takes a –2 penalty to saving throws against fire and petrification effects.

**Columns:** Each smooth, carved support column is between 30 and 100 feet tall, depending on its position on the slopes. Its polished surface requires a DC 25 Athletics check to climb.

**Platform Edges:** A creature falling from the platform plummets 30 to 100 feet to the slopes or into lava, mud, or salt (see the previous encounter).

**Steps:** Shallow steps lead up from the edge of the platform.

**Serpent-Twined Statues:** Three of the four Medium statues house traps, as described above. The fourth is an ordinary stone statue (AC5; Reflex 5, Fortitude 10; hp 50). All statues are blocking terrain.

## Conclusion

The characters find the reagents Tholundru has gathered for his ritual. Depending on your campaign plans, they might also discover prisoners Tholundru intended to sacrifice. You could expand the adventure by adding a group of cultists who arrive too late to aid in the ritual. You might also devise a way for the heroes to lay Tziphal to rest for good, leading to further quests and a return to the Barrow of the Mountain Builder.

CHAPTER 4

# Into the Abyss

JASON A. ENGLE

**The dreaded** Abyss is a wound in reality, a diseased abscess in the Elemental Chaos synonymous with horror. Adventurers are sorely tested in the Abyss, braving its depths only after their other options are exhausted. Few willingly enter, fewer return, and still fewer emerge unbroken.

More than a place, the Abyss is a presence—a death urge that would consume all existence if it were left unchecked. It is entropy unleashed, hunger eternal, hatred and rage unquenchable. The Abyss is not merely the source of great evils, it is evil without end.

The Abyss is both a part of the Elemental Chaos and a separate plane. It festers in the lower reaches of the Plane Below, a maw capable of swallowing entire worlds. It is bounded horizontally, confined to an ever-narrowing, swirling pit of entropy and chaos, but if the Abyss has a bottom, no one has reached it and returned.

The layers of the plane might be infinite. Each known one is a realm that has its own inhabitants, its own terrain, and its own nature. This chapter presents an overview of the pit, divided into the following topics.

- **The Deepest Depths:** How the Abyss and some of its layers function, and what traits they display, plus a discussion of means for traveling to and about the plane.
- **Abyssal Campaign Arcs:** A pair of suggestions for involving paragon and epic characters in the workings and the treachery of the Abyss.
- **Abyssal Adventures:** Sample adventure hooks and quests involving demons and the plane that spawns them.
- **Skill Challenges in the Abyss:** Four skill challenges that could occur nowhere else.
- **Abyssal Locations:** A few prominent fiendish sites with suggested encounter groups and environmental features.

# THE DEEPEST DEPTHS

The Abyss is a hole in reality at the bottom of the Elemental Chaos, a whirlpool of matter and energy and chaos. Its outermost edges stretch far enough to beggar the imagination.

The islands and oceans and storms of the Elemental Chaos beyond the pit's rim seem unaffected by its swirling forces. Still, a gradual spiral pattern to their movements can be discerned over the course of eons. Deeper within the Plane Below, the pattern becomes more obvious. The drifting masses, the flow of rivers, the paths of storms, even the invisible currents of chaos no longer churn at random. Instead, they commence a slow but inexorable spin, gathering in a circling maelstrom toward a dark, massive core. Objects at the pit's edge take years or even decades to complete their revolution, but as they are drawn ever inward, the spiral tightens. In time, they pour into the yawning cavity of the Abyss.

Such entry to the pit might be inevitable, but it is not quick. Traveling beyond the Abyss's outermost influence and down into its mouth could take decades or centuries, so vast is the distance crossed. One vessel known as the *Worldship*, an enormous *spelljammer* of stone, has been attempting the journey for several generations. It is crewed by hundreds and inhabited by troops of dwarves and genasi, a smattering of tieflings, and one deva who reincarnates onto the ship again and again.

## Infinite Layers

As befits a chasm of entropy, the Abyss is not a single location but a vast and brutal void that contains an uncounted number of layers. Numerologists, scholars, and ecclesiasts claim that they number six hundred sixty-six, but no one has attempted to confirm this fact. Some strata are visible from the center of the spinning maelstrom—assuming a witness could survive the plunge. Others remain hidden in the churning blackness.

As an elemental realm, the Abyss has most of the same traits as the Elemental Chaos, but no set of planar laws holds sway over its regions in general. Each of its layers has distinct planar features, and some particularly horrid ones vary far beyond what a normal imagination can conceive.

The Elemental Chaos is predominantly a mix of the natural world's substances in their rawest form. In contrast, several twisted layers of the Abyss are formed of organic materials: flesh and blood, plant and bone. Although these environments seethe with malign will, they do not truly live.

### Nature and Size

How can something be said to exist at the bottom of an infinite plane, or be a hole in reality? Perhaps the description is metaphorical. Still, if one travels far enough downward from any spot in the Elemental Chaos's known regions, the Abyss yawns below.

The plane is definitely limited in certain respects. It has a clear upper boundary that, although huge, is theoretically measurable. A traveler can move beyond the Abyss into the rest of the Elemental Chaos. Yet the plane also seems to extend infinitely downward, a maelstrom spinning tighter and tighter, darker and darker, without a physical endpoint. Legends claim that it spirals downward to a final heart of evil, but none can prove that assertion.

Individual realms within the Abyss are the size of worlds, but they are still bounded, with obvious edges that can be reached. Most levels are internally consistent, but some contain multiple realms, each with its own boundaries and physical laws. In a few instances, a single territory encompasses multiple layers. A few layers are spherical or bent mystically back onto themselves—a traveler who voyages far enough into one of these recursive realms eventually returns to the starting point.

### Gravity's Well

The Abyss has the same elemental buoyancy as the Elemental Chaos. A living being or a foreign vessel unfortunate enough to fall in continues to plummet to the black depths. The various masses of earth, water, acid, flesh, and stranger substances that make up the Abyss hover unaffected by gravity, drawn downward only by the slow spiraling of entropic energy.

An individual layer, however, could feature any of the known types of planar gravity, whether intrinsically or at the behest of a demon lord or some other master. Locations of normal and subjective gravity (*Manual of the Planes,* page 10) can both be found, as can even stranger places where the direction of gravity changes at the whim of powerful beings, or where objects of great mass exert a pull on any smaller forms that wander near.

### Abyssal Mutability

The various substances that swirl around in the Abyss are as easily manipulated as is the stuff of the Elemental Chaos. Again, the individual layers have their own properties; many either are unstable or have normal mutability. Other layers are even stranger, mutating on their own or in response to the casual whims of passersby. Some demon lords and other powers are able to influence their surroundings, giving their layers the equivalent of divine mutability

(*Manual of the Planes,* page 10), though few deities dwell in the Abyss—Lolth might be the only one.

## Traveling the Abyss

The Abyss is even more difficult to navigate than the rest of the Elemental Chaos is. That said, certain layers are easily traveled, though far from safe. The surfaces of these places might take the form of pliable flesh, rivers of blood, or nets of webbing, but they are relatively stable and can support walking, sailing, or climbing. Other strata provide no safe footing and no easily traversed paths and thus require more unusual forms of locomotion. The same extraordinary means sometimes used to traverse the Elemental Chaos are also necessary to negotiate these places.

Another concern is moving between layers. In a few rare cases, a traveler can physically pass from layer to layer without magic. It's possible, if inadvisable, to swim from the briny shores of Demogorgon's lair, Abysm, to the undersea domain of ancient Dagon. Crossing between most layers generally requires more exotic methods, however.

### Direct Descent

A foolhardy adventurer might try to explore the Abyss the hard way, using magic or planar vessels to fly deep into the maelstrom and stopping at various layers within the pit as they appear. Although technically possible, such an approach is unwise. All the bizarre weather and deadly hazards of the Elemental Chaos manifest here, often charged with necrotic emanations rather than more traditional elements. Adding to the danger is the malevolent will of the Abyss. Winds and storms deliberately move into the path of travelers. The dark clouds can also be caustic or poisonous, blinding travelers who swiftly become lost in their howling depths.

Layers revolve around the perimeter of the pit at varying speeds and heights. Locating a particular destination one time provides no guarantee that the feat can be repeated. Some travelers vanish into enveloping banks of darkness and are transported to random layers of the Abyss, thousands of miles from where they began. Many are never heard from again.

The greatest dangers of a direct descent into the Abyss are the horrible creatures that dwell within the turbulent chaos between realms. Flying demons, such as vrocks, hunt the skies near the boundaries between layers to avoid competing with their landbound counterparts. Farther into the maelstrom, in the darkness between strata, roam horrific, primal creatures of indescribable evil.

### Demongates

A demongate is a permanent portal between the natural world and the Abyss—usually, but not always, leading to Pazunia, the Plain of a Thousand Portals (see *Manual of the Planes,* page 78). Although such gates are reliable ways of getting to the Abyss, none bridges from one layer of the Abyss to another.

On rare occasions, a demongate allows access to the Abyss from a plane other than the world. They have appeared in the Feywild, the Shadowfell, and elsewhere in the Elemental Chaos.

Demongates are discussed in more detail on page 65 of *Manual of the Planes.* See also the "Destroying a Demongate" skill challenge on page 115 of this book.

### Portals

Portals are the common means of traveling from layer to layer in the Abyss. A number of portals are permanent and well known, including the links between the three layers of Azzagrat, the doorways scattered across the Plain of a Thousand Portals, and the infamous Demonweb. Most of the permanent portals to the Abyss are two-way. For the most part, though, Abyssal portals are intermittent, and as many of them are one-way as not.

Only a few such links are transparent; most are misty, opaque, or solid, making it impossible to tell what danger waits on the other side. A few project illusions, making their destinations appear safe when they're not. Ancient maps and lists claim to show the locations of safe—or at least predictable—Abyssal portals. These documents can rarely be trusted: A number of once-reliable portals are no longer so, and many maps filled with so-called secrets of the Abyss are circulated by demons to trap the gullible. A very few sources are accurate, however, allowing reliable and relatively safe travel between layers.

### Planar Vessels and Teleportation

Given the dangers of the Abyss and the unpredictability of many portals, ritual teleportation and plane-shifting vessels are the safest ways to reach a given layer. Some locales, such as the city of Zelatar in Azzagrat (*Manual of the Planes,* page 80), contain several known teleportation circles and ports for *spelljammers.* Other layers deliberately interfere with teleportation and planar vessels, another sign of a malign sentience within the plane. Vessels and explorers teleporting to these layers often arrive wildly off target, appearing within the desired layer but in a region of terrible danger far from the intended destination.

# ABYSSAL CAMPAIGN ARCS

The Abyss can be the basis for any number of story arcs, whether straightforward or convoluted. Although demonic nature tends toward blind destruction rather than subversive schemes, a few demons do exhibit some forethought. The demon princes are obvious examples, working to overthrow each other and conquer the Abyss. More devious types, such as cultists, often involve fiendish forces in their plans. The characters can become embroiled in these nefarious plots as they unfold.

The following two example campaign arcs are suited to characters at the paragon and epic tiers. (Those at the heroic tier are usually not powerful enough to survive the Abyss's challenges.) As usual, they can serve as inspiration for your own stories.

## Paragon Tier: The Best-Laid Plans

In this campaign arc, the adventurers get involved in a battle—some might call it a mere skirmish—between Orcus and Graz'zt. They must travel to the Abyss several times before the conclusion of the story.

The campaign begins in a worldly city, where local authorities ask the characters to investigate an abnormally powerful gang war. Although two rival groups of thugs duking it out in the bad part of town is a common occurrence, these clashes leave smashed buildings and smoking craters in their wake. Also, a number of innocent passersby have been slain. The authorities were finally moved to act when the prominent noblewoman Erra Deveera became a victim.

The characters' investigations are stymied initially, but then a mysterious informant approaches them. This shadowy figure claims that the battles were instigated by a secret group of protectors, called Aranor's Shield, who are struggling against the machinations of a cult of Orcus. The story is true—what is told of it. Unless the characters somehow discover the informant's deception, they move on to battle the cult of Orcus in its tunnels under the city's mausoleum. The heroes clash with undead, demons, mortal cultists, and the cult's leader, a mummy lord. While they are so engaged, the sect's true enemy, a cult of Graz'zt, is free to take over the city. The characters' informant is actually a member of the cult who used them as tools to weaken the opposition.

Once the Graz'zt cultists have no further use for their pawns, they move to eliminate the characters. The party strikes back and ultimately takes the fight to the cult in its fortress, an abandoned university. The characters' opponents include humanoid cultists, demons, and allied elemental or abyssal beasts. During the course of their investigations, the heroes also discover that Erra Deveera, the murdered noblewoman, was a member of the cult.

Ultimately the characters triumph over the cult's leaders, a ruling triumvirate of six-fingered slayers and dark acolytes of Graz'zt (*Manual of the Planes*, page 133). But even as they do so, they learn that the cult is still one step ahead of them. When they emerge from the university stronghold, the characters are arrested by order of the duke. In truth, that noble has been replaced by the cult's shapechanging leader, a chosen of Graz'zt (*Manual of the Planes*, page 132) named Malikith.

The false duke makes it easy for the characters to escape their prison, expecting them to come after him in his palace. When they do, he tricks them into walking through a one-way portal to the Abyss.

The characters emerge on the Plain of a Thousand Portals with no easy means of escape. Demons and other servitors of demon lords challenge them, as do the Abyss's environmental hazards. The party meets up with a band of secretive merchants who offer transport in their *spelljammer* in exchange for protecting their camp. The ship is to depart in three days. Yet again, the deal is not as good as it seems. The supposed merchants are devil-worshiping cultists accompanying several disguised succubi. They are spying on the demons for their infernal masters, and they plan to kill the characters as soon as the letter of their agreement has been met. They attack after their *spelljammer* leaves Pazunia.

The characters, having overcome their attackers, might have a few unrelated adventures in the Elemental Chaos as they navigate their way back home. They are likely to hold a grudge against the cult of Graz'zt. Even if they don't, once they return to the world they learn that the cult's influence is spreading. A true city-state of Graz'zt's design is taking shape.

The party is approached by a concerned paladin. For once, this stranger is just what he appears to be. He has discovered that his sister is a long-time member of the cult, and he believes that she knows much about its movements and inner workings. He asks the characters to capture her in hopes of redeeming her and in order to learn what they can about the cult.

The paladin's sister can be sequestered in whatever sort of dungeon you like. When the characters finally pry the information out of her, possibly involving magical coercion, she reveals an unfortunate truth. Graz'zt, pleased with the cult's success, granted it an artifact called the *Dream of Dominion*. This crown enables its wearer to dominate creatures at will. One way to counter it is with a collection of different artifacts, the *Helms of the Indomitable*. An Orcus-worshiping archwizard created these artifacts centuries ago, and they are now kept in Orcus's realm, Thanatos.

The final adventures of the arc return the heroes to the Abyss, this time to Thanatos, where they must acquire the *Helms* using stealth and deception. Finally, the characters return to the world and fight their way to Malikith's headquarters. Although they defeat the cult and send its plans crashing down, Graz'zt or one of his disciples will surely remember this slight.

## Epic Tier: The Conquering Demon

A powerful cult of Baphomet (*Manual of the Planes*, page 118) has conquered one of the Elemental Chaos's few genasi trading cities. The populace is dead or fled—both the minotaur cultists and Baphomet are bloodthirsty ravagers. One of the refugee genasi approaches the characters and asks them to free the city.

The minotaurs are strong but not overly bright. A party that employs finesse can overcome them with relative ease. While liberating the city, the characters encounter at least one living genasi, a former council member named Jett. He accompanies the characters as they free the city, watches them defeat the minotaur leader, and willingly offers whatever aid and information he can.

Jett is actually a covert priest of Dagon (*Monster Manual 2*, page 45) who hopes to expand the demon's influence to other cities, using swifter methods than those employed to take Gloamnull (page 74). He had manipulated the Baphomet cultists into openly attacking the city so he could sweep in, with the aid of a few dark allies, and "rescue" it. His plans stymied for now, he cozies up to the heroes to gather more information about them.

While the characters undertake other adventures, Jett contemplates what to do about his recently overturned plans. In the end, he forsakes subtlety and reconquers the city with a force of demons supplied by Dagon's ally, Demogorgon (*Monster Manual 2*, page 42). The characters uncover Jett's ruse and return to free the place again. They also learn that he hopes to use the genasi city as a beachhead for fiendish forces to conquer other important locations in the Elemental Chaos. The ultimate goal is to build an army of slaves, march into the Abyss, and conquer the rivals of Dagon and Demogorgon.

By defeating Jett, the characters have personally angered the Prince of Demons. Demogorgon launches a series of fiendish attacks against them, culminating in a strike by his exarch Thrarak (*Monster Manual 2*, page 47). The steadily escalating attacks, punctuated with a pointed declaration by one of Demogorgon's servants, send a clear signal that the two-headed fiend has no intention of letting the matter drop. For the characters to survive, the Prince of Demons must die.

Such an effort requires stout warrior allies who are willing—and able—to take on a demon lord. Convincing others to join the mission is easier than the heroes might imagine: Rulers, gods, and rival demon lords all seek the defeat of Demogorgon. While gathering companions, the characters must survive continuing assaults by ever more powerful soldiers of the Prince of Demons. The attacks culminate when the exarch Kazuul (*Monster Manual 2*, page 46) and an army of demons invade the natural world to lay waste to everything the characters hold dear.

Eventually the characters confront or outmaneuver Jett and learn of Dagon's influence. They might decide that removing the Lord of Depths would help their cause immeasurably. The climax of the campaign is a showdown: the characters and their allies on one side, and one or both demon lords and their forces on the other. If the heroes can't kill one or both of the demon princes, they can still claim a major victory by substantially weakening them.

### Low Level, High Danger

The sample campaign arcs presented here involve the paragon and epic tiers. Characters at the heroic tier simply aren't tough enough to survive extended forays into the Abyss or the prolonged attentions of its inhabitants. Nevertheless, you can still introduce abyssal influences into heroic tier adventures or campaigns.

The simplest means of doing so is to pit the characters against the cultists of a demon lord. Since foolish or mad individuals of all levels might turn to worship of such vile beings, you can design these opponents to suitably challenge the party's abilities. Such organizations also allow you to foreshadow the appearance of more powerful abyssal entities in the campaign at higher levels.

Perhaps your heroic tier characters are already in the Elemental Chaos when a demonic force launches an attack. They might be inhabitants of or visitors to a major community of the Plane Below, such as a githzerai monastery or a genasi or efreet trading post. The characters aren't yet powerful enough to stand on the front line against the demon hordes, but they can still contribute to the battle in important ways. For example, they can protect and evacuate some of the population, fight lone demonic scouts that penetrate the settlement, or patrol the streets against looters or other scum that would take advantage of the turmoil. This activity in turn brings the party to the attention of more influential patrons—and more dangerous enemies.

The influence of the Abyss occasionally bleeds into the world for a short time through a planar breach. If the characters aren't tough enough to handle a sojourn in the Abyss, you can bring the Abyss to them. A small region that has been corrupted and twisted into a reflection of the darkest pits makes an interesting and terrifying glimpse of the campaign's future.

The following hooks and plot seeds might inspire a variety of Abyss-themed adventures. They follow the same format as those presented in the "Adventures" section of chapter 1.

## 11: Closing the Portal

Opening and closing portals to unpleasant places is a standard fantasy trope. This adventure puts a slight spin on that theme by requiring a portal to be closed only from its dangerous side.

Someone or something—perhaps a demon-worshiping cult, an insane wizard, or an arcane accident—has created a portal to the Abyss from the world. The rift opens into a relatively uninhabited area of the Abyss, and so far only a few minor demons (barlguras, evistros, and mezzodemons) have come forth.

The climax of this quest could be the "Destroying a Demongate" skill challenge presented on page 115. Success, though, might strand the heroes in the Abyss. Now they must get home without falling afoul of the pit's more potent residents.

**Quest Hook:** Demons are wreaking havoc on the local townsfolk. Although they are among the weakest of their kind, the attackers can be stopped only by intrepid heroes. Killing the demons isn't enough; to end the attacks, the characters must find and close the portal through which the demons emerge. First, they have to deal with the portal's guardians. A skill challenge, or perhaps a simple Arcana check, reveals that the passage can be closed only from the other side.

**Quest XP:** If the characters succeed in closing the portal, they earn a major quest reward of 3,000 XP.

## Streets of Demons (Paragon or Epic Tier)

The notorious thief and tomb robber Galek Nightless is wanted, dead or alive, in cities throughout the world—and beyond. His enemies include monarchs, archmages, and high priests.

Several years ago, Galek exhausted his resources in the mundane realm. With no new identities to assume, no safe havens, and a dwindling list of friends, he fled the world. He feels at home both in cities and in places fraught with corruption, so he settled in an ideal place—Zelatar in the Triple Realm of Azzagrat (*Manual of the Planes,* page 79).

Even though Galek was surrounded by the foulest creatures in creation, his enemies eventually caught up with him. To stay alive, the thief was forced to adopt a new identity, drawing on all the tricks and schemes learned throughout his long career.

**Quest Hook:** The characters must find Galek. The simplest motivation is a huge bounty on the master thief's head—enough to make a trip to the Abyss worth the risk. On the other hand, the characters might just need to talk to him. They might want to know what the inscription on an emperor's tomb read before Galek broke it, or learn the whereabouts of an artifact he once stole. To find Galek, the party must journey to Zelatar and survive its dangers, contend with the fugitive's allies or hired muscle, locate his common haunts, and somehow corner him.

### Demons Galore

If you want to populate an adventure with demons, you have plenty of choices. Here's a list of every demon that appears in the *Monster Manual* (*MM*), *Monster Manual 2* (*MM2*), *Manual of the Planes* (*MP*), or *Dungeon Master's Guide 2* (*DMG2*).

| Monster | Level and Role | Source |
|---|---|---|
| Dretch | 2 Brute | *MM2* 54 |
| Runespiral Demon | 5 Artillery | *MM2* 59 |
| Rupture Demon | 5 Minion Soldier | *MM2* 60 |
| Gnaw Demon | 5 Skirmisher | *MM2* 54 |
| Evistro | 6 Brute | *MM* 54 |
| Bloodseep Demon | 7 Skirmisher (L) | *MM2* 53 |
| Canoloth | 7 Soldier | *MP* 120 |
| Barlgura | 8 Brute | *MM* 53 |
| Neldrazu | 8 Lurker | *MM2* 56 |
| Mezzodemon | 11 Soldier | *MM* 58 |
| Arctide Runespiral Demon | 12 Artillery | *MM2* 60 |
| Needle Demon | 12 Controller | *MM2* 56 |
| Shadow Demon | 12 Elite Lurker | *MP* 122 |
| Canoloth Harrier | 13 Minion | *MP* 120 |
| Vrock | 13 Skirmisher | *MM* 58 |
| Abyssal Eviscerator | 14 Brute | *MM2* 51 |
| Bloodcry Barlgura | 14 Brute | *DMG2* 217 |
| Chasme | 14 Skirmisher | *MP* 121 |
| Vrock Swordwing | 14 Skirmisher | *DMG2* 221 |
| Pod Demon | 15 Elite Artillery | *MM2* 58 |
| Solamith | 15 Artillery | *MP* 123 |
| Immolith Deathrager | 15 Brute | *DMG2* 221 |
| Immolith | 15 Controller | *MM* 56 |
| Podspawn | 15 Minion Skirmisher | *MM2* 59 |
| Yochlol Tempter | 17 Controller | *MM2* 61 |
| Bebilith | 18 Solo Brute | *MM2* 52 |
| Goristro | 19 Elite Brute | *MM* 55 |
| Kazrith | 20 Lurker | *MM2* 55 |
| Hezrou | 22 Brute | *MM* 56 |
| Nycademon | 22 Skirmisher | *MM2* 57 |
| Glabrezu | 23 Elite Brute | *MM* 54 |
| Aspect of Orcus | 24 Elite Brute | *MM* 208 |
| Aspect of Graz'zt | 24 Elite Skirmisher | *MP* 131 |
| Marilith | 24 Elite Skirmisher | *MM* 57 |
| Aspect of Demogorgon | 25 Elite Controller | *MM2* 44 |
| Abyssal Rotfiend | 26 Controller | *MM2* 52 |
| Balor | 27 Elite Brute | *MM* 53 |
| Baphomet | 28 Solo Brute | *MP* 118 |
| Kazuul | 28 Elite Soldier | *MM2* 46 |
| Graz'zt | 32 Solo Controller | *MP* 130 |
| Dagon | 32 Solo Soldier | *MM2* 45 |
| Orcus | 33 Solo Brute (L) | *MM* 207 |
| Demogorgon | 34 Solo Controller | *MM2* 42 |

JIM NELSON

**Quest XP:** If the characters manage to find Galek and get what they need, they earn a major quest reward based on their level (*Dungeon Master's Guide,* page 122).

## 21: The Last Witness

Long ago, a cult of Orcus engaged in an elaborate ritual to bring the Lord of Undeath into the world. An eladrin wizard named Felias stopped the cult with a counter-ritual of his own design. Enraged, Orcus directed his followers to track down Felias, capture him, and drag him to Oblivion's End. Felias finally succumbed after many years of lengthy torment. Nothing stays dead in Thanatos, though. Felias returned as a tormenting ghost (*Monster Manual,* page 117), driven mad by the tortures visited upon him.

**Quest Hook:** A new sect of Orcus worshipers has rediscovered the old cult's ritual and is again attempting to call the demon lord to the world. The only known way to stop the ritual is Felias's counter-ritual, but Orcus's followers suppressed all information about it. Felias's records were destroyed when he was captured. The only way to reconstruct the ritual is to consult the long-dead eladrin. The characters journey to Thanatos to contact him, but his ghost is too insane to communicate reasonably. The characters must find a means of restoring his sanity. Barring that, they must destroy the ghost, find Felias's body, and use the Speak with Dead ritual. Only then can they hope to retrieve the information they need.

**Quest XP:** If the characters vanquish Felias's ghost, they earn a minor quest reward of 3,200 XP.

**Quest XP:** If the characters manage to rediscover the old ritual, they earn a major quest reward of 16,000 XP.

## 28: To Trick the Prince of Beasts

Baphomet (*Manual of the Planes,* page 118) didn't get to be a demon prince by being stupid or gullible. Still, Lolth, the Demon Queen of Spiders, is far more cunning and patient. She has been plying the Prince of Beasts for years, sending him gifts, entrusting demons to his service, and showering him with flattery. Having finally won his trust, she has convinced him that she can weaken the demon lord Yeenoghu's defenses long enough for Baphomet to storm his rival's realm and destroy his hated enemy. The Horned King musters his army and prepares to attack, and Lolth promises to keep his domain safe in his absence.

Without interference, Yeenoghu slays Baphomet but is so weakened that Lolth, hidden nearby, can finish him. The characters might not care if these demon lords kill each other, but they should be concerned when the ensuing chaos greatly improves Lolth's status. With their masters dead, the demons sworn to Baphomet and Yeenoghu turn their allegiance to the Queen of Spiders. Lolth is already a god—a flood of new demons to her banner would make her even more dangerous. With this newfound power, it will not be long before she turns her covetous eyes to the world, or even the Astral Sea.

**Quest Hook:** The characters learn of the demonic maneuvering through terrestrial followers of the demon lords. Baphomet's cults undertake rituals to transport them to the Abyss so they can fight at their lord's side, while followers of Lolth prepare a great celebration. After discovering the extent of Lolth's plan and assessing the risk, the characters descend into the Abyss to stop her. The best outcome would be for Yeenoghu to slay Baphomet, Lolth to vanquish Yeenoghu, and the heroes to put down Lolth or at least stymie her plots. Accomplishing all this would throw three layers of the Abyss into chaos and keep their demon residents too busy tearing each other apart to trouble the world any time soon.

**Quest Reward:** If the heroes stop Baphomet from attacking Yeenoghu's realm, they earn a minor quest reward of 13,000 XP.

**Quest Reward:** If the characters manage to achieve the defeat of the three demon lords, they receive a major quest reward of 65,000 XP.

There's much more to adventuring in the Abyss than "merely" combating demons and other horrendous creatures. The four skill challenges in this section are prime examples of other threats that visitors to the Abyss might have to deal with.

To determine easy, moderate and hard DCs tailored to the level of a skill challenge, refer to the table on page 24.

## Abyssal Madness

The Abyss is a maddening place. Adventurers are made of stern stuff and can handle the everyday terrors of the Abyss, but some areas are so dark and full of despair that even the strongest mind crumples. Checks in this skill challenge could occur hourly or daily, depending on the intensity of the madness-inducing effects and how frequently they threaten the characters' sanity.

**Level:** Equal to the level of the party (XP equal to the reward for five standard monsters of the party's level).

**Complexity:** 5 (requires 12 successes before 3 failures).

*Special:* Each time a character fails an Endurance, Perception, or Religion check in this skill challenge, that character gains an insanity effect (see the table below). Each failed check after the first results in a +2 cumulative bonus to the roll on the insanity table.

A character can have multiple insanity effects, although he or she can't be affected by the same one more than once unless the effect so specifies. Each effect lasts until the characters succeed on the skill challenge or until a Remove Affliction ritual is performed.

**Primary Skills:** Endurance, Perception, Religion.

*Endurance (hard DC by level):* Through an act of stubbornness or inner strength, the character resists the onset of madness and fortifies the will of his or her companions.

*Perception (moderate DC by level):* The character is able to see past the madness and keep his or her companions focused on the task at hand.

*Religion (moderate DC by level):* The character's faith sustains the group.

**Secondary Skills:** Bluff, Diplomacy, Heal, Intimidate.

*Bluff (easy DC by level, when an ally fails an Endurance, Perception, or Religion check):* The character turns an ally away from the madness at the last second—for a price. A successful check negates the failure from the triggering check, but not the insanity effect. Whether or not this check succeeds, the character making the Bluff check gains an insanity effect.

**INSANITY EFFECTS**

| d20 | Effect |
|---|---|
| 1-5 | **Jitters: The character develops nervous tics. He or she takes a -2 penalty to all Dexterity-based checks. This penalty is cumulative if this result is rolled more than once.** |
| 6-10 | **Hysteria: The character becomes afraid of any sudden movement and loud noise. He or she takes a -2 penalty to initiative checks, to Will, and to any defense attacked by a fear effect. This penalty is cumulative if this result is rolled more than once.** |
| 11-15 | **Melancholy: The character stops caring and falls into a deep depression. He or she can take only two actions each turn. If a character obtains this result more than once, he or she instead becomes dazed.** |
| 16 | **Mania: The character is a bundle of unfocused energy. He or she can take an extra move action in place of a minor action. If the character does so, he or she takes a -2 penalty to attack rolls and to all defenses until the end of his or her next turn.** |
| 17 | **Megalomania: The character believes he or she is invincible. He or she cannot use healing surges during an encounter until first bloodied.** |
| 18 | **Paranoid Delusion: The character is so distrustful that he or she no longer counts as an ally to anyone.** |
| 19 | **Manic Depression: The character fluctuates between melancholy and mania (as described above). Each round, he or she rolls a d20 at the start of his or her turn. On a result of 1-10, the character is affected by melancholy; on a result of 11-20, the character is affected by mania.** |
| 20 | **Dementia: The character has trouble distinguishing reality from fantasy. He or she automatically fails any Intelligence-, Wisdom-, or Charisma-based checks.** |
| 21+ | **Catatonia: The character retreats into himself or herself and is unresponsive. Treat this state as being unconscious, except that the character is still aware.** |

*Diplomacy (moderate DC by level, when an ally fails an Endurance, Perception, or Religion check):* Using reason, empathy, and careful words, the character talks an ally back from the brink. A successful check negates the failure from the triggering check, but not the insanity effect.

*Heal (moderate DC by level, when an ally fails an Endurance, Perception, or Religion check):* The character tends to the ally's trauma. A successful check negates the insanity effect from the triggering check, but not the failure.

DAVE ALLSOP

*Intimidate (hard DC by level, when an ally fails an Endurance, Perception, or Religion check):* The character forces the ally to snap out of it. The ally must be conscious and willing to cooperate. A successful check negates both the failure and the insanity effect from the triggering check.

**Success:** The party holds together. The characters' minds are weary, but they are stronger for the experience. All insanity effects gained during the skill challenge end.

**Failure:** It's too much . . . each character gains an additional insanity effect. The insanity can be relieved only by a Remove Affliction ritual.

## Destroying a Demongate

Demongates—permanent two-way portals between the Abyss and other points in the cosmos—are a constant danger. Although a demongate can be blocked by the Arcane Lock ritual (*Manual of the Planes*, page 149), such a temporary seal is too weak to hold back powerful denizens of the Abyss. Utterly destroying a demongate is no easy task, and it requires traveling to the portal's Abyss side.

**Level:** Equal to the level of the party, or up to three levels higher (XP equal to the reward for five standard monsters of the challenge's level).

**Complexity:** 5 (requires 12 successes before 3 failures).

*Special:* Dealing with a demongate is a traumatic process. Unless a character's primary skill check beats the DC by 5 or more, that character loses a healing surge in addition to any other effect of the skill check.

**Primary Skills:** Arcana, Religion, Thievery.

*Arcana (hard DC by level, standard action):* The character funnels abyssal energy from the demongate into his or her own body and then disperses it, diminishing the gate's power. This is a traumatic process, and it costs the character a healing surge.

*Religion (moderate DC by level, standard action):* The character purifies the gate by drawing on divine power.

*Thievery (hard DC by level, standard action):* A character adjacent to the gate is able to disable or rearrange the runes, sigils, and eldritch energy that fuel and regulate its power.

**Secondary Skill:** Endurance.

*Endurance (easy DC by level, immediate interrupt, when a character loses a healing surge from making a primary skill check):* The character making the Endurance check loses the healing surge instead of the character making the primary skill check. On a failure, both characters lose a healing surge.

**Success:** The demongate is destroyed, flaring in a burst of dark energy. Each nondemon within 1 mile of the Abyss side of the demongate takes ongoing 5

fire, cold, lightning, and poison damage per tier and is dazed (save ends both). *Aftereffect:* The creature is dazed (save ends). Based on your plans for the adventure, you determine whether the party can escape through the collapsing demongate or must find another way home.

**Failure:** The demongate is not destroyed but still flares with chaotic energy. Each nondemon creature within 1 mile of the Abyss side of the demongate takes ongoing 5 fire, cold, lightning, and poison damage per tier and is dazed (save ends both).

**Development:** Whether or not the characters are successful in sealing the demongate, the flare emitted alerts demons that someone is tampering with it. This skill challenge can result in an encounter with enraged demons or even a demon horde (see below), depending on your plans for the adventure.

## Escaping a Demon Horde

Countless demons roam the Abyss and portions of the Elemental Chaos. They gather in hordes too large and destructive for even a seasoned group of heroes to fight. Often, running is the only sensible response.

In this skill challenge, the characters must escape from a horde of demons. The challenge is also suitable for fleeing from slaad mobs, packs of elementals, or other large hostile groups. It assumes the action takes place over hours rather than rounds.

Each hour of the flight, every character must make an Endurance check (see below) to keep up the pace. Except where otherwise noted, each character can also make a single primary or secondary skill check each hour.

**Level:** One or two levels higher than the party level (XP equal to the reward for five standard monsters of the challenge's level).

**Complexity:** 5 (requires 12 successes before 3 failures).

**Primary Skills:** Acrobatics, Arcana, Athletics, Nature, Stealth.

*Acrobatics (hard DC by level):* The character uses superior agility to scout from vantage points and to find unusual routes away from the horde. Failure costs each party member a healing surge. A character who has no healing surges left loses hit points equal to his or her healing surge value.

*Arcana or Nature (hard DC by level):* The character uses knowledge of the Abyss or Elemental Chaos to predict geography and help the group find the best trail. A character who is familiar with the Elemental Chaos can attempt a Nature check instead of an Arcana check. Use Religion for this check if the chase takes place in the Astral Sea or the Shadowfell. Use Nature if the action takes place in the world or the Feywild.

*Athletics (hard DC by level):* The character uses Athletics to bring the group to higher ground, or to put rough terrain between the group and its pursuers. Failure costs each party member a healing surge. A character who has no healing surges left loses hit points equal to his or her healing surge value.

*Stealth (moderate DC by level):* The character finds a good hiding spot, such as a valley or hollow, allowing the party to temporarily avoid the pursuers in the nick of time.

**Secondary Skills:** Diplomacy, Endurance, Heal, Insight, Intimidate, Perception.

*Diplomacy or Intimidate (hard DC by level):* The character spurs on his or her companions by relating the horrors that await if they fail to keep pace. A success with this skill grants each character a +2 bonus to his or her next Endurance check.

*Endurance (moderate DC by level; mandatory check):* To keep up the grueling pace, the characters tax themselves severely. Each character must make an Endurance check each hour; on a failure, he or she loses a healing surge. A character who has no healing surges left loses hit points equal to his or her healing surge value. In addition, the character is weakened during any surprise round and the first round of any combat until his or her next Endurance check is a success, or until the party successfully ends the skill challenge or takes an extended rest.

*Heal (hard DC by level):* The character works to keep the group healthy and to minimize fatigue. A success on this check prevents each party member from losing a healing surge to one failed skill check this hour.

*Insight or Perception (hard DC by level, once per day):* The character notices something in the demons' behavior (Insight) or their search tactics (Perception) that aids the group. This recognition negates one failure already accumulated in this challenge. Each of these skills can be used to gain a maximum of 1 success in this challenge.

**Success:** The characters evade the demon horde and are safe . . . for now.

**Failure:** Some of the demons catch up to the characters. They face a combat encounter two or three levels higher than the party's level. If the characters overcome the opposition, they can start a new skill challenge and try to escape the remaining horde.

## Navigating the Demonweb

Any wrong turn in the Abyss can be deadly, but no place in that vile realm is as labyrinthine and terrifying as Lolth's Demonweb. Its silk-lined, tubelike passages continually morph and shift as her pets spin new webs and tear down the old, making any attempt to map the Demonweb futile.

You can use this epic tier skill challenge whenever the characters must win passage through a section of the Demonweb. Perhaps they need to reach one of the portals hidden within its tangle of passages, or

EVA WIDERMANN

complete a mission against the Demon Queen of Spiders or her servants.

Extended forays into Lolth's lair might require succeeding on this skill challenge multiple times as the characters find their way from one section of the Demonweb to another.

Each hour of the passage, unless at least one character makes a successful Arcana check to keep the group on track (see below), the party gains 1 failure. In addition, each hour every character must make an Endurance check (see below) to resist the poisonous effects of the webs' inhabitants. Except for the character making the Arcana check, each character can also make a single primary or secondary skill check each hour.

**Level:** Equal to one level lower than the level of the party, increasing by one for each new skill challenge as another section of the Demonweb is discovered (XP equal to the reward for five standard monsters of the challenge's level).

**Complexity:** 5 (requires 12 successes before 3 failures).

**Primary Skills:** Acrobatics, Athletics, Arcana, Nature.

*Acrobatics or Athletics (hard DC by level):* The character scrambles around in the tunnel and locates an opening, or cuts through the tunnel walls, revealing a safe path to another tangle of webbing. This skill can be used to gain a maximum of 1 success in this challenge.

*Arcana (moderate DC by level):* The character uses his or her knowledge of the Abyss to keep the group moving in the right direction. Allies can aid this check, to a maximum bonus of +4. This skill can be used to gain a maximum of 1 success each hour.

*Nature (hard DC by level):* Although the Demonweb is far different from anything in the world, enough natural arachnids dwell there for a skilled pathfinder to discern clues about the environment from their behavior.

**Secondary Skills:** Endurance, Heal, Perception.

*Endurance (moderate DC by level; mandatory check):* The Demonweb is infested with spiders and other dangerous arachnids. Avoiding all their stings and bites is impossible, resulting in accumulated poison over time. Each character must make an Endurance check each hour; on a failure, he or she loses a healing surge. A character who has no healing surges left loses hit points equal to his or her healing surge value. A failure on this skill check does not count as a failure in the skill challenge.

*Heal (hard DC by level, when a character fails an Endurance check):* The character successfully treats the character who failed the Endurance check. The ally does not lose a healing surge.

*Perception (easy DC by level):* The character notices something about the environment that aids navigation—he or she might feel a faint breeze from one direction, or spot signs of danger from another. A character who succeeds on this skill check can grant a +2 bonus to another character's subsequent Arcana check.

**Success:** The characters reach their destination or the next stop along the way. If the place they arrive at is guarded, the characters gain surprise against the guardians.

**Failure:** The characters become hopelessly turned around and run into a dangerous trap or group of monsters. They face a combat encounter of a level equal to that of the skill challenge. The characters must start the skill challenge anew to reach their destination or to make their way back to their starting point.

Only powerful demons and those that serve them live long in the Abyss. Braving its depths requires great courage or equally great foolishness. Adventurers find little respite in its stinking swamps of filth, shifting seas of necrotic seepage, and pits of hateful bile. The closest thing to civilization is the sleazy markets of Azzagrat.

The bizarre and horrific regions of the Abyss are legion. The following sample locations should get your fiendish imagination working.

## Mal Arundak, the Bastion of Confusion

At the heart of a vast rainless waste, overlooking a gorge dropping into nothingness, stands a tall basalt bastion emblazoned with the symbol of Pelor. A horde of demons ebbs and flows around it like a terrible sea. Within the fortress, a group of former angels stands guard over what they believe is the trapped essence of the Chained God, Tharizdun.

They are wrong, and they have fallen into terrible folly.

This Bastion of Confusion was crafted by the leader of the guardians, Alusiel, to hold the *Ebon Stone*. The gods gave Alusiel this item not long after they shackled Tharizdun, telling the angel that the *Stone* was the essence of that dread being. Alusiel and other angels were charged with binding it within the Abyss and watching over it until the end of time. They have never questioned their assignment. This unthinking loyalty has led to their corruption and ultimate damnation.

Alusiel and the fellow guardians have resided at Mal Arundak for so long that the Abyss has transformed them into demons. Their forms and souls are terrible mockeries of what they once were. This alteration has been so subtle that they are convinced that they remain creatures of grace and light. To outsiders, however, their fall is obvious. The former angels' limbs are twisted, they have sprouted horns and barbs, and their wings are fiery, or black and leathery like those of bats. Only their featureless faces and haughty manner betray their origin.

The former angels are not aware of their dread transformation and continue offering shelter and aid to all who happen upon Mal Arundak and survive the demon throng outside. Unfortunately for those in their care, the angels' demonic taint manifests in paranoia, vanity, and blood lust. In the end, visitors must escape or fall under Alusiel's crackling sword of wrath.

### What Is Mal Arundak Guarding?

Whatever it might be, it's not Tharizdun. The former angels have been tricked into the corruption of Mal Arundak for mysterious reasons. Although the *Ebon Stone* does contain the essence of a powerful creature, it does not hold the Chained God. The exact reason for the subterfuge, and the identity of the creature bound in the stone, are up to you.

### Inhabitants and Culture

The demons that surge and snarl outside Mal Arundak never try to penetrate the bastion, though they are happy to tear apart travelers or fallen angels that come within reach. They exist only to buttress Alusiel's purported goal of protecting the Bastion of Confusion. Just how they know to maintain this careful facade is not known.

Treating with constituents of the demon horde is impossible. Large groups splinter off to attack and pursue any nondemon on sight (see the "Escaping a Demon Horde" skill challenge, page 116). However, flying is a relatively safe way to enter the Bastion. The surrounding horde contains horrors capable of flight, but they are far fewer than the land-bound demons.

Once inside, visitors remain threatened. They must convince the corrupted angels that they too are servants of the gods, or at least are actively working to fight evil. Despite their terrible forms, the former angels mercilessly attack anyone who even hints that corruption has taken hold of them.

Alusiel's company gives aid and respite for a short time, no more than a day or two, before paranoia and doubt sour the relationship. As time goes on, the corrupted angels become certain that their visitors are searching for the *Ebon Stone* and that they are working toward the release of the Chained God. They respond by first limiting visitors' access to highly controlled parts of the bastion. After a time, they set upon the visitors, imprisoning them in dank oubliettes in the lowermost reaches of Mal Arundak. The angelic host attacks to kill any who try to escape, but they do not pursue beyond the walls of Mal Arundak. The former angels are bound by their duty to guard the *Ebon Stone*.

### Major Areas

Just as the strange situation within the walls of Mal Arundak is rife with adventure potential, so too is the vast wasteland around it.

**Asag:** Leagues beyond Mal Arundak, but visible from the uppermost reaches of the bastion, is a shining and treeless oasis. The entire site is a vast, unmoving demon called Asag. This strange being engulfs any creature that attempts to gain refreshment from its sparkling but poisoned waters. Even those who choose to circumvent the terrible place might be ambushed—several solamiths and barlguras dwell within burrows dug into Asag's massive body.

**Hesaxath's Lair:** The seemingly endless gorge that Mal Arundak overlooks is home to a deadly hive of chasmes (*Manual of the Planes,* page 121). These monsters serve an undead dragon named Hesaxath, who is covertly building a power base in the hope of becoming the Abyss's next demon lord. Hesaxath's lair reeks of sulfur and death. Its chambers are filled with the dragon's vast hoard, including one artifact—a seer's stone supposedly created by Ioun.

## Adventures

Mal Arundak is an excellent way to introduce a campaign set in the Abyss. Although the fortress seems a refuge of normalcy amid the chaos, it is soon revealed as another instance of demonic terror.

Getting into Mal Arundak is difficult enough. The tougher challenge is dealing with delusional angels that can turn on the characters at a moment's notice. The heroes must walk a fine line—encouraging their hosts' desire to help servants of the gods while quieting the dark corruption that has stained their essence. A truly epic task could be finding a way to redeem Alusiel and the others, perhaps by retrieving the *Ebon Stone*.

## Environmental Features

**Asag Black Grass:** Although the area of Asag is treeless, black grass appears to grow from its surface. In truth, the stalks are the demon's appendages. Resembling cilia, the tendrils grab at anything in reach. Any nondemon that falls prone in a square of Asag black grass must make a DC 20 Strength check to stand up. Each creature that is prone in a square of Asag black grass at the end of its turn takes 10 acid damage.

**Screaming Winds:** The areas around the Bastion of Confusion are immense and lifeless wastelands. Winds blow strongly over the dusty plains, howling with anguished cries. Dangerous whirlwinds (*Dungeon Master's Guide,* page 69) often arise.

## Encounter Groups

The following encounter groups fit the strange happenings of Mal Arundak.

FRANZ VOHWINKEL

**Level 11 Encounter (XP 3,450)**
- 3 barlguras (level 8 brute, *MM* 53)
- 2 canoloths (level 7 soldier, *Manual of the Planes* 120)
- 2 evistros (level 6 brute, *MM* 54)
- 2 neldrazus (level 8 lurker, *Monster Manual 2* 56)
- 2 runespiral demons (level 5 artillery, *Monster Manual 2* 59)

**Level 14 Encounter (XP 5,200)**
- 4 corrupted angels of protection* (level 14 soldier, *MM* 15)
- 1 corrupted angel of valor* (level 15 skirmisher, *MM* 14)

* To reflect these angels' corruption, change their origin to elemental, add the demon keyword, and give them resist 10 variable (2/encounter).

**Level 15 Encounter (XP 6,200)**
- 2 boneclaws (level 14 soldier, *MM* 37)
- 3 chasmes (level 14 skirmisher, *Manual of the Planes* 121)
- 1 immolith (level 15 controller, *MM* 56)

# Molor, the Stinking Realm

Juiblex, patron of slimes and oozes, is a disgusting and unfathomable demon prince. He rules a revolting layer of the Abyss, of which the Stinking Realm of Molor is iconic. It is a land of oozes and slime, many infused with demonic energy. The area is permeated with filth, decay, and the atmosphere of long-dead empires. Its malodorous denizens are at home in the filth, carriers of disease and infested with parasites. Molor is anathema to Erathis, the deity who personifies the heights of civilization; the Sinking Realm embodies its nadir and, perhaps, its ultimate fate.

## Inhabitants and Culture

Molor's inhabitants are demons, oozes, otyughs, and similar creatures that have no civilization. Society is not absent, however. A town called Thullgrime hunches in the twisted tunnels like a feeble and wasting toad. Mad cultists, trapped and dying explorers, wererats, and disease-riddled consumptives dwell in its streets and shantytowns. They are a weakened lot, futilely attempting to ward off a slow, debilitating, and inevitable doom. Though they are little more than scavengers in the wilderness, a shared sense of decay and disease unites these individuals. Outsiders are horrified when they learn that intelligent creatures of any sort reside in this putrid sinkhole.

### Juiblex, the Faceless Lord

Juiblex is not among the most powerful of the demon princes of the Abyss, but it is one of the most infamous and horrific. A viscous mass covered with unblinking eyes and spurting gouts of sludge, it is the lord of oozes, slimes, rot, and decay. Juiblex and its servants wish only to consume and dissolve all living things.

Molor, though part of the Faceless Lord's realm, is not its home domain. Juiblex dwells within the 222nd layer of the Abyss, called Shedaklah, where it wars for supremacy with Zuggtmoy, the Lady of Fungi. The two realms are linked by a number of portals, most of which exist within Juiblex's portion of Shedaklah.

Although Juiblex and Zuggtmoy are of roughly equivalent personal power, the Faceless Lord has little interest in cults; its few followers are vastly outnumbered by those of the Lady of Fungi. This disparity keeps Juiblex on the losing end of their struggle. The Faceless Lord might be eventually forced to retreat to Molor, making that into its new abode.

Juiblex is one of the oldest demon lords of the D&D game, having appeared as far back as the 1st Edition *Monster Manual*.

## Major Areas

Nobody has bothered mapping much of Molor. Still, a few areas are known to those who either dwell within or have studied the region.

**Dripping Tunnels:** Molor is filled with labyrinthine tunnels of muck. The ceilings bow precariously, and ooze drips and trickles overhead. Filth of all sorts—stinking waste, diseased refuse, rotten food—is embedded in the walls or flows along the floor in lazy streams. Scholars claim that sewage from throughout the planes ultimately seeps into Molor's dripping tunnels.

**Juiblex's Shrine:** Somewhere in the heart of Molor's tunnels is a shrine to Juiblex, the Faceless Lord. Here, devoted and powerful cultists pay homage to their infernal master. Juiblex's shrine is said to hold uncounted riches beneath its surface: the offerings of centuries of worshipers who came, placed something before the altar, and watched it sink into the slime.

**The Maw of Eternity:** At the end of a sodden series of tunnels is a cavern called the Maw of Eternity, which features a dripping, 15-foot-wide hole in its center. The place serves as a last resort for inhabitants of the Stinking Realm, particularly denizens of Thullgrime. Demonic beasts infest the tunnels that lead here, plaguing invaders or explorers. However, they seem to sense the desperation and misery of the hopeless and leave such creatures alone, fading into the shadows. The damned are free to skulk through the sucking mud and stand at the lip of the pit.

The Maw of Eternity is said to be bottomless—those who leap in fall forever. Other rumors say that a plummeting wretch ends up somewhere else. To the desperate Thullgrime denizens, either result is acceptable.

In fact, anyone that falls into the Maw continues to descend for about ten minutes before passing through an unpredictable portal. It might transport creatures to another, deeper layer of the Abyss one moment and to a different plane the next. Once in a great while, a creature passing through the portal ends up beyond the planes entirely. The few scholars who know about the Maw's portal wonder if it leads to Juiblex's original realm. Perhaps, long ago, a creature from Beyond crawled up the side of this hole, heaved itself over its lip, and infested a new home.

**Thullgrime:** The only known settlement in Molor, Thullgrime is a collection of shacks thrown together from rotting fungal fibers, burrowed out of heaps of ooze, or slapped together from garbage. The streets are covered with a sucking, foul-smelling muck. In places, the ground seems alive and drags creatures below; and bones bubble up minutes, hours, or days later. Disease haunts the streets, and maggot-ridden corpses are a common sight.

Cullis Heartrend rules the town. He was the self-proclaimed king of a small city-state whose name has been lost to history—as have the details of the sins of hubris that caused his soul to wind up here. Cullis's mind snapped long ago, and he lords over this stinking hovel-town as if it were an opulent empire.

Thullgrime's citizens grudgingly do Cullis's bidding—strapping on rusted weapons to go on patrol, shuffling soiled scraps and calling it paperwork, and shambling about on so-called state business. They obey mainly because they fear Cullis's punishment, meted out by a dire creature called the Grollog. This being might have once been an earth-based elemental that was corrupted by Juiblex's influence. Now, it is a huge, amorphous beast with a great, sucking maw and dripping pits for eyes. It can merge with other oozy material and travel throughout Molor, moving through the floors, walls, or ceilings with only a ripple to denote its passing. The Grollog is somewhat intelligent and can communicate in broken Abyssal and Common. Why it obeys Cullis is anyone's guess; most denizens suspect Juiblex's influence.

## Adventures

Molor does not welcome visitors. Those who are knowledgeable about the place avoid it unless no other option exists. The characters might need to speak with a person or a creature in Thullgrime, or they might track a dangerous cult of Juiblex to a base here. They might wind up in the Stinking Realm by accident, perhaps crossing over from the winding sewers of a major and magic-rife city in the world, or they could be forced to pass through on their way elsewhere.

## Environmental Features

The ever-present, slippery muck makes all but a few of Molor's surfaces difficult terrain.

**Cave Slime:** Cave slime (*Dungeon Master's Guide*, page 67), or its abyssal equivalent, coats many surfaces in Molor.

**Cloudspore:** These mushrooms (*Dungeon Master's Guide*, page 67) grow among stands of other fungi.

**Demon Slick:** This oily black slime (page 14) is difficult to discern from the surrounding filth.

**Grasping Slime:** Molor's muck is a perfect location for this feature (*Dungeon Master's Guide*, page 68).

**Infectious Pallor:** Endemic to Molor, this terrain (page 16) harbors horrifically wasting diseases such as slimy doom (*Dungeon Master's Guide*, page 50).

**Sacred Circle:** A few circles (*Dungeon Master's Guide*, page 68) dedicated to Juiblex exist throughout the realm.

**Slides:** Many steep areas and sluices of Molor function as slides (*Dungeon Master's Guide*, page 68).

## Encounter Groups

Oozes and slimes dwell in Molor, as do creatures of filth and a plethora of demons.

**Level 5 Encounter (XP 1,000)**
- 1 gelatinous cube (level 5 elite brute, *MM* 202)
- 3 wights (level 5 skirmisher, *MM* 262)

**Level 9 Encounter (XP 2,250)**
- 1 black pudding (level 8 elite brute, *Monster Manual 2* 172)
- 2 carrion crawlers (level 7 controller, *MM* 40)
- 1 gorgon mud hazard (level 8 obstacle, page 18)
- 2 otyughs (level 7 soldier, *MM* 211)

**Level 17 Encounter (XP 9,000)**
- 2 abyssal ghouls (level 16 skirmisher, *MM* 118)
- 2 abyssal ghoul hungerers (level 18 minion, *MM* 119)
- 1 acid transformation field hazard* (level 18 obstacle, page 21)
- 1 enormous carrion crawler (level 17 elite controller, *MM* 40)

* This functions like an elemental transformation field, but the damage type and transformation are acid instead of fire.

JIM NELSON

# The Plains of Rust

A plain coated in dull red particles stretches beneath an eternal twilight sky in the Abyss. Wide, flat basins and gently rolling dunes give way to towering, mountainous heaps and dark pits of unfathomable depths—all caked with rust flakes. Here and there, jagged sheets of corroded iron protrude from great salt flats cast in a hideous, unnatural light. Winds blow incessantly, stirring the rust into a clinging mist.

During the last flare-up of the Blood War, Asmodeus's devils built strongholds in the Abyss. They used these great iron fortresses to launch attacks against the near-endless demons. Most of these strongholds were perched on the Plain of a Thousand Portals, but the devils managed to secure footholds in some of the deeper layers.

One such layer was a grim, swampy demesne without redeeming features. It was empty, useless, unimportant. Yet, by a quirk of planar conjunction, it boasted three intermittent portals to the Nine Hells. Using a cunning ritual, the devils regularized the passages and colonized the area. They built fortresses atop rising hillocks and protruding from the swamp before the demons discovered their presence.

The atmosphere of the layer, poisoned by the hideous substances in the swamp, had always been toxic and corrosive. It was not debilitating enough to curtail the devils' plans—at least at first. Upon learning of the devils' presence, the demon lords Orcus and Juiblex set their will to enhancing the layer's existing environment. Between Orcus's mastery of necrotic energy and Juiblex's command over caustic ooze, the layer's atmosphere became supersaturated with decay. Iron fortifications crumbled in a matter of days, and clouds of rust mushroomed into the air. The grit mixed with the swamp, creating a viscous sludge. As it continued to drift down, it covered everything like a horrific snowfall. In time, the ground became a close-packed rust plain blanketing a highly toxic mire. As the diabolic fortresses crumbled, the demons swarmed, further tainting the rust with the blood of their enemies.

## Inhabitants and Culture

No demon lord claims this layer, and the only inhabitants are mindlessly destructive. The essence of slain devils and demons became infused with the necrotic and acidic power of the buried swamp. This mixture gave rise to baleful corrupting undead and malignant constructs that seek to destroy all they encounter.

The demon princes send packs of demons here from time to time to ensure that the portals to the Nine Hells remain buried and unusable. Occasional diabolic scouting parties make an effort to reopen the portals. Mortal explorers have established temporary camps while searching the rusted ruins for ancient magic used during the Blood War. None of these groups ever survive long enough, or grow large enough, to form communities. A single tribe of humanoids wanders the rust plain like nomads in a desert of the world. No one knows who they are, why they dwell here, and how they have managed to survive.

## Major Areas

Sinkholes lead to warrens within the rusty mire, and broken, corroded ruins of diabolic fortresses yet house wonders and horrors alike.

**The Bloody Fen:** Although the realm is pocked with sinkholes, in one expanse the hard-packed rust that covers the plain is thin enough that careless wanderers can sink into the sludge beneath. This so-called Bloody Fen is miles across, a surviving bit of the toxic mire that once covered the entire layer. Passersby who stumble into it must either wade through the venomous muck or pole a barge or raft across. All the while, fen-dwelling horrors lurk beneath the semisolid surface.

**Fort Splinter:** Most of the devils' fortresses have been reduced to flakes of rust or a few corroded walls. A few strongholds still stand—not whole, but at least recognizable. The largest of these is Fort Splinter. Legend claims that powerful magic and numerous artifacts wait to be discovered here, perhaps even one of the portals to Hell. Tales also speak of the lurking spirits of its diabolic defenders, ready to slaughter all trespassers.

**The Palace of Dust:** According to accounts from survivors of the Plains of Rust, clouds of particles whipped by the wind occasionally settle into the form of an ornate palace. Always spotted at a distance, the shape boasts a dozen variegated towers, all surrounded by a bastion that rises and falls like a tide. If it is a mirage, it's a remarkably consistent one. Still, no traveler has been able to draw near the palace before it disintegrates back to wind-blown dust.

## Adventures

Encounters can occur anywhere within the Plains of Rust, and the few creatures that dwell here are universally hostile. Despite its desolate nature, the place attracts interest. Adventurers, devils, and demons seek relics of the Blood War, left behind in the crumbling fortresses or buried beneath layers of dust. The peculiar nomadic tribe or chambers within the Palace of Dust could hold great secrets forgotten since the days of the war.

Then, too, there are the ancient portals. If one or all three were unearthed, they could once again connect the most vile areas in the cosmos. If so, what might they be used for this time? Characters desperate to escape the Abyss might seek these portals as a way out. Hell isn't a much more pleasant place, but at least devils can be bargained with.

ERIC L. WILLIAMS

## Environmental Features

Most of the plain's surface is solid and is treated as normal terrain.

**Blood Rust:** These areas behave like blood rock (*Dungeon Master's Guide,* page 67).

**Corroding Air:** Ferrous metals such as iron and steel corrode swiftly in the Plains of Rust. Each day of exposure, metal weapons take a cumulative –1 penalty to attack rolls made with them (maximum –3), and metal armor and shields take a cumulative –1 penalty to their AC and Reflex bonuses (maximum –3). Such weapons and armor disintegrate into rust when the penalty is greater than the object's enhancement bonus. The Enchant Magic Item ritual can be used to repair a magic object that is so damaged but not destroyed, at one-fifth the item's cost.

**Iron Scraps:** The lingering essence of devils or demons might be able to animate portions of iron scraps. Treat the resulting creatures as iron golems or iron golem juggernauts. You can given them a demonic feel by adding variable resistance or making them deal necrotic or fire damage.

**Rust Cloud:** Clouds of rust are kicked up by the winds, creating lightly obscured squares.

**Rust Storm:** The equivalent of a whirlwind (*Dungeon Master's Guide,* page 69), these squares are also heavily obscured by rust particles.

**Rust, Shifting:** In areas, the rust layer is soft, like fine sand, forming difficult terrain. A few of these areas include sinkholes that drop passersby into the sludge beneath. The muck might be grasping slime (*Dungeon Master's Guide,* page 68), acidic mire (page 12), or something more dire.

## Encounter Groups

Common encounters in the Plains of Rust involve the undead and constructs that haunt the region. The characters also could stumble upon demons or devils searching for the layer's secrets.

**Level 16 Encounter (XP 7,400)**
- 1 dust demons (level 15 elite controller, page 132)
- 1 demonic slime hazard (level 16 obstacle, *Manual of the Planes* 23)
- 3 immoliths (level 15 controller, *MM* 56)

**Level 22 Encounter (XP 21,550)**
- 6 abyssal ghoul myrmidons (level 23 minion, *MM* 119)
- 1 iron golem (level 20 elite soldier, *Monster Manual 2* 134)
- 2 void crust hazards (level 22 obstacle, page 22)

**Level 25 Encounter (XP 41,000)**
- 1 abyssal rotfiend (level 26 controller, *Monster Manual 2* 52)
- 2 dread wraiths (level 25 lurker, *MM* 267)
- 1 iron golem juggernaut (level 26 elite soldier, *Monster Manual 2* 135)

# The Spires of Rajzak

This vast badland of sickening black and brown rock features strange, top-heavy spires and formations of balancing rocks that appear to have been eroded by a long-evaporated sea. Some rock arches form naturally occurring, one-way demongates, allowing creatures from other parts of the cosmos to enter but never to leave. These unfortunates are doomed to die within the horrid canyons of the Spires of Rajzak.

This forlorn place is named for its infamous inhabitant, the gargantuan Rajzak, a being said to be as powerful as a demon lord but more bestial than the dimmest barlgura. Rajzak hunts this expanse still, killing and devouring any creature it comes across.

Many demons also call the Spires home. They roam the area in nomadic groups, waging war against one another, outrunning the rampaging Rajzak, and delighting in the slaughter of those deposited here by demongates.

## Rajzak's Origin

According to an obscure and cryptic passage in the *Demonomicon* of Iggwilv (*Manual of the Planes*, page 132), Rajzak wasn't always a devouring mass of regrowth and mindless rage. It suggests that Rajzak was among the first demon lords to arise after Tharizdun created the Abyss. In past eons Rajzak was known by a different name, now lost to the ages, and ruled over the spires that the creature now haunts. That role earned him the sobriquet Lord of the Spires.

A demon lord of uncommon beauty and rare guile, he meddled in the politics of the Abyss, the world, and even the Astral Sea. This was his biggest mistake. The *Demonomicon* asserts that because of Rajzak's meddling, Asmodeus sent Graz'zt to the Abyss to retrieve a second shard of evil, though the reason for the expedition is not clear. Eventually the demon prince came into conflict with Graz'zt, and during their battle the devil was able to tear both the mind and soul from the Lord of the Spires and hide it as an "itinerant hellflame, forever lost." Most scholars believe that Graz'zt began to transform from devil to demon as a result of eons spent within the Abyss, but few suggest that he used a portion of Rajzak's essence to undergo the process.

The consensus of those who have studied this passage is that Graz'zt intends to keep his former enemy forever trapped in the Spires of Rajzak, tormented in a mindless form whose soul and bodyare disconnected. Other demonologists believe that the sly Lord of the Spires actually tricked Graz'zt into creating his current form, and that the demon lord is becoming transformed into the most powerful demon prince the cosmos has ever known.

## Inhabitants and Culture

No settlements exist in the Spires, only masses of demons that hunt the unforgiving badlands. Scores of these groups run riot among the twisted canyons. The more notable groups, along with Rajzak, are detailed here.

**The Gibberers:** Composed not of one horde but a number of smaller packs, the Gibberers are a force of raw chaos. Barlguras, evistros, and goristros gather in inexplicable mobs, babbling madness. With gnashing teeth, drooling lips, and rending claws, they rampage through the Spires, destroying everything in their path. At times, bands of these demons work for days to bring down one of the area's massive spires. Their reason for doing so is as unclear as anything else they do.

Why do these creatures mass, and why they continually blather nonsense? Perhaps a strange disease infects them, or the chaos of the Abyss is particularly concentrated here. A few reports describe gibbering orbs accompanying the Gibberers in their wanton destruction.

**The Inferno of Mescathas:** At times, a bright sunrise seems to pierce the gray and bitter sky of the Spires. The inhabitants know that such a dawn brings only fiery doom. A large group of immoliths roams the land in a great flaming mass, commanding legions of blazing skeletons and other fiery undead and torching anything that will burn. The incandescent mob is led by Mescathas, an undead fire demon desperately searching for the Greenfire Doorway (see below). He hopes to escape the Abyss and begin a campaign to burn everything to a lifeless cinder.

**Krazzkat's Horde:** The largest of the demonic hordes is under the thrall of the bullying balor Krazzkat. A ragtag band comprising all sorts of demons, the mob throngs through the canyons, devouring and slaying as it goes—trampling its weakest members as it pushes through tighter spots. The unruly mass carries Krazzkat atop a huge stone and iron litter, large enough to serve as a base for what he calls his palace. The small construction is little more than a couple of rooms housing the balor and his chief lieutenants. Some observers believe that Krazzkat intends to challenge Rajzak and absorb its power.

**Rajzak:** Over 80 feet tall and twice as wide, this obese mass of maws, claws, and oozing sores lurches and seeps through the caverns, propelled by dozens of stubby limbs. Parts of Rajzak are reptilian or amphibian, but other sections are indescribable. The foul demon heals at an alarming rate and can regrow limbs lost in battle or to the razor-sharp protrusions of the Spire's cavern walls.

Rajzak exists only to eat and destroy—if it is capable of speech, none have ever heard it talk.

**The Thousand Swords:** Vestra and Volauk, a pair of marilith sisters, command this group. Vrocks and mezzodemons flock to their banner, sharing their fierce, tactical, and heartless approach to surviving and mastering the Spires. Surprisingly clear-headed for demons, Vestra and Volauk realize that survival in the Spires requires teamwork. They are less spendthrift with the lives of their underlings than other demons. They are also more open to parley than others, though they negotiate typically as a pretense to learn the weakness of potential prey.

Unlike many of the demons in the Spires, the sisters are not exiles but travel the area in the service of Graz'zt. If they know Graz'zt's plan for the Thousand Swords, the sisters do not speak of it. One rumor claims that the Dark Prince is training a special force, and that he has designs on controlling the Spires and making this the fourth layer in his empire.

## Major Areas

For the most part, the Spires of Rajzak are a monotony of black dust, teetering rock formations, and deadly bottleneck canyons that make ideal ambush sites. A few areas break this uniformity.

**The Bastion of Hate:** Carved into a mountainside by an unknown architect eons ago, the Bastion of Hate is one of the few permanent structures in the Spires of Rajzak. It hums with arcane energy and is impervious to even Rajzak's predations. These features make the fortress a highly desirable base of operations for the hordes that haunt the Spires. Recently, a powerful group of githzerai has begun to explore the Bastion of Hate, perhaps with the aim of transforming it into a monastery.

**The Greenfire Doorway:** Among the demongates that dot the Spires of Rajzak, only one promises escape: the Greenfire Doorway. It might be no more than a myth, but the Doorway fills the hopeful thoughts of exiles desperate to leave the Spires. Some theories suggest that it is not a single passage but a phenomenon that affects one or more of the demongates, wreathing them in a strange green fire when active.

**Sorrow's Crescent:** This massive canyon is sometimes referred to as Rajzak's Nest, but no evidence indicates that the massive demon does more than pass through the place. Over 50 miles long and 20 miles across, it is the largest open area in the Spires. At any given time, at least one demon horde, or Rajzak, occupies Sorrow's Crescent. Demons that spend more than a few hours here heal all wounds. They gain other, random powers when they drink the inky liquid that rolls down the canyon's sides.

## Adventures

Escaping a demon horde or outrunning the ponderous mass of Rajzak can be challenge enough, but anyone trapped in the Spires of Rajzak seeks escape above all. Several means are available, but all are dangerous or elusive in nature. Finding the Greenfire Doorway is a fool's errand, though many sorry creatures eking out an existence in the Spires are happy to sell a "genuine" map to the demongate. (These wretches have plenty of inventive excuses for why they haven't used the map to get out.) Still, the place might exist and could permit release.

The githzerai in the Bastion of Hate might offer the best way to escape the Spires—they clearly have a means of exit. The characters would have to win the trust of those suspicious people, however.

## Environmental Features

**False Gates:** A number of false demongates stand amid the stone arches. They are teleporters (*Dungeon Master's Guide*, page 69) that only send unfortunates even deeper into the Spires.

**Loadstone:** Many of the protruding rocks and jags throughout the Spires consist of this peculiar substance (*Dungeon Master's Guide*, page 68).

**Primordial Fonts:** These pools of chaotic energy (page 17) bubble up throughout the area.

## Encounter Groups

Demon hordes predominate in the Spires, but undead and other creatures can be found on occasion.

**Level 14 Encounter (XP 5,400)**
- 2 immoliths (level 15 controller, *MM* 56)
- 2 abyssal eviscerators (level 14 brute, *Monster Manual 2* 51)
- 2 skull lords (level 10 artillery, *MM* 236)

**Level 16 Encounter (XP 7,600)**
- 3 githzerai mindmages (level 14 artillery, *Monster Manual 2* 131)
- 1 githzerai zerth (level 13 elite controller, *Monster Manual 2* 130)
- 5 githzerai cenobites (level 11 soldier, *Monster Manual 2* 130)

**Level 17 Encounter (XP 8,000)**
- 2 chasmes (level 14 skirmisher, *Manual of the Planes* 121)
- 3 vrocks (level 13 skirmisher, *MM* 58)
- 6 mezzodemons (level 11 soldier, *MM* 58)

CHAPTER 5

# Creatures of Chaos

JULIE DILLON

EVEN IN the wild and seething Elemental Chaos, life thrives. Such beings appear alien to creatures of the world, but they are driven by the same desires and emotions and are just as dangerous to adventurers as other monsters they are more familiar with.

A host of creatures native to the ever-shifting realms of the Plane Below appear in the *Monster Manuals* and the *Manual of the Planes* books. This chapter expands upon those concepts and adds new ones to fill your campaign with challenges for elemental-themed adventures. Though all these monsters originated in the Elemental Chaos, they are also found in the mortal world.

In this chapter you will find:

- **Abominations:** Elemental monstrosities that continue to war against the gods and their servants.
- **Archons:** New archons to serve in primordial armies.
- **Blight-Born Demons:** Elemental creatures tainted and twisted by the influence of the Abyss.
- **Eisk Jaats:** Beings of elemental cold enslaved by the frost giants.
- **Elementals:** More of the wild creatures that embody all the forces of creation.
- **Slaads:** More additions to the ever-growing roster of the chaotic, illogical slaads.
- **Masters of the Elements:** Legendary and infamous figures of the Elemental Chaos, including Ehkahk the Smoldering Duke, the revered githzerai Liricosa, and the horrifying Ygorl, ancient slaad lord and champion of entropy.

# ABOMINATION

Abominations are living weapons crafted by the primordials during the Dawn War. Several of those dread weapons continue to roam the Elemental Chaos and beyond, still obeying their ancient instructions to slaughter the children of the gods.

## Primeval Ooze

The viscid and mutable primeval ooze is a primitive form of life, an acid-filled amoeboid blob. Ever hungry, it bubbles with envy of all more advanced creatures.

**Primeval Ooze** **Level 24 Elite Brute**
Huge elemental beast (blind, ooze) XP 12,100

**Initiative** +17 **Senses** Perception +18; blindsight 20, tremorsense 20
**Seeping Sludge** aura 3; the aura's area is difficult terrain. Any creature that has a critical hit scored against it while within the aura is knocked prone.
**HP** 556; **Bloodied** 278
**AC** 36; **Fortitude** 40, **Reflex** 36, **Will** 37
**Immune** gaze, poison; **Resist** 30 acid
**Saving Throws** +2
**Speed** 5, burrow 5; see also *engulf*
**Action Points** 1

⊕ **Pseudopod** (standard; at-will) ✦ **Acid**
Reach 3; +27 vs. AC; 3d8 + 9 acid damage, and the ooze slides the target 2 squares.

⸸ **Engulf** (standard; at-will) ✦ **Acid**
The primeval ooze attacks one or two Large or smaller targets; +25 vs. Reflex (no attack roll required against an immobilized creature); the target is grabbed and pulled into the primeval ooze's space. The target is dazed and takes ongoing 20 acid damage until it escapes the grab. A creature that escapes the grab shifts to a square of its choosing adjacent to the primeval ooze. A primeval ooze can move normally while creatures are engulfed within it.

↯ **Bursting Cyst** (immediate reaction, when damaged by an attack; at-will) ✦ **Acid**
Close blast 4; targets the triggering attacker; +25 vs. Reflex; 1d8 + 6 acid damage, and ongoing 10 acid damage (save ends).

✲ **Torrent of Slime** (standard; at-will) ✦ **Acid**
Area burst 3 within 20; +25 vs. Reflex; 1d8 + 10 acid damage, and the target is immobilized (save ends).

**Alignment** Unaligned **Languages** understands Primordial
**Skills** Stealth +27

| | | |
|---|---|---|
| **Str** 25 (+19) | **Dex** 21 (+17) | **Wis** 23 (+18) |
| **Con** 28 (+21) | **Int** 7 (+10) | **Cha** 17 (+15) |

## Primeval Ooze Tactics

The ground surrounding a primeval ooze is covered in a slimy sheen, making enemies more vulnerable to its attacks. Primeval oozes soften up their opponents using *torrent of slime*, then engulf immobilized victims.

## Primeval Ooze Lore

**Arcana DC 24:** Primeval oozes are weapons of the primordials, crafted from the earliest forms of life to consume servants of the gods. Only a few primeval oozes were created. Most that remain dwell in remote regions of the Elemental Chaos, but some lurk in desolate wilds of the world, always on the hunt for prey. Though they are unable to speak, the horrors understand Primordial.

**Arcana DC 29:** A primeval ooze conceals itself in a slimy place, such as a stinking swamp in Canaughlin Bog, and waits for prey to come unsuspecting to it. When roused, though, it roams the wastelands, devouring everything it encounters—from puny goblins to mighty dragons.

## Encounter Groups

Primeval oozes are usually solitary but can travel in pairs or small groups. Sometimes an ooze learns to share the territory of certain elemental creatures, realizing that leaving this prey alone ultimately brings it more food.

### Unique Abominations

Many abominations were created in numbers, even if only a handful still exist. Some, though, are unique individuals created by primordials that either intended them for a specific purpose or simply couldn't be bothered to make more.

The most infamous of these unique abominations is the tarrasque (*Monster Manual*, page 13), though some myths suggest that more than one such creature might exist. If the natural realm contains multiple worlds, as they claim, perhaps each such world harbors its own tarrasque. For all practical purposes, however, the beast is unique.

Xixecal, the Living Glacier, is another such unique abomination. This roving servant of Solkara, the Crushing Wave, is detailed further on page 153.

Other unique abominations known to exist include the following.

**Annak-Kur, the Empty Blade:** The most potent servant of the now deceased Tabrach-Ti, the Queen of Bronze, Annak-Kur is a creature of ore and blades that roams the cosmos seeking out angels and other divine servitors to slay.

**Engakar, Twilight's Herald:** Nobody today knows what Engakar looks like, for it exists only as a name in ancient texts. Engakar is said to have been created not to battle the gods, but to destroy the primal spirits that barred both the gods and the primordials from the world.

**Thrasvarrun, the Screaming Storm:** A creature without physical form, Thrasvarrun is literally a living peal of thunder, traveling the skies from storm to storm. It adds its own power to that of nature, creating weather of inconceivable destructive force.

**Level 23 Encounter (XP 28,350)**
- 2 blood fiends (level 23 soldier, *MM* 12)
- 1 great flameskull (level 24 artillery, *MM* 109)
- 1 primeval ooze (level 24 elite brute)

## Storm That Walks

A storm that walks is the fury of the elements given destructive purpose. It takes the form of a mass of dark, boiling clouds with a vaguely humanoid shape, flickering with lightning and spawning ice storms with each immense step.

**Storm That Walks** **Level 28 Solo Controller**
Gargantuan elemental humanoid (air, cold, fire) XP 65,000

**Initiative** +22 **Senses** Perception +21; low-light vision
**Oncoming Storm** aura 5; creatures (including flying creatures) treat the area within the aura as difficult terrain. Each enemy within the aura gains vulnerable 10 lightning.
**HP** 1,008; **Bloodied** 504
**AC** 42; **Fortitude** 41, **Reflex** 38, **Will** 40
**Immune** lightning; **Resist** 20 cold, 20 lightning, 20 thunder, insubstantial; **Vulnerable** cold (if a storm that walks takes cold damage, it loses the insubstantial quality until the end of its next turn)
**Saving Throws** +5
**Speed** fly 8 (hover)
**Action Points** 2

**Pummeling Gust** (standard; at-will) ✦ **Cold**
Reach 4; +32 vs. Reflex; 3d6 + 11 cold damage, and the target is knocked prone.

**Tongue of Lightning** (standard; at-will) ✦ **Lightning**
Ranged 20; +32 vs. Fortitude; 3d6 + 11 lightning damage, and the target is dazed (save ends). *Each Failed Saving Throw:* Each ally adjacent to the target takes 10 lightning damage.

**Forked Tongue** (standard; at-will)
The storm that walks makes four basic attacks. It cannot attack the same target more than twice.

**Fist of the Storm** (minor; recharge ⚅) ✦ **Cold, Lightning**
Ranged 20; +32 vs. Reflex; 4d6 + 11 cold and lightning damage, and the target is restrained (save ends). *Each Failed Saving Throw:* The storm that walks slides the target 3 squares.

**Raging Storm** (minor; recharge ⚅) ✦ **Lightning, Thunder**
Close burst 3; +32 vs. Fortitude; 4d6 + 11 lightning and thunder damage, and the storm that walks pushes the target 4 squares and knocks it prone.

**Storm Unleashed** (free, when first bloodied; encounter) ✦ **Cold, Lightning, Thunder**
*Raging storm* and *hand of the storm* recharge, and the storm that walks uses them both.

**Alignment** Chaotic evil **Languages** Primordial
**Str** 30 (+24) **Dex** 27 (+22) **Wis** 24 (+21)
**Con** 20 (+19) **Int** 16 (+17) **Cha** 16 (+17)

## Storm That Walks Tactics

A storm that walks prefers to remain at a distance and obliterate foes with ranged attacks. It is smart enough to cooperate with allies, but its desire to destroy often overcomes its better sense. It seizes any opportunity to use *raging storm*, even if it catches an ally in the area of effect.

JIM NELSON

## Storm That Walks Lore

**Arcana DC 28:** A storm that walks is a literal thunderstorm given malevolent life. Any who get too close become more vulnerable to its devastating attacks.

After creating the first storm that walks, the primordials began to experiment with crafting the elemental soldiers known as archons.

**Arcana DC 33:** Different legends attribute the origin of the first storm that walks to Mual-Tar, the Thunder Serpent, or to Iktha-Lau, the Ever Empty. Perhaps the two cooperated in its creation. Today, these abominations hold no allegiance to any primordial.

## Encounter Groups

A storm that walks hates all nonelemental living things and barely tolerates the presence of other creatures. It sometimes works as a member of a group for the opportunity to destroy more victims. It attracts elemental creatures that share its nature and might even let them live.

**Level 29 Encounter (XP 91,000)**
- 2 storm gorgons (level 26 skirmisher, *MM* 143)
- 1 storm that walks (level 28 solo controller)
- 1 thunderblast cyclone (level 26 artillery, *MM* 105)

# ARCHON

Shock troops and soldiers of the primordials, the archons formed armies to stand against the forces of the gods during the Dawn War. After their creators fell, the archons continued to serve powerful beings of the Elemental Chaos. They even follow other creatures that support their cause: to restore rulership of the world to the primordials.

## Iron Archon

The most violent of their kind, iron archons are quick to initiate bloodshed.

**Iron Archon Interceptor** **Level 14 Soldier**
Medium elemental humanoid XP 1,000

**Initiative** +14 **Senses** Perception +12
**HP** 144; **Bloodied** 72; see also *blood rust*
**AC** 30 (28 while bloodied); **Fortitude** 28, **Reflex** 26 (25 while bloodied), **Will** 26
**Immune** disease, poison; **Resist** 15 lightning; see also *lightning leap*
**Speed** 6

⊕ **Greatsword** (standard; at-will) ✦ **Weapon**
+21 vs. AC; 2d10 + 4 damage, and the target is marked until the end of the iron archon interceptor's next turn.

↯ **Intercepting Slash** (immediate interrupt, when an enemy marked by the interceptor and within 3 squares of it makes an attack that does not include the interceptor; at-will) ✦ **Weapon**
The iron archon interceptor shifts into the nearest empty square adjacent to the target and makes an attack; +21 vs. AC; 2d10 + 4 damage, and the target is weakened until the end of the interceptor's next turn.

**Blood Rust** (while bloodied) ✦ **Poison**
The iron archon interceptor is filmed in a poisonous rust and flies into a rage. It takes a -2 penalty to AC and a -1 penalty to Reflex, and targets hit by its weapon attacks also take ongoing 10 poison damage (save ends).

**Lightning Leap**
Whenever an iron archon interceptor is hit by a lightning power or is subject to an effect that deals lightning damage, it can shift 3 squares as a free action.

**Alignment** Chaotic evil **Languages** Primordial
**Str** 22 (+13) **Dex** 20 (+12) **Wis** 20 (+12)
**Con** 24 (+14) **Int** 15 (+9) **Cha** 15 (+9)
**Equipment** greatsword

### Iron Archon Interceptor Tactics

An interceptor chooses a foe and sticks with it. However, even when focused on a given target, it chooses a position that lets it move to flank, or tempts a marked enemy into drawing an *intercepting slash*.

### Iron Archon Crescent Blade Tactics

Crescent blades are opportunistic attackers. They deliberately draw the ire of melee strikers, then leap away and wait for a chance to attack any targets marked by allies such as iron archon interceptors.

**Iron Archon Crescent Blade** **Level 16 Skirmisher**
Medium elemental humanoid XP 1,400

**Initiative** +17 **Senses** Perception +13
**HP** 159; **Bloodied** 79; see also *blood rust*
**AC** 30 (28 while bloodied); **Fortitude** 29, **Reflex** 30 (29 while bloodied), **Will** 28
**Immune** disease, poison; **Resist** 15 lightning; see also *lightning leap*
**Speed** 8

⊕ **Sickle** (standard; at-will) ✦ **Weapon**
+21 vs. AC; 1d8 + 7 damage (2d8 + 7 against marked targets).

↯ **Twin Sickles** (standard; at-will)
The iron archon crescent blade makes two sickle attacks. It can shift before, between, or after these attacks, up to a total of 2 squares.

↯ **Roll With It** (immediate reaction, when hit by a melee or close attack; recharge ⚅ and when first bloodied)
The iron archon crescent blade shifts its speed. If it ends this movement in a space adjacent to a marked enemy, it can then make a sickle attack against a marked enemy as a free action.

**Blood Rust** (while bloodied) ✦ **Poison**
The iron archon crescent blade is filmed in a poisonous rust and flies into a rage. It takes a -2 penalty to AC and a -1 penalty to Reflex, and targets hit by its weapon attacks also take ongoing 10 poison damage (save ends).

**Lightning Leap**
Whenever an iron archon crescent blade is hit by a lightning power or is subject to an effect that deals lightning damage, it can shift 3 squares as a free action.

**Alignment** Chaotic evil **Languages** Primordial
**Str** 21 (+13) **Dex** 25 (+15) **Wis** 21 (+13)
**Con** 23 (+14) **Int** 17 (+11) **Cha** 15 (+10)
**Equipment** two sickles

### Iron Archon Lore

**Arcana DC 20:** Iron archons are aggressive fighters that rarely take on defensive assignments such as guard duty. They are brutally direct but use limited tactics to gain an advantage.

**Arcana DC 25:** Crescent blades are masters of exploiting foes' weaknesses. They slash with their twin sickles against any enemy whose attention is drawn to an ally that marked it.

Iron archons were not among the first creations of the primordials. They appeared later, inspired by the mortal races' discovery of crafting weapons from iron and other metals.

## Mud Archon

Every army needs scouts, ambushers, and assassins. Although mud archons are capable of stand-up combat, they excel at the stealthy strategies of guerrilla warfare.

### Mud Archon Skulker Tactics

A mud archon skulker prefers to lie in wait in sliding mud form, using *shifting mud* to attack without losing combat advantage. It assumes its normal form to attack a prone target, then reverts to its sliding mud form and attempts to hide so it can repeat the attack.

**Mud Archon Skulker** **Level 14 Lurker**
Medium elemental humanoid (earth, water) XP 1,000

**Initiative** +16 **Senses** Perception +11
**HP** 112; **Bloodied** 56
**AC** 28; **Fortitude** 27, **Reflex** 26, **Will** 25
**Immune** disease, poison
**Speed** 7 (swamp walk); see also *sliding mud form*

⊕ **Spiked Chain** (standard; at-will) ✦ **Weapon**
Reach 2; +19 vs. AC; 2d4 + 6 damage, and the target is knocked prone.

↯ **Shifting Mud** (free, when the mud archon skulker moves into an enemy's space; only while in sliding mud form; at-will)
Targets the triggering enemy; +17 vs. Reflex; the target is knocked prone and immobilized until the end of the skulker's next turn.

**Sliding Mud Form** (standard; at-will) ✦ **Polymorph**
The mud archon skulker transforms into an oozelike mass of mud. While in sliding mud form, the skulker is insubstantial and can attempt to become hidden if it has cover or concealment. While squeezing in this form, it moves at full speed, provokes no opportunity attacks for squeezing, and does not take a -5 penalty to attack rolls for squeezing. It can shift 4 squares as a move action and can move through enemies' spaces during this move. it cannot manipulate objects or make attacks except for its *shifting mud* power. The mud archon skulker can revert to its normal form as a minor action.

**Strike the Fallen**
Whenever a mud archon skulker hits a prone enemy with a melee attack, it deals 2d8 extra damage.

**Alignment** Chaotic evil **Languages** Primordial
**Skills** Acrobatics +17, Stealth +17
**Str** 23 (+13) **Dex** 20 (+12) **Wis** 18 (+11)
**Con** 22 (+13) **Int** 15 (+9) **Cha** 13 (+8)
**Equipment:** scale armor, spiked chain

## Mud Archon Ambusher Tactics

An ambusher uses *mud spray* as often as possible to keep in motion and gain combat advantage. It often uses *splatter* to move adjacent to its attacker, though it sometimes exploits the additional movement to deal with a pesky controller or ranged combatant.

## Mud Archon Lore

**Arcana DC 20:** Mud archons are the scouts and assassins of the archons, favoring ambush and stealth.

**Arcana DC 25:** Pinning down a mud archon is exceedingly difficult. Skulkers can transform into mobile mud, and ambushers can splatter apart and re-form at a distance.

## Encounter Groups

Like other archons, iron and mud archons work with almost any creature if doing so advances their goals or if they are ordered to do so by a higher power.

**Mud Archon Ambusher** **Level 19 Skirmisher**
Medium elemental humanoid (earth, water) XP 2,400

**Initiative** +17 **Senses** Perception +14
**HP** 183; **Bloodied** 91
**AC** 33; **Fortitude** 32, **Reflex** 31, **Will** 30
**Immune** disease, poison
**Speed** 7 (swamp walk); see also *mud spray*

⊕ **Longsword** (standard; at-will) ✦ **Weapon**
+24 vs. AC; 2d8 + 7 damage, and the target is slowed until the end of the mud archon ambusher's next turn.

**Mud Spray** (move; recharge ⚄ ⚅) ✦ **Polymorph**
The mud archon ambusher transforms into a spray of mud and shifts its speed. During this move, it ignores difficult terrain and can move through enemies' spaces. At the end of the move, it reverts to its normal form. Each enemy adjacent to it at the end of the move grants combat advantage to the ambusher until the end of the ambusher's next turn.

**Splatter** (free, when a critical hit is scored against the mud archon ambusher or when it is first bloodied; at-will)
*Mud spray* recharges, and the ambusher uses it.

**Combat Advantage**
A mud archon ambusher deals 2d6 extra damage against any creature granting combat advantage to it.

**Alignment** Chaotic evil **Languages** Primordial
**Skills** Acrobatics +20, Stealth +20
**Str** 25 (+16) **Dex** 22 (+15) **Wis** 20 (+14)
**Con** 23 (+15) **Int** 15 (+11) **Cha** 15 (+11)
**Equipment:** scale armor, 2 longswords

**Level 14 Encounter (XP 5,400)**
- 2 earth archon ground ragers (level 14 controller, *Monster Manual 2* 14)
- 1 iron archon crescent blade (level 16 skirmisher)
- 2 iron archon interceptors (level 14 soldier)

**Level 18 Encounter (XP 10,400)**
- 1 ice archon rimehammer (level 19 soldier, *MM* 20)
- 2 mud archon ambushers (level 19 skirmisher)
- 1 storm archon tempest weaver (level 21 artillery, *Monster Manual 2* 17)

ZOLTAN BOROS & GABOR SZIKSZAI

# DEMON, BLIGHT-BORN

From the moment that the festering cyst of the Abyss was formed, horrors unimaginable came into existence. Demons slouched from that tainted womb, and its corruption twisted primordials into demon princes. But other inhabitants of the Elemental Chaos were also poisoned by utter evil. Djinns and efreets, archons and elementals, even slaads were caught in the horrific and unholy emanations. Like the demon lords, these creatures were either transformed into their vile forms at the creation of the Abyss or are descendants of others who were.

They are the blight-born, demons of the purest elements made anything but pure.

## Dust Demon

The aftermath of the Abyss's creation engulfed a tribe of djinns, scouring away portions of their flesh and souls until they were little more than sentient wind and bits of debris. The resulting blight-born demons, known as dust demons, appear as whirlwinds of dirt, dust, teeth, and broken bone that whip through one another so that it is impossible to tell where one ends and the next begins. Driven insane by their transformation, dust demons kill and maim out of endless rage directed against all creatures that do not suffer as they do.

### Dust Demon Tactics

A dust demon whirls through and around its prey, attempting to catch one or two foes in its *whirlwind sweep* while pummeling the others with basic attacks. It releases some of its constituent dust wisps to overwhelm a single target that is near death, vulnerable to damage, or close to a cliff edge or other hazard. If a dust demon is bloodied by an enemy, it releases a blast of wind that forces the attacker away.

### Dust Demon Lore

**Arcana DC 18:** Dust demons are the result of a family of djinns that were partly torn apart by abyssal forces; their remains were corrupted into blight-born demons. A dust demon consists of several entities bound together in its unholy winds, some of which escape the windstorm in times of stress to wreak individual havoc.

**Arcana DC 23:** Dust demons have no real society. Their constituent wisps hunger only to shred and destroy. The souls of creatures that die while swept up in a dust demon plunge into the Abyss, forever to suffer as the playthings of demons. But if a dust wisp could be captured, healed of its madness and taint, and returned to the dust demon of which it is a part, the entire djinn tribe would be cleansed—or so the legend goes.

**Dust Demon** **Level 15 Elite Controller**
Large elemental magical beast (air, demon) XP 2,400

**Initiative** +14 **Senses** Perception +12; darkvision
**Buffeting Winds** aura 5; each creature in the aura takes a -2 penalty to attack rolls with ranged and area attacks.
**HP** 296; **Bloodied** 148
**AC** 29; **Fortitude** 27, **Reflex** 29, **Will** 25
**Resist** 10 variable (3/encounter), half damage from melee and ranged attacks; **Vulnerable** 10 against close and area attacks
**Saving Throws** +2
**Speed** fly 10 (hover)
**Action Points** 1

⊕ **Wind and Thunder** (standard; at-will) ✦ **Thunder**
Reach 2; +19 vs. Fortitude; 1d8 + 7 damage plus 1d8 thunder damage, and the dust demon slides the target 3 squares. The dust demon can then shift 1 square or move 3 squares as a free action.

ǂ **Whirlwind Sweep** (standard; at-will) ✦ **Thunder**
The dust demon moves half its speed and can move through enemies' spaces. This movement does not provoke opportunity attacks. At any point during the move, it makes an attack against a Large or smaller creature within reach: reach 2; +19 vs. Reflex; the target is grabbed and pulled into the dust demon's space. Until the grab ends, the target is dazed and takes ongoing 10 damage and ongoing 5 thunder damage. When the grab ends, the target shifts to a square of its choice adjacent to the dust demon.

A dust demon can grab one Large creature, two Medium creatures, or four Small or smaller creatures, and it can move normally while it has creatures grabbed.

**Dust Horde** (standard; encounter)
Five dust wisps appear, each in an unoccupied square within 2 squares of the dust demon. Each wisp takes a move action and a standard action right away and thereafter acts immediately after the dust demon's initiative count. When a dust wisp is reduced to 0 hit points, the dust demon that created it takes 5 damage. Characters do not earn experience points for killing dust wisps created by this power.

**Bloodied Winds** (when first bloodied by an attack; encounter)
The dust demon slides the triggering attacker 4 squares.

**Alignment** Chaotic evil **Languages** Abyssal, Primordial

| | | |
|---|---|---|
| **Str** 18 (+11) | **Dex** 24 (+14) | **Wis** 20 (+12) |
| **Con** 20 (+12) | **Int** 14 (+9) | **Cha** 17 (+10) |

**Dust Wisp** **Level 15 Minion Controller**
Small elemental humanoid (air, demon) XP 300

**Initiative** +14 **Senses** Perception +12; darkvision
**Buffeting Winds** aura 2; each creature within the aura takes a -2 penalty to attack rolls with ranged and area attacks.
**HP** 1; a missed attack never damages a minion.
**AC** 29; **Fortitude** 27, **Reflex** 29, **Will** 25
**Speed** fly 10 (hover)

⊕ **Wind and Thunder** (standard; at-will) ✦ **Thunder**
+19 vs. Fortitude; 7 damage plus 4 thunder damage, and the dust wisp slides the target 3 squares. The dust wisp can then shift 1 square or move 3 squares as a free action.

**Alignment** Chaotic evil **Languages** Abyssal, Primordial

| | | |
|---|---|---|
| **Str** 18 (+11) | **Dex** 24 (+14) | **Wis** 20 (+12) |
| **Con** 20 (+12) | **Int** 14 (+9) | **Cha** 17 (+10) |

# Ash-Wrought Soulburner

Formerly efreets, ash-wrought soulburners feed on the warmth of living beings. Though they burn flesh, their feeding drains body heat, leaving behind icy corpses rather than cinders.

**Ash-Wrought Soulburner** **Level 19 Controller**
Large elemental humanoid (demon, fire) XP 2,400

**Initiative** +15 **Senses** Perception +13; darkvision
**HP** 178; **Bloodied** 89
**AC** 32; **Fortitude** 32, **Reflex** 31, **Will** 31
**Resist** 15 fire, 15 variable (2/encounter); **Vulnerable** cold (an ash-wrought soulburner that takes cold damage is slowed until the end of its next turn)
**Speed** 8, fly 8 (clumsy)

⨁ **Chilling Fist** (standard; at-will) ✦ **Cold**
Reach 2; +24 vs. AC; 3d6 + 8 cold damage.

**Soulfire Theft** (standard; at-will) ✦ **Cold**
Ranged 15; +23 vs. Fortitude; 1d10 + 8 cold damage, and the target takes ongoing 5 cold damage and is slowed (save ends both). When any creature fails a saving throw against this power, the ash-wrought soulburner recharges either *burning ash storm* or *soulfire inferno*.

**Soulfire Inferno** (standard; encounter) ✦ **Fire**
Ranged 15; +23 vs. Reflex; 2d8 + 7 fire damage, and ongoing 10 fire damage (save ends).

**Burning Ash Storm** (standard; encounter) ✦ **Fire, Zone**
Area burst 2 within 15; the burst creates a zone of burning ash that lasts until the end of the ash-wrought soulburner's next turn. Any creature that starts its turn within the zone takes 2d6 + 3 fire damage. The zone blocks line of sight. *Sustain Minor:* The zone persists, and the soulburner can move it 3 squares.

**Alignment** Chaotic evil **Languages** Abyssal, Primordial
**Skills** Intimidate +20
**Str** 25 (+16) **Dex** 22 (+15) **Wis** 9 (+8)
**Con** 18 (+13) **Int** 11 (+9) **Cha** 23 (+15)

## Ash-Wrought Soulburner Tactics

The soulburner begins combat with its encounter powers, using *burning ash storm* to protect itself and gain cover from enemies and *soulfire inferno* against a dangerous foe. It then falls back to *soulfire theft* to recharge its more powerful attacks while sustaining *burning ash storm*.

## Ash-Wrought Soulburner Lore

**Arcana DC 22:** Ash-wrought soulburners are elemental creatures that were corrupted into blight-born demons by the creation of the Abyss. They were once efreets, but the abyssal taint has caused their inner fires to go out. Now they must draw heat and life energy from other beings to survive.

**Arcana DC 27:** Ice devils sometimes enslave ash-wrought soulburners. Their chill nature give the devils a natural advantage over the heat-starved demons.

# Consumptive Swarm

Prolonged exposure to the Abyss normally transforms slaads into void slaads, but those that were bathed in energy at the birth of the Abyss were more dramatically altered. From those first warped slaads burst swarms of ravenous parasites combining the worst aspects of slaad tadpoles and demons.

**Consumptive Swarm** **Level 21 Elite Skirmisher**
Large elemental beast (demon, swarm) XP 6,400

**Initiative** +20 **Senses** Perception +15; darkvision
**Swarm Attack (Acid)** aura 1; each enemy that starts its turn within the aura takes 7 acid damage.
**HP** 400; **Bloodied** 200
**AC** 35; **Fortitude** 33, **Reflex** 34, **Will** 30
**Immune** disease; **Resist** 20 variable (3/encounter), half damage from melee and ranged attacks; **Vulnerable** 15 against close and area attacks
**Saving Throws** +2
**Speed** 6; see also *aqueous shift*
**Action Points** 1

⨁ **Swarm of Jaws** (standard; at-will) ✦ **Disease**
+26 vs. AC; 3d6 + 9 damage, and the swarm makes a secondary attack against the target. *Secondary Attack:* +24 vs. Fortitude; the target is exposed to slimy doom (*DMG* 50).

**Ravenous Stampede** (standard; at-will) ✦ **Acid, Disease**
The consumptive swarm shifts its speed and makes an attack against each creature it moves adjacent to during the move: +24 vs. Reflex; 1d6 + 3 damage plus 1d6 + 3 acid damage, and the swarm makes a secondary attack against the target. *Secondary Attack:* +24 vs. Fortitude; the target is exposed to slimy doom (*DMG* 50).

**Consumptive Spew** (standard; recharges when first bloodied) ✦ **Acid**
Close blast 5; +24 vs. Reflex; 4d6 + 9 acid damage, and ongoing 5 acid damage (save ends). *Effect:* Six consumptive parasites appear, each in an unoccupied square within or adjacent to the blast. They act immediately after the consumptive swarm's initiative count. Characters do not earn experience points for killing consumptive parasites created by this power.

**Currents of Chaos** (minor; at-will)
The consumptive swarm shifts 1 square.

**Aqueous Shift**
A consumptive swarm ignores difficult terrain while shifting.

**Alignment** Chaotic evil **Languages** understands Abyssal
**Str** 18 (+14) **Dex** 26 (+18) **Wis** 21 (+15)
**Con** 24 (+17) **Int** 3 (+6) **Cha** 9 (+9)

**Consumptive Parasite** **Level 16 Minion Skirmisher**
Small elemental beast (demon) XP 350

**Initiative** +15 **Senses** Perception +12; darkvision
**HP** 1; a missed attack never damages a minion.
**AC** 30; **Fortitude** 28, **Reflex** 29, **Will** 27
**Immune** disease; **Resist** 15 variable (2/encounter)
**Speed** 6; see also *chaotic shift*

⨁ **Digestive Bite** (standard; encounter) ✦ **Acid**
+19 vs. Fortitude; 4 acid damage, and the target gains vulnerable 5 acid (save ends).

**Chaotic Shift** (move; at-will)
The consumptive parasite shifts 2 squares.

**Alignment** Chaotic evil **Languages** understands Abyssal
**Str** 9 (+7) **Dex** 24 (+15) **Wis** 19 (+12)
**Con** 21 (+13) **Int** 3 (+4) **Cha** 9 (+7)

## Consumptive Swarm Tactics

A consumptive swarm begins combat with *consumptive spew*, adding minions that weaken foes against its acidic attacks. It then moves into melee, continually shifting to stay near weaker targets and keep them in its acidic aura while avoiding tougher combatants. Once it is bloodied, it uses *consumptive spew* again as soon as possible.

Consumptive parasites prefer to gang up on one foe and take advantage of flanking opportunities. When fighting alongside a parent swarm, they move to keep dangerous foes away from it.

## Consumptive Swarm Lore

**Arcana DC 20:** The consumptive swarm is one of the blight-born, demons resulting from the corruption of elemental creatures at the birth of the Abyss. The parasites that make up the swarm are warped slaad tadpoles. Although they are incapable of speech, they understand the Abyssal tongue.

**Arcana DC 25:** Intelligent slaads approve of the demonic transformation, reveling in the opportunity for even their indirect spawn to infest creation. More than one slaad-worshiping cult has been destroyed by misguided attempts to breed consumptive parasites.

### Sibling Rivalry

Blight-born demons and chaos shards (*Monster Manual 2*, page 34) are both spawned at the boundary of the Abyss, where its corrupting power bleeds into and warps the Elemental Chaos. While the blight-born are elemental creatures twisted by the Abyss, chaos shards are crystals of the Plane Below that were not only corrupted but given life by abyssal energy.

Given their innately chaotic evil and destructive instincts, the two groups of creatures are unlikely to have any particular affinity to one another. Sages were surprised to discover, though, that each harbors a murderous, undying hatred toward the other. Blight-born and chaos shards sometimes work with creatures that can advance their destructive agendas, such as other demons, slaads, and elementals, but neither group will ally with the other, even abandoning other efforts to attack that enemy on sight. Nothing less than utter extermination of the hated group will satisfy the creatures' rage.

Some theories speculate that the two sorts of beings are competitors for the same territory and position in the Elemental Chaos. Others suggest that each sees the other as an inferior copy of itself, an impure mockery to be annihilated.

# Writhing Crag

Hideous amalgamations of jagged stone, writhing crags love the feel of flesh and bone being crushed beneath their flailing limbs. They have traits of both ropers and xorns and might be descended from either—or perhaps both, fused by the same corruptive taint that transformed them into demons.

**Writhing Crag** **Level 23 Elite Soldier**
Huge elemental magical beast (demon, earth) XP 10,200

**Initiative** +18 **Senses** Perception +17; all-around vision, darkvision
**HP** 434; **Bloodied** 217
**AC** 39; **Fortitude** 37, **Reflex** 31, **Will** 35
**Immune** petrification; **Resist** 25 variable (3/encounter)
**Saving Throws** +2
**Speed** 6 (earth walk), burrow 4 (tunneling), climb 6 (spider climb)
**Action Points** 1

⊕ **Stone Reach** (standard; at-will)
Reach 5; +30 vs. AC; 2d6 + 5 damage, and the target is grabbed.

**Triple Reach** (standard; at-will)
The writhing crag makes three *stone reach* attacks.

**Reel** (minor; at-will)
Reach 5; targets a creature grabbed by the writhing crag; +28 vs. Fortitude; the target is pulled 5 squares.

**Flailing Tentacles** (standard; recharge ⚄ ⁞⁞)
Reach 5; +30 vs. AC; 3d6 + 9 damage, and the writhing crag slides the target 5 squares and knocks it prone. Each enemy adjacent to the target and within the writhing crag's reach (5 squares) takes 9 damage.

**Stone-Melding Slam** (standard; usable only against a target touching or adjacent to a stone surface; recharge ⁞⁞)
Reach 5; +30 vs. AC; 3d6 + 9 damage, and the target is partly absorbed into the surface, causing it to become immobilized (save ends). *First Failed Saving Throw:* The target is restrained (save ends). *Second Failed Saving Throw:* The target is drawn entirely into the stone, leaving a faint imprint (no save). The target does not die but remains in stasis until it is freed from the stone.

**Tentacle Grab**
A writhing crag can attack and grab with up to three tentacles at a time. While grabbing an enemy, it can act normally, but it can't use that tentacle for another attack. Enemies can attack the tentacle to make the writhing crag let go of a grabbed creature; the tentacle's defenses are the same as the crag's. An attack that hits a tentacle does not harm the writhing crag but causes it to let go and retract the tentacle.

**Earth Glide**
A writhing crag can burrow through solid stone as if it were loose earth.

**Stony Body**
A writhing crag that does not move and retracts its tentacles resembles a jagged rock formation, stalagmite, or stalactite. In this form, the writhing crag can be recognized only with a successful DC 35 Perception check.

**Alignment** Evil **Languages** Abyssal, Primordial
**Skills** Athletics +25, Stealth +21 (only in caves and rocky environments)

| | | |
|---|---|---|
| **Str** 28 (+20) | **Dex** 20 (+16) | **Wis** 22 (+17) |
| **Con** 25 (+18) | **Int** 13 (+12) | **Cha** 23 (+17) |

## Writhing Crag Tactics

Unexpectedly stealthy, a writhing crag often attempts to surprise its targets. It takes a few rounds to assess the foes, then uses *stone-melding slam* to neutralize the most dangerous melee combatant, focusing on spellcasters and ranged attackers. It uses *earth glide* to gain optimal tactical position but rarely flees from battle. Most writhing crags fight to the death, believing that they cannot be defeated.

## Writhing Crag Lore

**Arcana DC 24:** Writhing crags are blight-born demons, elementals corrupted by the creation of the Abyss. They might be descended from xorns or ropers, or from some foul combination of both.

**Arcana DC 29:** A writhing crag can engulf a creature in solid stone. Up to 24 hours after a writhing crag's death, its limbs retain the ability to move through stone. They can be used to retrieve creatures it has buried without resorting to tedious rock cutting.

# Encounter Groups

Like more traditional demons, blight-born care for little more than wanton destruction. They might cooperate with other demons—or, on occasion, slaads, elementals, or humanoid summoners—if doing so promises the opportunity for violence, but such alliances are temporary at best.

**Level 19 Encounter (XP 13,200)**
- 1 ash-wrought soulburner (level 19 controller)
- 1 goristro (level 19 elite brute, *MM* 55)
- 3 rockfire dreadnoughts (level 18 soldier, *MM* 104)

**Level 23 Encounter (XP 28,700)**
- 2 earthwind ravagers (level 23 controller, *MM* 104)
- 2 hezrous (level 22 brute, *MM* 56)
- 1 writhing crag (level 23 elite soldier)

JASON A. ENGLE

# Eisk Jaat

Bitter and deadly as the north wind, eisk jaats are creatures of primordial cold. Although they are descended from dwarves enslaved by giants, they are twisted in body, mind, and soul. Eisk jaats often serve frost giants but can be found in any realm of harsh cold, usually working toward nefarious ends.

## Eisk Jaat Warrior

The infantry of an eisk jaat war party, these lumbering warriors swing picks carved from primordial ice.

**Eisk Jaat Warrior** **Level 15 Minion Skirmisher**
Medium elemental humanoid (cold) XP 300

**Initiative** +13 **Senses** Perception +12
**HP** 1; a missed attack never damages a minion.
**AC** 29; **Fortitude** 28, **Reflex** 26, **Will** 27
**Immune** slowed; **Resist** 15 cold
**Speed** 5 (ice walk)

⊕ **Icy Pick** (standard; at-will) ✦ **Cold, Weapon**
+20 vs. AC; 7 cold damage (crit 10)

**Slide Away** (immediate interrupt, when hit by a close or area attack; encounter)
The eisk jaat warrior shifts 3 squares.

**Alignment** Evil **Languages** Giant
**Str** 17 (+10) **Dex** 19 (+11) **Wis** 20 (+12)
**Con** 23 (+13) **Int** 10 (+7) **Cha** 10 (+7)
**Equipment** hide armor, icy pick

### Eisk Jaat Warrior Tactics

Eisk jaat warriors shamble into combat, cutting out a single foe from the group. Once that victim falls, they move on to the next. Though they seem awkward, they can evade close and area attacks with surprising speed and grace.

## Eisk Jaat Rimebolter

Wielding crossbows of primordial ice, rimebolters rain freezing death on their enemies.

**Eisk Jaat Rimebolter** **Level 15 Artillery**
Medium elemental humanoid (cold) XP 1,200

**Initiative** +13 **Senses** Perception +12
**HP** 115; **Bloodied** 57
**AC** 27; **Fortitude** 26, **Reflex** 28, **Will** 27
**Immune** slowed; **Resist** 15 cold
**Speed** 5 (ice walk)

⊕ **Frost Axe** (standard; at-will) ✦ **Cold, Weapon**
+20 vs. AC; 1d10 + 5 damage plus 1d10 cold damage.

⊰ **Rimebolt Crossbow** (standard; at-will) ✦ **Cold, Weapon**
Ranged 15/30; +22 vs. AC; 2d8 + 5 cold damage, and the target is slowed until the end of the eisk jaat rimebolter's next turn.

⊰ **Winterbite Bolt** (standard; recharge ⚄ ⁞⁞) ✦ **Cold, Weapon**
Ranged 15/30; +20 vs. Fortitude; 2d8 + 5 cold damage, and the target takes ongoing 10 cold damage and is slowed (save ends both). Until the target saves, any creature that starts its turn within 2 squares of the target takes 5 cold damage.

**Slide Away** (immediate interrupt, when hit by a melee or close attack; recharges when first bloodied)
The eisk jaat rimebolter shifts 5 squares.

**Icebound Footing**
When an effect pulls, pushes, or slides an eisk jaat, the eisk jaat moves 1 square less than the effect specifies. Also, an eisk jaat can make a saving throw to avoid being knocked prone.

**Alignment** Evil **Languages** Giant
**Str** 17 (+10) **Dex** 23 (+13) **Wis** 21 (+12)
**Con** 19 (+11) **Int** 10 (+7) **Cha** 12 (+8)
**Equipment** chainmail, frost axe, rimebolt crossbow, 20 bolts

### Eisk Jaat Rimebolter Tactics

Rimebolters take cover and riddle their enemies with rimebolt crossbow bolts. They enjoy splitting up groups with *winterbite bolts*, then picking off targets one at a time. When melee attackers threaten to hem in a rimebolter, it uses *slide away* to escape.

## Eisk Jaat Mauler

These eccentric eisk jaats often live amid winter wolves, which view them as pack leaders.

**Eisk Jaat Mauler** **Level 16 Brute (Leader)**
Medium elemental humanoid (cold) XP 1,400

**Initiative** +12 **Senses** Perception +14
**Pack Master** aura 5: each elemental beast ally that starts its turn within the aura rolls twice when recharging a power that recharges on a die roll, taking the higher result.
**HP** 194; **Bloodied** 97
**AC** 28; **Fortitude** 29, **Reflex** 26, **Will** 28
**Immune** slowed; **Resist** 15 cold
**Speed** 5 (ice walk)

⊕ **Frost Maul** (standard; at-will) ✦ **Cold, Weapon**
+19 vs. AC; 2d6 + 5 damage plus 2d6 cold damage, and the target is slowed until the end of the eisk jaat mauler's next turn.

⸸ **Icebind Strike** (standard; recharge ⚄ ⁞⁞) ✦ **Cold, Weapon**
Targets a prone or slowed creature; +17 vs. Fortitude; 4d6 + 5 cold damage, and the target is restrained (save ends). *Aftereffect:* The target is slowed until the end of the eisk jaat mauler's next turn.

**Icebound Footing**
When an effect pulls, pushes, or slides an eisk jaat, the eisk jaat moves 1 square less than the effect specifies. Also, an eisk jaat can make a saving throw to avoid being knocked prone.

**Alignment** Evil **Languages** Giant
**Str** 20 (+13) **Dex** 19 (+12) **Wis** 22 (+14)
**Con** 24 (+15) **Int** 10 (+8) **Cha** 12 (+9)
**Equipment** hide armor, frost maul

### Eisk Jaat Mauler Tactics

A mauler wades through combat fearlessly, beating down foes with its frost maul and directing beast companions to the slowed prey. It follows up with *icebind strike* against targets hit by frost maul attacks.

## Eisk Jaat Mystic

Masters of winter's fury, mystics are the spiritual leaders of the eisk jaats. Their word is law. Other eisk jaats lay down their lives to protect a mystic, believing that members of this sacred caste are the true chosen of primordial cold.

| **Eisk Jaat Mystic** | **Level 18 Lurker** |
|---|---|
| Medium elemental humanoid (cold) | XP 2,000 |

**Initiative** +15 **Senses** Perception +16
**HP** 136; **Bloodied** 68
**AC** 32; **Fortitude** 30, **Reflex** 29, **Will** 31
**Immune** slowed; **Resist** 15 cold
**Speed** 5 (ice walk)

**Rime Mace** (standard; at-will) ✦ **Cold, Weapon**
+23 vs. AC; 1d6 + 3 damage, and ongoing 10 cold damage (save ends).

**Chilling Ray** (standard; at-will) ✦ **Cold**
Ranged 10; +21 vs. Reflex; 2d6 + 7 cold damage, and the target gains vulnerable 10 cold until the end of the eisk jaat mystic's next turn.

**Blizzard Cloak** (standard; recharge ⚄ ⚅) ✦ **Cold, Zone**
Close burst 2; the burst creates a zone of whirling snow and wind centered on the eisk jaat mystic that lasts until the end of the mystic's next turn. When the mystic moves, the zone moves with it, remaining centered on it. Any enemy that ends its turn within the zone takes 15 cold damage and is slowed until the end of its next turn. The zone's space is heavily obscured.
*Sustain Minor:* The zone persists.

**Winter's Fury** (standard; recharges when *blizzard cloak* ends) ✦ **Cold**
Area burst 1 within 10; +20 vs. Fortitude; 2d8 + 7 cold damage, and the target is immobilized (save ends). If the target is already immobilized, prone, or slowed, it is instead restrained (save ends).

**Icebound Footing**
When an effect pulls, pushes, or slides an eisk jaat, the eisk jaat moves 1 square less than the effect specifies. Also, an eisk jaat can make a saving throw to avoid being knocked prone.

**Alignment** Evil **Languages** Giant
**Str** 17 (+12) **Dex** 14 (+11) **Wis** 24 (+16)
**Con** 22 (+15) **Int** 21 (+14) **Cha** 14 (+11)
**Equipment** robes, rime mace

## Eisk Jaat Ice Mystic Tactics

After opening with *chilling ray*, the mystic moves near several enemies and throws down a *blizzard cloak*. When *blizzard cloak* recharges, the mystic uses it, unleashes *winter's fury*, and starts the tactic all over again. It makes melee attacks only to deal with those bold or disoriented enough to approach within its reach.

## Eisk Jaat Lore

**Arcana DC 20:** Like azers and galeb duhrs, eisk jaats are the descendants of dwarves who were once enslaved by giants and twisted by elemental energy. Unlike their kin, eisk jaats developed cold hearts, vicious attitudes, and unparalleled greed. Many worship the frost titan king Thrym as their callous god.

**Arcana DC 25:** Some eisk jaats threw off the yoke of their frost giant masters and traveled to the cold regions of the world, the Feywild, and the Shadowfell. Time and exposure to other creatures has tempered their wickedness. They exist independently or serve other powers, such as the fey of the Winter Court and the Raven Queen's forces near Letherna.

## Encounter Groups

Eisk jaats often serve frost giants and revere primordials of cold, particularly Thrym. They can accompany other creatures of cold, as well as agents of winter and death.

**Level 16 Encounter (7,000 XP)**
- 1 eisk jaat mauler (level 16 brute)
- 8 eisk jaat warriors (level 15 minion)
- 1 rime hound (level 17 elite skirmisher, *Monster Manual 2* 211)

**Level 21 Encounter (16,000 XP)**
- 1 eisk jaat mystic (level 18 lurker)
- 3 eisk jaat rimebolters (level 15 artillery)
- 3 frost giants (level 17 brute, *Monster Manual 2* 122)
- 1 frost titan (level 20 elite brute, *Monster Manual 2* 123)

JASON A. ENGLE

A wide variety of elementals exist throughout the Plane Below, filling many different roles. Five new kinds are described here.

## Scorchwind Phantom

This mass of steam interspersed with flashes of fire glides across the chaotic landscape.

| **Scorchwind Phantom** | **Level 9 Lurker** |
|---|---|
| Medium elemental magical beast (fire, water) | XP 400 |

**Initiative** +13 **Senses** Perception +7
**HP** 54; **Bloodied** 27
**AC** 23; **Fortitude** 21, **Reflex** 22, **Will** 20
**Immune** disease, poison; **Resist** insubstantial; **Vulnerable** cold (a scorchwind phantom that takes cold damage is slowed and cannot use *disperse* until the end of the attacker's next turn)
**Speed** fly 8 (hover); phasing

⊕ **Scorchwind Lash** (standard; at-will) ✦ **Fire**
Reach 2; +12 vs. Reflex; 2d4 + 5 fire damage, and the target grants combat advantage until the end of the scorchwind phantom's next turn.

↓ **Roiling Surge** (standard; recharge ⁙ ⁝⁝, after the scorchwind phantom uses *disperse*) ✦ **Fire**
The scorchwind phantom flies its speed and can move through enemies' spaces. This movement does not provoke opportunity attacks. The scorchwind phantom makes an attack against any creature whose space it moves into: +12 vs. Reflex; 2d8 + 5 fire damage, and the target grants combat advantage until the end of the scorchwind phantom's next turn.

**Disperse** (standard; at-will) ✦ **Polymorph**
The scorchwind phantom transforms into scalding steam occasionally flashing with motes of fire. Until it resumes its normal form, it cannot attack or be attacked. At the start of its turn, it can resume its normal form in any space within 8 squares of its position when it used *disperse*; until the end of that turn, its attacks make targets blinded instead of causing them to grant combat advantage. A creature that encounters a scorchwind phantom in steam form can recognize it as a creature with a successful DC 24 Perception check.

**Alignment** Unaligned **Languages** Primordial
**Skills** Stealth +14

| | | |
|---|---|---|
| **Str** 10 (+4) | **Dex** 20 (+9) | **Wis** 17 (+7) |
| **Con** 18 (+8) | **Int** 7 (+2) | **Cha** 7 (+2) |

### Scorchwind Phantom Tactics

A scorchwind phantom uses *disperse* to blend into an area in steam form, waiting for victims to stumble into range. It takes its normal form and launches a *roiling surge*, blinding creatures hit by the attack, then uses *scorchwind lash*. If pressed, it uses *disperse* and waits for *roiling surge* to recharge, then repeats the tactic. Anyone who uses cold powers against a scorchwind phantom becomes its preferred target.

## Ashfrost Assassin

An ashfrost assassin's dark body is a shifting slurry of smoldering ash and ice that constantly melts and refreezes. Its malleable form allows it to move in unexpected ways.

| **Ashfrost Assassin** | **Level 12 Skirmisher** |
|---|---|
| Medium elemental magical beast (cold, fire) | XP 700 |

**Initiative** +14 **Senses** Perception +10
**HP** 121; **Bloodied** 60
**AC** 26; **Fortitude** 23, **Reflex** 26, **Will** 24
**Immune** disease, poison; **Resist** 10 cold, 10 fire
**Speed** 7; see also *flowing slurry*

⊕ **Slam** (standard; at-will) ✦ **Cold, Fire**
+15 vs. Fortitude; 1d6 + 3 cold damage plus 1d6 + 3 fire damage, and the target is knocked prone and cannot stand up until the end of the ashfrost assassin's next turn.

↓ **Ashfrost Slide** (standard; at-will)
The ashfrost assassin moves its speed and can make a slam attack at any point during this movement. It doesn't provoke opportunity attacks when moving away from the target.

⇖ **Ashfrost Torrent** (standard; recharge ⁝⁝, or recharges when the ashfrost assassin takes cold or fire damage) ✦ **Cold, Fire**
Close burst 3; +14 vs. Fortitude; 2d6 + 3 cold damage plus 2d6 +3 fire damage, and the target is knocked prone.

**Combat Advantage**
An ashfrost assassin deals 1d8 extra cold damage and 1d8 extra fire damage against any creature granting combat advantage to it instead of knocking that creature prone.

**Mutable Form**
When squeezing, an ashfrost assassin moves at full speed, provokes no opportunity attacks for squeezing, and does not take a -5 penalty to attack rolls for squeezing.

**Flowing Slurry**
An ashfrost assassin can move across liquid and ignores difficult terrain.

**Alignment** Unaligned **Languages** Primordial
**Skills** Stealth +17

| | | |
|---|---|---|
| **Str** 15 (+8) | **Dex** 22 (+12) | **Wis** 19 (+10) |
| **Con** 17 (+9) | **Int** 7 (+4) | **Cha** 8 (+5) |

### Ashfrost Assassin Tactics

An ashfrost assassin hides in an enclosed space, then surprises its prey with *ashfrost torrent*. It maneuvers around the battlefield with *ashfrost slide*, battering foes to the ground with slam attacks all the while. It hammers a prone foe, then knocks it down again, preferably with a recharged *ashfrost torrent*.

## Sunsearer

A mote of solid light that wanders the Elemental Chaos, the sunsearer scorches all it encounters with blazing light and intense flame.

### Sunsearer Tactics

A sunsearer hovers out of melee range, blistering enemies with *blinding ray* and *sunblast*. Most enemies that get into melee range are blinded, giving the sunsearer an opportunity to increase the distance between itself and its foes.

| **Sunsearer** | **Level 15 Artillery** |
|---|---|
| Medium elemental magical beast (fire) | XP 1,200 |

**Initiative** +14 **Senses** Perception +11
**Dazzling Radiance** aura 1; each enemy that starts its turn within the aura is blinded until the start of its next turn.
**HP** 116; **Bloodied** 58
**AC** 27; **Fortitude** 27, **Reflex** 29, **Will** 26
**Immune** blinded, disease, poison; **Resist** 10 fire, 10 radiant
**Speed** 2 (clumsy), fly 8 (hover)

**Sunstrike** (standard; at-will) ✦ **Fire, Radiant**
+20 vs. Reflex; 1d6 + 3 fire damage plus 1d6 +3 radiant damage.

**Blinding Ray** (standard; at-will) ✦ **Fire, Radiant**
Ranged 10; +20 vs. Fortitude; 1d6 + 3 fire damage plus 1d6 +3 radiant damage, and the target is blinded (save ends).

**Sunblast** (standard; recharge ⚅ ⚄ ⚃, or recharges when the sunsearer takes fire or radiant damage) ✦ **Fire, Radiant**
Area burst 2 within 10; +19 vs. Reflex; 1d8 + 5 fire plus 1d8 + 5 radiant damage, and the target takes a -2 penalty to attack rolls and grants combat advantage (save ends both). *Miss:* Half damage.

**Alignment** Unaligned **Languages** Primordial
**Str** 8 (+6) **Dex** 24 (+14) **Wis** 18 (+11)
**Con** 20 (+12) **Int** 6 (+5) **Cha** 7 (+5)

# Diamondstorm Reaper

The vicious diamondstorm reaper combines the strength and sharpness of diamond with the fluidity of wind.

| **Diamondstorm Reaper** | **Level 20 Soldier** |
|---|---|
| Large elemental magical beast (air, earth) | XP 2,800 |

**Initiative** +18 **Senses** Perception +14
**HP** 188; **Bloodied** 94
**AC** 36; **Fortitude** 34, **Reflex** 32, **Will** 30
**Immune** disease, poison
**Speed** 6

**Slam** (standard; at-will)
+27 vs. AC; 3d6 + 8 damage (crit 3d6 + 26), and the target is marked until the end of the diamondstorm reaper's next turn.

**Reaping** (immediate interrupt, when a creature marked by the reaper moves or shifts out of a square adjacent to it, or makes an attack that does not include the reaper; at-will)
The diamondstorm reaper makes a slam attack against the triggering creature. On a hit, the target's movement ends.

**Diamond Shred** (standard; recharge ⚄ ⚃)
The diamondstorm reaper makes two slam attacks. If both attacks hit the same target, that target is also knocked prone and dazed until the end of the diamondstorm reaper's next turn.

**Diamondstorm** (standard; recharges when first bloodied)
The diamondstorm reaper shifts its speed and can move through enemies' spaces. It makes an attack against each creature whose space it enters: +24 vs. Fortitude; 4d8 + 8 damage (crit 4d8 + 32), and the target is marked until the end of the diamondstorm reaper's next turn.

**Keen Winds**
A diamondstorm reaper can score a critical hit on a roll of 19-20.

**Alignment** Unaligned **Languages** Primordial
**Str** 26 (+18) **Dex** 23 (+16) **Wis** 19 (+14)
**Con** 20 (+15) **Int** 6 (+8) **Cha** 9 (+9)

## Diamondstorm Reaper Tactics

A diamondstorm reaper fearlessly moves around the battlefield, counting on its toughness to protect it. It starts with *diamondstorm* to position itself and control the flow of battle, triggering its *reaping* power against adjacent enemies that try to get away. Then it focuses on pinning its enemies in close combat, using *diamond shred* as often as possible to mark two foes or pummel a single target to the ground. When bloodied, it might use *diamondstorm* to reach the enemy that bloodied it.

# Caustic Slayer

Fine salt crystals and other caustic minerals form a gritty, malleable body around flexible bones of shifting rock, creating a towering form of streaming particles and writhing limbs. Although the creature is enormous, its constituent parts are so fine that it moves with unexpected ease.

| **Caustic Slayer** | **Level 24 Elite Lurker** |
|---|---|
| Huge elemental magical beast (earth) | XP 12,100 |

**Initiative** +25 **Senses** Perception +19
**HP** 356; **Bloodied** 173
**AC** 38; **Fortitude** 35, **Reflex** 37, **Will** 36
**Immune** disease, poison; **Resist** 30 acid
**Saving Throws** +2
**Speed** 7 (earth walk), climb 7; see also *malleable form*
**Action Points** 1

**Slam** (standard; at-will) ✦ **Acid**
Reach 3; +27 vs. Fortitude; 1d10 + 7 damage, and ongoing 10 acid damage (save ends). If the target cannot see the caustic slayer, it instead takes 2d10 + 7 damage, and ongoing 15 acid damage (save ends).

**Eyeburn** (standard; at-will) ✦ **Acid**
Ranged 20; +27 vs. Reflex; 2d6 + 7 acid damage, and the target is blinded until the end of the caustic slayer's next turn.

**Slayer's Fury** (standard; at-will)
The caustic slayer makes two basic attacks.

**Caustic Breath** (standard; recharge ⚄ ⚃) ✦ **Acid**
Close blast 5; +26 vs. Fortitude; 2d10 + 7 acid damage, and the target takes ongoing 10 acid damage and is slowed (save ends both).

**Sight-Burning Cloud** (standard; recharge ⚄ ⚃) ✦ **Acid, Zone**
Close burst 2; the burst creates a zone of corrosive grit centered on the caustic slayer that lasts until the end of its next turn. When the slayer moves, the zone moves with it, remaining centered on it. Any creature that ends its turn within the zone takes 20 acid damage and is blinded until the end of its next turn. The zone's area is heavily obscured for all creatures except the caustic slayer, which treats it as lightly obscured. *Sustain Minor:* The zone persists.

**Malleable Form**
A caustic slayer can squeeze through spaces as though it were a Large creature.

**Alignment** Unaligned **Languages** Primordial
**Skills** Stealth +26
**Str** 23 (+18) **Dex** 28 (+21) **Wis** 25 (+19)
**Con** 23 (+18) **Int** 8 (+11) **Cha** 8 (+11)

## Caustic Slayer Tactics

A caustic slayer hides in a crevice or another area seemingly too small to contain it. When creatures approach, it erupts from hiding, moves in close, and unleashes *caustic breath*. It follows up by spending an action point to use *sight-burning cloud*. Thereafter, it sustains *sight-burning cloud* and pounds on blinded foes. It uses *eyeburn* only against enemies that hang back and make ranged or area attacks.

# Primordial Blot

The primordial blot embodies the forces of creation. It is all elements in one, as if the Elemental Chaos were bound to a finite size and imbued with dim sentience. A primordial blot roams the Elemental Chaos or sometimes other planes. Wherever it finds order and life, it strives to reduces that order and life back to the fundamental chaos from which it arose.

### The Mythic Blot

The primordial blot has captured the attention of some scholars of the Elemental Chaos. Characters who conduct additional research in libraries of the Plane Below can learn the following information about the primordial blot with a DC 30 Arcana check.

The creatures are so rare that their nature is a mystery. Sages are still trying to determine how they form, what they do, and whether they have any purpose. One theory holds that primordial blots are stillborn worlds—blobs of matter quickened with the genesis of new planes of existence that failed for some reason. Thus, they are fonts of inconceivably vast power. This theory implies that there are no new primordial blots, since they all formed early in the history of the cosmos. Those who believe in this idea also wonder if a primordial blot could be somehow induced to complete its transformative process and create a new world.

Other scholars espouse a more prosaic origin for the blot. They hold that the creatures arise under the proper confluence of elemental energy. Such an event is rare even in the Elemental Chaos. Like other, less exotic elementals, primordial blots are somewhat intelligent but driven by instinct to survive and reproduce. They might be able to create more of their kind by reducing large swaths of matter into its raw, primitive form.

One theory claims that primordial blots originated during the Dawn War. Certain writings speak of four primordials who fused their bodies into one so as to better fight their divine foes, forming a composite being of vast power. This entity was unstable, and the attacks of the gods reduced it into multiple blobs of pure elemental chaos that live on. They still seek the same goal as the primordials from which they came: to tear apart the works of their great enemies.

**Primordial Blot** **Level 26 Solo Artillery**
Large elemental magical beast (air, cold, earth, fire) XP 45,000

**Initiative** +22 **Senses** Perception +20
**HP** 968; **Bloodied** 484; see also *primordial surge*
**AC** 39; **Fortitude** 38, **Reflex** 39, **Will** 37
**Immune** disease, petrification, polymorph, poison; **Resist** 25 variable (5/encounter)
**Saving Throws** +5
**Speed** fly 10 (hover)
**Action Points** 2

**Acid Gout** (standard; at-will) ✦ **Acid**
Ranged 15; +31 vs. Reflex; 1d8 + 9 acid damage, and ongoing 15 acid damage (save ends).

**Crushing Earth** (standard; at-will)
Ranged 10; +33 vs. AC; 3d6 + 9 damage, and the target is slowed (save ends).

**Ice Slick** (standard; at-will) ✦ **Cold**
Ranged 10; +31 vs. Reflex; 3d8 + 9 cold damage, and the target is knocked prone.

**Light Beam** (standard; at-will) ✦ **Radiant**
Ranged 20; +31 vs. Reflex; 2d8 + 9 damage, and the target is blinded (save ends).

**Thunderous Grip** (standard; at-will) ✦ **Thunder**
Ranged 10; +31 vs. Fortitude; 2d8 + 9 thunder damage, and the target is immobilized (save ends).

**Elemental Barrage** (standard; at-will)
The primordial blot makes four different ranged basic attacks. Using *elemental barrage* does not provoke opportunity attacks.

**Elemental Opportunity** (immediate reaction, when an enemy provokes an opportunity attack; at-will)
The primordial blot makes a ranged basic attack against the triggering enemy. Using *elemental opportunity* does not provoke opportunity attacks.

**Elemental Snap** (free 2/round, when an enemy moves adjacent to the primordial blot or hits it with an attack; only while bloodied; at-will)
The primordial blot makes a ranged basic attack against the triggering enemy. Using *elemental snap* does not provoke opportunity attacks.

**Primordial Terror** (minor 1/round; at-will) ✦ **Fear**
Close burst 3; +31 vs. Will; the primordial blot pushes the target 3 squares.

**Skyfire Eruption** (standard; recharge ⚅) ✦ **Fire, Lightning**
Area burst 3 within 10 or close burst 2; +31 vs. Reflex; 5d10 + 9 lightning damage, and ongoing 10 fire damage (save ends).

**Primordial Surge** (when first bloodied and again when reduced to 0 hit points)
*Skyfire eruption* recharges, and the primordial blot uses it and makes each of its ranged basic attacks once. Using *primordial surge* does not provoke opportunity attacks.

**Alignment** Unaligned **Languages** Primordial
**Str** 10 (+13) **Dex** 29 (+22) **Wis** 24 (+20)
**Con** 26 (+21) **Int** 7 (+11) **Cha** 20 (+18)

## Primordial Blot Tactics

Primordial blots are only minimally aware, but they are sensitive to elemental variances. Thus, they choose attacks that exploit their targets' elemental resistances or vulnerabilities. A primordial blot uses *skyfire eruption* against packed groups, *thunderous grip* or *ice slick* against opponents who try to engage in melee combat, *light beam* against ranged attackers,

and *crushing earth* and *acid gout* against the greatest threats. *Primordial terror* and *elemental snap* keep enemies at bay.

## Elemental Lore

**Arcana DC 20:** Although the elements of fire, earth, air, and water are the most common, other fundamental building blocks exist, such as mud, crystal, metal, steam, and light. Elementals composed of these substances are more common in the Plane Below than elsewhere.

**Arcana DC 26:** The powerful primordial blot combines all the known elements and is said to be a piece of the Elemental Chaos given form and sentience. Some sages claim that a single primordial blot has the potential to birth worlds.

## Encounter Groups

In the Elemental Chaos, elementals often travel in packs like predatory beasts. They most frequently share elemental types or environments, but sometimes they have little in common.

**Level 21 Encounter (XP 19,625)**
- 2 diamondstorm reapers (level 20 soldier)
- 1 earthwind ravager (level 23 controller, *MM* 104)
- 7 shardstorm vortex whirlwinds (level 23 minion skirmisher, *Monster Manual 2* 101)

### Life, But Not As We Know It

In most instances, a clear delineation exists between monsters and hazards. The Elemental Chaos, however, makes such differences less obvious. In that strange realm, life can include ambulatory masses of stone, fire, water, and even light, while the very landscape might possess rudimentary sentience.

Elementals usually occupy the role of wild beasts in the Plane Below. Some behave instinctively, and others are intelligent enough to serve masters, but they're still recognizable as creatures. If you'd like to give your characters a new and different experience without having to come up with a lot of new mechanics, consider treating some elementals as environmental hazards instead. If the characters are moving through a volcanic field, perhaps a pool of magma reaches out and tries to burn them; when they are scaling a cliff, the rock face might lash out with "fists" of stone; maybe an island on which they land tries to drown them with battering waves and pitching earth.

You can model environmental effects after the powers of existing elementals, adjusting your descriptions accordingly, instead of creating brand-new hazards. Your players might not realize (unless you tell them afterward) that their desperate escape from dangerous terrain was really an encounter with a handful of "ordinary" elementals.

FRANZ VOHWINKEL

Constrained by order at every turn, slaads seek to spread chaos and disrupt all that is logical, sensible, and chained to universal rules of cause and effect. They hope to scar reality itself enough to create a hole into the wider multiverse their maddened leaders believe exists.

## Chaos Phage Swarm

These mindless clumps of oversized slaad embryos are set loose into the Elemental Chaos to spread havoc and produce more of their kind. A chaos phage swarm attacks recklessly, since in death it infects even more potential hosts.

**Chaos Phage Swarm** **Level 12 Brute**
Medium elemental beast (swarm) XP 700

**Initiative** +10 **Senses** Perception +9, blindsight 10
**Swarm Attack (Disease)** aura 1; each enemy that starts its turn within the aura takes 7 damage and is exposed to chaos phage (see below).
**HP** 151; **Bloodied** 75; see also *death burst*
**AC** 24; **Fortitude** 26, **Reflex** 24, **Will** 23
**Resist** half damage from melee and ranged attacks; **Vulnerable** 10 against close and area attacks
**Immune** chaos phage
**Speed** fly 6 (hover)

**A Thousand Tiny Bites** (standard; at-will) ✦ **Disease**
+13 vs. Fortitude; 2d10 + 5 damage, and the target is exposed to chaos phage (see below).

**Swarm Swell** (standard; recharge ⚄ ⚅) ✦ **Disease**
Reach 2; +13 vs. Fortitude; 2d10 + 5 damage, ongoing 10 damage (save ends), and the target is exposed to chaos phage.

**Death Burst** (when reduced to 0 hit points) ✦ **Disease**
The chaos phage swarm explodes in a burst of diseased matter: Close burst 2; +13 vs. Reflex; ongoing 10 damage (save ends), and the target is exposed to chaos phage.

**Alignment** Chaotic evil **Languages** –
**Str** 20 (+11) **Dex** 18 (+10) **Wis** 16 (+9)
**Con** 21 (+11) **Int** 1 (+1) **Cha** 3 (+2)

### Chaos Phage Swarm Tactics

A swarm charges the closest nonslaad living creature, using *swarm swell* to gain a little extra reach if necessary. It fights to the death, eager to spread infection with its *death burst*.

## Green Slaad Madjack

Green slaads whose mad visions extend beyond their own fevered minds, madjacks sow insanity among their foes.

**Green Slaad Madjack** **Level 13 Elite Controller**
Large elemental humanoid XP 1,600

**Initiative** +8 **Senses** Perception +16; low-light vision
**HP** 268; **Bloodied** 134
**AC** 27; **Fortitude** 26, **Reflex** 23, **Will** 25
**Immune** chaos phage
**Saving Throws** +2
**Speed** 6, teleport 4
**Action Points** 1

**Claw** (standard; at-will) ✦ **Disease**
Reach 2; +18 vs. AC; 2d8 + 5 damage, and the target is exposed to chaos phage (see below).

**Maddening Croak** (standard; recharges when first bloodied and again when the green slaad madjack spends an action point) ✦ **Psychic**
Close blast 5; +16 vs. Will; 2d12 + 5 psychic damage, and the madjack slides the target 3 squares and knocks it prone. Until the end of the target's next turn, the target must take a standard action to stand up.

**Maddening Visions** (minor 1/round; at-will) ✦ **Charm**
Close burst 2; targets one enemy in burst; +16 vs. Will; the target must make a melee at-will attack as a free action against one of its allies within its reach. The green slaad madjack chooses the attack and the target ally.

**Mind Spasm** (immediate reaction, when an enemy moves adjacent to the green slaad madjack; at-will) ✦ **Psychic**
Close burst 1; +13 vs. Will; 2d6 + 5 psychic damage. If the attack hits the triggering enemy, it is also dazed (save ends).

**Alignment** Chaotic evil **Languages** Common, Primordial
**Skills** Athletics +15, Stealth +13
**Str** 19 (+10) **Dex** 14 (+8) **Wis** 21 (+11)
**Con** 22 (+12) **Int** 16 (+9) **Cha** 14 (+8)

### Green Slaad Madjack Tactics

A green slaad madjack prefers to stay close to disrupt its foes with *maddening visions*, typically starting an attack by charging. It then uses an action point to let loose its *maddening croak*, further sowing chaos among its foes and recharging that power. Once bloodied, the madjack teleports away from melee when possible to get the most use of its *mind spasm* and *maddening visions* powers.

## Blue Slaad Digester

These variant blue slaads try to consume reality in search of the true nature of the wider multiverse. They have a filthy habit of predigesting prey with acidic saliva while holding it with their sticky skin.

### Blue Slaad Digester Tactics

The blue slaad digester grabs several foes at once if possible, using *acidic spew* against its pinned victims. It trips up any who escape with its *caustic tongue*, then tries to grab them again.

**Chaos Phage** Level 16 Disease **Endurance** improve DC 25, maintain DC 20, worsen DC 19 or lower

The target is cured. ◀ **Initial Effect:** A slaad embryo is implanted in the target. ◀▶ The target takes a –2 penalty to Will. While bloodied, the target succumbs to madness and attacks the nearest creature. ▶ **Final State:** The target dies, and a slaad tadpole burrows out of its skull.

| Blue Slaad Digester | Level 14 Elite Soldier |
|---|---|
| Large elemental humanoid | XP 2,000 |

**Initiative** +14 **Senses** Perception +13; low-light vision
**HP** 332; **Bloodied** 166
**AC** 28; **Fortitude** 27, **Reflex** 26, **Will** 26
**Immune** chaos phage
**Saving Throws** +2
**Speed** 6, teleport 4
**Action Points** 1

**Grasping Claw** (standard; at-will) ✦ **Disease**
Reach 2; +19 vs. AC; 1d8 + 9 damage, and the target is grabbed and exposed to chaos phage (see page 142). The blue slaad digester can grab up to two Medium or smaller creatures at once.

**Acidic Spew** (minor; at-will) ✦ **Acid**
One creature grabbed by the blue slaad digester gains ongoing 10 acid damage (save ends).

**Caustic Tongue** (opportunity, when a creature grabbed by the blue slaad digester escapes the grab; at-will) ✦ **Acid**
Reach 2; targets the triggering creature; +17 vs. Fortitude; the target is knocked prone and takes ongoing 10 acid damage (save ends).

**Covetous Claws** (standard; at-will)
The blue slaad digester makes two grasping claw attacks.

**Digestive Spray** (minor; recharge ⚅) ✦ **Acid**
Close blast 5; +15 vs. Fortitude; 1d8 + 6 damage, and ongoing 10 acid damage (save ends).

**Alignment** Chaotic evil **Languages** Common, Primordial
**Str** 23 (+13) **Dex** 20 (+12) **Wis** 13 (+8)
**Con** 16 (+10) **Int** 4 (+4) **Cha** 20 (+12)

# Gray Slaad Havoc

These variant gray slaads love to sow confusion in combat by misdirecting enemies' attacks and scattering friend and foe alike across the battlefield.

| Gray Slaad Havoc | Level 15 Artillery (Leader) |
|---|---|
| Medium elemental humanoid | XP 1,200 |

**Initiative** +10 **Senses** Perception +11; low-light vision
**HP** 116; **Bloodied** 58
**AC** 27; **Fortitude** 27, **Reflex** 28, **Will** 26
**Immune** chaos phage
**Speed** 6, teleport 6

**Havoc Claw** (standard; at-will) ✦ **Disease**
+22 vs. AC; 1d8 + 6 damage, the gray slaad havoc slides the target 2 squares, and the target is exposed to chaos phage (see page 142).

**Havoc Bolt** (standard; at-will)
Ranged 20; +20 vs. Reflex; 2d8 + 6 damage, and the gray slaad havoc slides the target 3 squares. If the attack scores a critical hit, the gray slaad havoc can repeat it once as a free action.

**Fog of Chaos** (immediate interrupt, when hit by a ranged attack; recharge ⚁ ⚄ ⚅)
Close burst 20; targets the triggering attacker; +20 vs. Will; the triggering attack instead targets one of the target's allies of the target's choice.

**Reality Shift** (move; at-will) ✦ **Teleportation**
Close burst 10; targets one creature in burst; +20 vs. Will (no attack roll required against an ally); the gray slaad havoc teleports the target to any space within the burst.

**Alignment** Chaotic evil **Languages** Common, Primordial
**Skills** Athletics +14, Stealth +15
**Str** 14 (+9) **Dex** 17 (+10) **Wis** 19 (+11)
**Con** 20 (+12) **Int** 23 (+13) **Cha** 16 (+10)

## Gray Slaad Havoc Tactics

The gray slaad havoc peppers foes at a distance with *havoc bolt*, trying to draw a retaliatory ranged attack to trigger its *fog of chaos* power. Most enemies fall for this tactic only once; afterward, the gray slaad havoc reshapes the battlefield to its advantage with *reality shift*.

# Red Slaad Juggernaut

Taking the red slaads' propensity for violence to extremes, the immense juggernaut is an unstoppable engine of destruction.

| Red Slaad Juggernaut | Level 15 Elite Soldier |
|---|---|
| Huge elemental humanoid | XP 2,400 |

**Initiative** +12 **Senses** Perception +12; low-light vision
**HP** 296; **Bloodied** 148
**AC** 32; **Fortitude** 30, **Reflex** 25, **Will** 29
**Immune** chaos phage
**Saving Throws** +2
**Speed** 8, teleport 4
**Action Points** 1

**Brutal Claw** (standard; at-will) ✦ **Disease**
Reach 3; +21 vs. AC; 2d8 + 6 damage, and the target is knocked prone and exposed to chaos phage (see page 142).

**Rend the Fallen** (minor action; at-will)
Reach 3; targets a prone creature; +21 vs. AC; 2d8 +6 damage.

**Claw Apocalypse** (standard; at-will) ✦ **Disease**
Close burst 2; +19 vs. AC; 2d8 + 6 damage, and the target is knocked prone and exposed to chaos phage.

**Juggernaut's Punishment** (opportunity, when a creature within 2 squares of the red slaad juggernaut moves or stands up; at-will)
The red slaad juggernaut makes a melee basic attack against the triggering creature.

**Alignment** Chaotic evil **Languages** Common, Primordial
**Skills** Athletics +18, Stealth +15
**Str** 22 (+13) **Dex** 16 (+10) **Wis** 20 (+12)
**Con** 20 (+12) **Int** 10 (+7) **Cha** 11 (+7)

## Red Slaad Juggernaut Tactics

A red slaad juggernaut teleports or charges into the largest concentration of enemies, then slashes at them all with *claw apocalypse*. It follows up with *rend the fallen* against any targets knocked prone by that attack, then uses an action point for another *claw apocalypse*. The slaad gleefully takes advantage of its *juggernaut's punishment* against any foe attempting to escape.

# White Slaad (Chronos Slaad)

These rare slaads have an uncanny and disturbing insight into time, with which they pull replicas of themselves from the past and future.

| White Slaad | Level 16 Elite Lurker |
|---|---|
| Medium elemental humanoid | XP 2,800 |

**Initiative** +16 **Senses** Perception +14; low-light vision
**HP** 248; **Bloodied** 124
**AC** 29; **Fortitude** 29, **Reflex** 27, **Will** 26
**Immune** chaos phage
**Saving Throws** +2
**Speed** 6, teleport 4
**Action Points** 1

**Probability Claw** (standard; at-will) ✦ **Disease**
+21 vs. AC; 1d6 + 5 damage, and the target is dazed until the end of the white slaad's next turn and is exposed to chaos phage (page 142).

**Temporal Split** (standard; recharges when first bloodied or when the white slaad spends an action point)
The white slaad splinters into six white slaad temporal replicas, each appearing in an unoccupied space within 5 squares of the white slaad's previous space. The white slaad disappears, and it cannot attack or be attacked until it reappears. The temporal replicas thereafter act on the white slaad's initiative count. When the last temporal replica has been reduced to 0 hit points, the white slaad reappears within 5 squares of the space occupied by that replica and can act normally on its next initiative count. See also *advantage of time*.

**Advantage of Time**
Whenever a white slaad reappears after its temporal replicas have been reduced to 0 hit points, all enemies it can see grant it combat advantage until the end of its next turn.

**Combat Advantage**
A white slaad deals 1d6 extra damage against any creature granting combat advantage to it. In addition, that creature is dazed (save ends) instead of dazed until the end of the slaad's next turn.

**Alignment** Chaotic evil **Languages** Common, Primordial
**Skills** Athletics +18, Stealth +17
**Str** 20 (+13) **Dex** 19 (+12) **Wis** 13 (+9)
**Con** 22 (+14) **Int** 7 (+6) **Cha** 14 (+10)

| White Slaad Temporal Replica | Level 16 Minion Lurker |
|---|---|
| Medium elemental humanoid | XP 0 |

**Initiative** +16 **Senses** Perception +14; low-light vision
**HP** 1; a missed attack never damages a minion.
**AC** 29; **Fortitude** 29, **Reflex** 27, **Will** 26
**Speed** 6, teleport 4

**Probability Claw** (standard; at-will)
+21 vs. AC; 8 damage, and the target is dazed until the beginning of the white slaad temporal replica's next turn.

**Combat Advantage**
A white slaad temporal replica deals 2 extra damage against any creature granting combat advantage to it.

**Alignment** Chaotic evil **Languages** Common, Primordial
**Str** 20 (+13) **Dex** 19 (+12) **Wis** 13 (+9)
**Con** 22 (+14) **Int** 7 (+6) **Cha** 14 (+10)

## White Slaad Tactics

A white slaad charges into combat and attempts to daze an enemy, exploiting combat advantage to focus on that target. If it is hard-pressed, the white slaad spends an action point to use *temporal split*, populating the battlefield with replicas of itself as well as recharging that power.

# Black Slaad Entropic

Black slaads embody entropic energies similar to those that Ygorl (page 156) wields. Those the Lord of Entropy selects as personal troops are changed by his touch, becoming black slaad entropics.

| Black Slaad Entropic | Level 26 Minion Brute |
|---|---|
| Large elemental humanoid | XP 2,250 |

**Initiative** +21 **Senses** Perception +15; low-light vision
**HP** 1; a missed attack never damages a minion; see also *entropic void*.
**AC** 38; **Fortitude** 39, **Reflex** 38, **Will** 37
**Immune** disease
**Speed** 6, teleport 3

**Claws** (standard; at-will)
Reach 2; +29 vs. AC; 12 damage, and until the start of the black slaad entropic's next turn, the target takes 5 extra damage whenever the target is hit by an attack.

**Ray of Entropy** (standard; at-will)
Ranged 20; +27 vs. Reflex; 10 damage, and ongoing 7 damage (save ends).

**Entropic Void** (when reduced to 0 hit points)
Close burst 2; +27 vs. Fortitude; 10 damage, the target is pulled 1 square, and the black slaad entropic becomes an entropic void (see below).

**Alignment** Chaotic evil **Languages** Common, Primordial
**Skills** Stealth +26
**Str** 29 (+22) **Dex** 26 (+21) **Wis** 15 (+15)
**Con** 25 (+20) **Int** 12 (+14) **Cha** 25 (+20)

| Entropic Void | Level 26 Minion Soldier |
|---|---|
| Large elemental beast, slaad (blind) | XP – |

**Initiative** +24 **Senses** Perception +10; blindsight 10
**Tug of the Void** aura 2; each enemy that starts its turn within the aura slides 2 squares to a square within the aura and is slowed until the start of its next turn.
**HP** 1; a missed attack never damages a minion; see also *entropic locus*.
**AC** 42; **Fortitude** 38, **Reflex** 39, **Will** 37
**Immune** disease, gaze
**Speed** fly 6 (hover)

**Engulf** (standard; at-will)
+30 vs. Fortitude; the target is pulled into the entropic void's space and grabbed. The target is weakened until the grab ends. *Sustain Standard:* The entropic void sustains the grab, and the target takes 15 damage.

**Entropic Locus** (when reduced to 0 hit points) ✦ **Zone**
Close burst 2; the burst creates a zone of black void that lasts until the end of the encounter. The zone blocks line of sight. Any creature that enters or starts its turn in the zone takes 10 damage.

**Alignment** Unaligned **Languages** Common, Primordial
**Str** 26 (+21) **Dex** 29 (+22) **Wis** 4 (+10)
**Con** 20 (+18) **Int** 4 (+10) **Cha** 25 (+20)

## Black Slaad Entropic Tactics

A black slaad entropic hurls itself against enemies without hesitation. It uses ranged attacks only against foes it cannot otherwise reach. When forced into entropic void form, it focuses its attacks on a single target.

## Slaad Lore

**Arcana DC 16:** Slaads sometimes set loose their enlarged embryos into the Elemental Chaos in the form of chaos phage swarms. Dozens of these swarms are a pestilence that spreads faster and farther than ordinary diseases, breeding even more slaads in its wake.

**Arcana DC 18:** Blue slaad digesters are variant blue slaads with a slightly different philosophy on spreading chaos—they believe that if they can eat enough of reality, the true nature of the wider multiverse will finally show through.

**Arcana DC 22:** Gray slaad havocs can induce planar instability by firing too many *havoc bolts* in a short period. Stories claim that a few who managed to trigger a cascade of *havoc bolts* briefly opened unintentional portals to the world or to an echo plane in the midst of a fight.

When red slaads feast overlong on the elemental instability, they throw off the husk of their former flesh and swell in size to become juggernauts.

Black slaad entropics are Ygorl's close followers, void slaads rendered nearly immortal in the Lord of Entropy's presence. If a black slaad entropic is destroyed, it becomes a drifting miasma of entropy; if that entropic void is destroyed, it creates a lingering pocket of nothingness. If such a void remains after a battle along with Ygorl, a slaad arises from it—often a black slaad entropic.

**Arcana DC 24:** White slaads, also known as chronos slaads, have learned that time itself is an illusion that can sometimes be pierced, if ever so briefly. White slaads can pull replicas of themselves into the present from other moments in time. These temporal replicas are not as powerful as the original, but each seeks to accomplish its goals.

**Arcana DC 26:** A white slaad can create only a limited number of temporal replicas, though slaads believe that one of their elder slaad lords has the ability to pull hundreds of replicas into the present. Called Norsar the Many, this translucent-skinned slaad is its own army.

## Encounter Groups

Slaads usually fight alongside other slaads, because their motives are inscrutable to most other kinds of creatures.

**Level 13 Encounter (XP 4,600)**
- 2 chaos phage swarms (level 12 brute)
- 2 gray slaads (level 13 skirmisher, *MM* 238)
- 1 green slaad madjack (level 13 elite controller)

**Level 16 Encounter (XP 7,600)**
- 2 gray slaad havocs (level 15 artillery)
- 1 red slaad juggernaut (level 15 elite soldier)
- 1 white slaad (level 16 elite lurker)

***(Left to right) blue slaad digester, red slaad juggernaut, green slaad madjack, white slaad***

DAVE ALLSOP

# Masters of the Elements

Some creatures of the Elemental Chaos have become so potent, so dangerous, or so important that their infamy has spread beyond that turbulent plane. This section presents a few such mighty beings.

## Ehkahk

Looming in an obscure region of the Elemental Chaos, a fortress of uneven walls and jagged towers rises from a foundation of black clouds. A passerby might mistake this structure for a bastion of the djinns, but on close examination it seems to be constructed of ash-blackened steel. The clouds are in fact rolling banks of burning, suffocating smoke. This is the Choking Palace (described in more detail on page 72), home of Ehkahk, the Smoldering Duke, and his court.

Ehkahk is a gaunt creature, the height of a human child, with ash-gray skin. Smoke leaks constantly from his eyes and mouth, leaving trails in the air when he moves, and pours from his back, giving the impression of flexing wings. Those who take Ehkahk's small size to mean he is no threat, though, rarely survive to repeat their mistake.

### Ehkahk's Tactics

Ehkahk claims to disdain violence but actually delights in exercising his abilities, particularly against those he deems disrespectful. He uses *venomous vapors* to neutralize as many enemies as possible, then wreaks havoc. The most troublesome foe becomes a target for *consuming smoke*, and he looses the *choking kennel* against enemies that are mobile. He prefers to remain at range and aloft, making use of *ride the smoke* when possible.

### Ehkahk Lore

**Arcana DC 17:** Ehkahk, the Smoldering Duke, is a small but powerful creature of poisonous fumes who rules a court in his fortress, the Choking Palace. Although his domain, called Fume, is not large, and he does not always treat his subjects well, he protects the place mercilessly against attackers. The other powers of the Elemental Chaos seem to acknowledge his rule; he sends regular ambassadors to the Charcoal Palace in the City of Brass and occasionally visits there himself.

**Arcana DC 26:** Nobody is certain of Ehkahk's true nature. Different tales claim that he is an elemental who developed an abnormal degree of intelligence; the offspring of an efreet and a djinn; and even the child or a fragment of a slain primordial.

**Ehkahk** **Level 25 Elite Controller (Leader)**
Small elemental humanoid (air, fire) XP 14,000

**Initiative** +16 **Senses** Perception +22
**Suffocating Fume** aura 2; each living enemy that enters or starts its turn within the aura begins to cough uncontrollably. Until the start of its next turn, it grants combat advantage and cannot spend healing surges.
**HP** 464; **Bloodied** 232
**AC** 39; **Fortitude** 35, **Reflex** 39, **Will** 37
**Immune** disease, fire
**Saving Throws** +2
**Speed** 6, fly 8 (hover); see also *ride the smoke*
**Action Points** 1

⊕ **Ashen Rapier** (standard; at-will) ✦ **Weapon**
+29 vs. Reflex; 2d10 + 10 damage, and Ehkahk slides the target 1 square and can then shift 1 square as a free action.

**Ashen Plume** (standard; at-will) ✦ **Fire, Poison**
Ranged 15; targets one or two creatures; +29 vs. Fortitude; 1d10 + 10 fire and poison damage, and the target is blinded (save ends).

**Choking Kennel** (minor; recharges when first bloodied)
Four smoke hounds (see below) appear, each in an unoccupied space within 15 squares of Ehkahk. The smoke hounds take their turns immediately after Ehkahk's initiative count. They remain until they are killed, until Ehkahk uses a free action to dismiss them, or until the end of the encounter. Characters do not gain experience points for killing smoke hounds summoned by this power.

**Consuming Smoke** (standard; recharge ⚄ ⚄ ⚅) ✦ **Fire, Poison, Teleportation**
Ranged 15; +31 vs. Fortitude; 1d10 + 10 fire damage, and the target disappears until the start of Ehkahk's next turn. The target reappears prone in a space of Ehkahk's choice within 15 squares of him that does not include hindering terrain, and Ehkahk makes a secondary attack that is a close burst 1 centered on the target. *Secondary Attack:* +28 vs. Fortitude; 3d10 + 10 poison damage. The area within the burst is heavily obscured by thick smoke until the start of Ehkahk's next turn.

**Ride the Smoke** (move; recharge ⚄ ⚅) ✦ **Teleportation, Zone**
Area burst 4 within 20; the burst creates a zone of thick smoke that lasts until the end of Ehkahk's next turn. Ehkahk and each adjacent ally of his choice teleport to spaces of his choice within the zone. The zone's area is heavily obscured to enemies.

**Venomous Vapors** (standard; encounter) ✦ **Fire, Poison**
Three area bursts 1 within 15 that do not overlap; +28 vs. Reflex; 4d8 + 10 fire and poison damage, and the target is blinded (save ends). *Miss:* Half damage, and the target is blinded until the end of Ehkahk's next turn.

**Alignment** Unaligned **Languages** Common, Giant, Primordial
**Skills** Arcana +26, Bluff +25, Diplomacy +25, Insight +22
**Str** 13 (+13) **Dex** 19 (+16) **Wis** 21 (+17)
**Con** 24 (+19) **Int** 28 (+21) **Cha** 26 (+20)
**Equipment** ashen rapier

Ehkahk's duchy is home to all manner of creatures, from near-mindless elementals to rogue efreets and djinn, and even a sizable population of natural beings. Any who lack a home are welcome in

Ehkahk's domain—as long as they're willing to swear lifelong fealty to him.

**Arcana DC 31:** Ehkahk seems to have no fear of death. He has more than once returned to his court after being "slain" in the sight of witnesses. Perhaps the Smoldering Duke is truly unkillable, or maybe multiple different individuals have taken on his title.

## Smoke Hound

These creatures of living smoke aren't truly hounds, but their behavior and general shape are close enough to what canines display that the name has stuck. When they are not serving a master or trainer, smoke hounds run in packs through the Elemental Chaos.

| **Smoke Hound** | **Level 23 Minion Soldier** |
|---|---|
| Medium elemental beast (air, fire) | XP 1,275 |
| **Initiative** +21 | **Senses** Perception +20; low-light vision |
| **HP** 1; a missed attack never damages a minion. | |
| **AC** 37; **Fortitude** 35, **Reflex** 37, **Will** 33 | |
| **Immune** poison; **Resist** 30 fire | |
| **Speed** 8 | |
| ⨁ **Unyielding Bite** (standard; at-will) ✦ **Fire, Poison** | |
| +26 vs. Reflex; 9 fire and poison damage, and the target is grabbed. The smoke hound cannot make *unyielding bite* attacks while it has a creature grabbed. *Sustain Minor:* The smoke hound sustains the grab, and the target takes 13 fire damage. | |
| ⨽ **Tongue of Smoke** (standard; at-will) | |
| Targets a creature grabbed by the smoke hound; +26 vs. Fortitude; the smoke hound moves half its speed and moves the target with it. | |
| **Unshakable Grasp** | |
| A creature grabbed by a smoke hound grants combat advantage until the grab ends. | |
| **Alignment** Unaligned | **Languages** understands Primordial |
| **Str** 22 (+17) | **Dex** 26 (+19) **Wis** 18 (+15) |
| **Con** 21 (+16) | **Int** 5 (+8) **Cha** 11 (+11) |

### Smoke Hound Tactics

Smoke hounds use pack tactics when possible. When they are working alongside other creatures, they grab and hold foes to make them easier targets.

### Smoke Hound Lore

**Arcana DC 24:** Smoke hounds are predators of the Elemental Chaos. Although they are dangerous attackers, their semisolid nature makes them fragile in combat. They do not speak, but they understand Primordial and often fight alongside more intelligent masters. Ehkahk, the Smoldering Duke, keeps a large kennel of them.

## Encounter Groups

Ehkahk travels with a retinue of guards or members of his court—not necessarily for protection, but because to do otherwise would belittle his status.

**Level 25 Encounter (XP 37,250)**

- 1 djinn stormsword (level 24 soldier, *Monster Manual 2* 72)
- 1 djinn cloudstalker (level 24 lurker, page 151)
- 1 efreet flamestrider (level 23 skirmisher, *MM* 99)
- 1 storm giant (level 24 controller, *MM* 124)
- Ehkahk (level 25 elite controller)

### Ehkahk Through the Years

Like many other creatures and entities in the 4th Edition D&D game, the Smoldering Duke has a history that reaches back into the early years of the game. Yet the long-lived Ehkahk has had little impact on D&D's long-running stories, plots, and adventures.

Ehkahk initially appeared in the 1st Edition version of *Manual of the Planes* as a name dropped into a single paragraph. Ehkahk's name resurfaced in the *Planescape Campaign Setting*, but little more was said about him. The details presented here flesh out the Smoldering Duke as a major entity for the first time.

DAVE ALLSOP

# LIRICOSA

GITHZERAI HOLD UP THIS REVERED, even legendary hermit as a shining example of what mortals can become. Liricosa is the one living member of the race to have achieved true enlightenment. His wisdom and insight are rivaled only by his physical perfection.

Monks, philosophers, and those of all races who desire enlightenment (but particularly githzerai) seek Liricosa as a mentor. He does take disciples and shares his wisdom with the lucky few who reach him. However, locating him is no easy task. He seeks to experience many places throughout the planes in order to keep expanding his mind. He might be found on a secluded mountaintop in the world one year, and might establish residence in a crumbling keep in the Elemental Chaos the next.

Liricosa is in prime condition and has achieved such mastery over his body that he can withstand any environmental condition. However, he has acquired various eccentricities. He does not protect himself against the environment, which he no longer notices in his enlightenment. His speech is slow, contemplative, and slightly distracted. Every night, he tears a page from a different book, dampens it, and plasters it to his face before falling asleep.

Liricosa seems emotionless and evinces little concern for events around himself. Even news of calamities never shakes him; he simply nods and thanks his informant. He presumably enjoys passing on his wisdom to others, but his actions appear lifeless and automatic.

## LIRICOSA'S TACTICS

Liricosa shuns combat unless battle is absolutely necessary. When forced to fight, he continually adjusts the tactical situation to his best advantage. He uses *inevitable consequences* to punish enemies that attack him and disrupts his foes with *reorder reality* whenever convenient—targeting as many foes as possible with *awe of truth*. He targets leaders first, then strikers, then controllers, preferring teleportation and stunning attacks to remove defenders so he can concentrate on the true threats. If sorely pressed, he teleports to safety. He reserves *the master's touch* for use against worthy opponents.

**Liricosa** **Level 21 Solo Controller**
Medium natural humanoid, githzerai XP 16,000

**Initiative** +17 (37); see also *fundamental awareness*
**Senses** Perception +24 (44); truesight 20; see also *fundamental awareness*
**HP** 704; **Bloodied** 352
**AC** 35; **Fortitude** 33, **Reflex** 33, **Will** 35
**Immune** disease, poison; **Resist** 15 variable (at-will)
**Saving Throws** +5
**Speed** 8, teleport 6
**Action Points** 2

⊕ **Unarmed Strike** (standard; at-will)
+26 vs. AC; 2d8 + 7 damage, and the target is dazed until the end of its next turn.

**Blur of Fists** (standard; at-will)
Liricosa makes two unarmed strike attacks.

**The Master's Touch** (standard; encounter) ✦ **Reliable**
+25 vs. Reflex; 4d10 + 8 damage, and the target takes ongoing damage equal to half its bloodied value (save ends).

**Reorder Reality** (minor; recharge ⚄ ⁞⁞) ✦ **Teleportation**
Ranged 20; targets one to five creatures; +25 vs. Fortitude; Liricosa teleports the targets, swapping their positions as he chooses.

**Awe of Truth** (standard; recharge ⁞⁞) ✦ **Psychic**
Close burst 3; targets enemies; +25 vs. Will; 4d8 + 7 psychic damage, and the target is stunned (save ends). *Miss:* Half damage.

**Inevitable Consequences** (immediate interrupt, when Liricosa is missed by an attack; at-will)
Liricosa teleports 15 squares to a space adjacent to the triggering attacker and makes an unarmed strike attack against it.

**Fundamental Awareness**
Liricosa is always assumed to roll a 20 on any Insight, Perception, or initiative checks.

**Environmental Adaptation**
Liricosa never takes damage from nonmagical environmental effects.

**Alignment** Unaligned **Languages** Supernal
**Skills** Athletics +20, Insight +24 (44); see also *fundamental awareness*

| | | |
|---|---|---|
| **Str** 20 (+15) | **Dex** 24 (+17) | **Wis** 29 (+19) |
| **Con** 24 (+17) | **Int** 24 (+17) | **Cha** 26 (+18) |

## LIRICOSA LORE

**History or Nature DC 14:** Liricosa is the most revered githzerai monk alive. He is a transient hermit whose location is difficult to pin down.

**History or Nature DC 22:** No one knows when Liricosa was born, and stories of his youth have developed a mythic quality. Some say he has spent his life searching for enlightenment; others that he was a thief and murderer who achieved his current state when he confronted a possible future self through a strange rift in reality. Still others claim that Liricosa is not a githzerai at all, but an entity of the Far Realm in mortal guise.

**History or Nature DC 27:** Liricosa's fundamental understanding of the nature of being allows him to change aspects of himself, his environment, and even other people. He understands all languages, and all creatures understand his speech. Some say that Liricosa has access to all the secrets of the universe and can learn the answer to any question if he concentrates. Though he willingly talks to those who seek him, the answers he provides are rarely what the questers thought they wanted.

### Liricosa's Current Whereabouts

Deep in the Elemental Chaos stands a ruined city atop a tumbling earthmote. The city's builders are long gone, and their identity is a mystery. The place's doorways and ceilings suggest that its inhabitants were 8 or 9 feet tall, and several other clues indicate that they were humanoid and had at least four arms. The likely cause of their demise is a portal that periodically activates in the city's bowels.

About once a year, the portal sputters to life. It is linked to the Abyss, but the precise location, level, and layer of the destination vary every year with no discernible pattern.

Six months ago, Liricosa abandoned his traditionally isolated lifestyle when he and his acolytes arrived at this ruined place. They slew the scattered demons that had come through the portal most recently, then set up shop. By now, most githzerai have heard rumors that the legendary Liricosa dwells here. His presence at a known location attracts more followers, and Liricosa seems happy to accept and train them.

Many people have also come to warn Liricosa of an imminent demon attack, but his eyes wander and he seems to lose attention when this topic arises. Some believe that he is just a crazy old hermit and doesn't know what he is getting into—but anyone familiar with Liricosa knows that the truth can't be so simple. They wonder if he plans to shut down the portal or perhaps even build an army to take the fight to the Abyss, though none can say why he would choose to do so now.

Liricosa's current chief disciple, Ertrand, has been leaving his master's side more often than usual. He has been seen in major settlements in the Elemental Chaos: the City of Brass, Zerthadlun, and Threshold, among others. He talks to only a select few individuals in these places, but he always visits the libraries.

## Liricosa's Disciples

Liricosa keeps roughly twenty disciples at any given time. Most are githzerai, but a few are members of other races. They come from different backgrounds and have different goals, but they all revere Liricosa. These individuals remain with him for as long as they like. Some have been with him for decades; others come and go, traveling the planes in attempts to attain enlightenment.

For a typical disciple of Liricosa, use the statistics for a githzerai zerth (*Monster Manual*, page 130).

## Encounter Groups

Liricosa faces opponents alone. His disciples are always willing to fight on his behalf or at his side, but anything that is a serious threat to him would likely slaughter his students, so he sends them away before engaging in combat.

DAVE ALLSOP

# SIRRAJADT, THE VENGEFUL STORM

The once-mighty djinns are few now, their great palaces and sweeping empire lost. Punished by the gods for their part in the Dawn War, many linger imprisoned in mundane objects. Those who remain free are mere shadows of what once they were, seeking to regain their lost power and free their kin so that they might rebuild the great djinn cities of the Elemental Chaos. Some, though, seek not recovery but revenge.

One of the last free members of a shattered noble house, Sirrajadt thirsts to destroy all those he blames for his people's plight: the gods and the mortals who worship them, as well as those who failed to aid the djinns in their time of need. He frees other djinns only to increase the ranks of his followers. He does not believe that restoration of the djinn kingdoms is possible, and he scoffs at the misguided fools who seek it.

The Vengeful Storm is shrewd, cunning, and calculating. He is willing to cooperate with one enemy to bring down another, since he knows that he and his followers are not yet potent enough to complete their tasks on their own. He has cooperated with worshipers of the gods against the efreets; with one efreet house against another; and with either or both sides in various mortal conflicts. Sirrajadt's patience is as vast as his rage.

JULIE DILLON

**Sirrajadt** **Level 27 Elite Lurker (Leader)**
Large elemental humanoid (air) XP 22,000

**Initiative** +27 **Senses** Perception +19; blindsight 15
**HP** 386; **Bloodied** 193
**AC** 41; **Fortitude** 38, **Reflex** 40, **Will** 39; see also *storm form*
**Immune** disease, poison; **Resist** 15 lightning, 15 thunder
**Saving Throws** +2
**Speed** 6, fly 10 (hover); overland flight 15; see also *storm form*
**Action Points** 1

⊕ **Storm Scourge** (standard; at-will) ✦ **Lightning, Thunder**
Reach 2; +29 vs. Reflex; 1d8 + 9 lightning damage plus 1d8 + 9 thunder damage (crit 17 lightning damage plus 17 thunder damage, and ongoing 10 lightning and thunder damage [save ends]).

**Sound and Fury** (standard; at-will)
Sirrajadt makes two melee basic attacks. If each attack hits a different target, both targets are deafened until the end of Sirrajadt's next turn.

**Storm Strike** (standard; usable only in storm form; at-will) ✦ **Lightning, Thunder**
Reach 2; targets two different creatures within reach or within the *storm form*'s zone; +31 vs. Reflex; 3d6 + 9 lightning damage plus 3d6 + 9 thunder damage, and the target is deafened and cannot take opportunity actions until the end of Sirrajadt's next turn. Sirrajadt returns to his humanoid form after the attack. See also *storm form.*

**Storm Surge** (standard; usable only in storm form; encounter) ✦ **Lightning, Thunder**
Reach 2; targets each creature within reach or within the *storm form*'s zone; +30 vs. Fortitude; 2d8 + 9 lightning damage and 2d8 + 9 thunder damage, and the target is deafened (save ends) and knocked prone. *Miss:* Half damage, and the target is deafened until the end of Sirrajadt's next turn. Sirrajadt returns to his humanoid form after the attack. See also *storm form.*

**Cyclone** (minor 1/round; usable only in storm form; at-will)
Close burst 1; +29 vs. Fortitude (no attack roll required against allies); Sirrajadt slides the target 3 squares, and enemies within the burst are knocked prone.

**Storm Form** (standard; at-will) ✦ **Lightning, Polymorph, Thunder, Zone**
Close burst 2; Sirrajadt disperses into a howling storm. The burst creates a stormy zone that lasts until Sirrajadt uses a minor action to end the effect or is forced to return to humanoid form. Any enemy that starts its turn within the zone is slowed until the start of its next turn. Any ally that starts its turn within the zone gains a +2 bonus to attack rolls, and its attacks deal 5 extra lightning and thunder damage.

While in storm form, Sirrajadt cannot be attacked and can use only *cyclone, storm strike,* and *storm surge.* He can fly at half speed as a move action, squeeze as though he were a Tiny creature, and move through enemies' spaces.

When Sirrajadt resumes his humanoid form, he appears in any space within the burst. He must resume his humanoid form after using *storm strike* or *storm surge,* or if the zone is destroyed.

**Alignment** Evil **Languages** Common, Primordial
**Skills** Insight +24, Stealth +28

| | | |
|---|---|---|
| **Str** 24 (+20) | **Dex** 31 (+23) | **Wis** 22 (+19) |
| **Con** 25 (+20) | **Int** 28 (+22) | **Cha** 26 (+21) |

## Sirrajadt's Tactics

Sirrajadt prefers to remain hidden until combat begins, then attacks aggressively. He moves into a good position, invokes *storm form*, uses *cyclone* to disrupt enemies and place his allies in advantageous positions, and then spends an action point to launch *storm surge*.

After this devastating opener, he alternates between lurking in storm form (maneuvering allies with *cyclone*) and using *storm strike*, with occasional lashes of *sound and fury*. When he resumes his humanoid form, Sirrajadt takes a position that allows him to set up his next attacks or avoid retaliation. If he is forced to flee, he does so in storm form.

## Djinn Cloudstalker

These djinn ambushers forgo the direct assaults favored by their kin to practice guerrilla warfare. They consider Sirrajadt, who has mastered cloudstalker techniques to a mystical level, to be the greatest of their kind.

**Djinn Cloudstalker** **Level 24 Lurker**
Large elemental humanoid (air) XP 6,050

**Initiative** +25 **Senses** Perception +16; blindsight 10
**HP** 173; **Bloodied** 86
**AC** 38; **Fortitude** 35, **Reflex** 38, **Will** 36; see also *cloud form*
**Immune** disease, poison; **Resist** 15 lightning, 15 thunder
**Speed** 6, fly 8 (hover); see also *cloud form*

⊕ **Katar** (standard; at-will) ✦ **Weapon**
Reach 2; +29 vs. AC; 2d8 + 9 damage (crit 3d8 + 18).

⸸ **Biting Wind** (standard; usable only in cloud form; at-will) ✦ **Cold**
Reach 2; targets a creature within reach or within the *cloud form* zone; +31 vs. AC; 4d8 + 9 cold damage, and the target is knocked prone. The djinn cloudstalker returns to its humanoid form after the attack. See also *cloud form*.

✧ **Cloud Form** (standard; at-will) ✦ **Polymorph, Zone**
Close burst 1; the djinn cloudstalker disperses into a billowing cloud. The burst creates a cloudy zone until the cloudstalker uses a minor action to end the effect or is forced to resume humanoid form. While in cloud form, the cloudstalker cannot be attacked and can use only *biting wind* and *turbulence*. It can fly at half speed as a move action, squeeze as though it were a Tiny creature, and move through enemy-occupied spaces.

The cloudstalker can resume its normal form as a minor action. When it does so, it appears in any unoccupied space within the burst's area. It must resume its humanoid form after using *biting wind*, or if the zone is destroyed.

✧ **Turbulence** (minor 1/round; usable only in cloud form; at-will)
Close burst 1; targets enemies; +26 vs. Fortitude; the djinn cloudstalker slides the target 2 squares and knocks it prone.

**Alignment** Unaligned **Languages** Primordial
**Skills** Stealth +26
**Str** 22 (+18) **Dex** 28 (+21) **Wis** 18 (+16)
**Con** 23 (+18) **Int** 23 (+18) **Cha** 25 (+19)
**Equipment** 2 katars

## Djinn Cloudstalker Tactics

Like Sirrajadt, a djinn cloudstalker prefers to take foes unaware and uses similar tactics. It assumes cloud form, moves into the midst of enemies, and rearranges the battlefield with *turbulence*. Then the cloudstalker strikes a chosen foe with *biting wind*.

## Sirrajadt Lore

**Arcana DC 26:** Sirrajadt, called the Vengeful Storm, is a djinn who seeks the destruction of all he blames for the fall of his kind. He sometimes cooperates with other creatures if doing so allows him to take down a more potent enemy, such as an efreet house. Sirrajadt has numerous militant followers, including djinn cloudstalkers and elementals.

Sirrajadt travels in a great magical storm, carrying his followers with him. The first sign of his coming is rolling thunder that long precedes any visible thundercloud. By the time the horizon darkens, it is too late. Sirrajadt and his troops strike quickly, without mercy or honor.

**Arcana DC 31:** Long ago, Sirrajadt was only a minor noble of the House of Haytham. At the time, he was rebellious and uncouth, refusing to accept his place and always complaining about his status, until his family sent him away. Sirrajadt suffered through the horrors of the Dawn War without the luxuries of his birthright. When he returned from his wanderings, it was to a palace shattered: The gods had locked away the members of Sirrajadt's house. The djinn then swore an oath of blood vengeance. Aside from rage, shame drives Sirrajadt to prove himself, even though his family might never know of his victories.

## Encounter Groups

Sirrajadt is never encountered alone. He has too many enemies—some of whom are more potent than he—to risk traveling in solitude.

**Level 26 Encounter (XP 47,150)**
- ✦ 1 djinn cloudstalker (level 24 lurker)
- ✦ 1 djinn skylord (level 25 controller, *Monster Manual 2* 73)
- ✦ 2 djinn stormswords (level 24 soldier, *Monster Manual 2* 72)
- ✦ Sirrajadt (level 27 elite lurker)

# SOLKARA, THE CRUSHING WAVE

She is the fury of the tsunami that crashes upon the shore, leaving broken wood and shattered stone in its wake. She is the impossible weight of the bottomless depths, against which no living thing can stand. Solkara, the Crushing Wave, is a primordial lord who waits in cold rage for her vengeance. Like the sea against which mortal races build their fragile bulwarks, Solkara's wrath can be forestalled only for a time.

Solkara is frozen within a divinely built prison at the heart of a glacier as wide as a continent, deep within uncharted regions of the Elemental Chaos. Her dark form is scarcely visible in the ice's frigid heart. For an age so long that mortals have no way of comprehending it, her worshipers have struggled to melt away the imprisoning ice. Now dark emissaries of her will, unseen for millennia, walk the Plane Below and the world once more. If they have risen, can their queen be far behind?

Solkara's monstrous form defies easy description. A scaled tail extends from a body supported by a pair of reptilian legs and made up of two humanoid torsos joined at the shoulders, sprouting three multijointed arms. Rising from these torsos, two sinuous necks connect to a single head resembling that of a ferocious predator of the deep. Water flows constantly over the whole without apparent source. Solkara is living proof that the primordials have no place in the world of the gods, for no sane creator could mold such a creature.

## Solkara's Tactics

Solkara has not devolved into bestial savagery as have other primordials, but she is still a raging force of nature, not a cunning tactician or scheming strategist. Unless her foes are widely spread out, she initiates battle with *incoming tide*, then spends an action point to use *crushing torrent*. She continues to make overwhelming melee attacks, using *incoming tide* as needed to draw foes near. If she is too closely surrounded, she creates distance between herself and her attackers with *crushing wave*.

## Solkara Lore

**Arcana DC 23:** Solkara, the Crushing Wave, is one of the ancient primordials, embodying the fury of the sea and the cold of its darkest depths. She is imprisoned in an enormous glacier somewhere within the Elemental Chaos. One of her cults, led by the mad storm titan priest Mirmakur, occupies the glacier, trying to melt the ice with elemental flame.

**Arcana DC 32:** During the Dawn War, Solkara dominated many seas of the mortal world, putting her most frequently in conflict with the goddess Melora. Eventually, Melora defeated the Crushing Wave with the aid of her exarch Sekolah, Kord in his role as god of storms, and Sehanine, exercising the moon's influence over the tides. They were unable to destroy Solkara, but they stripped her of much of her power and imprisoned her in a continent-sized ice shelf.

**Arcana DC 37:** Several signs suggest that the Crushing Wave might be dangerously close to regaining her freedom. These include the recent reappearance of Xixecal in the mortal world, and an increase in tidal waves and storm surges that seem to have little to do with Melora.

**Solkara** **Level 34 Solo Controller**
Gargantuan elemental magical beast (aquatic, cold, primordial, water) XP 195,000

**Initiative** +26 **Senses** Perception +24; darkvision
**Cumbersome Tide** aura 10; the aura's area is difficult terrain. Each prone creature within the aura must use a standard action to stand up; see also *drowning wave*.
**Drowning Wave** (only while bloodied) aura 10; creatures treat the aura's area as underwater (*DMG* 45).
**HP** 1,148; **Bloodied** 574
**AC** 48; **Fortitude** 48, **Reflex** 45, **Will** 46
**Immune** attacks by creatures of lower than 20th level; **Resist** 20 cold, 20 fire
**Saving Throws** +5; whenever an attack produces an effect on Solkara that a save can end, she makes an immediate saving throw. Solkara makes saving throws at the end of each of her turns as normal.
**Speed** 6, swim 10
**Action Points** 2

⊕ **Crushing Blow** (standard; at-will)
Reach 4; +41 vs. AC; 4d6 + 12 damage, and Solkara knocks the target prone.

⸸ **Battering Tide** (standard; recharge ⚅, and recharges when first bloodied)
Solkara moves her speed and makes one attack against each creature within her reach (4 squares) at any point during the move; +39 vs. Reflex; 3d10 + 12 damage, and Solkara knocks the target prone. *Miss:* Half damage.

⸸ **Crushing Torrent** (standard; at-will)
Solkara makes four crushing blow attacks, each against a different target.

✧ **Crushing Wave** (standard; recharge ⚄ ⚅) ✦ **Cold**
Close blast 10; +39 vs. Reflex; 4d6 + 12 damage, and Solkara pushes the target 8 squares and knocks it prone. In addition, the target is blinded until the end of Solkara's next turn and takes ongoing 10 cold damage (save ends). *Miss:* Half damage, and Solkara pushes the target 2 squares.

✧ **Incoming Tide** (minor; at-will)
Close burst 10; +39 vs. Fortitude; Solkara pulls the target 5 squares.

**Threatening Reach** (only while bloodied)
Solkara can make opportunity attacks against all enemies within her reach (4 squares).

**Alignment** Chaotic evil **Languages** Primordial
**Str** 34 (+29) **Dex** 28 (+26) **Wis** 25 (+24)
**Con** 27 (+25) **Int** 17 (+20) **Cha** 30 (+27)

JAKE MASBRUCH

# Xixecal, the Living Glacier

This towering abomination of shifting, cracking ice is one of Solkara's greatest servants. Xixecal's roughly humanoid shape is surrounded by a permanent blizzard and radiates bone-numbing, soul-chilling cold.

## Xixecal's Tactics

The Living Glacier believes only in overwhelming force. It stalks into battle, weakening foes with its aura and battering them into submission. It uses *breath of winter* as often as possible, freezing enemies in ice before pounding them with glacial smashes.

## Xixecal Lore

**Arcana DC 19:** Xixecal, the Living Glacier, is an enormous being of elemental ice that was created during the last days of the Dawn War.

**Arcana DC 28:** After Solkara was imprisoned, the primordial Iktha-Lau created a soldier of living ice from the glacier that entombed the Crushing Wave. Perhaps the Ever Empty believed that his creation, having a portion of Solkara's power, would serve him. Instead, Xixecal was born with unshakable loyalty toward Solkara alone. For the duration of the Dawn War and millennia thereafter, it stalked the Elemental Chaos and the natural world, claiming to speak for Solkara and to act in her name. Few were willing to challenge the Living Glacier's claim.

| **Xixecal** | **Level 30 Elite Brute** |
|---|---|
| Huge elemental humanoid (cold) | XP 38,000 |
| **Initiative** +17 | **Senses** Perception +17; low-light vision |
| **Raging Blizzard** aura 5; the aura's area is lightly obscured. Each enemy that starts its turn within the aura is slowed and loses any resistance to cold until the start of its next turn. | |
| **HP** 682; **Bloodied** 341 | |
| **AC** 44; **Fortitude** 46, **Reflex** 42, **Will** 44 | |
| **Immune** cold; **Vulnerable** fire (when hit by a fire attack, Xixecal takes a -4 penalty to all defenses until the end of its next turn) | |
| **Saving Throws** +2 | |
| **Speed** 6 (ice walk) | |
| **Action Points** 1 | |
| ⊕ **Slam** (standard; at-will) ✦ **Cold** | |
| Reach 3; +33 vs. AC; 4d8 + 11 cold damage. | |
| ⸸ **Freezing Slam** (standard; at-will) ✦ **Cold** | |
| Xixecal makes two slam attacks. If both attacks hit the same target, the target takes ongoing 20 cold damage and is immobilized (save ends both). | |
| ⇢ **Breath of Winter** (standard; recharge ⚄ ⚅) ✦ **Cold** | |
| Close blast 6; +31 vs. Fortitude; 4d10 + 11 cold damage, and the target takes ongoing 20 cold damage and is restrained (save ends both). | |
| **Alignment** Evil | **Languages** Primordial |
| **Skills** Arcana +25 | |
| **Str** 32 (+26) | **Dex** 15 (+17) **Wis** 14 (+17) |
| **Con** 31 (+25) | **Int** 20 (+20) **Cha** 28 (+24) |

**Arcana DC 33:** In recent years, the Living Glacier has appeared once again. Some worry that its return might herald the coming release of Solkara herself.

# Mirmakur, the Raving Priest

The storm titan Mirmakur is devoted to freeing Solkara and leads the cultists who revere the Crushing Wave. His body is filthy, his hair matted into clumps, and his teeth befouled with dangling seaweed, but his eyes burn with a fanatic's fervor. Mirmakur's obsession has consumed his sanity, and he flies into a homicidal rage at the slightest setback. He has even slain many of his own cultists, whom he branded as heretics for failing to fulfill their sacred duty.

**Mirmakur** **Level 28 Elite Brute**
Huge elemental humanoid (aquatic, giant) XP 26,000

**Initiative** +20 **Senses** Perception +24
**Storm Fury (Lightning, Thunder)** aura 4; any enemy that enters or starts its turn within the aura takes 10 lightning and thunder damage; enemies treat the area within the aura as difficult terrain and cannot fly.
**HP** 640; **Bloodied** 320
**AC** 40; **Fortitude** 43, **Reflex** 36, **Will** 39
**Resist** 30 lightning, 30 thunder
**Saving Throws** +2
**Speed** 8 (ice walk), fly 10 (hover), swim 8
**Action Points** 1

⊕ **Roaring Halberd** (standard; at-will) ✦ **Lightning, Thunder, Weapon**
Reach 4; +31 vs. AC; 2d6 + 12 damage plus 2d8 lightning and thunder damage.

**Fearsome Cleave** (standard; recharge ⚄ ⁞⁞) ✦ **Lightning, Thunder, Weapon**
Close burst 4; targets enemies in burst; +31 vs. AC; 2d6 + 12 damage plus 2d8 lightning and thunder damage, and the target is knocked prone.

**Hurl Thunderbolt** (standard; at-will) ✦ **Lightning, Thunder**
Ranged 10; +30 vs. Reflex; 3d6 + 12 lightning and thunder damage, the target is dazed (save ends), and Mirmakur pushes the target 3 squares.

**Alignment** Chaotic evil **Languages** Giant, Primordial
**Skills** Arcana +21, Intimidate +26
**Str** 34 (+26) **Dex** 23 (+20) **Wis** 20 (+19)
**Con** 30 (+24) **Int** 15 (+16) **Cha** 24 (+21)
**Equipment** halberd

## Mirmakur's Tactics

Mirmakur begins combat at a safe distance with *hurl thunderbolt*, focusing on whoever has angered him the most. If such lesser beings still dare to approach, he mows them down with *fearsome cleave*.

## Mirmakur Lore

**Arcana DC 19:** Mirmakur is a wildly insane storm titan who worships the primordial Solkara, the Crushing Wave. He is often called the Raving Priest, though never to his face.

**Arcana DC 28:** Mirmakur and his cultists spend most of their time on Solkara's glacial prison, constantly seeking to melt the ice. Although the Raving Priest has no fire magic, he commands many fire-based elementals who contribute their powers to the sacred task. When not overseeing these efforts, Mirmakur wanders the Elemental Chaos and other worlds, seeking ever more powerful magic to aid in his quest.

**Arcana DC 33:** Mirmakur is not happy about the recent return of the ice creature called Xixecal, one of Solkara's greatest servants. He hopes that the Living Glacier's appearance means that the Crushing Wave will soon be free, but he fears that the more powerful creature might replace him as the primordial's chief agent.

# Crushing Wave Cultists

Not all of Solkara's worshipers are such mighty beings as titans or abominations. Many of her lesser followers are watersoul genasi who long for her to inundate creation.

## Crushing Wave Cultist Tactics

A hierophant remains behind its followers, attacking foes from a distance and using *swift current* to move away if enemies draw too near. It constantly uses *tide of war* to keep enemies off balance and give its followers additional attacks. Initiates close to melee swiftly, marking enemies and then using *stroke of lightning* whenever possible.

**Crushing Wave Hierophant** **Level 10 Artillery (Leader)**
Medium elemental humanoid (aquatic, water), genasi XP 500

**Initiative** +9 **Senses** Perception +8
**HP** 84; **Bloodied** 42
**AC** 22; **Fortitude** 22, **Reflex** 22, **Will** 23
**Saving Throws** +2 against ongoing damage
**Speed** 6, swim 6

⊕ **Hammer** (standard; at-will) ✦ **Weapon**
+17 vs. AC; 1d8 + 6 damage.

**Force Hammer** (standard; at-will) ✦ **Force**
Ranged 20; +17 vs. AC; 2d6 + 6 force damage, and the Crushing Wave hierophant slides the target 2 squares.

**Tide of War** (minor 1/round; at-will)
Close burst 10; targets one or two allies; the target shifts 2 squares. If the target ends this move adjacent to at least one enemy, it can make a melee basic attack against one of those enemies as a free action.

**Phantom Rain** (standard; recharge ⚄ ⁞⁞) ✦ **Force, Lightning**
Area burst 2 within 20; +15 vs. Reflex; 2d8 + 5 force and lightning damage, and the target is slowed until the end of the Crushing Wave hierophant's next turn.

**Swift Current** (move; encounter)
The Crushing Wave hierophant shifts 6 squares. During this movement, the hierophant can move across liquid and through enemies' spaces, ignoring difficult terrain and hazardous terrain effects. It takes no penalties for squeezing during this movement.

**Alignment** Evil **Languages** Common, Primordial
**Skills** Arcana +12, Religion +12
**Str** 11 (+5) **Dex** 18 (+9) **Wis** 17 (+8)
**Con** 18 (+9) **Int** 15 (+7) **Cha** 21 (+10)
**Equipment** chainmail, hammer

**Crushing Wave Initiate** **Level 8 Soldier**
Medium elemental humanoid (aquatic, water), genasi XP 350

**Initiative** +9 **Senses** Perception +6
**HP** 89; **Bloodied** 44
**AC** 24; **Fortitude** 21, **Reflex** 20, **Will** 20
**Resist** 5 lightning
**Speed** 6, swim 6

⊕ **Longsword** (standard; at-will) ✦ **Lightning, Weapon**
+15 vs. AC; 2d8 + 3 lightning damage, and the target is marked until the end of the encounter, until the initiate is knocked unconscious, or until another mark supersedes this one.

↯ **Stroke of Lightning** (standard; recharge ⚅) ✦ **Lightning, Teleportation, Weapon**
+15 vs. AC; 2d8 + 3 lightning damage, and the initiate teleports the target to a space of the initiate's choosing within 8 squares of the initiate that does not include hindering terrain. The initiate then makes a secondary attack, which is a close burst 1 centered on the target. *Secondary Attack:* +13 vs. AC; targets enemies; 2d8 + 3 lightning damage.

**Elemental Assault** (immediate reaction, when an enemy marked by the initiate and within 10 squares of it hits with an attack that does not include the initiate; at-will) ✦ **Teleportation**
The initiate teleports to a square adjacent to the triggering enemy and makes a longsword attack as a free action.

**Swift Current** (move; encounter)
The Crushing Wave initiate shifts 6 squares. During this movement, the initiate can move across liquid and through enemies' spaces, ignoring difficult terrain and hazardous terrain effects. It takes no penalties for squeezing during this movement.

**Alignment** Evil **Languages** Common, Primordial
**Str** 20 (+9) **Dex** 17 (+7) **Wis** 14 (+6)
**Con** 17 (+7) **Int** 11 (+4) **Cha** 16 (+7)
**Equipment** chainmail, longsword

## Encounter Groups

Solkara would fight alone if she were ever released, but her followers are numerous. They include her powerful agents and elemental beings of both water and fire.

**Level 8 Encounter (XP 1,875)**
- 1 Crushing Wave hierophant (level 10 artillery)
- 2 Crushing Wave initiates (level 8 soldier)
- 9 human lackeys (level 7 minion, *MM* 162)

**Level 27 Encounter (XP 58,000)**
- 2 efreet pyresingers (level 25 controller, *MM* 99)
- Mirmakur (level 28 elite controller)
- 1 thunderblast cyclone (level 26 elite artillery, *MM* 105)

**Level 29 Encounter (XP 82,000)**
- 2 retrievers (level 27 soldier, *Monster Manual 2* 177)
- 1 storm titan (level 27 elite controller, *MM* 125)
- Xixecal (level 30 elite brute)

## A Heart of Ice

If you want to use Solkara and her servants in your campaign but with an additional twist, consider the possibility that Xixecal's loyalty to Solkara is not entirely what it appears.

The Living Glacier has a link to Solkara, allowing it to share a sliver of her power and supposedly forming a bond of fealty to her. Xixecal, however, might actually be working to free the Crushing Wave from her prison not because it serves her, but because it wants her destroyed.

If Solkara is released, the champions of the gods would be forced to confront her. She would wreak unimaginable devastation, but in the end, the gods would almost certainly succeed. If that occurs, the terrible essence of the primordial would have to re-form somewhere. Xixecal believes that its innate connection to Solkara would make itself the receptacle for this power. If this theory holds true, the result would be something unseen in the cosmos in a thousand eons: The birth of a new primordial, unimpeded by divine bonds and free to do as it will.

Whether you make Xixecal a schemer in its own right or keep it as a devoted servant of Solkara, the Living Glacier has its own servitors. These lesser but still powerful beings of ice wander the Elemental Chaos and the world, doing what they see as Xixecal's will. A few have even made their way to the coldest winter realms of the Feywild, where they serve fey lords of cold and ice. (Whether they do so on behalf of Xixecal or have forsaken one master for another is unclear.) These creatures are often mistaken for their lord, creating the impression that Xixecal is a kind of creature rather than a unique being.

These servitor entities are towering constructs of living ice empowered by brutal, destructive strength. To use one of these creatures in an encounter, modify the primordial colossus (*Monster Manual 2*, page 37) as follows: Change its resistance to cold, rather than the variable resistance presented in that entry, and replace all damage keywords with cold.

# YGORL, LORD OF ENTROPY

Slaads recognize no god and kneel to no primordial, but they all revere the slaad lords: mysterious beings as old as the universe. Although these powerful creatures do not demand service, the slaads fear and respect them. Each slaad lord personifies a form of destruction that can bring about the end of reality that all slaads crave.

The best known and most dreaded is Ygorl, Lord of Entropy, also known as the Bringer of Endings. He is the shadow cast by the Elemental Chaos; wherever he travels, death follows. Plants wither, animals sicken, and color leaches from the surroundings. All who behold him see their demise reflected in his cold, uncaring eyes.

## Ygorl's Tactics

Ygorl rides into combat on the back of his dragon companion, Shkiv, and lands amid his foes to engage in slaughter. He begins by sweeping his scythe in an *entropic arc*, leaving a deadly trail of necrotic energy in its wake, while his *entropic presence* urges nearby enemies to reckless action even as their defenses crumble. Once he has bloodied one or more opponents, he overwhelms them with *well of entropy*.

| **Ygorl** | **Level 26 Elite Soldier (Leader)** |
|---|---|
| Medium elemental humanoid, slaad | XP 18,000 |

**Initiative** +20 **Senses** Perception +22; low-light vision

**Entropic Presence** aura 5; each slaad ally within the aura rolls twice and takes the higher result when making melee basic attacks. Each enemy within the aura gains a +2 bonus to attack rolls and vulnerable 5 to all damage; see also *word of annihilation.*

**HP** 336; **Bloodied** 168

**AC** 42; **Fortitude** 39, **Reflex** 37, **Will** 37

**Immune** disease, fear; **Resist** insubstantial

**Saving Throws** +2

**Speed** 8, teleport 6; phasing

**Action Points** 1

⊕ **Scythe** (standard; at-will) ✦ **Weapon**
+33 vs. AC; 1d12 + 9 damage (crit 3d12 + 21), and the target is immobilized until the end of Ygorl's next turn.

↯ **Entropic Arc** (standard; at-will) ✦ **Necrotic, Weapon, Zone**
Close burst 2; targets enemies; +33 vs. AC; 1d12 + 9 damage (crit 3d12 + 21). *Effect:* The burst creates a zone of entropic destruction that lasts until the end of Ygorl's next turn. Any creature that enters the zone or starts its turn there takes 10 necrotic damage.

↯ **Inescapable Endings** (minor; recharges when a creature affected by this power saves) ✦ **Healing**
Close burst 2; targets one creature in burst; +31 vs. Will; the target is affected by inescapable endings (save ends). While the target is affected by inescapable endings, whenever it takes a standard or a move action, Ygorl can take a move action as an immediate reaction; whenever the target regains hit points, Ygorl regains the same number of hit points. *Miss:* Whenever the target takes a move action, Ygorl can take a move action as an immediate reaction (save ends).

↯ **Well of Entropy** (standard; encounter) ✦ **Zone**
Close burst 5; the burst creates a zone of entropy that lasts until the end of Ygorl's next turn. Any bloodied creature that starts its turn within the zone cannot move out of the zone on that turn. *Sustain Minor:* The zone persists.

↯ **Word of Annihilation** (standard; at-will) ✦ **Necrotic**
Close burst 5; targets one creature in burst; +31 vs. Fortitude; the target takes ongoing 20 necrotic damage (save ends). While the target is within Ygorl's *entropic presence* aura, it cannot make saving throws to end the ongoing damage.

**Alignment** Chaotic evil **Languages** Common, Primordial

**Skills** Arcana +25, Insight +22, Intimidate +25, Stealth +23

| | | |
|---|---|---|
| **Str** 29 (+22) | **Dex** 21 (+18) | **Wis** 19 (+17) |
| **Con** 24 (+20) | **Int** 25 (+20) | **Cha** 24 (+20) |

**Equipment** adamantine scythe

## Shkiv

Shkiv came to Ygorl's service after the ruin of Arkhosia. Disgusted with human excess and overcome with grief for his fallen kin, the dragon sought out the Lord of Entropy to get revenge. The slaad lord accepted the dragon's service, and the melancholic beast has been Ygorl's constant companion ever since.

Service to a slaad lord comes at a steep price. The chaotic energy swirling about Ygorl corrupts any who spend too much time in his presence. Shkiv's body is twisted and shrunken, prone to sudden eruptions and

JIM NELSON

transformations. His wings are tattered, his scales tarnished, and his flesh sags from the bones, testifying to the dragon's great age.

| **Shkiv** | **Level 26 Artillery** |
|---|---|
| Large natural magical beast (dragon) | XP 9,000 |
| **Initiative** +20 | **Senses** Perception +20; darkvision |
| **HP** 189; **Bloodied** 94; see also *bloodied breath* | |
| **AC** 39; **Fortitude** 41, **Reflex** 37, **Will** 36 | |
| **Resist** 30 fire | |
| **Speed** 8, fly 10 (hover), overland flight 12 | |
| ⊕ **Bite** (standard; at-will) ✦ **Fire** | |
| Reach 2; +33 vs. AC; 2d8 + 5 damage plus 2d8 fire damage. | |
| ⊕ **Claw** (standard; at-will) | |
| Reach 2; +33 vs. AC; 2d8 + 9 damage. | |
| ⨺ **Aggressive Assault** (standard; at-will) | |
| Shkiv shifts 2 squares and then makes two claw attacks. He cannot move on his turn after using this attack, and, if flying, he must land. | |
| ⨳ **Chaos Fire** (standard; at-will) ✦ **Fire** | |
| Ranged 20; +31 vs. Reflex; 2d8 + 8 fire damage, and each enemy adjacent to the target is dazed until the end of Shkiv's next turn. | |
| ✧ **Flux Breath** (standard; recharge ⚄ ⚅) ✦ **see text** | |
| Close blast 5; +29 vs. Reflex; 4d10 + 8 damage. Roll a d6 to determine the attack's damage type: 1—cold, 2—fire, 3—lightning, 4—necrotic, 5—psychic, or 6—thunder. *Miss:* Half damage. | |
| ✧ **Bloodied Breath** (free, when first bloodied; encounter) | |
| *Flux breath* recharges, and Shkiv uses it immediately. | |
| **Alignment** Chaotic evil | **Languages** Draconic, Primordial |
| **Skills** Arcana +22, Athletics +27, Insight +20, Intimidate +24 | |
| **Str** 28 (+22) | **Dex** 24 (+20) **Wis** 14 (+15) |
| **Con** 27 (+21) | **Int** 19 (+17) **Cha** 22 (+19) |

## Shkiv's Tactics

Shkiv bears Ygorl into battle, blasting *flux breath* over his master's foes and following up with *chaos fire*. The pair might work together, depending on the situation, but they often separate so that Ygorl can savage his enemies in melee. The dragon lends whatever aid it can.

## Ygorl Lore

**Arcana DC 17:** Ygorl is one of the mighty slaad lords who dwell in the Elemental Chaos. This terrible host includes such figures as Chourst, the Lord of Randomness, and Bazim-Gorag the Firebringer. Ygorl embodies the force of decay: He is dedicated to unraveling the bonds of creation and scattering its remnants to the void. Slaad legends say that Ygorl came into being when the universe died and now moves backward through time.

**Arcana DC 26:** The Lord of Entropy has learned over his long existence to choose his battles carefully. Just as they crushed the primordials in the Dawn War, the gods would join forces to stop Ygorl should he act overtly. Having already witnessed creation's demise, he has no need to bring it about quickly. Instead, he subtly saps the bonds between mortals and the gods, and weakens reality's fabric to ensure that the end he knows will come.

Ygorl's plots depend on the slaads, though he feels no affection or concern for them. Slaads spill out in the hundreds or thousands from the Elemental Chaos to wipe out a settlement, tear down a mountain, or retrieve a discarded magic item. These missions seem to serve little purpose, but the slaads perform them obediently.

**Arcana DC 31:** When he is not roaming, Ygorl withdraws to his solitary fortress. Like the Pandemonium Stone (page 80), this stronghold appears at random, vanishing for a time and reappearing elsewhere in the Elemental Chaos. Here the slaad lord reflects on reality's end and plans his next move.

## Skirnex, Voice of Ygorl

Ygorl needs slaads to execute his mysterious plans, but his reclusive nature hinders his efforts to direct them. The twisted void slaad Skirnex serves as an intermediary and pseudo-priest, dispensing the Lord of Entropy's unfathomable wisdom to followers.

| **Skirnex** | **Level 23 Elite Controller (Leader)** |
|---|---|
| Medium elemental humanoid, slaad | XP 10,200 |
| **Initiative** +15 | **Senses** Perception +17; low-light vision |
| **Entropic Gibbering** aura 2; each enemy that enters the aura or starts its turn there takes a -2 penalty to all defenses until the start of its next turn. | |
| **HP** 290; **Bloodied** 145 | |
| **AC** 35; **Fortitude** 37, **Reflex** 35, **Will** 33 | |
| **Immune** disease; **Resist** insubstantial | |
| **Saving Throws** +2 | |
| **Speed** 6, teleport 4 | |
| **Action Points** 1 | |
| ⊕ **Claw** (standard; at-will) | |
| Reach 2; +28 vs. AC; 2d10 + 8 damage, and ongoing 10 damage (save ends). *Each Failed Saving Throw:* The target loses a healing surge. | |
| ⨳ **Bolt of Insanity** (standard; at-will) ✦ **Psychic** | |
| Ranged 20; +27 vs. Reflex; 2d10 + 8 psychic damage, and the target is surrounded by a shroud of maddening energy (save ends). While surrounded by the shroud, whenever the target takes damage, it takes 1d10 extra psychic damage. | |
| ⨺ / ⨳ **Mad Assault** (standard; at-will) | |
| Skirnex makes two basic attacks. If each attack hits a different target, the target is also dazed until the end of its next turn. | |
| ✲ **Void Slime** (standard; recharge ⚃ ⚄ ⚅) ✦ **Necrotic** | |
| Area burst 2 within 10; +26 vs. Fortitude; 2d8 +6 damage, and the target is encased by a blob of entropic goo (save ends). While encased by the goo, the target is slowed, cannot take standard actions, and takes half damage from melee and ranged attacks. *Aftereffect:* The target is slowed and takes ongoing 10 necrotic damage and a -2 penalty to attack rolls (save ends all). *Miss:* The target is slowed and takes ongoing 10 necrotic damage (save ends both). | |
| ✧ **Entropic Shift** (move; at-will) ✦ **Teleportation** | |
| Close burst 10; targets two creatures in burst; +20 vs. Will (no attack roll required against an ally); Skirnex teleports the targets, swapping their positions. | |
| **Alignment** Chaotic evil | **Languages** Common, Deep Speech, Primordial |
| **Skills** Stealth +20 | |
| **Str** 24 (+18) | **Dex** 18 (+15) **Wis** 13 (+12) |
| **Con** 23 (+17) | **Int** 11 (+11) **Cha** 17 (+14) |

### Skirnex's Tactics

Skirnex prefers to attack from a distance, but when enemies close, he tries to get them in his *entropic gibbering* aura to weaken their defenses. His *void slime* power hinders multiple enemies and makes ranged strikers and controllers easier for allies to catch in melee. He also interferes with enemies' disposition and places his allies in advantageous positions with *entropic shift*.

### Skirnex Lore

**Arcana DC 16:** Skirnex is a misshapen void slaad with a stunted third arm sprouting from his shoulder, surrounded by an almost palpable haze of wrongness. Even though slaads follow no god or primordial, some are willing to listen to Ygorl's words as interpreted by Skirnex.

**Arcana DC 24:** Skirnex has led many expeditions on behalf of the Lord of Entropy and managed to survive, although he has been bizarrely altered. He takes his unusual longevity to be evidence that the Lord of Entropy favors him and has set himself up as something resembling a priest of Ygorl. Skirnex hopes to share the secrets of ruin known only to Ygorl, even though the slaad elder has never given any indication of recognizing or even remembering him.

**Arcana DC 29:** Skirnex's distorted form suggests that he has been touched by the emanations of the Far Realm. Perhaps he wandered into a place where that weird domain overlaps the Elemental Chaos, or somehow strayed too close to the seed of evil that rests at the bottom of the Abyss.

## Acolyte of Entropy

Skirnex has gathered a small group of fanatical slaad worshipers of Ygorl who coerce other slaads into following his orders.

### Acolyte of Entropy Tactics

Acolytes of entropy revel in destruction and lash out at any targets they can reach. They try to flank enemies, trying to deal as much damage as possible. An acolyte has no fear of being injured and even tries to sustain enough damage to loose an *illogic burst*, granting its allies combat advantage against confounded foes.

### Acolyte of Entropy Lore

**Arcana DC 20:** Acolytes of entropy are variant gray slaad havocs that live to spread physical as well as mental disorder. They have embraced destruction to such an extent that their own wounds become their most dangerous weapons.

**Acolyte of Entropy** **Level 18 Skirmisher**
Medium elemental humanoid, slaad XP 2,000

**Initiative** +14 **Senses** Perception +13; low-light vision
**HP** 162; **Bloodied** 81
**Regeneration** 5
**AC** 31; **Fortitude** 30, **Reflex** 31, **Will** 28
**Immune** disease
**Speed** 6, teleport 4

⊕ **Entropic Claw** (standard; at-will) ✦ **Necrotic**
+23 vs. AC; 1d8 + 8 necrotic damage, and the target is weakened until the end of its next turn.

**Void Bolt** (standard; at-will) ✦ **Necrotic**
Ranged 20; +21 vs. Reflex; 2d8 + 8 necrotic damage, and the target is knocked prone. If the attack scores a critical hit, the target is also stunned until the end of its next turn.

**Illogic Burst** (when the acolyte of entropy becomes bloodied; recharges when the acolyte is restored to full hit points) ✦ **Necrotic, Psychic**
Close burst 3; the acolyte of entropy's head explodes: +21 vs. Fortitude; 3d8 + 6 necrotic damage, and ongoing 5 psychic damage (save ends). *Aftereffect:* The target grants combat advantage until the end of its next turn.

**Entropic Advantage**
Whenever the acolyte of entropy hits a target granting combat advantage to it, that target also gains vulnerable 5 to all damage (save ends).

**Alignment** Chaotic evil **Languages** Common, Primordial
**Skills** Athletics +16, Stealth +17

| | | |
|---|---|---|
| **Str** 14 (+11) | **Dex** 17 (+12) | **Wis** 19 (+13) |
| **Con** 20 (+14) | **Int** 23 (+15) | **Cha** 16 (+12) |

## Encounter Groups

Few slaad lords look beyond the slaads for servants, but Ygorl recognizes that all creatures have a part to play in bringing about creation's end. He forges alliances with any who would have him, asking little in return beyond spreading mayhem. Demon lords bargain for Ygorl's void slaads to bolster their hordes in wars raging across the Abyss. Evil gods make pacts with the Lord of Entropy, gaining insight about the future in exchange for participating in one of his bizarre schemes.

Ygorl usually keeps a coterie of black slaad entropics near at all times, ready to do his bidding. Skirnex often leads fanatical followers on missions to serve the slaad lord's inscrutable purposes.

**Level 23 Encounter (XP 29,400)**
- Skirnex (level 23 elite controller)
- 4 acolytes of entropy (level 18 skirmisher)
- 4 black slaads (level 20 skirmisher, *MM* 239)

**Level 26 Encounter (XP 49,500)**
- Ygorl (level 26 elite soldier)
- Shkiv (level 26 artillery)
- 10 black slaad entropics (level 26 minion brute, page 144)

## NEW MONSTERS

Every new monster in this book appears on the following list, which is sorted alphabetically by level and monster role. Monster leaders are indicated with an (L).

| Monster | Level and Role | Page |
|---|---|---|
| Crushing Wave Initiate | 8 Soldier | 155 |
| Scorchwind Phantom | 9 Lurker | 138 |
| Crushing Wave Hierophant | 10 Artillery (L) | 154 |
| Chaos Phage Swarm | 12 Brute | 142 |
| Ashfrost Assassin | 12 Skirmisher | 138 |
| Green Slaad Madjack | 13 Elite Controller | 142 |
| Mud Archon Skulker | 14 Lurker | 131 |
| Blue Slaad Digester | 14 Elite Soldier | 143 |
| Iron Archon Interceptor | 14 Soldier | 130 |
| Eisk Jaat Rimebolter | 15 Artillery | 136 |
| Gray Slaad Havoc | 15 Artillery (L) | 143 |
| Sunsearer | 15 Artillery | 139 |
| Dust Demon | 15 Elite Controller | 132 |
| Dust Wisp | 15 Minion Controller | 132 |
| Eisk Jaat Warrior | 15 Minion Skirmisher | 136 |
| Red Slaad Juggernaut | 15 Elite Soldier | 143 |
| Eisk Jaat Mauler | 16 Brute (L) | 136 |
| White Slaad | 16 Elite Lurker | 144 |
| White Slaad Temporal Replica | 16 Minion Lurker | 144 |
| Consumptive Parasite | 16 Minion Skirmisher | 133 |
| Iron Archon Crescent Blade | 16 Skirmisher | 130 |
| Acolyte of Entropy | 18 Skirmisher | 158 |
| Eisk Jaat Mystic | 18 Lurker | 137 |
| Ash-Wrought Soulburner | 19 Controller | 133 |
| Mud Archon Ambusher | 19 Skirmisher | 131 |
| Diamondstorm Reaper | 20 Soldier | 139 |
| Liricosa | 21 Solo Controller | 148 |
| Consumptive Swarm | 21 Elite Skirmisher | 133 |
| Skirnex | 23 Elite Controller (L) | 157 |
| Smoke Hound | 23 Minion Soldier | 147 |
| Writhing Crag | 23 Elite Soldier | 134 |
| Primeval Ooze | 24 Elite Brute | 128 |
| Caustic Slayer | 24 Elite Lurker | 139 |
| Djinn Cloudstalker | 24 Lurker | 151 |
| Ehkahk | 25 Elite Controller (L) | 146 |

## ABOUT THE DESIGNERS

Ari Marmell has been shirking homework in favor of playing D&D® since he was nine years old. Thankfully, he now works in the industry, since shirking work for gaming tends to wreak havoc with the bills. *The Plane Below* is his first turn behind the lead design wheel for Wizards of the Coast.

Bruce R. Cordell is an Origins and ENnie award-winning game designer whose long list of professional credits include the new *Forgotten Realms® Campaign Guide, Keep on the Shadowfell, Draconomicon: Chromatic Dragons,* and *Open Grave: Secrets of the Undead.* Bruce is also an author of Forgotten Realms novels, including *City of Torment,* the second book in the his Abolethic Sovereignty series.

As of May 30 2009, Luke Johnson became a married man. As of August 2009, he is also enrolled in medical school. How he still has time to write for Dungeons & Dragons is a secret his fellow authors intend to wring out of him any day now.

Stephen Radney-MacFarland is a game developer for Wizards of the Coast RPG R&D, but is actually just biding his time in anticipation of the zombie apocalypse. His most current projects include *Arcane Power, Adventurer's Vault 2,* and *Draconomicon: Metallic Dragons.*

# IMPROVE YOUR GAME WITH A BOOKMARK.

Add D&D Insider™ to your Favorites and bring more to your characters and campaigns with a constantly growing source of new content, tools, articles, applications, and more.

Whether you're a player, a DM—or both—D&DI™ will help you spend less time prepping for your game and more time playing it.

# Where Chaos Rules Adventure Follows

A hotbed of adventure awaits in the roiling maelstrom of the Elemental Chaos—a tumultuous plane of primordials, titans, elementals, slaads, and demons. From the City of Brass to the githzerai monastery of Zerthadlun to the spiraling depths of the Abyss, adventure lurks behind every lava waterfall, across every icy battlefield, and beyond every raging lightning storm.

This Dungeons & Dragons® supplement explores the Elemental Chaos in detail, featuring key locations throughout the plane. It also presents new monsters, adventure hooks, encounters, hazards, and everything Dungeon Masters need to make the Elemental Chaos a featured setting in their campaigns.

For use with these 4th Edition Dungeons & Dragons® products:

*Player's Handbook®* core rulebooks

*Dungeon Master's Guide®* core rulebooks

*Monster Manual®* core rulebooks

*D&D® Miniatures* *D&D™ Dungeon Tiles*

INDEX ..... 223

# Introduction

Player's Handbook 2 introduced eight new classes and five new races to the D&D® game. It presented racial paragon paths, character backgrounds, and new feats and rituals for every character.

*Monster Manual® 2* presented over 300 new monsters to the game, covering every level and role. From the humble ankheg broodling to the mighty Prince of Demons, Demogorgon, it's full of monsters to challenge your players and add new life to your dungeons.

So what's in *Dungeon Master's Guide® 2* that will make your game better?

## Juicy Rules Bits

Let's start with the juicy rules bits you can drop in your game right away—like the eight pages of new traps in Chapter 2. You also get solid guidelines for creating your own traps, covering everything from getting the numbers right to making sure your trap threatens the characters—not the fun of your game.

Chapter 2 also includes new types of fantastic terrain you can add to your encounters, as well as introducing the concept of "terrain powers"—attack powers built in to an encounter's environment.

Chapter 4 is about tweaking and adjusting monsters. It rounds out the rules presented in the first 4th Edition *Dungeon Master's Guide* with additional rules for making minions and refined guidelines for elite and solo monsters. It presents new templates, including class templates for the classes in *Player's Handbook® 2*, and introduces monster themes—a great way to tweak the flavor and powers of a monster to make it fit whatever kind of adventure you want to run.

You'll find new artifacts in Chapter 5, including old favorites such as the *Rod of Seven Parts* and the *Cup and Talisman of Al'Akbar* (both of which appeared in the original *Dungeon Master's Guide* back in 1979) as well as all-new artifacts designed to appeal to pairs or whole groups of characters.

Chapter 5 also sets out a new system of rewards you can use instead of (or as a supplement to) magic items. Divine boons represent gifts from the gods or their agents, legendary boons express the accomplishment of great deeds of power, and grandmaster training reflects what happens when a player character learns from a legendary master.

Near the end of Chapter 1, you'll find rules for companion characters—a great way to round out a small party or bring an important NPC along for the ride with your player characters. That chapter also includes handy rules for altering a character on the fly so he or she can fit in with a party of characters of much higher or lower level.

## Expert Advice

A *Dungeon Master's Guide* isn't just about rules, it's about helping you be a better Dungeon Master. Whether you're a veteran DM or a first-timer, this book has ample expert advice to improve your game.

Chapter 1, "Group Storytelling," focuses on the cooperative experience of creating a dramatic narrative. Whether you're looking to inject a little more drama into your game or you want a group-created story to drive your campaign, you'll find advice that will help you bring the characters at your table to life.

Chapter 2, "Advanced Encounters," extends that advice to the level of the individual encounters that make up your adventures, offering advice to help make each encounter an important part of the plot. This chapter also includes advice on how to tailor encounters for different player motivations, how to deal with large and small groups, how to encourage movement in combat, and how to pace encounters to build dramatic tension. If you've wondered how to encourage characters to press on without taking an extended rest, or how to handle a long fight with wave after wave of onrushing enemies and no time for a short rest, this chapter has the advice you need.

Chapter 2 ends with a sample encounter that pulls many of the elements discussed in the chapter together into a single, dynamic fight.

Chapter 3, "Skill Challenges," focuses on using skill challenges in your game, combining extensive, detailed advice with lots of examples. It sums up the basic rules of skill challenges (as already expanded and clarified in rules updates found on www.wizards.com), moves on to discuss five key elements of skill challenges, and wraps up with a series of examples.

In among the rewards and artifacts in Chapter 5, "Adventures," you'll also find plenty of advice to help you build your campaign. Sample campaign arcs, including a hands-on example of how to build a campaign arc, help you form the skeleton of your campaign, and information about using artifacts and organizations can help you flesh out the details.

If the characters in your campaign have advanced to paragon level, be sure to take a look at Chapter 6, "Paragon Campaigns." This chapter offers tips and

suggestions for campaigns set in the paragon tier, presents the city of Sigil as a home base for characters' adventures through the paragon tier, and includes a short adventure for 11th-level characters.

## D&D Insider

Throughout this book, you'll find excerpts of material from the pages of *Dungeon*™ magazine, particularly Stephen Radney-MacFarland's "Save My Game" column and James Wyatt's "Dungeoncraft" column. Some other material in this book originally appeared in the "Ruling Skill Challenges" column by Mike Mearls or in feature articles in *Dragon*™ magazine.

These columns and features are part of *D&D Insider*™, an online subscription-based service designed to bring new life and new ideas to your D&D game. *D&D Insider* is a suite of content and tools for better gaming, including:

- *Dragon* magazine, which features new material and expanded content to help make your characters and campaigns more fun and more compelling: character options, powers, feats, magic items, paragon paths, epic destinies, monsters, campaign setting source material, and more. *Dragon* magazine also regularly features material slated for inclusion in future print products, giving you the opportunity to share your feedback with the Wizards of the Coast design and development teams.
- *Dungeon* magazine, which provides three to five new adventures every month—something for each tier of play (heroic, paragon, and epic)—so you'll always have a game that's ready to run. Whether you run those adventures, or play your own homebrewed adventures and campaigns, *Dungeon* offers a continuous source of articles, features, hints, and tips, to help make the job of DMing even easier.
- The D&D Character Builder, a stand-alone application that puts information from every printed book and online article at your fingertips as you build and level your character. In addition to providing an updatable and easy-to-read character sheet, the Character Builder generates power cards for you to quickly reference and track your character's powers.
- The *D&D Compendium*, a searchable online database of the complete rules text for every race, class, paragon path, epic destiny, skill, feat, power, item, and ritual—from every D&D rulebook and online magazine article.

Wizards of the Coast is working constantly to expand and improve the tools and content available on *D&D Insider*, so be sure to check www.dndinsider.com for the latest updates. And if you like the excerpts from *D&D Insider* you find within these pages, become a subscriber and check out what you've been missing!

### PUTTING IT ALL TO USE

Since the release of the *Dungeon Master's Guide* in 2008, the D&D game has grown. Besides *Player's Handbook 2* and *Monster Manual 2*, you and your players might own *Martial Power*™, *Draconomicon*™: *Chromatic Dragons*, *Open Grave*™, *Adventurer's Vault*™, the *Forgotten Realms*® or *Eberron*® *Campaign Guide* and *Player's Guide*, and any number of other supplements and adventures. How do you put it all to work for your game?

Start by knowing when to say no. If a player brings a new option to your table that doesn't fit in your game, it's okay to tell the player to hold on to that idea until this campaign wraps up and you (or someone else in your group) starts something new. Balance this, of course, with the advice to say yes as much as possible (see page 28 of the *Dungeon Master's Guide*), but know the limits you want in your game and don't be afraid to enforce them.

If your players are eager to try a new class or build they found in *Player's Handbook 2* or a power source book such as *Arcane Power*™, check out the sidebar on page 35, which discusses how to let players take on multiple characters. You should also feel free to let your players tweak aspects of their characters when new options become available. If the guardian druid in your party wants to become a swarm druid once *Primal Power*™ comes out, and the player can make that change without doing violence to the story of your game, let it happen.

The *D&D Compendium*, part of the *D&D Insider* suite of tools, is a great way to keep track of information that appears in multiple books. If you're trying to find the caller in darkness, the *Compendium* can tell you quickly that it appears in *Open Grave: Secrets of the Undead* (and that it's a level 19 elite soldier). Using the *Compendium* to build encounters keeps all the information from your books at your fingertips.

Loot freely. For instance, you don't have to be running a game set in the world of Eberron to find something worth using in the *Eberron Campaign Guide*. Maybe the idea of characters with dragonmarks tied to a mysterious prophecy fits in with the ideas you have for your own campaign. Letting your characters take dragonmark feats—and then pitting them against agents of the Chamber and the Lords of Dust—makes everyone at the table happy.

Delves (short, three-encounter adventures), lairs, and even single encounters are easy to work in to whatever adventure you're running, whether it's a published adventure or one of your own creation. If you craft your own adventures but find yourself underprepared for a session, picking up a delve from *Dungeon Delve*™, a dragon lair from *Draconomicon*, or even a couple of encounters from one of the dozens of adventures found in *Dungeon* magazine is a great way to keep your game on track.

– James Wyatt

CHAPTER 1

# Group Storytelling

The D&D game offers a Dungeon Master and the other players the ability to craft a story out of each session and each adventure. Sometimes a gaming group creates a straightforward story, with sword-and-sorcery action and little character development or few plot twists. Other times, a group weaves a magical tale with dramatic layers of complex storytelling.

This chapter focuses on the narrative side of the game from the DM's point of view, offering techniques to encourage your group of players to help you shape the story of the game.

This chapter includes the following topics.

- **Story Structure:** The basic building blocks of narrative storytelling.
- **Branching:** Consider the narrative as a series of choices leading to multiple possible destinations.
- **Cooperative Arcs:** Consult with your players to build a campaign from the ground up.
- **Your Cast of Characters:** Help players work with you and each other to create dynamic characters.
- **Cooperative World Building:** The cooperative storytelling approach builds a story through joint improvisation. Players feel they have a stake in the story when they participate in building the plot.
- **Roleplaying Hooks:** Strong personality and plot hooks established at the start keep the characters involved throughout the life of the campaign.
- **Vignettes:** Short, directed scenes allow players to see events from a different point of view.
- **Drama Rewards:** Significant, dedicated roleplaying deserves XP rewards.
- **What Your Players Want:** Create surveys so you can adapt the game to your players'—and their characters'—requests.
- **Companion Characters:** Your story might call for an ally to join the PCs for a time, or maybe they need help in overcoming a challenge you want to use. These rules work independent of the storytelling style you adopt for your game.
- **Making Things Level:** Guidance for handling the situation when a character of higher or lower level joins the party.

HOWARD LYON

To create any story—whether prepared in advance or improvised, whether for your D&D game or for a creative writing project—begin with the basic building blocks that construct all narratives.

## Classic Story Structure

Fantasy stories draw on the great myths of various world cultures and make heavy use of traditional structures. You can create strong effects by deviating from an expected structure, but doing so requires a thorough knowledge of the subject.

The following elements comprise a traditional story.

**Introduction:** An opening sequence that identifies the viewpoint characters, or protagonists, and the basic situation. The introduction also establishes the antagonists, the forces that impede the progress of the protagonists.

**Rising Action:** A series of events that makes the characters' situation more complex and urgent. As these events progress, the consequences become more significant. You can map the rising action as an upward-trending line with peaks and valleys. Through a series of turning points, you create tension, release it periodically, and then build it up again to a higher pitch.

**The Climax:** A pivotal moment of maximum tension, in which the opposed forces driving the central conflict of the story conclusively clash, resolving the situation established in the introduction.

### STORY ISN'T EVERYTHING

You can run a thrilling D&D campaign that keeps your players coming back for more even if you don't give a single thought to story structure, character motivations, cooperative world building, or any of the other concepts described in this chapter. Using these ideas makes you a better DM only if doing so enhances the collective fun of a receptive group. Before introducing the cooperative techniques discussed in this chapter, poll your players and confirm that they are interested.

Consider the types of players in your group (as discussed on pages 8-10 of the *Dungeon Master's Guide*). Explorers, instigators, and storytellers thrive in a cooperative game. Power gamers and slayers might approve, as long as the focus on characterization doesn't cut into their fighting time. Watchers remain content if they are allowed to shy from the creative spotlight. Thinkers might feel frustrated by a cooperative game's focus on drama and tension. Some actors might love the cooperative style of dramatic creation, but others could find it distracting.

**Denouement:** A brief wrap-up sequence in which the players glimpse the lasting consequences of the story's climactic events.

## Turning Points

Every peak or valley in the rising action pivots around a turning point. At the end of a turning point, players feel the tension either increase or decrease. Turning points fall into two main categories: problem solving and dramatic turns.

### Problem Solving

Problem-solving turning points make up the majority of an adventure story. A protagonist faces an external obstacle, attempts to overcome it, and either passes or fails the test. For this reason, the structure of adventure stories is sometimes referred to as "the pass/fail cycle." External obstacles that stand in the way of pragmatic or tactical goals include:

- a hidden item the characters must find.
- a wall the characters must climb.
- a witness the characters must convince to talk.

### Dramatic Turns

Tension also rises or falls when a protagonist pursues emotional goals through interaction with other characters. These turning points make up a large part of conventional dramas, from soap operas to classic plays. In adventure stories, dramatic turns most often appear as interludes of emotional reaction interwoven with active pass/fail obstacles.

Dramatic scenes occur when outside characters such as the PCs' friends, family members, loved ones, rivals, and enemies hold emotional power over the player characters. These scenes offer a shift in power from one character to another. Tension decreases if the protagonist retains or increases his or her emotional power. If she loses it, tension increases.

### TENSION AND RELEASE

Maintain the tension and release of the pass/fail cycle by adjusting DCs or encounter levels to reflect the party's recent record of loss and gain. When a string of failures discourages players, adjust the numbers downward to make their subsequent success more likely. If the PCs are cocky in the wake of successive wins, tighten the screws.

Satisfying D&D stories differ from other narrative forms in one major way: D&D stories don't follow a single predetermined storyline through a series of turning points. Instead, each turning point presents the opportunity for the story to branch in an unexpected direction. By anticipating branches, you can ensure that the story keeps moving in an exciting—and unexpected—direction.

A strong branch point engages players and can move the story in two or more directions.

## Pass/Fail Branching

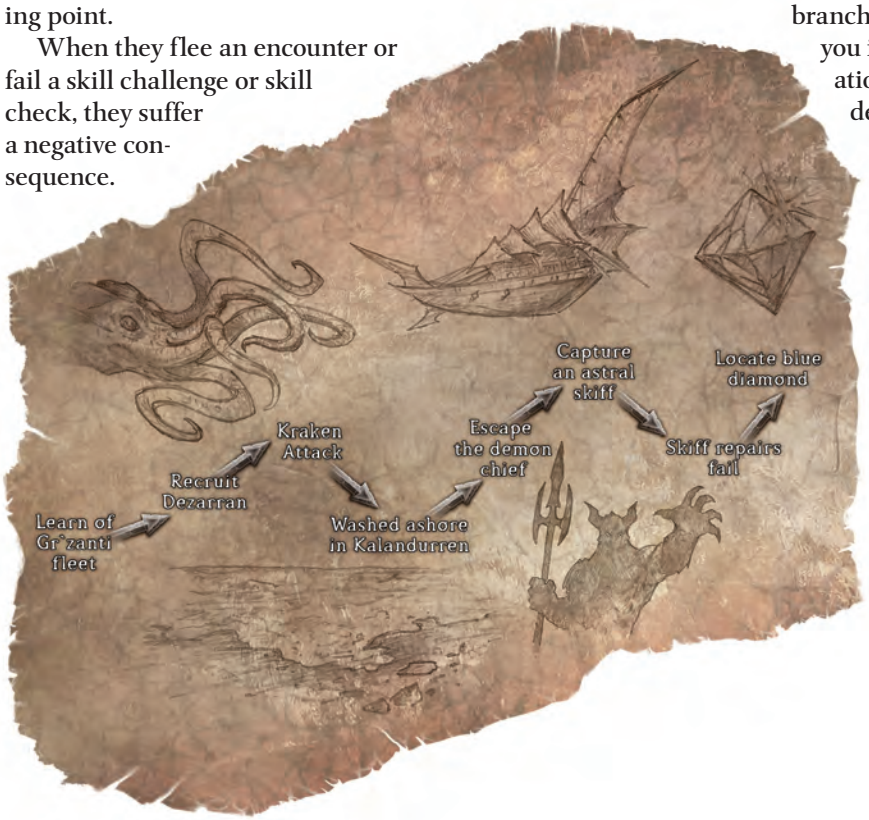
Every time you call on a D&D mechanic to resolve an action and the result affects the story, you create a pass/fail branch point.

When players successfully complete encounters or skill challenges or make successful skill checks, the PCs pass a test and gain a benefit. Tension is released. Success carries them to the next turning point.

When they flee an encounter or fail a skill challenge or skill check, they suffer a negative consequence. Tension increases as they move toward a new turning point—possibly one not of their choosing.

A null result—one that is not a success and does not move the story forward—could frustrate players and create a negative play experience. If the PCs fail to overcome the current obstacle, they must find another way to surmount it—and there should always be another way.

To create a strong pass/fail branch point, build tension by showing players the negative consequences of failure. Even if the players see the negative consequences already, increase the thrill level with vivid description. Describe the yawning chasm the paladin will fall into if he fails to clamber up onto the ledge. Alternatively, tantalize your group with a tempting reward they will gain if they succeed.



*This diagram maps out a D&D session's major events in a pass/fail cycle. The PCs first learn that an astral pirate fleet threatens the friendly dominions. The characters successfully recruit Dezarran, an expert on the pirates, passing that obstacle (represented by an upward arrow). During the PCs' return from this journey, an astral kraken attacks them, and they fail to defeat it before it shatters their ship. A downward arrow represents their failure. They wash ashore on Kalandurren. This event leads to a successful skill challenge to escape a demon chief (pass) and the capture of an astral skiff from slaad guards (pass again). They fall short on a skill challenge to repair the skiff (fail), leading them to search for a blue diamond to power its engines, which they successfully locate (pass).*

## Avoiding Dead Branches

When you look at the two possible outcomes of any branch point, don't let either choice lead you into a narrative dead end. This situation could occur when the PCs can't devise a solution to a problem, or if a sequence of dull, repetitive, or petty obstacles hinders their progress.

Eventually, a dead branch will stump you. You just can't imagine a consequence of failure that takes the story anywhere fun or interesting. In this case, allow the players an automatic success. Either secretly set the DC of the check to 1, or drop the pretense and tell the players that they overcome the obstacle without resorting to a die roll. If this easy success feels like a lapse in story logic, describe a fortuitous event that makes the obstacle suddenly surmountable. The PCs locate a crack in a supposedly impregnable wall, find the guards asleep at their post, or stumble upon the dragon after a wagonload of ale has left him in a magnanimous mood. Turn a dead branch into an opportunity to create a scene to move the story forward.

Repeated null results are a particularly difficult form of dead branches. The story stalls, and the players' frustration

builds with each failed attempt at the same task. Before this type of dead branch spoils everyone's enjoyment of the game, drop the DCs in order to allow the characters to move on. Plan ahead to avoid the frustration of repeated null results by devising obstacles that create a new situation after a failure.

Sometimes story logic dictates a difficult challenge even though one of its possible branches leads to a dead end. In this case, focus the challenge on what the PCs' necessary victory costs them, rather than on winning or losing. On either a success or a failure, the characters will move on to the same obstacle. However, on a failure, they move on at a significant disadvantage.

### Encounters as Branch Points

The aftermath of a typical encounter has two or more branches. Lucky, smart PCs walk away from a fight having spent relatively few daily powers, action points, and healing surges. Bad luck or poor tactics in the same encounter leaves the PCs in worse shape and force them to rest to replenish their resources. Occasionally, a party member will die, exacting an even higher cost in lost time and payment for a ritual to bring back the dead character.

You can turn encounters into genuine pass/fail turning points, with possible branches for both outcomes. One way to accomplish this is by staging a nonlethal fight against superior opponents. Pit the group against more creatures than the standard encounter rules call for, or increase the encounter level by one or two notches. Success gives the group a benefit and sends them to obstacle A, whereas failure has a negative consequence and takes them to less desirable obstacle B.

Another technique is to give the PCs a secondary goal to fulfill during the encounter, in addition to overcoming the traps and defeating the creatures. If the PCs achieve the goal in a set number of rounds, the plot takes a positive turn. If the PCs take longer or fail, their next obstacle reflects a narrative setback. A secondary goal might include a simple task, such as reaching a specified square and then succeeding on a skill check. Chapter 2 discusses encounter goals in more depth, but simple objectives could include the following accomplishments:

- Capturing an enemy noncombatant.
- Defeating a particular creature before dealing with the rest of its comrades.
- Destroying a magic device before it harms a distant person, place, or object.
- Grabbing an artifact before it is somehow lost.
- Hitting a button to keep a dimensional gate open.
- Rescuing a hostage.
- Stopping a sinister ritual.

Make sure to tailor the encounter for the additional goal the PCs must accomplish. Ease back on encounter difficulty if necessary by reducing creature numbers or the overall encounter level. Consider introducing a creature or two in the middle of a fight if the PCs meet the secondary goal with anticlimactic ease. You could also stage an encounter of higher level than the level of the PCs. Build in a goal that, if it is reached, removes some of the creatures from the fray, putting the encounter back into the group's comfort zone.

## Decision Branching

Strongly plotted adventures provide players with multiple opportunities to make decisions that insert branch points into the story. These branches might lead to obstacles that don't involve the PCs defeating monsters or traps, such as:

- Opening the door on the left instead of the one on the right.
- Choosing which witness to talk to next.
- Deciding to go to the tavern in the dangerous part of town instead of the one that seems more safe.
- Going home to challenge your evil stepbrother for superior status in the family.
- Demanding that your father, the king, recognize you as a worthy heir.

STEVE ARGYLE

Sometimes, players make unexpected choices, forcing you to improvise a suitable response. A DM who prefers to prepare every encounter before starting an adventure might try to nullify the players' choice, encouraging their return to the preplanned set of obstacles. DMs who like to improvise might use these unanticipated decision branches as opportunities to allow the players to take the story in a new direction.

Strong decision points give the players a sense of freedom and influence over the course of events. Describe the situation so they can make a clear decision between contrasting outcomes, not a random choice between unknowns. Simply choosing between a dungeon corridor to the right and one to the left is not as satisfying a decision for the players as the choice between a corridor that reeks of necromantic magic and a hallway that echoes with a strange siren song.

When a decision point lies between action and inaction, heighten the stakes by making both options seem risky in different ways. If a player tries to decide whether he should return home to confront his character's stepbrother, raise the stakes: Suggest to him the consequences of putting off the showdown, as well as what might happen if he goes through with it.

## DM'S WORKSHOP: ROYAL SUMMONS

Previously in the campaign, the paragon-level PCs had begun exploring the Underdark. They know of a dwarven stronghold that they hope to make their base of operations for their delving, but encounters with dwarf patrols have warned them that the dwarf king is unstable.

In this example of branching, the king of the stronghold summons the PCs. The stronghold's sergeant, Thangur, arrives with a heavily armed escort to take the PCs to the royal audience chamber. As a consequence of success in a previous pass/fail scene when the PCs met a patrol led by Thangur, they have earned the sergeant's grudging approval.

You have built a decision branch into the opening of the encounter: Do the PCs try to flee the escort, or do they obediently accompany Thangur? Plan ahead to ensure that both choices pose risks to the party and offer up interesting branches.

Fleeing poses risks; if the PCs fail the resulting skill challenge to get away, they face capture and King Fyolf's wrath. If they succeed, they must fend for themselves in the depths of the Underdark without the dwarves' aid. So, one course of action offers two branches that move the story toward new obstacles.

Following Thangur has its risks, too. He reluctantly explains that a brush with a mind flayer has made King Fyolf increasingly capricious. Depending on how deftly they deal with Fyolf, he might throw them in his dungeon or send them on a mission. Again, this outcome branches toward two interesting obstacles: escaping from a dungeon or going on a mission the PCs might not have chosen for themselves.

Having planned ahead in two directions, you have preparations in place for the players to make either available decision, and you can plan strong pass/fail results for both outcomes.

The players discuss their options and decide to accompany Thangur. As you might expect, they pump him for further information about Fyolf. Use this opportunity to heighten the tension with a description of the king's unpredictability. Obsequious words sometimes anger him, but he also erupts if petitioners fail to bow and scrape before him.

After some discussion, the PCs decide to present themselves as proud and unapologetic, befitting their paragon status.

After checking your notes, you see that the PCs easily succeeded on their last skill challenge, so you might decide to use high DCs this time.

With both possible branches from this challenge planned, the scenario plays out. The PCs fail the skill challenge, and a furious Fyolf imprisons them. The players react with dismay when the king threatens to jail their characters, and they consider fighting their way out of his court.

Because you have described in great detail the formidable retinue attending the king, it seemed unlikely that the PCs would present you with this decision point. You might think about shutting off this option by simply declaring the opposition to be overwhelming. But before you do that, remind yourself that cooperative DMs take cues from their players; rethink the situation, and look for a way to resolve this scenario with a fight that makes sense. You decide that Fyolf, bored and seeking entertainment, dispatches just enough guards to make for a tough but fair fight against the party. If the PCs defeat the guards without being foolish enough to kill any of them, he'll merely exile them from his kingdom. If they lose the fight, or if they kill any guards, they wind up in chains. Armed with two interesting yet believable branches, you can now create a dwarf encounter and haul out the battle grid.

Then, as you begin to assemble the encounter materials, the players perform an about-face. Cooler heads maintain that attempting to escape from Fyolf's prison presents less difficulty than fighting an entire court of dwarf warriors—so the characters surrender and allow themselves to be taken into custody.

While you describe the group's trip to jail, at the same time, anticipate the possible branches that could arise from an escape sequence. Being unable to escape from confinement exemplifies a classic dead branch—possibly the deadest of all because it leads to frustration. So you assume the characters manage to escape, perhaps without attracting any attention from their guards or perhaps after fighting their way out. In both cases, the PCs wind up without civilized shelter in the Underdark and must take and hold a hideout of their own.

## COOPERATIVE ARCS

A sense of shared authorship between you and the players can begin before you start playing, when you create a campaign. Convene with your group and ask them to help you create a campaign arc from the ground up. Have each player bring a pitch, a basic idea for the campaign, to this meeting. The pitch is a simple sentence that describes how the player characters fit into their world. Here are a few examples.

- The resurrected heroes of a long-dead empire fight to prevent the disaster that claimed their civilization from destroying another.
- Outcasts and scavengers vow to gather a barbarian army and conquer the world.
- Bickering half-siblings set out to gather unique items for their father's magic item shop.
- In a Roman-style empire, high-status slaves capture live monsters for combat in the coliseum run by their master, a senator.

You serve as editor and mediator, guiding the process until you assemble a blueprint for the campaign. After each player makes a pitch, let the group discuss and rank the possible choices. They might take elements of several pitches and combine them into a favorite pick. Cross-fertilization promotes engaging storylines. Aim for a concept open enough to allow variety while still revolving around a distinct, central idea.

Having hammered out the basic premise, expand and refine it by establishing the basic arcs of the three tiers. (You can skip this step if you plan to run a shorter campaign.) Use the examples beginning on page 168 in Chapter 5 for inspiration and guidance as you build the basic structure of your storyline.

Earthbound and practical, the heroic tier focuses on the steady emergence of the characters from obscurity to fame. The paragon tier thrusts them into strange environments and raises the stakes to national or global levels. In the epic tier, the stakes go up yet again, with the cosmos possibly hanging in the balance.

Don't worry if an obvious take on the later tiers fails to present itself. You can schedule a new pitch meeting later, as the new tier draws closer.

### DM'S WORKSHOP: CONCEIVING THE REVIVED

Now that another DM's campaign is about to wrap up, you take the reins for your group's next campaign. You decide to create a cooperative campaign arc, pitch-meeting style. Your group consists of the players Amy, Ben, Carlos, and Deena. When you solicit pitches from the group, one suggestion immediately captures everybody's attention:

"How about a game where we bring our favorite characters back for an all-star team-up?" Amy says.

The other players immediately reel off exploits of favorite PCs from past campaigns. You recall some details, others you don't.

You can tell that the players like the idea because the other players begin riffing on it:

"How do they all know each other?"

"They don't have to be from the same world, I hope. My paladin is from the Forgotten Realms campaign—"

"—but I want to play my first character, from my big brother's homebrewed world."

"And they were all different levels, and different editions," muses Carlos. "You want to start out at 1st level, right?"

The group suggests ideas until the wrinkles are ironed out, and here's where things stand: The PCs have the same names and appearances as their favorite past PCs and live as peasants in the same village. As they advance through the heroic tier and they manifest their various powers, they slowly recall their past lives. Initially, they remember only flashes of their old lives. At the end of the heroic tier, they have recovered their memories entirely.

Ben suggests that during the paragon tier, they discover why fate reincarnated them together. "We won't know what it is; maybe something cosmic in scope requires the universe's greatest heroes to gather."

Deena nods, seeing his direction. "And then the epic tier focuses on fighting a world-threatening force."

As you furiously jot down ideas, Carlos pipes up with a request of his own: "You know, my monk never defeated his archenemy, the Flower King. If I convince Keith, who DMed that campaign, to write him up for you, can you make him a major villain?"

"Yes!" Amy exclaims. "Every hero team-up needs its rogue's gallery."

Now that the players have an excuse to tell you about their characters, they spend the evening giving you the details you need to reveal their old histories, and to introduce their villains. Meanwhile, you might ponder various possible cosmic menaces to propel the plot forward.

You don't have to confine the storytelling process to a dialogue between you and the players. Encourage players to cooperate with each other, to build relationships and connections between their characters. This approach lends a greater sense of cohesion to the developing story. Your campaign's memorable and entertaining moments of interaction likely happen between player characters. Similar to the leading characters of an ensemble TV show, the PCs should contrast with one another to make dramatic sparks fly.

## Core Motivations

Strong characters build strong ensembles. Compelling, dramatic characters actively propel themselves into the story by pursuing powerful core motivations. Ask each player to spell out his or her reason for adventuring. Motivations can suggest what the characters have encountered before they meet each other, as well as what kind of actions they might take during the game. Here are a few examples to get your players thinking.

- "An obsessive curiosity about arcane secrets propels me."
- "The destruction of my village drives me to vengeance against bandits and anyone else who reminds me of them."
- "In tribute to the brother who died saving my life, I have sworn to spread the worship of Pelor."
- "If I don't use my brilliant mind to solve mysteries, I'll go mad."
- "An oracle told me I'd learn the secret of my true parentage somewhere deep in the Underdark."

Work with a player if he or she creates a passive, vague, or impersonal motivation; help the player sharpen it and give it emotional weight.

Motivations contain specifics. If the campaign frame specifies the PCs' courses of action, help players tie their motivations into the arc's main activity.

Players' conceptions of their characters might change over time, especially after the first few sessions of a campaign. Allow them to modify their core motivations—provided that the new motivation also provides compelling story hooks.

### Making Use of Motivations

When designing adventures, use motivations to draw the characters into encounters, skill challenges, and decision points. Make sure characters can act on their motivations in more than one way, so they don't feel trapped.

Devise adventure plot lines around character motivations. Wherever possible, develop story ideas so that they advance the agendas of multiple PCs. This method divides attention between players more evenly. It also covers you when a player whose motivation you planned as a story springboard can't play during a critical session or leaves the campaign.

Over time, balance your use of motivations to shine the spotlight on everyone. Make an exception for watchers, players who prefer having a secondary role in others' stories to taking center stage in their own. Some motivations can easily generate stories, whereas others might require effort to incorporate. If you consistently find it difficult to connect a PC's motivation with the action in your game, revisit the motivation. Work with the player to adjust the motivation so that it inspires specific action.

## Interrelationships

To create reasons for the PCs to spend all their time together and entrust each other with their lives, ask each player to specify a preexisting tie between his character and at least one other PC. The tie should involve strong positive feelings toward the chosen PC. Both of the players must agree to the relationship; negotiate the original suggestion until it makes sense for both. When a player's turn comes up, he or she should specify a new tie, rather than repeating one already established. However, the player might also

### Distracted

After having gone to the trouble to create them, players probably stick to their motivations. When a PC ignores his motivation to gain a short-term advantage, or for other reasons that seem out of character, declare him distracted. The stress of acting against his instincts costs him precious mental concentration. Until he reverts to his established motivation, he labors under some or all of the following consequences.

- Grants combat advantage.
- Takes a –2 penalty to saving throws.
- Loses one healing surge after each rest.
- Can't regain action points.

A player who wants to alter his character's motivation to fit an evolving conception of the character can do so without penalty. A character who constantly shirks his motivation to suit momentary circumstances is a shifty opportunist, and his motives should reflect that. Work with the player to recast his character's motivation to match his behavior.

confirm that he or she reciprocates the loyalty given by another PC.

Such a relationship might pair two characters as members of the same family, romantic partners, a mentor and a protégé, comrades-in-arms, coworkers, dedicated worshipers of the same deity, or political allies.

## Contrasts

Next, have each player outline a source of conflict between his or her character and another PC. Unlike the strong feelings represented by motivations and interrelationships, you can make these points of

### DM's Workshop: Casting The Revived

Amy, Ben, Carlos, and Deena gather for the preamble session of "The Revived."

Amy introduces her PC as Arisana, a budding wizard, and provides her motivation: "Since childhood, the villagers have feared me, saying I had 'witch eyes.' I had to sneak away and learn magic from books I found beneath a deserted hut. I need to prove to them—and myself—that they were wrong to fear me, and I am not a creature of evil."

Ben says, "My character is Bob the Ranger. He didn't have a motivation when I played him in my big brother's campaign, so I'll say he feels he has a great destiny, and he wants to find out what that feeling means."

(The others in the group object to his character's name, and Ben agrees to the more formal-sounding "Brom.")

"I'm Caliban, and I have developed unarmed fighting powers at odds with the surrounding culture," says Carlos, explaining that he chose to play a monk. "He has recurring nightmares about this dread figure who wears a crown and a wreath of toxic blossoms. Caliban seeks combat experience, so he can defeat this menace when it arrives."

Deena says, "My character is Diani, a fierce devotee of Bahamut. I intend to perform great deeds in the name of my deity to erase the memory of my treacherous father. He betrayed a cohort of his allies to Tiamat before she devoured him."

Now each player establishes a tie to another PC. "Arisana feels grateful to Diani," says Amy. "She saw virtue in me despite the villagers' fears."

Ben takes his turn: "Brom thinks Caliban's weird powers are cool. They show that Caliban has a great destiny, just like me, so I stick close by his side."

Carlos says, "Caliban adores Arisana, though he worries that if he shows it, he'll make her a target for the evil being in his dreams. So instead, he keeps a protective, brotherly watch over her."

"Hmm," says Deena, "that leaves Brom. I know—he's my husband! We were betrothed as children, and I went through with the marriage out of loyalty to my long-suffering mother. I feel no great passion for him, but I honor him out of duty."

"Wow, weird," says Ben, taking in this suggestion. Since the idea impinges on his character, he could ask for a modification. Instead he thinks for a moment and decides to roll with it. "I never thought of Brom as being married. This process has made him more interesting than when I played him as a kid. Well, Brom's kind of clueless, so he figures Diani loves him the way he loves her."

In the second-to-last round of collaborative party building, players pick their contrasts.

Amy says, "I don't fully trust Caliban. I don't understand why he watches an outcast like me so closely, and I sense that he hides his true intentions toward me. No one could ever love me, so it can't be that."

Carlos clutches his chest. "Oh, no! Poor Caliban!"

Ben's up next: "I choose Diani—I keep bugging her to settle down and have my kids."

"I try to restrain myself," adds Deena, "but Brom doesn't make it easy."

"Brom can be an insensitive numbskull," says Carlos. "Caliban finds it hard to maintain his sense of mystical detachment around the guy."

"Who hasn't been contrasted with yet?" asks Deena. Amy holds up her hand.

"Interesting. I'm your tie, right?" Deena continues. "Um, well, let's say I fear your outsider ways, how you skulk around and separate yourself from society. Diani believes in duty and conformity and obedience to legitimate authority."

Finally, each player specifies a recurring character who might play a role in the campaign.

"I'm an outcast," muses Amy. "So I only speak to these three individuals in the village. How about the shade of the old hermit who owned the books of magic I found? It appears by moonlight, sometimes, and it listens more than it talks."

"I had a henchman in the old campaign called Bodo," says Ben. "I'll have a servant named Bodo who follows me around, listens to my stories, and picks up after me."

"We must be well off, hubby," says Deena.

"I guess. Can I say I'm the son of a landowner?" Ben asks you.

"Sure, but you don't score any extra starting equipment."

In fact, Ben has just created two recurring characters—Bodo and Brom's father—giving you more grist for your story-making mill.

"I already named my contrasting character," says Carlos. "The Flower King."

"Me too," says Deena. "My father's treachery broke the heart of Diani's mother, Eloan."

"And your treacherous father?" Ben points out.

Deena shakes her head. "No, he's dead."

*I'm sure you believe he's dead,* you think to yourself, already hatching a plan for his eventual appearance.

HOWARD LYON

contrast relatively mild, even humorous. You want to achieve amusing banter, not genuine rancor.

For example, differences over minor theological points provide fodder for fun in-character debates. On the other hand, a character's vow to take fatal vengeance on another PC poses an obvious threat to group harmony. Contrasts that tie into another PC's motivations highlight both characters. Help the players work together to modify suggestions to bring any differences in line with their intended character portrayals.

## Recurring Characters

You might also ask players to invent one or two NPCs to whom they have important ties. These can be ties of loyalty, similar to what a character might share with another group member. Alternatively, these NPCs might despise the character, and you can use the NPCs as obstacles to the character's goals.

This option works best if you expect the PCs to spend frequent periods of downtime in a single home base. You might have trouble incorporating casts of recurring NPCs into a campaign that features a band of constantly roving PCs.

## Predestined

This approach comes into play when players want to decide ahead of time what, in general, happens to their characters at a campaign's end. A story that ends with one or more characters suffering a tragic fate (perhaps dying in a final heroic gesture) or an ironic reversal is especially appropriate for this sort of approach. In the latter case, a player might ask for story hooks that help his or her character evolve over time. Each step is part of a gradual progression, but the contrast between the beginning character and the end result is extreme. A foolhardy character might grow wise. An avatar of virtue could slowly become corrupted until the player hands his or her character over to you as an NPC adversary. A rambling explorer might end up finding true happiness in his hometown.

A character's core motivation culminates in predestined fates. They finish a PC's story. The character achieves his or her ultimate goal, rises above it to discover and complete a more profound objective, or is destroyed. In a tragic ending, either the goal inherently leads to doom, or the character's inner flaws prevent his or her success.

The process of shared creation doesn't need to stop during your campaign's prep phase. You can continue it by allowing players a role in inventing your D&D world.

The default D&D setting provides an ideal basis for definition on the fly. It establishes a few cornerstone elements, such as the planes of existence and the way magic works, and then you can fill in the rest. Traditionally, DMs flesh out these details on their own, as part of their prep work. Engage your players—and ease your workload—by inviting them to join in the process and help you create the world.

If you like the idea of player input but feel more comfortable working from detailed notes, assign your players homework. Ask them to describe which elements of the world their characters closely engage with. These background elements might include their cultures, religions, and organizations. This method preserves suspension of disbelief by creating relevant world details. If your group enjoys this approach, consider opening up the world as a joint setting, one in which all of you run games. You might establish separate campaigns based in different parts of the same world, or rotate DMing duties in a single, long-running game.

### LIMITS OF COLLABORATION

Even though the first rule of improvisation is never to negate someone else's idea, sometimes rules are meant to be broken.

When you and your players brainstorm to design a world, you can feel free to alter pure flavor elements of published D&D works. On the other hand, avoid suggestions that require you to alter game mechanics. "This world contains no necrotic energy" might sound like the seed for an interesting variant setting. However, many creatures, powers, and magic items in the game rules have necrotic attacks, resistances, and vulnerabilities hardwired into them. Removing such elements changes the game balance, making some game properties more powerful than intended and other abilities useless.

Also, player suggestions must remain consistent with the world's previously established continuity. If players declared the Raven Queen to be the city's patron deity last week, a new idea should usually not be allowed to override that fact. (You might make an exception for a truly compelling suggestion, provided that the player can convincingly justify the inconsistency.) This stipulation applies only to facts about the world that have come up in play. You can contradict a detail about your setting that, so far, appears only in your notes. If your players don't know about it, changing it won't impair their suspension of disbelief.

## Never Negate

A DM serves as an arbiter, deciding which player suggestions to incorporate into the world directly and which suggestions need to be modified to fit into your broader plans.

When you are presented with player input into your world, start by repeating to yourself the first rule of improvisation: Never negate.

With few exceptions (see the "Limits of Collaboration" sidebar), following this rule means incorporating at least part of every suggestion into your world. If an idea contradicts something you plan to introduce, don't reject the conflicting idea out of hand. Put a new spin on it instead. Even when you hear no objections to a suggestion, consider adding an additional element to it. This approach surprises the players, and it encourages a sense of creative back-and-forth. Approving the players' suggestions pleases them, and it encourages all participants to build on each other's ideas.

Add a new detail or caveat to a proposed idea instead of altering it beyond recognition. What you lose in control, you gain in player engagement.

Players might unintentionally add details to your world by confusing elements of the default D&D

### DM'S WORKSHOP: CHAMPIONS OF HONOR

*In this example of an incidental reference, a player named Ed responds haughtily on behalf of his character, Erekam, when challenged by sentinels at a city gate:*

"I bang vigorously on my shield, showing them the emblem of my warrior order."

Ed has never before referenced an emblem on his shield, but since it's his character, he can introduce it without any adjustment by you.

"Do you not recognize this symbol?" Ed exclaims, in his deep Erekam voice. "It identifies me as a member of the Champions of Honor! Do you not know us?"

You've never heard of the Champions of Honor. You reach for your notepad, ready to scrawl the necessary notation.

In character as the indifferent guard, you scratch your head and say, "We don't receive visitors hereabouts, stranger."

"Why, for a hundred years the Champions of Honor have protected the good folk of this region, driving off orcs and bandits alike!"

Through this exchange, Ed establishes that this organization exists as he has described and that Erekam belongs to it. After brainstorming for a moment, you prepare a bandit encounter—now someone can spot Erekam's shield, tell him about a brigand problem, and motivate the group's trip to the wilderness to engage them.

setting with past or alternate versions. Stave off other players' natural impulses to correct these mix-ups. Take advantage of fortuitous errors, and incorporate them the same as you would a purposeful suggestion. For instance, if a player misremembers the life expectancy of elves and cites a vastly longer figure, you can decide that the elves in your world enjoy greater longevity than the norm. These accidental improvisations help you to foster the idea of a mutually developed world. Their example helps to overcome any initial reluctance either to step on your toes or to adjust official source material.

## Introducing Player Suggestions

Three main techniques allow you to bring player suggestions to the fore: incidental reference, solicited input, and the turnaround. Proactive players might employ a fourth method, the direct assertion.

### DM's Workshop: Forks in the Road

*In this example of solicited input, the players are traveling along an ancient road through a dense forest.*

"After turning to avoid a rocky outcrop," you narrate, "the road forks to the east and northwest."

This fork offers a decision point to the PCs, as well as a chance to tailor its branches to their interests. Ben and Deena dominated an earlier interaction scene, so you solicit input from Amy and Carlos.

"Amy, you've heard that something dangerous lies to the east. What is it?"

Amy thinks for a moment. "Um, it's bird people. I hate bird people."

For a moment, you panic. You don't have stat blocks for any bird people. But you realize that, with minimal effort, the creatures in your bugbear and goblin encounter can be reskinned into hostile, flightless birds. You affirm Amy's choice by adding a new detail.

"Oh, yes," you reply. "They have a new leader, Rakak, who has sworn vengeance on all mammals."

"Okay, Carlos, what trouble lies to the northwest?"

Carlos takes the opportunity to bring his character's core motivation back into the storyline.

"The Pagoda of the Poison Blossom, a haunted place where explorers vanish. Rumor has it that the Flower King once lodged there and might have hidden secret texts on its grounds."

You decide on a twist: If the PCs go to the grounds, they find monks of the Flower King searching for lost scrolls. But you can reveal this surprise later.

Now that the players have established their options, they debate the merits of the two choices: Do they head toward the hostile bird people, or do they explore the haunted pagoda?

### Incidental Reference

This situation arises when a player makes an offhand remark, possibly as in-character dialogue, concerning a fact about the world. You then treat it as true.

If you need to adjust the idea, do not interrupt an unfolding scene to footnote the setting detail. Wait until a suitable break in the action, and then go back and clarify.

### Solicited Input

In the solicited input technique, you ask each player to supply a detail of your world. You could ask a particular player—perhaps one who hasn't had enough spotlight time—or throw it open to the group and take the first suggestion offered.

### The Turnaround

Players are accustomed to asking the DM for details of the world. In the turnaround technique, you take a player's question and turn it around on the group, asking the players what they think the answer might be.

Use the stock phrases of the turnaround: "You tell me" and "What do you think?"

### Direct Assertion

Players who are accustomed to the DM's traditional control over setting elements will wait for you to

### DM's Workshop: Deep Gnome Rule

*In this example of a turnaround, the players are traveling through the Underdark, debating whether to seek hospitality at a deep gnome enclave far underground.*

"Do I know anything about the deep gnome culture?" Amy inquires.

You consider requiring her to make a History check but instead give her an automatic success, because having information seems more interesting here than not having it. (In other words, failure would be a dead branch; see page 9.)

"You've read tomes on the subject," you answer.

"So, this enclave—how do the gnomes rule it?

"You tell me."

"Uh, well . . . I consider surface gnomes to be sneaky Feywild skulkers, and I think Underdark gnomes act especially paranoid. So its defenders rule its society, maybe? Sort of a combination of a police state and a ninja clan?"

That idea sounds pretty cool, and it's complicated enough that it doesn't require additional details.

"Exactly right," you say.

Amy realizes that she might have just invented the group out of a suitable hideaway. She quickly adds, "But paranoid ninja police state in a good way."

"Yep, that's what the deep gnomes say," you answer, keeping open a hint of uncertainty and danger.

prompt them before supplying world details. In a cooperative campaign, more assertive players might catch on to the technique and start giving you input unbidden. Give these ideas extra scrutiny to ensure that the players don't wreck the suspension of disbelief by proposing details that give their characters an advantage. If the players make slanted suggestions, spin the proposals to counterbalance the idea's intended benefits.

When given in good faith, direct assertions make good gifts for a harried DM. Proposals show what interests the players and what they want to do next.

## Areas of Input

You can seek player input for any aspect of your setting, from the fine details to the world-spanning back story. Common areas of input include the following elements.

### Background Information

Draw on players for details of your world's history, cultures, economy, or religious practices. By inviting them to add to your world maps, you recruit them as geographers. See the DM's Workshop sidebars "Champions of Honor," "Deep Gnome Rule," and "Dragons Love Elves" for examples of player input into world background.

### Descriptive Control

When you grant partial descriptive control to your players, you allow them to specify what they see and hear in a scene.

DMs might prefer to make encounters off limits for descriptive control. Allowing players to add obstacles and features might unbalance carefully planned combats. A daring DM might let the PCs play in this sandbox if he or she feels confident enough to countermand advantages that players try to sneak into the situation.

The DM's Workshop sidebars "Tentacle Temple" and "Forks in the Road" provide examples of descriptive control.

### Supporting Characters

If you used the collaborative cast-building techniques when preparing your campaign, the players might have already invented NPCs that tie into their characters' backgrounds. Extend this approach by allowing them to describe other minor characters.

Initially, you might blanch at the thought of allowing players to invent NPCs who make the PCs' lives easier. In practice, those NPCs can make your job easier. First, characters whom your players can interact with (and are interested in interacting with) make the story more dramatically interesting. Second, when you give your players the means to overcome minor inconveniences, you speed up play. In roleplaying, as in any story, you want to edit out the boring bits. If allowing a player to immediately flag down a messenger or find a blacksmith advances the story, all the better.

As with any PC advantage gained through improvised player input, you can change a situation and introduce it as a bit of complication. The bad guys might kidnap the messenger and grill him for information, prompting a rescue attempt. That seemingly helpful blacksmith could be a spy for the illithid conspiracy.

To help players invent minor characters on the fly, supply a list of names appropriate to the location. Players pick one that suits the new character and cross it off the list. When the players specify a name, you add that nonplayer character to your notes.

Once the players create an NPC, you control his or her words and actions, as you normally would.

#### DM's Workshop: Tentacle Temple

*In this example of a direct assertion, the party has entered a demon-occupied city.*

"Do I see a watchtower?" Carlos asks you.

Before you can reply, Ben, feeling a creative surge, supplies an answer of his own: "Look! Over there! That horrible tower, rising from the central plateau! Oh, my goodness, its tiles writhe! And tentacles dangle from the spire!"

You might instinctively want to slap down this seizure of your narrative prerogative. Then you remember that you encouraged the players to collaborate in building the world. You affirm Ben's idea by building on it.

"Yep, those are tentacles, all right. A strange bird that looks like a black-feathered albatross circles slowly near the spire. Suddenly, a tentacle zaps out, like the tongue of a frog, and grabs the bird, pulling it into the tower. You hear a chewing noise."

"You mean the tower is alive?" Deena exclaims. She knows your DMing style includes vivid details to encourage the PCs to move in closer to explore. "Thanks a lot, Ben!" she jokes.

#### DM's Workshop: Dragons Love Elves

*In this example, you turn around an abusive suggestion intended only to grant an advantage to a player.*

The party finds itself in the treasure chamber of an ancient dragon. The characters have no hope of defeating the dragon in combat and must resort to persuasion to avoid becoming its midday snack.

"Luckily, dragons in this world famously love and respect the elven people," says Paul. Not coincidentally, he plays an elf.

In character as the dragon, you growl menacingly in Paul's direction. "The others I might forgive," you boom, "but to have my lair invaded by an elf, a member of a people who allied with the dragons at the dawn of time . . . why, it is enough to rouse me to homicidal fury!"

"Whoops," says Paul.

JULIE DILLON

You could take the idea of player-created NPCs one step further. Let players momentarily play these NPCs as secondary characters. Choose when they gain or relinquish control. Different players might take on recurring characters over the course of a campaign.

Player-controlled recurring NPCs come in handy in open-ended adventures in which PCs split up and fan out to pursue separate agendas in parallel. The NPCs allow you to engage your players in the action when their characters are otherwise occupied.

Make a player-controlled NPC a noncombatant who, like any sensible, ordinary citizen, avoids the dangers of an adventuring life. You can play NPCs without set statistics, and without treating them as minions or designing creature stat blocks for them. Sometimes, they might morph into full-fledged companion characters (page 27) as the campaign develops.

## Timing and Frequency

Using the techniques of cooperative world building at the right times, and not too often or too seldom, gives them maximum impact. If you continually ask players to describe your world for you, they lose belief in it and come to think of it as malleable. Call on them too infrequently, and your requests for input seem jarring when they do occur.

To achieve balance, seek input no more than three or four times per session. Invite collaboration when you experience one of the following situations:

- You can't think of an answer.
- You don't see why the question matters.
- The party is stumped and seeking a new plot thread.
- You cannot envision the party's next obstacle.
- Your players haven't made a significant story choice recently.
- Players are focusing on the mechanics of the game and you want to engage their creative energy.

### DM's Workshop: Tanis

During the party's first trip to the city of Sigil, Brom decides to find a local to show them the ropes. "I look for a street urchin. Are any around?"

"You see a bunch of them," you reply. "Describe the one you want to talk to."

"Uh, okay. I see a young girl, dressed in rags with a mop of dark hair, and something about her makes the others treat her as a pariah."

"I know," suggests Amy. "She has a clawed hand, as if she has a demon or monster in her ancestry."

"Yeah, a clawed hand, that's awesome. She looks hungry; she doesn't receive the handouts that the others do." Ben takes the sheet of Sigil character names. "Her name's Tanis."

You note this detail, and take on the role of Tanis. For the first few sessions of play, you retain control of the character in order to convey information about the city.

Later, Brom and Diani conduct a dangerous negotiation with the githyanki leader Yultang. Caliban descends into a mazelike pocket dimension, attempting to track down a doppelganger who has been posing as him. You cut between the two sequences. Amy thought it out of character for Arisana to go on either errand. Rather than cook up a third plot line just for her, you offer her the chance to tag along in the githyanki sequence, temporarily playing Tanis. Amy decides that it would be a fun contrast to portray Tanis as an enthusiastic fan of the githyanki. Although others shun Tanis's ugliness, Amy explains, the pirates of the Astral Sea have engaged her services on numerous occasions. The others dislike her affinity for the githyanki, but they end up letting her lead the negotiation with Yultang.

Two sessions later, Brom dies. His comrades, low on funds but unwilling to sell their equipment, scour Sigil for someone willing to perform a Raise Dead ritual in return for future favors. You ask Ben if he wants to play Tanis, and he agrees. Picking up on the previously established githyanki connection, he has her suggest Yultang as a possible financier of the revivifying ritual. Although Brom would shudder at the thought of owing the githyanki, Ben enjoys having his temporary character skillfully back his permanent one into a corner filled with juicy plot hooks.

—by Stephen Radney-MacFarland,
from "Save My Game!" in *Dungeon #155*

The narrative part of roleplaying has a more free-form nature than the game rules. This aspect of playing the game makes people nervous and self-conscious, especially if they prefer not to act. Sometimes you have to ease players into roleplaying by making it work like other game aspects. The following ideas show you how.

## Create Hooks

A lot of D&D games involve the bare-bones, smash-and-grab model of roleplaying, filled with stats, action, monster killing, and treasure. Players in these games need less story to guide them. They don't care about the implausible. They have fun because they buy into the game. Why? Because the game and its design have built-in hooks.

What do I mean by hooks? The parts that grab your audience, pull them in, and never let them go. D&D has them in spades. Classes and races both function as hooks; their concepts, art, and application reach out and grab people. The "simple rules with exceptions" principle of D&D offers another hook. You have a firm idea of the general rules, and you can reference the specific. A hook pokes its head up and says, "Hey, I'm here, and I think you'll like me." The people who do like it, grab it and run. As a fantasy game, D&D has its own hook, too.

DMs sometimes forget the general principle of hooks when they make their campaigns. DMs might create a place they believe could be real, not realizing that few players care for the models of trade and agriculture in the game world—since the game functions as a power fantasy. Others fixate on their campaign's overarching story and overlook that this form of storytelling already has an audience (and cast) of real people in the form of players and their characters. In the end, these DMs might find themselves trapped when they create hooks interesting only to them. And as the DM, if you interest only yourself, you don't have an audience.

Use a sandbox approach to story and roleplaying. Throw out loose threads, see who bites, figure out why they bite, and react to the story rather than driving it autocratically from the start. You might guide your players in class and race choices, but don't make those decisions for them. Don't try to make roleplaying decisions for them, either. You can use an open approach in your details of your world and story vision without losing it completely. Pick up on good ideas and suggestions from your players. As your players feel more attached to the story, their immersion levels rise, especially when they figure out they can drive the story rather than have it unfold around them. When players have more investment in the storytelling and roleplaying parts of the game, they focus on these parts rather than ignoring or avoiding them.

I'll give you an example by briefly outlining what I'm doing in my current campaign—my first, full-fledged levels 1-30 D&D 4E campaign—the *Days of Long Shadows*. When my players made their characters, I gave them a list of seven backgrounds they could choose from. I told them from the start that choosing a background would ensure that their characters had a stronger connection to the overall plot of the campaign, but that they didn't need to take one. I made these backgrounds simple, with few restrictions. Two examples follow.

**The Hexed (Half-Elf, Human, or Tiefling):** A mysterious master cursed you; you don't know his identity. All you know is that his raspy voice occasionally compels you to do as he bids. His commands sometimes demand terrible deeds, but far worse consequences ensue when you refuse to obey.

**The Orphan (Human):** You're an orphan of the disappeared village of Fadail. A wandering oracle of Ioun prophesized that only Fadail's last scion could find the village. Presumably, that person is you.

These raw hooks have a purpose. I combined the interesting themes I wanted to explore in the campaign into a form that might interest my players, and made the themes available to my players.

Allowing my players to pick their backgrounds achieved a couple of objectives. First, it gives them a focused hook into one or more of the stories and themes of the campaign. Having a choice strengthens their story investment, and it gives me a tool that simultaneously focuses their plot-seeking activity and helps me create stories that speak to their characters personally—even before the campaign begins.

For instance, I had a specific player in mind when I wrote the hexed, and I was not surprised when the player took that background. He enjoys playing these mysterious, tormented characters that have a secret. I knew he would gravitate toward this background.

As for the backgrounds not chosen (such as the orphan above), I have a page of rough ideas I won't use in this particular campaign. I can learn a lot from what my players didn't pick, such as what kind of game interests them.

More important, these backgrounds bridge the gap between game and story. Since I made backgrounds a character choice, the players feel a sense of ownership. I created roleplaying and story hooks the same way the rest of the game hooks worked—I let my players choose what they wanted.

## Keep Those Lines Taut

So you have the hooks. Next step: Don't let them go. And keep a lookout for new and interesting hooks. Every time you identify what players find interesting in your game, pull them in with it. As the first order of business in my campaign, I make sure the background choice of each player remains important and relevant. Don't make a background a wasted choice by never incorporating its themes and ideas in the game; that approach makes the hook irrelevant and pointless. After all, my PCs can't retrain their backgrounds! At the same time, a D&D game has an ensemble cast. Game sessions rarely tug every line—save some lines for when they have the best effect.

For instance, if the hexed character never heard the voice, that situation would be silly and counterproductive. But the opposite holds true as well. You don't want every game session to start with the voice telling him what to do. Save these reveals for the right moments, and until then, leave them hanging over the character's head. After a few sessions, and when something interesting occurs, I bring in the mysterious agenda to create drama and conflict, and to give the player interesting choices to make.

As my second order of business, I observe how my players interpret those hooks, and how they use the hooks to flesh out their characters and inform their actions. My backgrounds lack detail for a reason—I want to see how each player interprets and weaves them into the story. As the hexed player comes up with past stories on how the voice guided him, I can ensure that future instances of the voice act in a similar manner.

## Don't Be a Sinker

Finally, don't sink honest effort even if it's awkward. It takes practice to do anything well. Some individuals might have a native ability to succeed, but most goals require trial and error until we hit our groove.

The same holds true for roleplaying. Although the drama major in your group might excel, your group introvert might have a hard time with it at first. And although pointing out someone's awkward attempt at roleplaying might give you a brief moment of amusement, a friendly guiding hand works better than sarcasm if you want to promote roleplaying and deeper story interaction. Don't worry; no one is up for an Oscar. No talent agent will knock on your door in the morning. People continue to roleplay as long as they have fun. You might enjoy being critical, but others rarely find it fun.

### My Son, the Fire Archon

D&D builds monsters and characters differently. Characters have more complexity than monsters because PCs live longer. A single player normally controls a single character, whereas the DM runs multiple monsters at a time.

So what happens when your 11-year-old son wants to play a fire archon as a character?

My son enjoys the tactile elements of the game. He loves it when I bring new miniatures home, he builds sprawling dungeons out of my *Dungeon Tiles*, and he designs his characters with specific minis in mind.

So his favorite mini from the *Desert of Desolation* set is the fire archon, and he wants to play that creature as his character. What do I do? Fire archons don't appear in the *Monster Manual* appendix of playable monster races.

I'm still amazed at how easily I constructed a fire archon character. I built him a 7th-level rogue, and I picked powers that I could rework to add a fiery touch:

- 7th-level encounter attack: *cloud of steel*, which I turned into *cloud of flame* (a close blast 5 of fire damage).
- 5th-level daily attack: *deep cut* became *blazing strike* (dealing ongoing fire damage).
- 3rd-level encounter attack: *bait and switch* turned into *flame's dance* but remained a power concerned with mobility.
- 1st-level daily attack: *blinding barrage* turned into *blinding flames* (a blast of blinding fire).
- 1st-level encounter attack: *dazing strike* transformed into *dazing flame* (a simple dazing attack).
- 1st-level at-wills: *piercing strike* became *fiery blast* (it already targets Reflex instead of AC), and *deft strike* for mobility again.

I made his sneak attack damage fire damage, just for flavor. Then, for racial powers, I copied the tiefling's fire resistance and added poison resistance in the same amount. I gave him immunity to disease and made his speed 8. That was enough—he didn't need an additional racial power.

Did I create a character identical to the fire archons in the *Monster Manual*? No, and I didn't make it a standard human rogue, either. I made it resemble the fire archon in all the ways that matter.

A player's character is an important aspect of the game for that player. So a DM should help every player create a fun character who won't unbalance the game (which would hinder the fun of the other players). Sometimes it proves easy within the limits of the rules. Other times, you have to be more creative.

# VIGNETTES

Add moments of character interaction to your game with vignettes—specially shaped scenes in which players respond to dramatic situations you create for them.

## Vignette Types

Vignettes can fill a number of roles in your story.

- Interactions dramatize current conflicts between PCs or other characters.
- Flashbacks illuminate past events in the characters' lives.
- Dream sequences bring a character's inner conflicts to life in a surreal mental environment.
- Transitions leap the campaign forward in time.
- Third-person teasers use NPCs, portrayed by the players, to foreshadow events that enmesh the PCs.

### Interactions

Interactions resolve conflicts that arise during standard play between PCs. Push for resolution cautiously; preserve player autonomy by allowing some interactions to end in standstills. Interactions make useful session starters. They can kick-start a campaign after a long break. Use them as reminders when your planned adventure riffs on a previous PC conflict that might have receded into the background.

### Flashbacks

Flashback sequences move the character's background story into the spotlight for the entire group to imagine. These vignettes can sharpen the portrayal of unfocused PCs by playing out the pivotal moments that shaped their core motivations.

You can also use flashback sequences to introduce elements of the character's past that later resurface in the main action. For example, if a previously unmentioned old mentor of a PC shows up to send the party on a mission, a flashback can add weight to the idea of their preexisting relationship.

In campaigns featuring elements of destiny or prophecy, flash forward to possible futures that provide a fun variation on the flashback. You might specify that these predictions offer glimpses into an immutable future. You might find it easier, though, to portray these sequences as possible futures (or

### DM'S WORKSHOP: BANISHED

After several sessions of play, you realize that one of the PCs seizes the lead role in encounters and takes a back seat in interaction scenes. The player, Greg, enjoys the story side of D&D. His shifter character, Grath, has yet to display a personality. You start the next session with a flashback sequence featuring Grath. Greg established that Grath chose the life of a wandering adventurer after his people banished him. You ask him to explain why his people banished him.

"My brother stole cattle belonging to the clan chief and traded them for silk for his trading company," Greg says. "The clan soothsayer performed a divining ritual and saw that I knew the culprit. Although I despised my brother, family loyalty prevented me from turning him in. So the townsfolk banished me, though my brother remains with them to this day."

"All right, we're flashing back to the moment before your final audience with the clan chief. You stand in the family tent. What's your brother's name?"

"I hadn't decided."

"Okay, how about Yaroth." You point to another player, Haru. "You play Yaroth. You must convince him not to turn you in."

Turning back to Greg, you ask, "Who was Grath's best friend and confidante?"

"A comrade-in-arms."

You select a third player, Inez, to play Grath's best friend, Uchig. "Your goal is to convince Grath not to throw away his position for the sake of his thieving, no-good brother."

Haru, as Yaroth, kicks off with a wheedling plea to protect his life. "They'll just banish you, but if you turn me in, they'll execute me!"

"And so you deserve!" cries Inez, as Uchig. "Why, I have a mind to tell the clan chief myself."

"Remember," says Greg, "you have sworn on your honor to keep this secret."

"What good is my honor, if he takes yours unfairly from you?"

Greg's addition to the scene gives him a goal, too—to persuade his friend not to besmirch his own honor over Yaroth's misdeeds.

The scene continues. When it becomes repetitive, you address Greg: "Okay, let's identify one more unknown detail about Grath's banishment. Steer the scene toward that revelation."

Greg nods and waits until Inez makes a strong point in favor of informing on Yaroth. He jumps in, now switching to narrative mode: "At that point my elderly father enters the tent, clutching his chest. I realize that if the elders execute Yaroth, it will also kill my father. Now I see my destiny laid out before me—as a wandering, masterless noble."

Move back into standard action when the scene reaches a natural climax. As you steer the group toward a choice of encounters, you can plan how to introduce a scene that recalls Grath's pivotal moment.

hallucinations) that the PCs can avert or move toward, according to their actions in the present.

## Dream Sequences

Dream sequences allow you to portray a PC's inner turmoil with surreal imagery. The PC stands at one point of the triangle while other players try to pull him in opposite directions. They might play dream versions of themselves, figures from the PC's past, or surreal personifications of abstract forces. For that matter, the other PCs can shift identities according to the whims of dream logic.

## Transitions

Transitions acknowledge the progression of time in the campaign since the last session. They create the sense that the character's life continues between adventures. In campaigns that use them, transitions can cover long jumps in time, taking the characters through months or years of unseen action.

Transitions require open-ended framing led by player input. Ask the players to describe a conflict that occupied them during the elapsed time period. Together, choose a dramatic moment, and frame a vignette around it. You might construct one vignette per character, or cast vignettes together into a scene of combined struggle.

## Third-Person Teasers

Scenes featuring a cast of player-controlled NPCs foreshadow events for their PCs. Third-person teasers provide snappy openers to sessions that might otherwise begin with a gathering of PCs in a tavern.

Dialogue might drive third-person teasers, but they might depart from other vignettes by featuring descriptions of physical action.

For inspiration, look at the opening credit sequences of TV shows, especially openers that feature only members of that week's guest cast. Horror

### DM's Workshop: Called to Account

Brom, who believes himself destined for greatness, ended last session with a craven surrender to the bandit queen, Isolta. To explore the gap between his self-image and his actions, you create a dream sequence in which Brom's hero, the legendary warrior Ambek, calls him to account. You assign Amy to play Ambek, who wishes to convince Brom to follow in his footsteps. Deena also appears in his dream, as Isolta, who argues that Brom, as an ordinary man, took the only reasonable action when he bowed and scraped before her.

You want this scene to pose a question, not to answer one, so interrupt it as it reaches a crescendo. Brom, you narrate, jolts awake in his bedroll, drenched in icy sweat.

NICOLE ASHLEY CARDIFF

procedurals, such as *Supernatural* or *The X-Files*, start with teasers that introduce an unknown threat to the main characters.

This device allows you to introduce your players to the bad guys before their characters kill them. They learn to dread and loathe the villains long before the climactic encounter, increasing its emotional impact.

Preserve future surprises by withholding information from the players. A monster attack scene might allow their temporary characters to see shadowy figures materialize from nothing and attack. In a scene of political negotiation or criminal plotting, you might not tell the PCs what characters they're playing.

Third-person vignettes require players who can separate their knowledge of the events portrayed from what their characters know.

## DM'S WORKSHOP: REPORT TO THE EMPEROR

In a saga-length campaign in which each of the PCs rules a province of the Arcathian Empire, the characters level up, triggering one of the campaign's periodic one-year breaks. You ask each player to come to the next session, which starts with a meeting of provincial governors before the emperor, with an accomplishment to brag about. A dry recap of interim events becomes a fun competitive scene, in which each player jockeys for recognition.

## DM'S WORKSHOP: ILLITHID ATTACK

As the kickoff to an adventure in which the heroes fight mind flayers, assign each player a new character to play in a third-person teaser. Each character plays a soldier guarding a frontier outpost. Assign each soldier a name. Half of the six characters work toward a goal that forces them to interact with one another. After playing dice all night, Conrad, Aldfrid, and Ellis have lost their wages to Imric, Oswyn, and Hengist, and the former group wishes the latter group to forgive their debts.

After the players roleplay their temporary characters long enough to make them feel real and engaging, you describe the horrible results of a mind flayer attack on the outpost. Although you allow the players to describe their temporary characters' responses to the attack, don't use dice or rules to resolve the results. These poor soldiers have no hope. The two players who can convincingly describe countermeasures survive the longest. The illithid leader, Khardaghk, as played with sinister relish by you, interrogates and toys with the last two survivors. By the time he slays the last of the soldiers, the players despise Khardaghk and want to see him laid low—even though their characters have yet to hear of him.

ZOLTAN BOROS & GABOR SZIKSZAI

## Vignette Stages

Vignettes break down into three stages:

- Framing, when you establish the parameters of the interaction.
- Development, in which the scene plays out.
- Conclusion, the wrap-up.

### Framing

When framing a vignette, you establish a current situation, as well as the conflict the vignette resolves. Start by designating which players you want to participate in the vignette. Tell them whom they will portray—their own characters or other NPCs important to the scene. You might have a mix—part of your group plays characters, and the other part plays NPCs.

Second, briefly describe the physical environment and the participants' starting situations.

Then lay out the conflict that drives the scene, preferably between two characters or sets of characters. Establish the goal each side pursues.

### Development

Sit back as the players, through dialogue and action description, play out the scene. Depending on the conflict you design, the players might employ a mixture of debate, emotional pleas, and offered inducements. As they do, the scene heads in one of two directions. Either the players resolve the conflict, or each side digs in. You can tell that players have dug in their heels when proponents of each side begin to restate their positions. If this stalemate happens, nudge the proceedings along by suggesting a new argument or negotiating position that one or the other side might adopt. If the players remain dug in, move to the next stage.

### Conclusion

If the conflict resolves itself naturally, the players either compromise, allowing both sides to achieve their goals, or one side capitulates to the other. The players have done your job for you: Declare the scene over and cut back to the main action.

If both sides refuse to budge, ask yourself if it seems unsatisfying to end the scene at a standstill. An impasse can be a strong outcome because it leaves unanswered questions the players can deal with in subsequent scenes.

If an impasse disappoints the players, decide who gives in. When PCs face off against NPCs, the PCs should have more influence over the conflict. In a conflict between two PCs, or one between NPCs, judge which side offers the most persuasive argument. Instruct the players on the losing side to convincingly relent. If players seem unhappy to relent for their PCs, default to an impasse.

### Maintaining Player Authority

Be prepared to accept input from players when placing their characters in vignettes. If your framing places the PCs in a situation they don't think they would have put themselves in, or assigns them a goal they don't agree with, revise the framing to meet their objections. Tell the players what the scene is intended to accomplish and solicit their input to adjust the situation and goal to better reflect their characters' intentions.

## Drama Rewards

When asked to recall their favorite D&D experiences, players might recall a session made up only of roleplaying interaction. You might hear the capper phrase, "And we didn't roll dice once!"

If you aspire to this style of play, you can give player characters experience rewards for time spent in dramatic scenes of interaction, as well as for their triumph over more traditional encounters. Award the characters experience as if they had defeated one monster of their level for every 15 minutes they spend in significant, focused roleplaying that advances the story of your campaign. Don't count time the players use to digress, idly chatter, repeat themselves, wander off topic, argue to a standstill, or engage pointlessly with minor characters.

Because vignettes are short, and because you steer them to maintain focus, you should grant drama rewards for vignettes only if you rely on them in any given session. Don't bother to calculate experience for one or two typical vignettes.

If you think a player is clearly drawing out an interaction to score a drama reward, subtract an amount of time that you estimate is equal to the entire time that player spent in the interaction.

This technique compensates players for the time they devote to interaction without judging any participant's skill at portraying his character. Instead, it rewards the entire group's focus and efficiency of communication.

### Action Resolution

Vignettes can unfold through dialogue alone, without resorting to skill checks. When participants physically clash or otherwise engage in activities that game mechanics ordinarily resolve, you can break out the dice, allow a directly concerned player to decide the outcome, or put it up to a group vote, with yourself as the tiebreaker.

Players whose PCs appear in flashback sequences decide how past conflicts panned out. Use mechanics only if different players' ideas conflict, and they can't agree on what should have happened.

# WHAT YOUR PLAYERS WANT

You'll find it easier to create adventures and encounters your players enjoy once you know what your players like about gaming. If you serve up game sessions that cover exactly what the group enjoys, then the players will have fun. Plus, you can prepare with more confidence and fewer contingencies because you know what material the players gravitate toward and what hooks and encounters they avoid, meaning faster and easier session preparation.

To find out what the members of your group like and dislike, ask them. Player and character surveys allow you to discover this information. What would you like to know about your players' gaming preferences? Write down a wish list. If you knew whether your group preferred city, wilderness, or urban settings, would that affect your campaign plans? What about favorite gaming moments, combats, and encounter setups? That information might give you great ideas for future sessions that your players find exciting.

Once you compile a list of details you want to know about your group, turn each item into a question, and then compile your questions into surveys. Use anything related to characters' wants, dreams, and goals in a character survey. Ask each player to answer this survey from his or her character's point of view. You could roleplay to make responses more interesting, since players could consider questionnaires a chore. Place questions related to player preferences and experiences in a separate player survey.

Dividing your queries and the players' answers into character and player categories helps you plan better adventures. Take character answers and weave those elements directly into encounters by way of monster, terrain, and treasure selection. Factor PC preferences into your plots, as well. Characters might want to visit certain places, take certain actions, and earn specific achievements. Modify your short- and long-term plans, the setting, and the villains to include character desires. You best serve a player through his or her character. Fulfilling the PCs' survey requests makes a group eager to play and happy with your games.

The second part of the equation serves player-specific preferences. You can serve these inclinations in the same way you serve character preferences—with in-game content and design. However, you might serve your friends better through new house rules, changes to the gaming environment or schedule, session management, and other metagame issues.

When you read player survey responses, consider how you can improve the game and campaign based on player feedback. Discuss major items such as session length or location, new house rules, or game world changes with your group. Implement changes one or two at a time, in trial periods. If someone expresses unhappiness with a change, roll it back. Set proper expectations and follow a process that respects individuals while trying to please the group.

To avoid overwhelming busy players, consider spacing out your questions. Perhaps supply one or two questions during sessions that players can think about while their characters are idle. Post a question of the week on your gaming group website, or follow up every session with a short feedback form.

Revisit your surveys. Sometimes player and character tastes change, and you want to keep your information fresh. Administer the entire survey again, or just pick key questions. A healthy frequency for surveys might be every five character levels, ten sessions, or four months.

**Example character survey questions:**

- Describe yourself in ten words or fewer.
- What do you think is your greatest strength?
- What do you think is your biggest weakness?
- What is your most distinguishing feature?
- Why did you choose an adventuring life?
- Which family members or friends do you hold most dear?
- What people, groups, or objects hold your greatest loyalty?
- What career do you want to have one year from now? Five years?
- What place do you wish to visit?
- Consider your skills. How did you acquire them?
- What do you like to do when not adventuring or training?
- What magic items do you crave?
- Where do you enjoy hanging out?
- How do you want people to remember you after your death?

**Example player survey questions:**

- What monsters do you like most?
- Rate your enjoyment of each of the following environments from 1–10, 10 being best: a) wilderness encounters, b) city encounters, c) dungeons, and d) unusual locations such as cloud homes or underwater.
- Rate your enjoyment of each of the following types of adventures from 1–10, 10 being best: a) long

adventures, b) short adventures, c) linear adventures, and d) open play with no prepared plot.

- Rate your enjoyment of each of the following types of play from 1–10, 10 being best: a) combat, b) interaction with NPCs, c) puzzles, d) investigation, and e) mystery.
- Do you have any session location requests or preferences?
- What times can you play each week?
- How do you prefer I contact you about game details? Please provide your contact information.
- How do you prefer we handle characters of absent players?
- What three gaming moments would you like to recreate in this campaign?

Keep replies and craft profiles for each player in one place, so you can read up on a player when desired. Profiles might contain survey answers, player knowledge, trivia, a spreadsheet, or paper forms you maintain.

At reasonable intervals, review your player and character profiles so you can adjust your DMing style. Approach each encounter with character and player preferences in mind. Even if you want to retain the original content of the encounters you've designed, realize that subtle tweaks during play can make games more enjoyable. For example, make a foe's magic weapon one a PC desires, change an NPC's surname and make him a distant cousin of a character, or use extra description for magical effects because one of your players loves spells and wizardry.

You can also make checklists of requests and ideas for each player and character. Then, try to add items from these checklists into the game. Check off an equal number of items for each player by session's end to maintain balance and fairness. Keep the checklists on hand behind your DM screen to make adding items easier during the game.

If you have a top-down DMing style, you do not need to throw out all your plans and designs in order to craft game sessions based on player and character preferences. Just change a few details, because the group will notice a little customization and campaign personalization, and this approach makes everyone excited to play.

## COMPANION CHARACTERS

A paladin rescues an imprisoned knight who swears to follow her as a faithful companion for a year and a day. A shaman tends to the wounds of a young black bear, and the friendly animal follows the shaman on his quest. A wizard takes on an apprentice, a youthful elf eager to learn the ways of magic and use them to battle evil.

The young sidekick, the eager beast follower, and the faithful henchman feature regularly in fantasy novels, comics, and movies. Although adding an extra character to the adventuring group might make perfect sense from a story point of view, instantly recognizable pitfalls can make this decision a bad one:

- Players might consider running a single character to be a full-time job; running two adds a lot of work and slows down the game.
- Allowing one player to run two characters diminishes the participation of the other players in the game, which can lead to frustration and disappointment from those players.
- Adding characters can dilute the individual strengths of other party members by doubling (or even tripling) particular roles, which can lead to player feeling as though his or her character isn't important anymore.

If you can cope with these issues, adding an extra character can yield significant benefits. No matter how compelling the story angle, however, remember one rule: Add an extra character only when it helps fill out a small party or an underserved role.

If fewer than five players participate in a game, your group probably struggles with standard encounters designed for groups of five PCs. In addition, your group probably lacks one or more character roles. Adding the right companion character can solve both problems.

Even in full-size groups, having a few companion characters available for use helps you cope with unexpected player absences. When the party's leader misses a gaming session, that friendly local priest of Kord willing to adventure with you can keep the game on track.

### COMPANION CHARACTERS VS. NPCS

The rules for building companion characters are similar to the "Creating NPCs" rules presented on page 186 of the *Dungeon Master's Guide*. However, these new rules are better at crafting an adventuring ally for the PCs, whereas the NPC rules are better at helping you build enemies for your characters.

These new rules are more abstract than the NPC rules: They focus entirely on the companion character's role in the party, rather than building the character through the filter of its class. That makes it simpler to create and use the companion character.

## Companion Characters in the Game

Companion characters fill a role similar to that of NPCs because you don't design and detail companion characters like player characters, nor do companion characters have key roles in the story as PCs do.

Companion characters exist first and foremost to ensure a fun and exciting game. A companion character should never disrupt anyone's enjoyment. You control a companion character's presence and role in the game and must allow him or her to come and go as appropriate to the story. Remove a companion character from the game (or modify the character's statistics) if she creates an inappropriate impact on the game, or if her presence overshadows the PCs.

The rules for companion characters relate to monsters more than to PCs, though companion characters share some aspects with PCs. Overall, a companion character's abilities offer function over flavor: a small array of powers and skills, a few personality elements, and the other basic mechanical elements of a character such as defenses, hit points, and healing surges. These rules aim to make the companion character easy to run, so a single player can handle both a PC and a companion character with little extra effort.

Of course, statistics represent only a portion of what makes companion characters fun. As the DM, you have to bring a companion character to life. A character who has an engaging personality and good story adds a layer of fun to the game. A companion character who doesn't exhibit such details behaves like a game piece, nothing more than a convenient tool for fighting monsters.

Allowing players to run a companion character can ease your burden (you have enough to do handling monsters, traps, and refereeing the game), but you still have control over the character's personality, motivations, and important choices. The players might dictate the companion character's tactics, but you can overrule them if the players push the companion character into a suicidal position ("I'll hold off this dragon while you guys flee!") or attempt to exploit him.

### DM Built, Player Run

The rules for companion characters rest on a simple assumption: The DM builds the character, and the players use the companion character for as long as his or her presence remains appropriate.

Don't allow players to exploit and abuse the *Monster Manual* to build a powerful ally. Instead, use a companion character when the party needs the help of an ally, or to fill out an empty role at a short-handed table.

At the table, assign the companion character to a player, preferably one whose character's background somehow links to the companion character. In combat situations, the player can run the companion character.

If a particular adventure does not require the companion character, tell your group he has an important errand that prevents him from assisting the PCs (just as you might do for an absent player's PC).

## Creating a Companion Character

You can craft a companion character by adapting a monster from the *Monster Manual* or another source, or by building one from scratch, the same way you create an NPC opponent.

When you create a companion character, consider involving the players in the process, particularly any player whose character has strong ties to the companion character. For example, if the paladin PC decides to take on a squire, the paladin's player might want to determine the characteristics of that companion character. You can allow that player to sketch out or design the squire, but you have ultimate veto authority. If you want to change something in the player's design, explain your reason to avoid appearing arbitrary or unfair. Maybe the companion character's race doesn't fit into your world, or maybe you think the powers the player chose for the character are inappropriate.

### Using an Existing Monster

As an easy solution, use an existing creature from the *Monster Manual* or some other resource to create a companion character. You can use an "out of the box" monster as a hired mercenary, a tamed beast, or a formerly evil creature that turned its back on its heritage. Just find a monster of the appropriate level and role, and apply a few adjustments to its statistics.

Simple monsters make good companion characters because they don't burden a player the way a more fleshed-out character would. The "Suggested Companion Characters" sidebar gives a list of appropriate monsters; use the following criteria to find a good fit.

**Keep it Simple:** As a rule of thumb, allow a companion character no more than three different attack powers. Otherwise, he or she approaches the complexity of a PC. You made the companion character to fill a party role or pad out the group's numbers. A complex monster defeats that purpose and might overshadow the characters.

**Standard Monsters Only:** Avoid elite and solo monsters because they make overpowered companion characters. Conversely, minions are too weak to help out the party.

**Medium Is Best:** Although Small companion characters pose no problems, Large creatures crowd the characters in a dungeon. Don't use Huge or Gargantuan companion characters except for brief guest appearances on enormous fields of battle.

## Turning a Monster into a Companion Character

When you use an existing monster as a companion character, keep these rules in mind.

**1. Level.** Make a companion character of the same level as the party. You can adjust an existing monster's level up or down to bring it in line with the party's level. If you increase a monster's level to make it a companion character, advance it according to the rules in "Companion Characters in Play" on page 33. Reduce the companion character's level by reversing the same process. For example, if you reduce a human mage's level from 4 to 3, reduce her hit points by 4, lower her attack bonus and defense scores by 1, and apply a –1 penalty to her damage rolls.

**2. Role.** A monster's normal role helps determine its appropriate role in the party. Use the following guidelines to determine a monster's appropriateness for a particular role in the PC party.

*Controller:* Controller monsters obviously work well for this role. Look particularly for controllers with area attacks. Artillery monsters that use area attacks also count as controllers.

*Defender:* Soldiers make good defenders. If a creature can mark its enemies as an at-will attack, consider it a defender regardless of its monster role. Controller monsters, particularly ones that prefer to engage in melee and control a limited swath of the battlefield immediately around their own space, can act as defenders in a PC party.

*Leader:* Few monsters fit this role because only a small number have the ability to bolster their allies. A monster that has the leader subtype can function as a backup leader in the party, but many of these monsters have more complicated arrays of powers that make them otherwise inappropriate. Instead, choose a monster that fits the controller or defender role, and add the default power for leader companion characters detailed in step 8 for creating companion characters, "Assign Feature," on page 31.

*Striker:* Brutes, lurkers, and skirmishers function well as strikers. Artillery monsters that use single-target ranged attacks also fit the striker role.

**3. Hit Points and Healing Surges.** Do not use the monster's normal hit points. The role you assign to a companion character determines its hit points as shown on the Companion Character Statistics table on page 30. It also gains healing surges, according to the same table.

**4. Defenses.** If you want to tweak the monster's defenses, increase one or two defenses while reducing other defenses. Don't adjust any defense by more than 2 from the baseline given in the Companion Character Statistics table.

- ✦ +1 AC: Reduce two other defenses by 1.
- ✦ +2 Fortitude, Reflex, or Will: Reduce AC by 1 or reduce one other non-AC defense by 2.

**5. Powers.** You might have to adjust a monster's powers to make them fit a companion character.

*Recharge:* If the creature has a power that recharges during the encounter, treat it as a normal, nonrechargeable encounter power.

*Swapping Powers:* If a monster's power causes trouble in the game because it's overly complicated or powerful, trade one of the creature's encounter attack powers for an encounter attack power from a class that shares the companion character's party role.

### Suggested Companion Characters

Here are a few monsters from the *Monster Manual* and other sources that make good companion characters. They have attacks and abilities on par with PC at-will or encounter abilities.

| Level | Monster | Role |
|---|---|---|
| 1 | Fire beetle | Striker |
| 1 | Halfling slinger | Striker |
| 2 | Elf scout | Striker |
| 2 | Gray wolf | Striker |
| 2 | Human bandit | Striker |
| 2 | Kobold dragonshield | Defender |
| 3 | Gnome arcanist | Controller |
| 3 | Human guard | Defender |
| 3 | Iron defender | Defender |
| 3 | Spitting drake | Striker |
| 4 | Dwarf bolter | Striker |
| 4 | Human berserker | Striker |
| 4 | Human mage | Controller |
| 4 | Warforged soldier | Defender |
| 5 | Dragonborn soldier | Defender |
| 5 | Dwarf hammerer | Defender |
| 5 | Human noble[M] | Leader |
| 5 | Rage drake | Striker |
| 6 | Ambush drake[D] | Striker |
| 6 | Dire boar | Striker |
| 6 | Dragonkin defender[D] | Defender |
| 7 | Eladrin fey knight | Soldier |
| 7 | Hell hound | Striker |
| 7 | Human cavalier[M] | Defender |
| 7 | Macetail behemoth | Defender |
| 8 | Eladrin twilight incanter | Controller |
| 8 | Warforged forgepriest[M] | Leader |
| 9 | Gnome wolverine[M] | Striker |
| 9 | Human pirate[M] | Striker |
| 10 | Minotaur warrior | Defender |
| 13 | Hill giant | Striker |
| 14 | Angel of protection | Defender |
| 14 | Azer foot soldier | Defender |
| 15 | Thunderfury boar | Striker |
| 17 | Firebred hell hound | Striker |

D: Appears in *Draconomicon: Chromatic Dragons*
M: Appears in *Monster Manual 2*

Choose a power of a level equal to or lower than the companion character's level. For instance, you can trade a human mage's *thunder burst* attack for *shock sphere* (a 3rd-level wizard encounter power).

*Avoid Record-Keeping Effects:* Powers that have effects that a saving throw can end, or that a monster can sustain, burden the player (and frequently prove too powerful in the hands of a companion character). Either avoid these monsters or remove the aspect of the power that requires record-keeping. For example, change a "save ends" duration to make the effect last until the end of the companion character's next turn.

*Avoid Immediate Actions*: Players should have to worry about immediate actions for only one character at a time. If a player's PC has no immediate actions, allow his companion character to have one.

*Beware of Gamebreakers:* Don't allow a companion character to have abilities that allow that character (and potentially the party) to avoid common obstacles or ignore normal resource management, particularly in the heroic tier. Your own experience at the table can tell you what powers or abilities would offer too much of an advantage to the party. For example:

- A companion character who has darkvision, blindsight, or tremorsense gives the party a warning system beyond their normal abilities.
- A companion character who can fly, particularly one capable of carrying another character, eliminates too many challenges and potential risks to the PCs. The same holds true for companion characters who have teleportation or phasing.
- A companion character who can daze, stun, or immobilize foes with an at-will power has too much clout. If you want to use such a creature, change the at-will power to an encounter power.
- A power that restores hit points without costing a healing surge makes a companion character too potent. Make such a power a daily power.

**6. Magic Items.** As a general rule, companion characters don't use magic items. A PC might give a magic item to a companion character, but if one does so, do not add the magic item's enhancement bonus to the companion character's statistics. The companion character's attack and defense values are already set at appropriate values for the character's level, so adding these bonuses could lead to an overpowered character.

A companion character can use only one daily magic item power per day. The character doesn't gain additional uses at higher tiers or when the party reaches a milestone.

## Crafting a Unique Companion Character

If no monster matches your vision for a follower, or if you want a particular kind of character for your campaign world and your current story arc, you can create a unique companion character from scratch.

Crafting a unique companion character resembles creating a PC or making a unique monster. To do so, follow the steps outlined below.

**1. Choose Level:** Set a companion character's level within one level of the PCs. This practice keeps the companion character relevant and prevents him or her from outshining the player characters.

**2. Choose Role:** A companion character doesn't have a character class, but each one does need a party role to generate numerical statistics and to clarify the character's place in the adventuring group. Page 16 of the *Player's Handbook* describes the party roles of controller, defender, leader, and striker.

**3. Choose Race:** If the companion character is a member of a PC race, he or she gains all the racial traits of that race, including the racial power. If you don't choose a PC race for the companion character, ignore this step.

**4. Generate Ability Scores:** Generate a unique companion character's ability scores just as you would for a 1st-level player character (as described on page 17 of the *Player's Handbook*). Unlike with a PC or an NPC, a companion character's ability scores don't improve at higher levels.

Ability modifiers don't influence a companion character's attack or defense numbers. Ability modifiers still apply when determining hit points and healing surges, damage values, skill check modifiers, ability check modifiers, and initiative check modifier.

**5. Determine Hit Points and Healing Surges:** The role you assign to a companion character dictates his or her hit points and healing surges, as shown on the Companion Character Statistics table.

**6. Calculate Defenses:** A companion character's defenses depend on the role and level you choose, as shown on the Companion Character Statistics table. Do not apply modifiers for ability scores or equipment.

At your option, increase any non-AC defense by 2. If you do, reduce a different non-AC defense by 2 to compensate.

**COMPANION CHARACTER STATISTICS**

| Statistic | Controller | Defender | Leader | Striker |
|---|---|---|---|---|
| Hit points | (level × 4) + 6 + Con score | (level × 6) + 9 + Con score | (level × 5) + 7 + Con score | (level × 5) + 7 + Con score |
| Healing surges | 6 + Con modifier | 9 + Con modifier | 7 + Con modifier | 6 + Con modifier |
| Armor Class | 13 + level | 17 + level | 15 + level | 15 + level |
| Other defenses | 13 + level | 13 + level | 13 + level | 13 + level |

**7. Select Powers:** Choose a character class that has the same role as the companion character. Note that class's appropriate melee and ranged basic attacks. Then select one other at-will attack power, one encounter attack power, and one utility power from that class. Each of these powers must be no higher in level than the companion character's level. As the companion character gains levels, replace these powers with new powers of the companion character's level or lower.

If the companion character is 11th level or higher, it gains an encounter attack power or utility power of 10th level or lower. If the companion character is 21st level or higher, it also gains an encounter attack power or utility power of 17th level or lower.

**8. Assign Feature:** Each companion character also gains one of the following four features, as appropriate to his or her role.

*Controller:* Once per encounter as a free action, a controller can extend an effect on an enemy to end at the end of his next turn, rather than his current turn.

*Defender:* When a defender hits an enemy with a melee basic attack, the defender marks that target until the end of her next turn.

*Leader:* Twice per encounter as a minor action, a leader can allow an ally within 5 squares of the leader to spend a healing surge. A leader of 16th level or higher can use this feature three times per encounter.

*Striker:* Once per round, a striker deals 1d6 extra damage when he hits an enemy he has combat advantage against. This extra damage increases to 2d6 at 11th level and 3d6 at 21st level.

**9. Calculate Attack Bonus:** A companion character's attack bonus equals 4 + level. For attacks with weapons, add the weapon's proficiency bonus. Do not apply modifiers for ability scores or magic items.

**10. Calculate Damage Bonus:** A companion character adds the appropriate ability modifier to damage rolls as normal. In addition, the character adds one-half his or her level to all damage rolls. This value replaces the damage bonuses that PCs derive from feats and other special benefits.

**11. Choose Skills:** Choose two trained skills for the companion character. Make at least one of these skills one in which a PC has training, so the companion character doesn't steal the limelight.

If necessary, you can give the companion character one or two additional trained skills to fill out key gaps in the party's array of trained skills.

Calculate skill check modifiers the same as for a PC (one-half level + ability modifier + training, if any). Skill check modifiers include racial bonuses, if applicable.

At 11th level, and again at 21st level, companion characters gain a +3 bonus to each of their trained skills.

**12. Choose Equipment:** Assign gear to the companion character as appropriate his or her their role, powers, and appearance.

*Armor and Shield:* Even though the companion character's armor and shield do not modify his or her AC, assign such gear as desired for the appropriate appearance. Defenders and leaders, for example, might wear heavy armor. Apply any armor check and speed penalties.

*Weapons and Implements:* Give the companion character weapons or implements appropriate for his or her powers. Remember to apply the weapon's proficiency bonus to attack rolls.

*Mundane Equipment:* You can provide various mundane gear—rope, trail rations, torches—to a companion character.

*Magic Items:* Don't equip companion characters with magic items. A companion character doesn't need magic items to be a viable party member. A companion character's presence doesn't result in extra magic items placed as treasure (see "Companion Characters in Play" on page 33), so they shouldn't have any when they join the party.

**13. Roleplaying Details:** Flesh out the companion character with details about his or her alignment, personality, appearance, and beliefs as appropriate.

**What a Companion Character Doesn't Receive:** A companion character doesn't receive class features or any benefits related to class features that appear in his or her powers.

A companion character gains only limited benefits from equipment. In particular, a companion character gains no enhancement bonuses from magic items.

A companion character has no feats.

A companion character should know rituals only if such knowledge is important to your story. You decide if a companion character learns additional rituals as the campaign continues.

A companion character doesn't select a paragon path at 11th level or an epic destiny at 21st level.

## Companion Character Traits

No matter how you create companion characters, assign them key personality traits. Make companion characters more than a collection of numbers.

Don't go overboard; a few key aspects go a long way toward defining a companion character. You can summarize a companion character's essential elements in five sentences, covering the following topics.

**Occupation:** Outside of life with the PCs, what does the companion character do for a living?

**Physical Description:** Provide a brief summary of the companion character's appearance. In addition to covering the basics (height; build; color of skin, hair, and eyes), consider a distinctive quirk to help set the character apart in the players' minds. You can choose a quirk from the NPC Quirks table on page 186 of the *Dungeon Master's Guide*, roll on the table to generate a quirk randomly, or come up with one of your own.

**Agenda:** Why is the character with the party? Although a strong personality makes a companion character memorable, a clear (and perhaps secret) agenda gives you a direction for the character. You can roll on the Agendas table below, choose one from the table, or come up with one of your own.

You could make the companion character want something that conflicts with the PCs' goals. A larcenous dwarf could sneak back to an abandoned temple in the dungeon and steal the sacred ingots that the party decided to leave behind. A knight might promise the mayor to defend the town against an attacking kobold horde, forcing the PCs into a tough decision: remain behind and help their friend, or push onward to chase down a fleeing villain.

**Behavior:** How does the companion character interact with other characters? Does he or she have a pessimist attitude, seeing doom around every corner? You might create a religious fanatic who preaches religious doctrine and finds a deity's hand in every event. One key behavioral trait provides enough distinction to make a companion character stand out. Come up with a behavioral trait that works for the character, or roll or choose one from the Behavioral Traits table below.

**Secret:** Finally, give each companion character a secret. If that secret surfaces in play, it could provide an interesting plot twist or an unexpected complication. The PCs discover that their trusted guide is a reformed criminal with a price on his head. Or, the one-handed halfling mage who has been so helpful to the party struck a bargain with a demon that holds her missing hand captive and uses it as a ritual focus to temporarily seize control of her. Use the secret to inject surprise into a mundane encounter or session. Make the secret lead to another storyline or resolve a key element in the story. Roll or choose a secret from the Secrets table below.

### AGENDAS

| d10 | Agenda |
|---|---|
| 1 | Wants revenge |
| 2 | Needs the PCs' help on a quest |
| 3 | Needs money |
| 4 | Bored, seeks excitement |
| 5 | Seeks magic |
| 6 | Seeks lost relative or friend |
| 7 | Seeks fame |
| 8 | Looks up to PCs (hero worship) |
| 9 | Owes PCs a favor |
| 10 | Wants to chronicle PCs' adventures |

### BEHAVIORAL TRAITS

| d20 | Trait |
|---|---|
| 1 | Sunny optimist, unflappable |
| 2 | Gloomy pessimist, sees doom everywhere |
| 3 | Religious fanatic, tries to convert others |
| 4 | Superstitious, sees ill omens in everything |
| 5 | Hedonistic, gambler and drinker |
| 6 | Violent, eager to attack |
| 7 | Greedy, takes risks for treasure |
| 8 | Barbaric, knows little of civilization |
| 9 | Patriotic, fights for a noble or a country |
| 10 | Careless, sloppy, makes casual mistakes |
| 11 | Bookish, studious, takes copious notes |
| 12 | Loyal, fights to the death for friends |
| 13 | Suspicious, trusts no one |
| 14 | Altruistic, easy target for a person in need |
| 15 | Honorable, follows rigid code |
| 16 | Grim, suicidally brave |
| 17 | Vengeful, seeks payback for a wrong |
| 18 | Abrasive, insults others |
| 19 | Finicky, overly polite and formal |
| 20 | Rude, ill-mannered |

### SECRETS

| d10 | Secret |
|---|---|
| 1 | In debt to crime lord |
| 2 | Spy for a villain |
| 3 | Spy for a rival organization |
| 4 | Works for villain but wants to change sides |
| 5 | Worships an evil god |
| 6 | Once belonged to evil cult |
| 7 | Fleeing from powerful enemy |
| 8 | Has a deep phobia |
| 9 | Once famous in particular city or region |
| 10 | Noble in hiding |

NICOLE ASHLEY CARDIFF

# Companion Characters in Play

Regardless of how you create companion characters, the following rules apply to them in play.

**Encounters:** When you build encounters, treat the companion character like a full member of the party.

If the companion character's level is one level higher or lower than the party's level, first determine your experience budget for the party as if the companion character didn't exist. Then add the experience value of a standard monster of the companion character's level to the encounter.

**Treasure:** When you determine treasure, don't count the companion character as a party member. The party should receive treasure, and magic items, appropriate for the number of player characters.

If the characters negotiate payment to the companion character, increase the treasure payout to support this payment. Make sure players understand that companion characters have no need for magic items.
